Postal savings funds are to be deposited by the Postmaster-General in national banks located as near as may be in the neighborhood where

such deposits were received, at a rate of interest not less than 2½ per cent per annum. If deposits can not be made in national banks at the specified rate of interest, the Postmaster-General may, with the approval of the Secretary of the Treasury and the Attorney-General, invest the same in State, Territorial, county, or municipal bonds.

The act applies to all the States and Territories, the District of Columbia, the district of Alaska, and Porto Rico.

One-fourth of 1 per cent commission is allowed to fourth-class postmasters for services rendered in connection with postal savings deposits, but no additional compensation is allowed to postmasters or employees in offices of the Presidential grade for services in connection with postal savings accounts.

Due provision is made for report by the Postmaster-General to Congress on all important details relating to the administration of the law. An appropriation of \$100,000 is made for the purpose of carrying the law into effect, and all statutes relating to the embezzlement, conversion, improper handling, retention, use, or disposal of postal and money-order funds, and the punishments provided for such offenses are extended and made applicable to postal savings depository funds.

I think this bill, if enacted into law, would make suitable and proper provision for the establishment of postal savings depositories in this country. The law could from time to time be modified to meet the exigencies of the service and to provide for extension and development as might seem wise.

No greater work can be done by the Government or by Congress than that which tends to encourage thrift and economy, particularly among our working people. In times of industrial depression, when many thousands of able-bodied and willing men are thrown out of employment, municipal bodies and charitable organizations spend enormous sums of money to relieve destitution and want, but the resources thus employed are inadequate to meet the situation. The most deserving are sturdy enough in their independence to abhor charity, and much of the destitution goes unrelieved. Charity is at best an expedient to relieve misfortune or acute distress. It should be a last resort. Much of the necessity for charity can be removed by measures wisely designed to encourage the habit of saving in times of prosperity for old age or the inevitable rainy day.

The postal savings bank system properly developed and conducted would do more than any other thing I know of to encourage the disposition to save. It would supply depositories located at points most convenient to the people and open for business at hours when they could most conveniently make deposits.

That feature of the Senate bill permitting a deposit as low as 10 cents will save many a dime from dissipation. However, it must not be forgotten that the great benefit to be derived by all the people and the country at large will be the turning of hoarded money into the channels of trade.

I think that \$1,000 should be the maximum deposit allowed to the credit of any one account. When a man has accumulated \$1,000 he is in a position to invest in real estate and that is what he should do. To own his home should be the ambition of every man. Real estate offers one other form of investment of which none is afraid.

Mr. Speaker, I hope this measure may yet receive the favorable consideration of Congress.

The Universal Advance in Prices.

The Democratic claim that the rise in prices in the United States during the past few years is owing to the tariff makes interesting the following extracts from Consular Reports showing that the advance has been universal.

SPEECH

OF

HON. JAMES S. SHERMAN,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. SHERMAN said:

Mr. SPEAKER: Under the leave to print granted by the House, I desire to call attention to the following statements regarding the advance in prices of various commodities, as shown by the consular reports from various countries:

The German statistical office has prepared a very careful comparative statement showing the general increase in the prices of all commodities during the past few years. As a basis for comparison the office adopted the average prices of commodities during the decade ending in 1898. With these prices are contrasted the rates current in the month of June, 1907. The following are the percentages of increase: Cereals, 25; animal products, 27; agricultural products of foreign origin, 20; textiles, 55; and mineral products, 60.—*Consul Thomas H. Norton, of Chemnitz, Germany.*

The retail price of bread has just been advanced in Nottingham on all grades, from 6 to 6½ cents for the best two-pound loaf. Advances have been general throughout England. In the past six months alone

flour has risen \$1.95 per sack of 20 stone, and a further rise is probable. The cost of living in this country has increased in the past two years.

* * * Sugar, tea, cocoa, pepper, cutlery, carpets, blankets, various canned goods, and other household articles cost more than a year ago.—*Consul F. W. Mahin, Nottingham, England.*

From articles recently appearing in French publications, based on carefully collected statistics, it is shown that prices of the various kinds of leather and of prepared skins in general have of late years greatly increased, and are still increasing; in fact, in so formidable degree as to seriously menace certain French industries which manufacture and employ these materials. The situation shows increases attaining the height of 60 per cent as regards hides and skins generally, whether raw or tanned, and of from 80 to 110 per cent as regards their products—footwear and gloves.—*Consul Chapman Coleman, of Roubaix, France.*

Formerly Athens was a very cheap place in which to live, but in recent years the price of articles of food and necessities have advanced until they are as high, if not higher, than in America. The cost per pound in United States currency of some of the principal articles are: Butter, \$1.03; beans, 5 cents; boiled ham, \$1.04; raw ham, 45 cents; beef, sirloin 17 cents and fillet 38 cents; lamb, 32 cents; pork chops, 18 cents; leaf lard, 19 cents; sugar, 10 cents. Eggs sell for 33 cents per dozen; salmon, 54 cents per can; fresh milk (cow's), 54 cents per gallon; petroleum, 75 cents a gallon, and coke, \$10 per ton.—*Consul-General George Horton, Athens, Greece.*

* * * The steady advance in the cost of raw material, which is becoming a very serious matter, is due to a number of causes, chief among which may be mentioned the comparative smallness of the production, the great increase in the consumption, the high cost of labor in the producing districts, and the effect upon production and wholesale distribution of artificial restrictions.—*The London Times.*

The prices of family necessities in the city of Breslau in 1906 compared with 1896 show the following increases: Men's wear, from 10 to 60 per cent; women's wear, from 10 to 60 per cent; food and drink, from 13 to 85 per cent; fuel, from 12½ to 22 per cent; soap, 60 per cent, and kitchen utensils, bedsteads, mattresses, etc., from 15 to 20 per cent; while wages have advanced from 25 to 66½ per cent. The principal cause of all this, in the opinion of the association, is the strong and rapid advance in wages in all branches of trade. Employers naturally raise their prices to meet the higher wages and dearer materials.—*Consul H. L. Spahr, of Breslau, Germany.*

The trade has gradually passed into the hands of great companies which have well defined and profitable "working arrangements" and which in the United States would be known as "trusts." The greatest tobacco company is very powerful and controls directly or by contracts a large number of shops in each city or town.—*Consul D. W. Williams, Cardiff, Wales.*

At the beginning of the year jute prices stood at figures much above normal, and the general expectation was that the near future would see a return to ordinary levels; but, instead of declining, rates continued to advance. As exemplifying the increased price of yarn, it may be mentioned that 8-pound fine Rio warp rose from 52½ cents per spindle in January to 85 cents at the close of the year. * * * The year under review has, it is said, marked a higher range of prices for burlaps than has been reached in any year since the American civil war, when many large fortunes were made by Dundee manufacturers who supplied cloth to the United States.—*Consul J. C. Higgins, Dundee, Scotland.*

During 1905 the increase in prices of provisions was so great that everybody suffered, the working classes in particular. The prices of meat advanced so that the poor class could not afford to buy the article, but had to look for a cheaper nourishment. * * * Manufacturers complain of the high prices of wool, which were severe during the last quarter of the year.—*Consul G. E. Eager, Barmen, Prussia.*

Consul W. Bardel, of Bamberg, reporting on prices of agricultural and food products in Germany, furnishes a table which shows that, with the exception of potatoes and hay, each article enumerated is dearer now (1906) than it was in 1905. A comparison of prices for the two years shows the following advances in price: Wheat, from \$39.27 to \$41.17; oats, from \$30.94 to \$38.08; beans, from \$76.87 to \$78.54; beef at wholesale, from \$292.74 to \$305.12, based on prices per metric ton.—*Monthly Consular Reports, November, 1906.*

There has been a steady rise in price during the year in American chilled meats. Hind quarters rose from \$11.35 at the opening to \$12.53 at the close of the year, and forequarters from \$7.38 to \$7.95 during the same period. Argentina chilled and frozen was in evidence in the same market and participated in the advanced prices; chilled hind quarters made \$7.95 at the opening of the year and at the close were \$8.52, and forequarters \$6.25 to \$7.91 during the same period. Frozen Argentine hind quarters in January were \$7.38 and in December \$8.32; forequarters in January \$6.92 and December \$7.38. Foreign pork rose from \$11.92 in January to \$15.33 per hundredweight in December.—*Consul William H. Bradley, Manchester, England.*

* * * The cost of all raw materials, especially of metals, advanced greatly during the year.—*Consul S. P. Warner, Leipzig.*

* * * The individual has suffered to a considerable extent during the past year owing to the abnormally high prices of the necessities of life, especially of meat. A matter of some anxiety is that, notwithstanding the general prosperity, the selling prices of the majority of manufactured articles can not be advanced in the requisite proportion to meet the higher cost of production, caused by the raw materials having, during the last year, increased exorbitantly in price in a number of cases, and also the cost of labor increased, due to the higher cost of living.—*Consul Walter Schumann, Mainz, Germany.*

* * * Owing to the advance in prices of all grades of leather, prices of manufactured goods were increased 10 per cent.—*Consul-General G. W. Roosevelt, Brussels.*

Beginning 1906, American prime plain white oak was sold at about \$57, and is now quoted at from \$64 to \$65 per 1,000. Hemp industries were kept busy with orders, but profits were very unsatisfactory. Raw prices rose faster than the prices of finished products could be raised. Linen weaveries and bleacheries had a good business year, yet prices could not be raised to correspond with the increased raw material prices. The rise in the price of coal was severely felt by this industry. Wages were increased from 10 to 15 per cent. * * * Artificial wool suffered under increased raw product prices. Manufacturers of sacks, canvas, and wagon covers had a satisfactory year, but raw materials advanced as much as 25 per cent, while by combination the manufacturers were able to obtain only a 10 per cent increase on their goods.—*Consul E. T. Liefeld, Freiburg.*

A report of the director of agriculture affirms that prices of food grains all over India have advanced rapidly and unprecedentedly.—*Consul-General W. H. Michael, India.*

Practically all foodstuffs, meat, dairy products, eggs, vegetables, fruits, etc., must be brought from a distance and are abnormally high in price. Fresh beef retails at from 25 to 35 cents per pound; eggs at 2 to 3 cents apiece; ham at from 37 to 40 cents per pound; apples at from 7 to 10 cents per pound, and flour, potatoes, green vegetables, etc., proportionally high. Fuel is also expensive.—*Consul G. N. Ifft, Annaberg, Germany.*

The rise in import prices in 1906 in the United Kingdom was estimated at 5.3 per cent and in export prices 5.4 per cent.—*Consul-General Robert J. Wynne, London.*

Prices for the staple products of Egypt have risen steadily. A splendid crop was obtained, the Nile flood was at its most useful height, and nothing is heard of on any side but prosperity.—*Consul-General Lewis Norris, Cairo.*

The prices at which asphalt work has been constructed have been very high, both on account of the high cost of material and labor.—*Consul-General G. E. Anderson, Rio de Janeiro, Brazil.*

Prices of products so increased that the landed proprietor, who had trouble formerly to make a profit of \$1,000 on 100 acres of land, found himself taking net \$4,000 from the same property. Cotton went up from \$8 or \$10 to \$20 or more.—*Consul-General Iddings, Cairo, Egypt.*

The prices obtained for the three principal grades of Indian tea in 1906 showed a substantial improvement over the previous two years.—*Consul E. H. Haldeman, Bombay, India.*

I append herewith current prices per ton on anthracite coals, together with prices for the same period in 1906 in shillings and pence. Maltling, large, present price, 25s.; price for same period of 1906, 20s.; Big vein and Peacock vein, present price, 22s. 6d.; price in 1906, 13s. 3d.; Red vein, present price, 17s.; price in 1906, 9s. 3d.—*Consul J. H. Johnson, Swansea, Wales.*

The price of fiber in Monterey during the past two years appears to be from 12 to 18 cents Mexican currency, the present price being about 18 cents Mexican currency per kilo.—*Consul-General P. C. Hanna, Monterey.*

Wheat commanded an advance price of 6 to 12 marks (mark = 23.8 cents) per ton of 2,204 pounds.—*Frankfort (Germany) Chamber of Commerce.*

The prices of vegetables have been about 40 per cent higher than the average, and bid fair to remain so until next summer. There has also been an increase in the price of meat, owing to the greater cost of articles necessary to the fattening of animals for the market.—*Consul E. L. Belisle, Limoges, France.*

Prices over here for finished pieces of furniture are from 50 to 100 per cent higher than could be obtained in the United States.—*Consul-General William F. Wright, Munich, Bavaria.*

The enormous increase in the price of glove leather seriously embarrassed this industry, as the prices of the manufactured article would not follow the advance in the raw material. The prices in lamb leather advanced from 60 to 70 per cent, and assortments were quite inferior, which brought the difference in value to about 100 per cent.—*Consul U. J. Ledoux, Prague.*

A pessimistic view is maintained by reason of the continued high price of raw materials and of all manufactured articles. The continuance of this condition will inevitably cut the production.—*Consul J. C. McNally, Liege.*

In 1906 the zinc market was particularly active and the demands exceeded the supply. The average yearly price was \$129.94 per metric ton (2,204.6 pounds), or \$8.12 higher than for previous year. The average price for spelter ex-ship London in 1906 was \$136.20, against \$122.79 in 1905. The average price of lead in 1906 was \$83.97 per metric ton, against \$68.48 in 1905.—*Consul J. C. McNally, Liege.*

During 1906 the wholesale price of olive oil was about 50 cents per gallon, while in 1906 it was over 75 cents per gallon. The cost would have been still higher had it not been for the large quantity of stock left over from the preceding year.—*Consul James L. Long, Patras.*

During the year the price of shelled almonds rose gradually from \$8.70 to \$14.50 per hundredweight. They are now held at \$16 to \$16.86 for the better grade of shelled nuts.—*Consul Milo A. Jewett, Trebizond.*

The prices of oak, walnut, and mahogany have increased from 30 to 40 per cent, according to species and quality, and the same may be said of supplies made of copper and iron, such as locks, hinges, and doorknobs, which has increased from 10 to 15 per cent; varnish, turpentine, and glue increased from 5 to 8 per cent, while glass of all kinds increased approximately 10 per cent.—*Consul W. P. Atwell, Ghent.*

The wool market has been a rising one, the price of raw material having increased steadily since the beginning of the year.—*Consul W. P. Atwell, Ghent, Belgium.*

The automobile, the bicycle, and electrical industries are consuming more and more rubber and the price of the raw material increases daily. That produced in the Belgian Congo, which brought \$1.54 per 2.2 pounds in 1902, has this year sold at \$2.38 per 2.2 pounds.—*Consul W. H. Hunt, Tamatave, Madagascar.*

The average prices of meats, per pound, in cents, in Munich, in the years indicated were as follows: Oxen, 12-19 in 1904, 15-19 in 1906; cows, 10-15 in 1904, 15-18 in 1906; swine, 11-19 in 1904, 13-17 in 1906; sheep, 8-11 in 1904, 10-13 in 1906.—*Consul-General W. F. Wright, Munich, Bavaria.*

The fact is that day by day olive oil is becoming more difficult to purchase and prices are continually rising.—*Consul-General B. H. Ridgely, Barcelona, Spain.*

The price of hard wheat from Russia is higher than usual this year.—*Consul-General George Horton, Athens, Greece.*

Consul W. Bardel writes from Bamberg, Germany, that while food and clothing have become much dearer in Germany, the prices for rents have materially increased also.

The prevailing high price for domestic bacon created a large demand for American bacon.—*Consul F. S. Hannah, Magdeburg, Germany.*

The enormous demand for hides has advanced the price in the last ten years 50 per cent, and in the case of "heads," 800 per cent. The price for dry hides per 80 pounds ten years ago was about \$4.66, whereas to-day the price is about \$15 per 80 pounds. The necessary effect of this advance and the advancing price of hides will be to increase the price of boots and shoes, both imported and homemade.—*Consul-General William H. Michael, Calcutta, India.*

As an example of the extent of the increase in price, it is stated that imported leathers have advanced 10 to 125 per cent on common sorts, and waxed splits for heavy boots and leggings from 20 to 25 per cent, and all bid fair to go still higher.—*London Commercial Intelligence* (quoted by Census Reports, November, 1906).

Mills are forced to buy and pay the prices asked for hemp, which are about 20 per cent higher than last season.—*Vice-Consul H. M. Byington, Naples, Italy.*

Manufactured leads have reached a point which has not been touched since the Franco-German war.—*Consul H. W. Metcalf, Newcastle-upon-Tyne, England.*

The selling price of cocoa is just at present much higher than it has been for years, and in the opinion of those best qualified to judge it is likely to reach a price considerably higher, the reason being that the production is not by any means keeping pace with the increasing consumption.—*Consul W. W. Hanley, Trinidad.*

Consul Solomon Berliner, of Tenerife, responds as follows to inquiries from different parts of the United States as to the cost of living in the Canary Islands and how they compare in this respect with the United States: "I am informed that fifteen years ago no place in the world was cheaper to live in than the Canary Islands, but during the last five or six years the conditions have entirely changed, and there can be but few places where the necessities of life are more costly. The prices of articles grown locally have advanced from 10 to 20 per cent.

Wool, the greatest export, is selling for over 13 pence a pound, almost double the price of six years ago.—*Consul William A. Prickett, Auckland, New Zealand.*

There has been a decided rise in the cost of wool, cotton, and linen, which are the chief materials of which Kidderminster carpets are made. The advance in wool is said to have been from 100 to 125 per cent over the cost in 1901 and 1902.—*Consul Albert Halstead, Birmingham, England.*

Camphor prices are very high, and the cultivation has been extended.

Copra is very high in price, and those who have coconut-palm estates are making large profits. The plumbago trade is also paying high prices.—*Special Agent W. A. G. Clark, on Industries of Ceylon.*

The price of coal in the last ten years has increased from \$6.50 to \$8.17; pine ties from 40 to 80 cents, and oak ties from 75 cents to \$1.15.—*Consul W. D. Shaughnessy, Aguascalientes, Mexico.*

Hides are scarce, and prices for the same are steadily advancing.—*Consul Louis Kaiser, Mazatlan, Mexico.*

High price of coal is a serious matter for British railways, which use about 12,000,000 tons a year for locomotive purposes. The mines now demand an advance of 3 shillings (73 cents) a ton (of coal) on the last contract price.—*Consul F. W. Mahin, of Nottingham, England.*

The price of alcohol works out to about 45 francs the 100 kilos. This is a very high price; previously it was much lower, less than one-half this figure.—*Consul-General E. H. Ozmun, of Constantinople.*

The cost of cotton seed at Alexandria is at present (August, 1907) abnormally high, being 81½ plasters an ardeb (an ardeb equals 5.4474 bushels), while the normal price would be nearer 60 plasters. (Plaster equals about 5 cents.) The price of oil is about \$142 an English ton, as compared with a normal price of over \$100.—*Special Agent W. A. Graham Clark, writing from Beirut, Syria.*

While the prices paid for raw jute were the highest known, the advance in the price of jute manufactures was not in proportion. Raw jute advanced 57 per cent in value and jute bags advanced 21 per cent in value. Gunny cloth advanced 31 per cent in value.—*Consul-General W. H. Michael, of Calcutta.*

Every branch of the local industries has profited by the general advance in orders. As a consequence prices have gone up considerably; coal has increased from 40 to 65 cents per ton, iron has followed in the same ratio, raw silk has advanced from \$10 to \$12.50.—*Consul H. S. Brunot, St. Etienne.*

The price of the best bore-hole coal was fixed at \$2.50 per ton by a combination formed last year. Taking the amount of coal exported last year and calculating at \$2 per ton, which was actually above the average price, the increased selling price will result in a return of approximately \$2,000,000 above the value placed on the coal exported last year. The trade anticipated this year should amount to \$2,500,000, in round numbers.

The prices touched by copper, tin, lead, and silver in 1906 have greatly stimulated the mining industry, and it is believed the official figures of the mines department, not yet available, will show another record output.—*Mr. Burrill, Sidney.*

In the case of calves the price experienced an unusually strong increase, rising from \$5.95 to \$13.33 in 1903, and from \$6.19 to \$16.18 in 1907.—*Consul E. T. Liefeld, Freiburg.*

The German statistical bureau has just issued a summary of the average prices of food products in the Empire during the past year which shows clearly that the general increase of cost in the United States for the necessities of life is simply a part of a world-wide movement. Of ten leading articles—wheat, rye, barley, oats, peas, beans, potatoes, straw, hay, and beef—all show an increase except potatoes and hay, and leading articles of foodstuffs show an increase of from 2 to 10 per cent.—*Consul Thos. H. Norton, Chemnitz.*

To give an idea of the great increase of price of olive oil in this city it will suffice to quote the following: During the month of January olive oil in Seville ran up to 16.12 pesetas; that is double, with a slight difference, the price paid four years ago. It must be noted that these are warehouse prices and only when sold in large quantities, and to this already excessive price we must add a charge of 3.13 pesetas per arroba for excise tax.—*Consul L. J. Rosenberg, Seville.*

WAGES AND FOOD PRICES IN FRANCE.

Consul Louis Goldschmidt, of Nantes, under date of January 28, transmits the following report covering the wages and food prices in Nantes, which, the consul says, may be considered a city of average prosperity, as compared with other cities in France and in Europe generally:

Considerable has been published lately in America concerning the increased cost of living and the comparative pay of labor in the United States. In some cases the writers have tried to demonstrate that it is only in the United States that the cost of articles of daily consumption has increased to any considerable degree. Statements are also frequently made to the effect that, although the wage of the laboring classes abroad is usually lower than the wage of the same class of labor in the United States, nevertheless living abroad is so much cheaper that the laboring class is just as happy and just as prosperous as the American laborer. In demonstrating that this is not the fact, statistics will be given, as far as they have been possible to obtain, of (1) the wages paid to various labor classes in Nantes; (2) the cost of articles of food, fuel, light, etc., entering seriously into the daily consumption of laboring people; and (3) the cost of rent of rooms or apartments.

The wages paid to the various classes of organized labor in this city, which may be considered a city of average prosperity in France and Europe, are given herewith as furnished to me by the secretary of the Nantes Labor Exchange. It is fair to assume that the maximum pay is given to organized labor; in fact, many classes of labor not organized are paid much lower wages than are here given.

Wages paid per day of ten hours.

Adjusters of machinery	\$1.00 to \$1.20
Blacksmiths	1.10 to 1.40
Blacksmiths' helpers	1.00 to 1.20
Bookbinders	1.00 to 1.20
Carpenters, timber workers	1.10 to 1.30
Carpenters, housework	.95 to 1.00
Dock laborers	.80 to 1.00
Chair makers, piecework	.90 to 1.00
Coopers, piecework	1.00 to 1.40
Electricians (installing lighting)	.75 to .90
Factory laborers	1.40 to 1.60
Lithograph printers	.90 to 1.10
Locksmiths	.90 to 1.00
Machine tenders (labor saving)	.90 to 1.00
Masons and marble workers	1.00 to 1.30
Molders	.90 to 1.00
Paper hangers, idle about four months in the year	1.10 to 1.30
House painters	1.00 to 1.20
Pattern makers	.80 to .90
Plasterers	1.10 to 1.60
Saw tenders, power saws	.70 to 1.00
Sculptors in stone for building	1.10 to 1.30
Shoemakers	1.00 to 1.20
Slaters and roofers	.60 to 1.00
Stonecutters	.75 to .80
Sugar refiners:	
Men	.40 to .60
Women	.90 to 1.00
Tanners and curriers	1.30 to 1.80
Typesetters	1.20 to 1.60
Wagon smiths	.90 to 1.00
Wheelwrights	1.00 to 1.20
Wagonmakers (woodworkers)	1.00 to 1.00
Wagon painters	
Willow and rattan workers	

Wages paid per week.

Bakers	6.00 to 8.40
Hairdressers, with board and room	5.00 to 12.00
Draftsmen, industrial	30.00 to 60.00
Engineers (stationary engines)	26.00 to 32.00
Railway engineers (engine drivers)	26.00 to 60.00
Railway firemen	24.00 to 34.00
Truckmen	18.00 to 24.00

Household service, with board and lodging:

Women servants	4.00 to 6.00
Women cooks, average	6.00 to 7.00
Manservants, trained	5.00 to 10.00
Store employees:	
Men	
First year after apprenticeship	15.00
Second year after apprenticeship	20.00
May eventually reach	30.00
Women	
Second year after apprenticeship	10.00
Third year after apprenticeship	15.00
May eventually reach	25.00

In nearly all the foregoing trades and employments an apprenticeship of two years, without pay, must be served. Domestic labor in the rural districts is from 25 to 40 per cent less than the foregoing rates. In establishments where dressmaking and tailoring for women are done the seamstresses are paid, after two years' apprenticeship without pay, a daily wage of from 15 to 20 cents, while exceptional workers may, after a number of years, reach 50 cents; foot-machine workers, 60 cents; forewomen, \$1; women cutters and fitters, \$60 per month; men cutters, \$80 per month.

COST OF FOOD.

Price of foodstuffs in Nantes per one-half kilogram ($1\frac{1}{2}$ pounds) run as follows in American cents:

"Beef for soup, 12 to 18, sirloin, 30, and tenderloin, 45; veal, 20 to 24; pork, fresh, 18 to 22, salted, 18 to 21, sausage, 24; ham, 25, or cooked, 35; horse meat for soup, 6, steak, 16, and tenderloin, 28; lard, 16; butter, according to season, 25 to 44; cheese, common, 24, Swiss, 28, and French, 20; fish, salted, 8, herrings, salted, 16, and smoked, per dozen, 22; coffee, common quality, 35; coffee, better quality, 40 to 50; chicory, 7; sugar, common, 5½ to 6, sugar, lump, 6½ to 9; tea, 60 to 80; chocolate (cocoa and sugar), 25; prunes, dried, 25; potatoes, 1½; macaroni and similar pastes, 7 to 20; rice, 7 to 10; tapioca, 24; flour, common, 4; salt, common coarse, 3, refined for table, 4; beans, dried, 6; alimentary oils, repressed, 12, peanut, 14, and olive, 16 to 25; fowls (each), chickens, 80; turkeys, \$3 to \$4; geese, \$3 to \$4; ducks, \$1.40 to \$1.60; eggs, 18 to 40; wines, common red and white, per quart, 4 to 8.

"In household necessities kerosene, common, costs 6 and better quality 8 cents per quart; soap, common laundry, 7 cents, and candles, 9 to 10 cents per pound. Coal costs \$10 to \$12 per ton; wood, \$7.50 to \$9 per cord."

On most articles of food the municipality collects a tax upon their entering the city limits. Consequently people living in the smaller outlying towns are enabled to purchase some of the articles for food at a little lower price than the market price in the city. However, the mass of the laboring people live within the city limits, and consequently are not affected by this difference. These taxes, which are paid in all the larger French cities, help to defray the expenses of the municipality and may be considered a direct tax upon all consumers of these products.

Inquiring carefully into the average price paid for rent of rooms and houses by working people here, it is learned that the average price paid per room in apartments or lodgings occupied by the laboring class is from \$18 to \$20 per year. Thus, a laboring family occupying a three-room apartment, composed of a general living room, a bedroom, and a kitchen, pays from \$50 to \$60 per year. These rooms do not contain the usual conveniences found in American houses.

WATER AN EXTRA CHARGE—COST OF CLOTHING.

Running water is not always found in the houses, and when found must be paid for by each tenant. Where the houses are of more modern construction, and are healthful and well ventilated, the cost of rooms is greater. In late years there have been some improvements in the construction of houses for laboring people, and more modern small

cottages have been constructed in the outskirts, which rent at from \$100 to \$160 per year. However, the average working family here can not afford to pay so much for their house rent, and must consequently live in the larger houses in the older quarters, where rents are cheaper, but where they are generally far from healthy, are ill lighted, and poorly ventilated.

The average cost of clothing in general here is not far, if any, below the cost of clothing in the United States. The cost of all articles of cotton is more expensive here than in the United States, while articles of linen are generally cheaper. Clothing made of woolen goods may be considered somewhat cheaper here, particularly considering the lower price of the finer grades of wool goods. However, a workman can purchase a better ready-made suit of clothes in the United States for from \$10 to \$15 than he can purchase for the same amount in this country. An ordinary business suit of tweed costs, when made by a local tailor, from \$20 to \$25, and I am quite sure than an article of clothing as good and as well fitting can be obtained from an American tailor at about the same price.

CONDITIONS OF LABOR.

Taking all these facts into consideration, concerning the condition of labor here as compared with labor in the United States, one may say that labor here has not reached the degree of prosperity that labor has reached in the United States, nor in any way approaching thereto. A great deal has been done and is being done in the way of organizing labor, and this will undoubtedly result in much good for the laboring classes here. Their condition is much better than it was a few years ago, and it is tending to constant amelioration as regards wages, but this condition can not be compared with that of the laborer in the United States, and when the cost of living for laborers in Europe is compared with the cost of living in the United States the fact should be taken into consideration that the laborer of Europe does not live as well as the laborer in the United States, nor are his requirements as many.

Many things are considered necessities to the laborer in the United States which would be luxuries to the laborer of Europe. In Europe the laborer expends much less than in America, and in spite of this lives comparatively happy, because he does not know or feel the need of all that enters into the daily life of the American laborer. The wages here do not permit of extravagance, and comparison of the condition of the laborer here and in the United States can not be made without coming to the conclusion that the laborer in the United States lives much better than here. Everything in the line of necessities for living comes high in Europe; the only commodity that is really cheap here is the price of labor.

The Vreeland Currency Bill.

SPEECH

OF

HON. GILBERT N. HAUGEN,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 14, 1908,

On the bill (H. R. 21871) to amend the national banking laws.

Mr. HAUGEN said:

Mr. SPEAKER: If I understand the situation correctly and what is desired, then this Congress, at this session, should provide for an emergency currency, in order to forestall a recurrence of a money stringency such as we had last October. The contention is that \$250,000,000 to \$300,000,000 additional currency is needed at certain times every year, or at the time of moving crops.

Personally, I favor an emergency currency; a currency available in times of emergency; a currency available to move our crops; an elastic currency; a currency that will expand and contract and that will adjust itself to existing conditions; a currency not in the interests of banks, nor for a few, but in the interest of and for the benefit of all the people, and that will meet all worthy and legitimate demands. In other words, a real emergency currency; a currency backed up by sound, unquestionable securities, guaranteed by the borrower, carefully scrutinized and accepted by some person or persons competent to pass on the paper offered as security. Not a money to accommodate the wild speculator or to finance wild-cat speculation; not cheap additional currency or a currency to be loaned at a low rate of interest, and so plentiful as to avoid money becoming tight under any circumstances or conditions. As long as we have speculation and money is loaned for speculative purposes, money will become tight under any system, regardless of the amount in circulation.

In my opinion the results desired can best be obtained under the taxing system, giving authority to somebody, possibly the Secretary of the Treasury, to issue an emergency currency, backed up by undoubted security, taxing it to such an extent as to make it self-retiring under normal conditions. Money is worth from 5 to 8 per cent under normal conditions, and, in my opinion, the tax should be 7 or 8 per cent. Authority should also be given to somebody, as is provided in this bill, to raise the rate if, in his judgment, he thinks it necessary to accomplish the results desired. All legislation along this line should be with one object in view, and that to provide an adequate additional currency to be used in times of stringency only. In

the brief time I have I want to call attention to one objection to this bill, and that is that the rate of interest fixed on the emergency currency is too low. If the interest is to be only 4 per cent, and if the currency is to be issued at the will of the Secretary of the Treasury, in view of the speculative tendencies that now exist, in order to accommodate and meet the demands that are sure to be made on the Secretary for this money at this cheap rate of interest, judging from the accommodations that have been extended in the past, I take it that accommodations will be extended freely hereafter and that, in the judgment of the Secretary, business conditions, at least in some localities, will warrant him issuing currency at any time. If so, this 4 per cent currency will be called for whenever and wherever it can be used at a profit; and, as a general thing, 4 per cent money can be loaned at a profit at all times in most parts of this country; and the danger is that with existing speculative tendencies this additional currency will be called for, issued, and used under normal conditions, and whenever a panic comes a part, if not all, of the money will already be in circulation and not available in times of emergency. As a result we will have an additional currency to be loaned at a low rate of interest and not an emergency currency.

The currency as provided for in this bill is on a par with a deposit at 4 per cent; and, as you know, many banks of this country are only too glad to accept money on deposit at 4 per cent, and some pay even a higher rate. Nobody can forecast the amount of currency that may be called for at this low rate of interest under normal conditions or what the judgment of the Secretary will be as to business conditions or the amount that will be available when the panic comes.

I fear that in times of a stringency we will find that much of this currency, if not all of it, has already been put into circulation and very little of it available as an emergency currency or in time of need.

But, Mr. Speaker, the bill has been improved in many respects, and while the rate of interest, in my judgment, should be higher, it has, however, been increased indirectly by requiring a reserve, which, in effect, is the same thing, only that it does not go far enough.

In conclusion let me say that while the bill in all its details does not meet my views, I believe it is a commendable measure. I fully realize the importance of immediate and remedial currency legislation; and with the varied views and interests, I of course appreciate that concessions will have to be made if any legislation is to be had at all; and, taking everything into consideration, I will most cheerfully vote for the bill.

The Colored Vote.

SPEECH

OF

HON. EDWARD L. TAYLOR, JR.,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. TAYLOR of Ohio said:

Mr. SPEAKER: In a speech in this House on the 13th of February last the gentleman from Illinois [Mr. RAINEY] amused us by going into a political trance and uttering prophecies. He promised the minority, hungry for power and office for so many years, that rescue was at hand for the Democratic party by reason of the fact of the defection from the Republican party of the colored vote. The gentleman from Illinois seems to have been, for the time being, in a condition truly telepathic. He vibrated with the forlorn hope of his party throughout the country as the wireless apparatus responds to the distant call of another station. Casting about for the voting strength that is to pick up the fallen, battered minority, set it upon the symbolic donkey that serves for the fitting emblem, Democracy has picked upon the negro, whom it has oppressed, abused, and disfranchised, to perform that office.

The Democratic party, like a man in his dotage, is searching among signs and omens for the promise of a future which the facts refuse. Battered and broken by the hard blows of successive defeats, barren of real issues, it turns its dim eyes toward the sky for signs and portents, and hanging breathlessly over the greasy cards of the fortune teller, it feels excitement thrill it as it listens to the clairvoyant's tale of a dark man coming to cross its path and restore its lost success.

Democracy is enjoying a second childhood. We smile when the child seeks for the pot of gold at the rainbow's end, but it is pathetic to see grandmother, with equal faith, join in the search. Playing with dolls is childhood's prerogative, but old age, clutching a rag baby to its breast, only inspires hope for a welcome release.

In twelve years Democracy has twice appealed for support on a promise to overthrow business, and once, on the assurance that it had become safe and sane, and nominated a judge. The country rejected the revolution and distrusted the sudden conversion to sanity. Now, approaching a fourth national campaign, the "party of uncertainty" is quivering in a quagmire of doubts and fears. Even the man who has made running for the Presidency a profitable livelihood—the perennial candidate of peerless rhetoric—is hanging from a cross of doubt and sweating anxiety under a crown of cruel suspicions. "An issue! An issue! The Commoner for an issue!" he cries. First he said the country must own and operate its railroads, but the country spoke up so sharply about it that a miracle was wrought. For almost ten days silence hung over Lincoln, Nebr. To the chagrin of many Members on that side of the House, this attack of lockjaw was a slight one. When he recovered his voice, however, this self-constituted Moses of the Democratic tribes wandering in the wilderness was chary of handing down any more law. The tribes had lost faith in his inspiration. He has since then adopted the cautious plan of indorsing the policy and acts of a great Republican President.

Every expedient is being tried, Mr. Speaker, every new trick and every old one, to make the rusty, creaking, and groaning Democratic machine fit for a flight this fall. Like certain people who have been experimenting with flying machines, the Democratic leaders dare reject nothing and dare adopt nothing. The plan proposed may be the suggestion of a crank or a scientist; the only sure test is the attempt to fly; the first sign of failure is when the machine and operator hit the ground, and, sore from disastrous and repeated bumps, they dread that drop this fall.

With defeat staring it in the face, without a real and virile issue except those embodied in the "Peerless One," Democracy is preparing for the conflict in expectation of winning with the votes of negroes in the North and without the votes of negroes in the South. And this delusion, Mr. Speaker, is the crowning climax of political clowning. The negro, disfranchised in the South by the Democratic party, is expected to swing Republican States of the North into the power of his oppressors. From the days of its birth this party has not only halted its boasted Democracy at the color line, but bragged about it.

The gentleman from Illinois [Mr. RAINEY], who gave us his trance reading, woke up long enough to express his real sentiments and those of his side when he said:

The Democratic party is the white man's party in this country, in the North as well as in the South.

And after this boast, in the CONGRESSIONAL RECORD, is written, "Applause on the Democratic side." The gentleman from Illinois added, after this applause had subsided:

We have been able to make it a white man's party in the past, and we do not care how long it remains a white man's party.

The methods by which the Democratic colleagues of the gentleman from Illinois [Mr. RAINEY] have made theirs "the white man's party" hold out a glowing future to the negroes of the North as a reward for voting for a Democratic national administration. Where the population is largely negro, the party of which the gentleman from Illinois [Mr. RAINEY] is so proud, has made not only the party white, but the law white. Citizens of the United States have been kept from the ballot box by methods peculiar to a party which has always quoted Thomas Jefferson on the equality of man—in the North—begged permission of labor to be its champion—in the North—and generally cried out about the woes of the masses and the rights of citizenship in the poorest and humblest—but always in the North.

In the district of the distinguished leader of the minority, the Eighth Mississippi, Yazoo County, the home of this gentleman, has a population of which 77 per cent are negroes. Hinds County has 75 per cent negro population and Madison County 77.8 per cent. These are three of fifty-five counties in the United States whose population was at the last census in 1900 at least 75 per cent negro. As the average throughout Mississippi, according to the same census, shows 58.5 per cent of the population to be negroes, the other two counties of the five composing this district are presumably of a similar complexion. The exponent of a majority rule on the stump and a minority rule in this House does not permit the race which

he hopes will materially aid in electing his presidential candidate to have a voice in his own Congressional campaigns. According to his modest autobiography in successive editions of the Congressional Directory he was elected by 1,433 votes to the Fifty-eighth Congress, by 4,934 votes to the Fifty-ninth Congress, and he modestly omits the election returns of his last campaign, contenting himself with the statement that he was "reelected to the Sixtieth Congress, receiving all the votes cast." Returns from this and other Mississippi districts, where they have been grudgingly made public, show that the votes cast cover a very select classification in this stronghold of a party that talks so much about the "people's rights."

The colleague of the distinguished minority leader from the Third Mississippi District [Mr. HUMPHREYS] was elected by 1,540 votes to the present Congress. His district has a population of 232,174. The gentleman from the Third Mississippi District also notes in his Congressional Directory biography that he was elected "without opposition." This "without opposition" expression is used generally by Members from this State in explanation of the small and scattered election returns which are their credentials of membership in this House. The election returns for the State of Mississippi show that there were cast in each district the following votes:

First.....	2,563
Second.....	2,567
Third.....	1,540
Fourth.....	2,536
Fifth.....	2,782
Sixth.....	4,250
Seventh.....	1,933
Eighth. No returns.	
Total.....	18,171

We are therefore safe in estimating that the entire vote for all Members of Congress from the State of Mississippi did not exceed 20,000. The smallest population of any of these districts is 158,643, in the Seventh District, and the largest 239,653, in the Second District. The explanation "without opposition," which is advanced by these gentlemen, does not altogether explain to the citizens of the North, where the qualified electors are permitted to exercise their suffrage, the small vote cast in the last Mississippi Congressional election. My distinguished colleague from the Thirty-first Ohio District [Mr. BURTON] has been accorded the honor of reelection without opposition from the Democratic party to the Fifty-ninth and Sixtieth Congresses. Nevertheless, with a population of 255,510 in his district, he received 20,826 votes. The pro forma opposition from the Socialistic and Prohibition parties secured 1,596 votes, about as many as is sufficient to elect a Democratic Member of Congress from the State of Mississippi.

It is not because his vote is so small as to be insignificant that the negro in the North, where the Republican party is dominant, is permitted to exercise his constitutional rights as a citizen. It is because that party respects the Constitution which has guaranteed those rights to the negro, and he is entitled to use them in any way he pleases along the lines of good citizenship. Ohio has a negro vote of more than 30,000, sufficient to turn the tide in many close-fought political battles in that State. There are several Ohio districts where the negro vote is large enough to be counted the balance of power between closely drawn party lines.

The negro is entitled to use his right of suffrage according to the dictates of his own conscience and cast his vote for or against any party or any candidate without let or hindrance. Fair treatment and an opportunity for education and advancement given to the negro result in an intelligent use of that most sacred right granted to every citizen of the United States. The fact that the great majority of negroes have at all times voted the Republican ticket is only another evidence of their good sense, judgment, and intelligence in recognizing in which direction their best interests lie.

The intelligent negro of the North does not worship false gods. He is thoroughly familiar with the unfortunate condition of the colored man in the South. He knows that at heart the leaders of the Democratic party do not wish his association in politics, but only hope to use him and to disgruntle him against the Republican party in order that they may, without benefit to him, be elevated into power. It does not need the declaration of the gentleman from Illinois [Mr. RAINEY] that the Democratic party is a "white man's party" to convince them that their interests and future welfare lie in the hands of the Republican party and its patriotic electors.

Who is this citizen whom Mr. RAINEY and his colleagues find so obnoxious who is not permitted to vote in the South? Can they not for a moment cease in hunting isolated cases where criminal negroes have committed grave outrages and look to

the broad development of the negro as a race? What has he done to earn his citizenship?

Education for the negro began with the emancipation proclamation. The illiteracy of the whole race, which may be admitted to have been total at emancipation, has been reduced to 44.5 per cent when the last census was taken. In the ten years from 1890 to 1900 it had been reduced from 57.1 per cent to 44.5 per cent, and in Ohio, where the first steps to educate the negro were taken, there was but 17.9 per cent of negro illiteracy when the last census was taken. Italy to-day has 38 per cent of illiteracy; Spain, 68 per cent, and Portugal, 79.2 per cent. These are white countries with centuries of civilization behind them. There are 40,000 negro students in higher institutions of learning, pursuing all branches from trade to classical and scientific courses. Forty thousand colored youth have graduated from secondary institutions of learning, and 4,000 from colleges. The race has developed 30,000 teachers, more than 16,000 clergymen, 4,000 musicians, more than 2,000 actors and showmen, more than 1,700 physicians and surgeons, about 1,000 lawyers, 300 journalists, 250 dentists, 236 artists and art teachers, 100 literary persons, 120 civil engineers and surveyors, 82 bankers and brokers, and 52 architects. It has about 200 institutions for higher education in the United States. In 1904 it owned property amounting to \$1,100,000,000. It operates 746,715 farms and owns 187,797 farms, or 25 per cent of the total. It rents 557,174 farms, or 74.6 per cent of the total. This is not a bad showing for a race which gentlemen of the minority have declared unfit to exercise its citizenship, and which they claim to be a purchasable quantity when it comes to exercise its suffrage.

In 1900 the farm property belonging to negroes was valued at \$200,000,000, almost \$300 for each negro family. In the State of Georgia in 1901 the negro owned 1,200,000 acres of land with an assessed valuation of \$15,269,181. The auditor of the State of Virginia, in his report for 1904, says that the colored people increased the value of their property in one year \$1,054,626, making the value in that year of their total property \$19,554,884. The average size of the negro's farm is 51.8 acres, and of the total acreage over 66 per cent was improved. More than one-fourth of all the farms in the South are operated by negroes.

It is an acknowledged fact that the real backbone of our country is agriculture. The negro has recognized this fact, and more than 2,000,000 are engaged in agricultural pursuits. Nearly 1,500,000 are engaged in domestic and personal service, 275,000 are engaged in manufacturing and mechanical pursuits, and 47,324 are engaged in professional pursuits. The negro has 20,000 churches, valued at many millions of dollars.

What is there in the progress of the negro that gives rise to unfavorable comparison with the progress of any people similarly situated? He has, from the time he was given the right to use his talents according to his own bent, endeavored to be, and has been, self-supporting and progressive. Those who were endowed with the best talents have progressed to the higher branches of business and professional life. Those who were not so well endowed have sought agricultural and mechanical pursuits, and their progress has been steady in the direction of independence and good citizenship. No class of men where the right of suffrage has been given to it, has cherished more effectually that privilege or used it more patriotically. Compare the negro with the Russian peasant, freed but a few years before, and his progress has been remarkable as compared to the down-trodden white serfs of the Russian Empire. With all, the negro has never demanded that which he was not entitled to. He has asked that he be given an opportunity to develop and become a good citizen. Where that opportunity has been given him he has taken advantage of it and is a good citizen. There are bad negroes by the same rule that there are bad white men. There are vicious negroes for the same reason that there are vicious white men, but the great majority of both whites and negroes are respectable and law-abiding. A creditable showing, truly, particularly if we take into consideration that the negro has had only a few score years of civil rights and the white man has always been free to develop his talents and advance his boasted civilization.

The gentleman from Illinois [Mr. RAINEY] in his speech on February 13 makes the following statement, referring to Senator FORAKER:

There is only one man in the Republican party who is spoken of as a candidate who really represents anything, and he represents money and negroes.

Further along he says:

You must take care of the negro vote and you can't do it when you turn down FORAKER. If you turn him down, if you do not nomi-

nate him—and he is the only man who is making a real fight for anything except the nomination—it will be necessary for you to buy every negro north of the Mason and Dixon line in order to get them to vote the Republican ticket.

And further:

The Republican party making a campaign without money and without negroes would present a pitiable spectacle in this country. [Applause on the Democratic side.]

Referring, for a moment, to that portion of the speech of the gentleman from Illinois [Mr. RAINEY] in which he not only casts reflections upon the splendid character and purposes of the senior Senator from Ohio [Mr. FORAKER], and in which he also characterizes every negro north of the Mason and Dixon line as being a purchasable quantity, and glories in the fact that he belongs to the national Democratic party, because it is a "white man's party" and always will be, let me say that I am equally proud of the fact that the Republican party is not a "white man's party," but is a party composed of American citizens regardless of nationality or color. It is a party that believes that the principles of the Constitution of the United States should be as potent south of the Mason and Dixon line as it is north of that imaginary line. It believes that every section of the Constitution should be inviolate and in no sense ignored. It stands for human rights and insists that the guaranty of civil and political rights given to every male citizen of this country 21 years of age shall apply to a negro as well as to a white man. It is the party of Abraham Lincoln, of Grant, of Garfield, and McKinley, and just as they stood for human rights and political liberty, so will it continue to stand, and I prophesy that at no far distant time those States which deprive certain of their citizens of those rights will be compelled to recognize the fundamental and organic law of our land as it was meant to be recognized by the patriots who drafted it.

Good Roads.

SPEECH

OF

HON. WILLIAM C. LOVERING,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. LOVERING said:

Mr. SPEAKER: The question of the improvement of the public roads of the country is rapidly becoming one of national importance. The urgent necessity for a radical change in our methods of highway construction, improvement, and maintenance is generally admitted, and in recent years public sentiment is strongly inclining toward the proposition that the National Government should give its cooperation and financial assistance in this matter with a view to the establishment of a complete system of properly constructed roads in all sections of the United States.

I have reached the conclusion that this is a subject in regard to which Congress must sooner or later legislate, and I believe that it is high time that the question of national aid for public road improvement should be taken up by this House for serious consideration. I am fully aware of the objections urged against the assumption by the Federal Government of another public function, but I can see no logical reason why the arguments in favor of national improvement of our waterways should not equally apply to the improvement of our highways. If appropriations for the former are justified because of the importance of our waterways to trade and commerce, it would seem clear that in view of the relatively greater importance of our highways to every productive and industrial interest of the country appropriations for the improvement of the latter are even more urgently desirable.

I followed with interest the recent discussion of this subject on this floor, which showed that while the Representatives may not be agreed upon a definite plan for Federal aid, there appears to be a preponderant sentiment favorable to the enactment of legislation of some kind for assisting in the work of public highway improvement. If, as seems to be the case, a majority of the Members of this House favors action by Congress for this purpose, the working out of a practicable method for national aid is the problem which must be satisfactorily solved before any further progress can be made.

Various propositions have been submitted in the numerous bills relating to this subject introduced at the present session. Without criticising these measures in detail, I may say that, in general, they make the appropriations provided for in aid

of public road improvement contingent upon appropriations of like amounts by the different States. I am inclined to believe that this feature of the bills is unwise, and that if Congress is to make appropriations for this purpose the expenditure of these appropriations should not be limited to such States as may appropriate equal amounts. In practical operation the provision that the respective States should receive an amount equal to that appropriated by them for road improvement would enable a few States to secure the greater part of the entire national appropriation.

Thus we were told by the gentleman from New York [Mr. PAYNE] that his State has voted the large amount of \$50,000,000 for the construction and maintenance of improved roads. Under the conditions proposed in the bills to which I have referred the State of New York would be entitled to receive \$50,000,000 out of the appropriations made by Congress, or practically all of the appropriations called for in these measures. It can therefore easily be seen that some other method of distributing the funds voted for this purpose must be devised.

In this connection I wish to refer briefly to the remarks of the gentleman from New York in opposition to the proposal for Federal aid. The gentleman told us that he was opposed to Federal aid for road improvement in any form, and that he would continue to oppose legislation for this purpose, no matter what the granges or the farmers in his district might favor. National aid for highway improvement, he told us, is paternalism. And he claimed that the people of his State did not want Federal aid, but were themselves issuing \$50,000,000 of bonds to build good roads.

I am not dismayed by the cry of "paternalism." Whenever a proposition for progressive legislation in the interest of the whole country is made on the floor of this House it is met with the same old epithet—"paternalism." Our rural free-delivery system was opposed as paternalism. Our law taxing oleomargarine was also said to be paternalistic. The enactment of laws prohibiting railways from granting rebates was said to be more paternalism. And it has grown to be the custom for honorable gentlemen who can say nothing else against a measure advocated in the public interest to crush it under that dreadful sounding word "paternalism."

Mr. Speaker, I am one of those who agree with President Eliot, of Harvard University, and with the honorable Secretary of State that the inevitable tendency of events is toward the assumption of additional functions by the National Government. I believe that the question as to the matters on which Congress should legislate, outside of constitutional limitations, is one to be decided wholly upon the merits of each question. And I believe that the day has gone by when any subject can be summarily tagged "paternalism" and thereby be scornfully dismissed.

I should like to ask the gentleman from New York if it is paternalism for the National Government to devote money raised by taxing the people of the whole country to the improvement of our navigable rivers, harbors, and so forth? If so, why does he continue to vote large appropriations for these purposes? If not, wherein lies the difference between the national improvement of public waterways and of public highways? The honorable gentleman may reply that our public road system is one that concerns only the localities in which these roads are situated. But, if that is true, why does his State of New York vote to expend \$50,000,000 for better roads? Why should the paternalistic legislature at Albany appropriate funds for Cayuga, Ontario, Wayne, and Yates counties? Why should not every township or farming community in the State of New York be left to construct, improve, or maintain its own roads?

The same questions might be asked in regard to river and harbor improvement. Certain of the older and wealthier States could undoubtedly attend to the maintenance of light-houses, the dredging of rivers and harbors, and other work now performed by the National Government within their borders. But I am sure that, taking the country as a whole, this work is better done under the present Federal system than if it were relegated to the States directly concerned.

The gentleman from New York says that his State does not ask for Federal aid for road improvement. I have looked over the daily list of petitions appearing in the CONGRESSIONAL RECORD and find that there are more petitions from the farmers and other citizens of that State in favor of national aid than from any other State in the country. Nor is the sentiment in favor of action by Congress adequately represented by these petitions. Every Member of this House knows that where one farmer takes the trouble to write to his Representative in favor of any desired legislation there are hundreds who are quite as strongly in favor who do not write. So that from the remarks of vari-

ous Representatives who have referred to the letters and petitions received by them in favor of legislation on this subject, I think it is plainly evident that the farmers of the country are practically unanimous in desiring action by Congress and that they want that action taken as promptly as possible.

Honorable gentlemen have raised the question of the power of Congress to make appropriations for the construction or improvement of the public highways. I have read the decisions of the Supreme Court of the United States bearing on this question, and am satisfied that under the power to regulate commerce between the States Congress can enact legislation for this purpose. The right to construct interstate public roads was exercised at the beginning of the nation's existence, and legislation providing for such roads was enacted, as recently stated on this floor by the gentleman from Alabama [Mr. UNDERWOOD], by the Third Congress, which included in its membership Representatives who had taken part in drafting the Constitution. If it is said that this is merely the right to construct interstate highways I would submit that under the decision of the Supreme Court in the case of *Miller v. The Mayor of New York*, in which it was held that the United States had power to preserve or improve navigable waters wholly within a State, provided those waters connected with other waters forming a channel for commerce among the States, Congress has power to make appropriations for any public roads which connect with, or lead into, any interstate highway.

Congress has in the past appropriated hundreds of millions of dollars, in the form of donations of public lands and other subsidies, to privately owned railway corporations. If it is constitutional to give away public funds to private corporations it surely should be constitutional to devote a part of these funds to a public purpose that will benefit the people of the country as a whole.

The problem of establishing a satisfactory public-road system throughout the whole country is one requiring earnest and intelligent study. I believe that the solution of this problem will be found in the creation of a National Highways Commission, under whose auspices a staff of trained road engineers would cooperate with the township, county, and State road authorities in the work of constructing improved roads, thus placing this work on a scientific basis. To enable this Commission to carry on its work on a proper scale liberal appropriations should be made by Congress, these appropriations to be expended in co-operation with the State officials having charge of the public roads.

The benefits which would result from the enactment of this legislation can not be overestimated. It is not merely that the appropriation of certain amounts for road improvement would aid in the construction of better roads in the sections of the country where they are most needed. Much more important is the fact that the National Highways Commission would be a central authoritative body, which would bring order out of the existing chaotic conditions, and substitute a scientific policy of road construction for the haphazard methods which now prevail to so large an extent.

The splendid public road system of France, acknowledged to be the best in the world, is mainly due to the fact that the construction and maintenance of the principal roads is under the supervision of the National Government, whose staff of expert engineers receive a special training in the College of Roads and Bridges.

The enactment by Congress of legislation creating a National Highways Commission, and making suitable appropriations for its work, will inaugurate a national policy of road construction and improvement that will ultimately result in giving the entire country a system of permanent public highways, constructed after the most scientific methods under the joint supervision of that Commission and the various township, county, and State authorities. The engineers and construction staff of the Commission, and the appropriations made by Congress will be available for aiding in the improvement of roads in every part of the country, and the roads so improved will be a constant inducement to each community to cooperate in making our road system what the wealth and intelligence of our people entitle us to have—the best in the world.

[From The National Grange.]
FRENCH V. AMERICAN ROADS.

A recent official report from Consul-General R. P. Skinner, of Marseille, France, gives some highly important information regarding the public roads of that country. As is generally known, France has the best and most complete road system in the world, and its splendid public highways fill with envy and admiration all foreigners, particularly those from the United States, where the roads in general are about the worst in any country professing to be civilized.

The superiority of the French road system is stated by Consul-General Skinner to be due to the fact that the construction and maintenance of the principal roads is carried on under the supervision of a corps of experts in road construction, who find in their profession

opportunities for advancement and distinction such as could not and good, not because of any superiority of road-making material, nor because the French people possess any special talent for road building, but because the initiative in matters pertaining to the public highways is taken by highly trained engineers and administrators, under the direction of the National Government.

All the principal French highways, or "national routes," of which there are 23,656 miles, are constructed and maintained by the National Government, which has expended on them over \$300,000,000. The superiority of these roads over those constructed or maintained by the local authorities is very marked, but even the local roads are kept in good condition, so that the standard French road is one upon which in a rolling country a draft horse hauling a load of 3,300 pounds is expected to travel about 20 miles per day. This fact alone will serve to indicate the difference between the roads in France and those of the United States, where the load hauled by one horse over the average level country road is only 1,400 pounds, and on roads with 5 per cent grades only 1,000 pounds.

The basis of the French highway system is the School of Bridges and Roads, one of the finest technical colleges in the world, where engineers are trained for positions in the public road administrative system. These engineers cooperate with the local authorities, and the result is that there is available for the work of road construction an effective body of competent administrators, whose influence extends throughout the whole country.

A beginning has been made in a small way in this country by the Bureau of Public Roads of the United States Department of Agriculture, to introduce the methods by which the French road system has been so satisfactorily developed. The organization of this Bureau, and funds at its disposal, are, however, wholly inadequate. What is needed is a National Highways Commission which shall have general powers to promote the construction and improvement of the public roads, and for which liberal appropriations should be made by Congress. The National Government's cooperation in this matter will greatly stimulate action by the various State, county, and township authorities, and will result in the establishment of a complete system of properly constructed roads, rivaling those of France, in all sections of the country.

Resolution Adopted by the Polish Citizens of Winona, Minn.

SPEECH

OF

HON. JAMES A. TAWNEY,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. TAWNEY said:

Mr. SPEAKER: In the district which I have the honor to represent in this House there are a great many Polish citizens. They have manifested a great deal of interest in the unjust treatment which the Poles of the Prussian Government have accorded to their nationality and to their friends and relatives whom they have left behind and who continue to reside under the Prussian Government.

I recently received a preamble and resolutions adopted by the Polish citizens of Winona, Minn., where I reside, at a mass meeting held May 3, 1908. This preamble and resolutions urge upon Congress favorable action upon the resolutions introduced at the session by the Hon. A. L. BATES, of Pennsylvania. So far this session I have had no opportunity to have these resolutions printed in the RECORD without unanimous consent, which consent could not be obtained. I now avail myself of the opportunity of printing the same, under the resolution adopted by the House giving Members permission to print matters of this kind, together with the letter to me of the Rev. J. Pacholski, who prepared the resolutions and transmitted them to me:

WINONA, May 4, 1908.

The Hon. JAMES A. TAWNEY,
House of Representatives, Washington, D. C.

HONORABLE SIR: You will find inclosed a copy of resolutions we have felt called upon to adopt against the now famous new Prussian laws, regarding the Poles in Prussia. Please kindly consider our humble request and help to pass Mr. BATES's resolution. Any favor you will bestow upon us in this matter will be thankfully received and gratefully remembered by the Poles of Winona.

Yours, very respectfully,

REV. J. PACHOLSKI.

Resolutions adopted by the Polish citizens of Winona, Minn., at a mass meeting held May 3, 1908.

Whereas it is a well-known historical fact that the Poles have always been a peaceful and liberty-loving nation, and that, keeping pace with the western civilization of Europe, they have been and are to-day contributing their share to the universal progress of the world, although they have lost their political freedom more than a century ago; and

Whereas one part of Poland, through the treacherous machinations of her jealous neighbors—Russia, Prussia, and Austria—has become a province of Prussia, yet, under the provisions and stipulations of the Congress of Vienna in 1815, has been assured by the oath of the King of Prussia forever the free use of the Polish language in private as well as in public life, and has been guaranteed equal rights with the rest of the subjects of the Prussian Kingdom; and

Whereas the Prussian Government, forgetful of the solemn oath of Frederick William III and of the reiterated promises of his successors for the last sixty years, but especially since the reign of Prince Bismarck, is unceasingly persecuting its Polish subjects and is causing its legislative body to pass exceptionally unjust laws against them, not-

withstanding their unquestionable willingness to discharge all their duties toward their sovereigns and their country; and

Whereas the persecution of the Poles by the Prussian Government reached its climax in the passage of new laws by the German Diet during its last session, aiming at a forcible expropriation of the Poles of their lands, which they and their forefathers held in undisturbed possession from times immemorial, and an utter prohibition of the use of the Polish language at public gatherings and in institutions of learning; and

Whereas the most profound and eminent men of all civilized nations, Germans not excepted, at the invitation of Henryk Sienkiewicz to pass their opinion on these outrageous laws, have unanimously condemned the Prussian Government for its unheard-of encroachments upon the rights of innocent, peaceful, and law-abiding citizens and for setting thereby a dangerous precedent, menacing the fundamental international law of private ownership; and

Whereas the Government of the United States has at all times proven itself to be a friend and protector of the unjustly oppressed, and may and will, we sincerely hope and believe, use its good offices to prevent the tortures which need must be the lot of the persecuted Poles in the Prussian provinces if the new laws be put into effect; and

Whereas we, the Polish citizens of Winona, Minn., having been at one time, almost without exception, subjects of the Prussian Government, and having at the present time living there our parents, brothers, and sisters, who will have to bear the humiliating and cruel effects of the new laws, feel more keenly than any other Polish colony in America the injustice of those laws; and

Whereas there is at present in Congress a resolution, introduced by the Hon. Mr. BATES, of Pennsylvania, expressing sympathy for the oppressed Poles, and pointing out to the German Government the perversity of its new laws: Therefore we, the Poles of the city of Winona, Minn., in mass meeting assembled, representing more than 4,000 citizens,

Resolved, That we hereby most cordially extend our unbounded sympathy to our relentlessly and unjustly persecuted brothers under the Prussian Government, and our admiration for their heroic perseverance in calmly and patiently bearing this persecution;

That we express our deepest indignation at the inhuman and unjust treatment of our brothers by the Prussian Government, and solemnly protest before the whole civilized world, and especially before the noble, liberty-loving nation of the United States, against the barbaric laws of Prussia of forcible expropriation and attempted extirpation of the Polish language;

That we earnestly request our Representative, the Hon. JAMES A. TAWNEY, to use his powerful influence in promoting the passage in Congress at its present session of the resolution now before Congress, offered by the Hon. Mr. BATES, of Pennsylvania;

That a copy of these resolutions be sent the Hon. JAMES A. TAWNEY, and

That the local daily papers be kindly asked by our committee to publish the same.

Duty on Wood Pulp and Print Paper.

REMARKS

OF

HON. GEORGE R. MALBY,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. MALBY said:

Mr. SPEAKER: I shall take advantage of the leave to print which the House has granted to present a comparatively brief and very comprehensive article, which appeared in the May Protectionist, upon the subject of the duty on wood pulp and print paper.

The article presents the arguments of those advocating the immediate removal of all duty, and answers them frankly, clearly, and forcibly. I shall not attempt to add to the article, but simply print it.

THE PROTECTION OF PULP AND PAPER—SOMETHING FOR REPUBLICAN EDITORS TO CONSIDER—AN ARRAY OF FACTS WHICH COMPLETELY OVERWHELM THE FREE-TRADE ARGUMENT.

Most Republican newspapers are advocates of protection, and they would like to have the policy equitable and fair to all interests. Most Democratic newspapers are advocates of free trade, and they are ever ready to break through the tariff wall whenever and wherever they can. The more they can make it a thing of favoritism, the sooner they hope to see the people reject it.

Recently there has been a renewal of the appeal to the self-interest of the press for a united opposition to the duties on wood pulp and ordinary news paper. For some years it was engineered by Mr. John Norris, of the New York Times, and Mr. Seitz, of the New York World, but it is now worked by Mr. Herman Ridder, of the Staats-Zeitung, all free traders. They have formed or gained control of the American Newspaper Publishers' Association. The association embraces but a small proportion of American publishers, but doubtless the statesman who does not look into the subject gains an impression that it speaks for all.

The scheme is based upon the old policy of Cobden to "divide and conquer." It is an appeal to class interest, and its alleged arguments are a tissue of falsehoods. In proof of this we will quote from an editorial in the Staats-Zeitung of March 16, and will refute its errors by authentic facts.

1. "The tariff is the father of trusts."

Why, then, was free-trade Great Britain covered with trusts before they were formed in the United States? Professor Sumner, of Yale, a high authority on free trade, says "Trusts, department stores, railroad consolidations, bank unions, are cases of a general development in the mode of industrial organization," and President Schurman, of Cornell, says "Consolidation is the tendency of the age, and it is

for the public interest when publicly supervised and controlled." Richard Olney, the ablest member in President Cleveland's Cabinet, says: "Among the weapons which industrial competition has developed is what is popularly known as the 'trust,' and the trust has earned the right to be regarded as an economic evolution." He refers to it as a favorite theme of denunciation by "political demagogues," and Mr. Ridder is entitled to this designation by a leader of his party.

2. "It was only through the eager exertions of a clique of captains of industry that the prohibitory duty was put on paper."

The duty was 30 per cent under the free-trade Walker tariff of 1846, and is only 15 per cent now, which is the same as in the Wilson tariff. If there was a conspiracy of captains they were of Mr. Ridder's party. Pulp wood is admitted free. In 1907 nearly \$8,000,000 worth of pulp was imported from Europe and Canada. The imports of wood pulp in 1905 increased 103 per cent in quantity and 87 per cent in value over those of 1900. The imports of paper increased in the same time from three millions to five millions in value. All this shows anything but prohibitory duties.

3. "The paper monopoly was created by the tariff and has been maintained by it to the present day."

The 1905 census shows that the number of paper and wood pulp establishments then in the country was 761, a gain of 12 over 1890; that their capital was \$277,000,000, against \$90,000,000 in 1890; that their employees numbered 66,000, against 31,000 in 1890; that the cost of materials used was \$111,000,000, against \$44,000,000 in 1890, and that the value of their product was \$189,000,000, against \$79,000,000 in 1890. The quantity of news paper produced in 1900 was 569,212 tons, and in 1905 it was 912,822 tons, a gain of 57 per cent in five years. While it is true that several large companies own numerous mills, they compete sharply with each other, and there are many independent mills which also compete. The great and almost steady decline in the price of news paper for thirty-years is a strong proof that consolidation has economized the cost of production, and that there is competition.

4. "The price of paper is to-day higher than ever."

The price of news-print paper fell from \$200 a ton to about \$40 in thirty years before 1890. It has risen since owing to the increase of 30 per cent in wages and 100 per cent in wood (see census of 1905), but according to the index number of the Department of Commerce and Labor the advance in the cost of news print from 1890 to 1906 was only from 69.09 to 73.02, while the advance in all commodities was from 101.7 to 122.4. The quotations of the Paper Trade Journal show that the price fell from \$4.75 per 100 pounds in January, 1890, to \$2.50 in 1900, which was after the International Paper Company was formed, and declined to \$1.90 in 1906, but then rose to \$2 in 1907. The highest price in 1908 has been \$2.62. These figures show that even at the highest the price has not advanced equally with the prices of labor and material, and nowhere near those of commodities in general. Probably there is hardly another article in general use which has declined so much in price from 1878 to 1908 as news paper, while it has improved much in quality.

5. "The laborer has not been benefited by this duty."

Having already shown the great growth in the industry, it follows that many more people have been employed. The Journal of the International Brotherhood of Pulp, Sulphite, and Paper Mill Workers, for March, 1908, says: "During the last fifteen years, we are glad to say, we have received an increase in the average wages of paper and pulp mill employees of 30 per cent, while the average hours have been shortened 8 per cent. In 1905 the wages paid were over \$32,000,000, which amounts to over \$10 per ton of paper made. Furthermore, there is a large amount of American labor employed in getting out pulp wood. This is estimated at \$6 per ton of paper, making the total labor employed in making a ton of news paper not less than \$15. It has been estimated that considering the labor that goes into the other raw materials, and the transportation, not less than two-thirds of all the money paid for a ton of news paper goes into the general wage fund of the country."

6. "The trust alone has derived advantage from the duty, as the dividends it has paid on its watered stock show."

None of the companies has paid dividends upon its common stock, and those on the preferred have averaged less than in other lines of manufacture. The market prices of the stocks and bonds show that the industry is not as profitable as many other industries.

7. "Prohibitive duty—robber tariff—legalized robbery, nothing else."

The average ad valorem duty on ground wood pulp is 12.26 per cent; on chemical pulp unbleached, 10.15; on chemical bleached, 9.88. These are among the lowest duties in the entire tariff. The statistical abstract of the United States gives the average on all dutiable articles in 1906 as 44.16 per cent, and on all imports (free and dutiable) as 24.22. Thus it is seen that the wood-pulp duties are less than one-quarter those of other dutiable products and less than one-half those which are reduced by a free list covering nearly one-half of all imports. Surely Mr. Ridder's case is the weakest yet made against any part of the Dingley tariff, and if we are to have protection at all on anything, paper and pulp can not fairly be excepted or discriminated against.

8. Consider the destruction which this monopoly has done in our forests and is still carrying on unpunished.

Undeniably there was some waste before the great companies were formed, but they early began to conserve their supply and to buy cheap lands for reforestation. The State forester of Maine reports that there is now as much timber being grown there as is being cut. This is true of Vermont and New York, and would be true of New Hampshire and the Northwestern States but for the less prudent cutting of the portable sawmill men. The pulp makers consume branches and also trees which have been killed by fire, and thus are great protectors of forests, and their rule is to cut no live trees smaller than 1 foot in diameter at the butt. The industry consumes only 1.6 per cent of the total timber consumption of the country. If pulp should now be admitted free of duty, either the price would be maintained and the Canadians and Norwegians would pocket the amount of the duty (which was the case when lumber was made free by the Wilson tariff), or else our pulp mills would be closed or the wages of their men cut by foreign competition. Then, if the duty on paper should be correspondingly reduced, as Mr. Ridder has persuaded President Roosevelt without hearing the other side to recommend, an industry which puts forth products worth \$200,000,000 a year would be so crippled that in some cases whole villages would be practically wiped out. Dispatches from Canada show that the President's recommendation is hailed with delight there, for the hope is that it will transfer a large part of our pulp and paper industry to that country. One thing is certain: Americans must prefer Americans and protection must be consistent, or piecemeal undermining will be followed by a grand collapse. Prosperity is in more danger from demagogism than it is from all other causes combined.

Supplementing this statement, and with the belief that the people of this country interested in the question of tariff on wood pulp and paper will also be interested in the views of the Canadian legislators, I append herewith the remarks of Hon. E. N. Lewis, M. P., in the Dominion parliament, at Ottawa, on March 11 last:

THE EXPORT OF PULP WOOD.

Mr. E. N. Lewis (West Huron) moved:
"That in the opinion of this house such an export duty should be placed on the export of pulp wood as will be sufficient to induce its manufacture into paper in Canada, and thus save to the labor of Canada the \$6,000,000 now lost."

He said: Mr. Speaker, my object in proposing this resolution is to bring to the notice of this house and of the government of Canada the question of the pulp-wood industry and of whether or not it is advisable for the government to take such steps as will encourage the manufacture of pulp wood into paper in this country, and thus save to the working people of Canada the many millions of dollars now lost to them.

President Roosevelt said recently in reference to the timber and pulp question:

"No other question of equal gravity is now before the nation."

Certainly for the United States this wood question has a dark look; but we in Canada have no desire for our cousins across the border to be without their daily paper. All we wish is that the product of our forests shall be manufactured in Canada and then shipped to them. With our help they must follow the views of a celebrated United States editor, of whom a brother journalist once said: "To him every cloud has a silver lining; if it has not, he's just the man to climb up and paint one on."

Earl Grey says:

"There are no more melancholy reflections than those suggested by the sight of a country once rich and supplied with all the majesty and panoply of power which has become a waste and stony desert through the reckless improvidence of its own people."

Sir Wilfrid Laurier not long ago said:

"We can calculate the number of years and the number is not very great when there will not be another tree of the original forest to be cut upon the limits of the Canadian lumberman."

We are told that the country to the south of us, once covered with a grand majestic forest, one of the main sources of wealth and power of that great nation, is now a dreary waste, a vast void, so to speak, and that such void will soon be duplicated in Canada.

Now, sir, I am an optimist, and I believe that no government of Canadians will be so lax as to allow such to occur here. I can see no dreary waste, no void for Canada.

Between optimist and pessimist the difference is droll.

"The optimist sees the doughnut, the pessimist sees the hole."

Manager Clouston, of the Bank of Montreal, says: "Canada is fast using up her timber resources." He calls a halt and urges action toward preserving the nation's wealth. The following from the pen of William Banks, Jr., the Globe envoy who made a special study of the pulp question on the spot, appeared in the Globe of July 11:

"In other words, Canada is furnishing to Wisconsin, New York, and other States of the Republic to the south, the raw material to be manufactured into goods which come into competition with the manufactures of this country in the markets of the world. What is Canada getting in return? Practically nothing. True, the land is left; there are also stumps of trees; a comparatively small amount is obtained for labor and transportation, and that is all; while around the American mills, whose hungry maws would have no food, or not enough to satisfy them, at any rate, were it not for the raw material furnished from the Canadian side, there are busy, thriving, and expanding communities. The Americans are taking pulp wood, while the sun shines, so to speak, and without being unkindly it would at least seem as though their attitude while they are so doing, is that of the man who smiles at his neighbor's uneasiness and occasionally puts his tongue in his cheek when the situation is made the subject of conversation."

I appear for the people as against the great corporations, both in Canada and across the border; but I regret to say that generally the people are handicapped, either by the lack of concerted action or the lack of funds from utilizing to the full the great power of the press.

The newspaper press is the great dominant and practically irresistible force in all great questions. The corporations realize this and hundreds of thousands of dollars are spent annually in promoting the corporation side of questions which affect them: railways, telephone companies, insurance companies, mining companies, fill to overflowing the advertising space of our prominent daily papers in the United States and Canada, and I ask, at whose expense?

It is naturally so, human nature is human nature, and papers must live, but again I ask, Mr. Speaker, Who pays for the full-page advertisements of those fine mining allurements "The Golden Dog" or the "Silver Fox," in which half the produce of the stock goes to the promoters and half to the newspapers? The development frequently goes minus and the shareholders ditto.

But, Mr. Speaker, I am glad to say that I have a subject now, a live subject and a vital one in which I feel sure the press will use its great influence solely on the side of the people, partly because it is the right side and partly because there is no other great question in which the press is so closely interested as the pulp-wood question.

For years we have grumbled because England made bad business arrangements for us with the United States. Now we have the opportunity to make our own bargain or laws in a vital issue affecting our national prosperity and future. Let us do so in a national manner, and in a way befitting a nation, not from a political or other point of view. Let us throw aside and reject all advice or pressure which may induce us to do or make a political deal. Joseph Clark, a well-known Canadian writer, said: "Canada has been mentioned in the dispatches, the United States high protectionist, as it is, has spoken. President Roosevelt in his message to Congress says: 'We are out of pulp wood, we supply the world with paper. I advise you, if possible, to make a bargain with Canada. Take off the United States duty on pulp wood, if Canada will agree not to impose an export duty.'"

And Mr. Clark further said: "There is one thing about these neighbors of ours, they always know what they want and why they want it." They barred out our pulp just as long as they had pulp of their own. Now they say: We are up against a paper famine, we already feel the pressure of it, the price of news paper has doubled. Don't do what we would do in your place. Do not force our paper mills to move to Canada; do not draw this vast industry to yourselves, feed your forests into our mills."

Statesmen at Washington have laughed until their sides ached when jurists of repute returned and told of the deals they had pulled off.

The United States Wall Street Journal says the International Paper Company, which controls over thirty mills, has in a little over a year acquired 1,255,000 acres more of timber limits, most of them in Canada. It is apparent that if the export of pulp wood from Canada were cut off the paper manufacturing of the United States would collapse.

You will notice, sir, that I am not forcing any opinion of my own on the House; I am simply stating facts and conclusions formed from those facts and giving opinions of gentlemen of experience and knowledge in the premises. Here are two statements, one from prominent political Quebec leaders, the other from a Congressman of the United States. Let me quote from the Gazette, March 6, 1908:

"The government congratulated themselves," Mr. Leblanc went on, "over their Crown land reports. It showed that 100,966 cords of pulp wood had been exported during the year. For this Canadians received \$6 per cord." The speaker asked his hearers to go to the directors of Canadian paper manufactories and find out that for every cord of pulp wood turned into paper in Canada Canadians received from \$48 to \$50, most of which meant wages for Canadian workmen."

The premier, Hon. Mr. Gouin, in reply, said:
"Hon. Mr. Leblanc had blamed the government for the exporting of the pulp wood, but the government was not to blame for that, as there was only one power that had the right to impose an export duty on pulp wood, and that was the federal administration. The premier thought it would be a good idea to have a commission to investigate this question and report whether a duty should be imposed."

Let me now quote what Mr. J. TIRRELL said in the Washington House of Representatives:

"If there are gentlemen on this floor who wish to see that industry wiped out, who wish to throw out of employment tens of thousands of American wage-earners and have them walking and moaning on the streets; if they wish to see the smoke and fires extinguished of the 108 mills now in the State of New York and the mills of the West, and the industry hampered so that it no longer becomes a factor in the commercial development of the country, then it is only necessary to wipe out the tariff on pulp and paper and give to Canada the power to pass prohibitive export laws and close all the mills of the United States!"

While, sir, pulp wood is a raw material of comparatively low value, it produces manufactured articles of high cost.

Millions upon millions of spruce logs, hundreds of thousands of cords of pulp wood, go yearly from Quebec, New Brunswick, and Nova Scotia to feed the pulp and paper mills of the Eastern, Middle, and Western States.

What does Canada get for this?

1. The government, not \$1 a cord.
2. The chopper, the loader, the river driver, the teamster, the peeler, not much more.

3. The railways a low rate on coarse freight. The whole result, \$6 or \$7 per cord left in Canada—I give a maximum figure; \$6 is absolute. Why, sir, they don't even allow us to carry the pulp wood in Canadian vessels. I have here a list of fourteen steamships carrying pulp wood last season from Quebec ports to Wisconsin ports, twelve of which are United States vessels and two Norwegian.

Now, I repeat again—\$6 or \$7 left in Canada for every cord of pulp wood leaving it. Watch, the value grows afterwards. Every cord of wood ground to pulp has a value of \$20. Every cord of wood made into fiber has a value of \$30 to \$32. Every cord of wood made into paper has a value of \$40 to \$45 and up. My resolution asks this government to take such action as will save to the labor men of Canada the \$6,000,000 lost annually. I firmly believe that \$20,000,000 would be nearer the mark. The United States shuts out our finished product, paper, but takes our crude product, pulp wood, makes it into paper, and undersells us in Europe with their surplus dump.

If the facts were properly placed before the farmer who has pulp wood for sale, he would see that he would be helped by an export duty more than anyone else. The sale would be just as great and more people would live in his neighborhood to use his other products and make his farm more valuable. If an export duty were to be put in force, sufficient mills could be removed to or built in Canada in eighteen months to supply the world.

The pulp and paper industry gives more healthy and steady day and night employment to a larger number of men and women at higher wages all the year round than any other industry in Canada.

We have no desire to prevent our American cousins having newspapers to read, but let them get our forests in the shape of the manufactured article. What happened when the Liberal government of Ontario restricted the export of saw logs? Sawmills started humming in all directions, factories followed; the United States sawmill men came over here, and we were glad to have them. We will welcome the paper manufacturers also. The leading pulp and paper journal of the United States asked a question of the trade as to the results of an export duty. One answer was:

"Would probably mean United States capital would cross the border and build mills; pay rolls would go to Canadian labor instead of United States."

Another answer was:
"It will simply build up the industry of Canada."

Now, let me give a few statistics on this subject. I would ask honorable members to bear in mind the difference between the wood pulp referred to in the first of these tables and wood for pulp.

The following figures show the value of wood pulp and wood sent to the United States for the year ending June 30, 1907:

Canadian wood pulp exported to United States, year ending	
June 30, 1907	\$3,230,272
Wood for pulp, 650,366 cords	2,792,751
Total	6,023,023

Now, according to United States Bulletin No. 80, pages 18 and 19, the value of paper per ton ranged in 1906 from \$41.61 for heavy wrapping to \$348.02 for fine Massachusetts. The tariff of 1887, which places a duty on Canadian pulp, contains this provision:

"If any country shall impose an export duty on pulp wood to the United States, the amount of such export duty shall be added as an additional duty to the duties herein imposed upon wood pulp imported from such country."

I say that is an insult to Canada, for that is aimed at us. I read the other day the remarks of a Congressman in the United States who prefaced one of his statements by saying, "If we allow Canada to do so." What right have they to "allow" Canada to do this or that? We are friendly to our neighbors and they to us, but why should we not

look after our own interest? My attention was drawn to this matter by a gentleman living in the United States and well acquainted with this business. He is a Canadian by birth and his feelings incline toward the flag under which he first lived. He told me that they were laughing at us over there.

Here is another object lesson: Japan imports 5,000,000 pounds of British paper and 8,500,000 of American paper—Canada is not mentioned. England imports \$28,369,075 worth of paper, principally from the United States. Where does she get her wood pulp? From Canada. Yet Canada is not mentioned. It has been stated in some of these documents from the United States that the paper and pulp mills in the United States number 1,200. Now, I have verified every statement I make here. I am not making a speech. I do not make speeches. I am putting in facts and trying to draw to them the attention of this House. Instead of 1,200 paper and pulp mills, there were in the United States, in 1905, the last year for which reliable figures are available, 761 pulp and paper mills. These had an average capital of \$364,579. There are 41 paper mills in Wisconsin alone. Where do they get their pulp wood? Why, where do these twelve American vessels and two Norwegian vessels of which I have spoken carry their pulp wood?

Now, what has Canada? Fifty-eight pulp mills, making 2,361 tons of paper in 1907, and 46 paper mills, making 966 tons per day. The retention of forests is needed to save the water supply, prevent droughts and freshets, and save water power for manufactures as well as for the pulp wood and timber.

As to forestry, the question is not "Can the trees be replaced as cut, and how," but "Who shall do it?" I think that is quite feasible. I have had correspondence with a gentleman in the State of Carolina. He is engaged in the forestry business and is a millionaire, and his opinion is that it is possible to make trees grow in the open field, but that this can be done much more easily where small trees are left after cutting down the large ones. We often read of statements made on the other side of the line as to the amount of pulp wood that is left and how many years it is going to last. I have this from a gentleman who has absolute knowledge in the matter, that very little spruce, if any, is left in New York, Pennsylvania, Massachusetts, Connecticut, Ohio, Michigan, Wisconsin, and Illinois; some in Maine and Wyoming. There is none left in Colorado and Dakota. Norway and Sweden are almost denuded. A mill in Herkimer, N. Y., took a ten-years' contract to furnish an English company with paper, and they are taking their pulp from Canada by rail.

Now, there is the question of retaliation which has been mentioned. I wish to state this to the government and to the House in general, that I have no fear of retaliation. I have questioned gentlemen who have knowledge of the matter and they say that there are other interests in the United States who would oppose retaliation, even if that were attempted; other interests who are opposed to the paper manufacturers are too strong to permit it. Now, here is a fact that may not be known to many in this House. In volume 1, page 736, of Storey on the Constitution of the United States, he gives these words from section 9, clause 5, of the Constitution:

"No tax or duty shall be laid on an article exported from any State."

Now, sir, with the permission of the House, I will proceed to read a few extracts taken from the pulp-wood number of the *Globe* of March 7. I have cut out only those that are pertinent to this question. Here is what Mr. Biggar says:

"A few years ago the United States believed, as we do now, that their supply of timber was inexhaustible. When theirs is done they have no place to turn but to Canada. We have the whip hand and control their supply."

Now, as to the question whether the farmer would be able to sell his pulp wood if an export duty was put on, I wish to say that his health, his comfort, and his interest would be greatly enhanced if such a duty were imposed; besides, he would be able to sell his pulp wood in other directions. Here is an example of the benefits following the manufacture of paper in Canada, which we find in the *Laurentide Paper Company* at Grand-Mere, Quebec:

"The town of Grand-Mere is a striking example of what the paper industry would do for Canada. Five thousand well-to-do, contented people live there."

"Before the paper mill came to it Grand-Mere was a small struggling village with a few score of inhabitants; now it is a bustling, growing town with over 5,000 inhabitants, and shows all the earmarks of prosperity."

"At Batiscan, one of the centers of the wood-pulp export business, there are some 300 people, yet at one time this village was a larger place than Grand-Mere. Batiscan is one of the chief shipping centers of the International Paper Company, and ships to the United States about as much pulp wood as is used by the Laurentide Paper Company. In one case all is exported and a struggling village of 300 barely holds its own. In the other case, it is manufactured and a town of 5,000 people is prospering and growing."

"The Laurentide Paper Company have about 1,200 men on their pay roll, and have built this thriving town simply 'on paper.' This company take their supplies from the St. Maurice River, which enter one end of their modern plant as logs and come out at the other end as pure white paper of the finest texture."

"They consume 100,000 cords of pulp wood every year, and when manufactured this means \$3,000,000. On the other hand, there are exported annually from Quebec 600,000 cords of pulp wood. This leaves in the country about \$3,000,000. Thus, there is as much money left in the country from 100,000 cords manufactured as from 600,000 cords exported."

"Or, to make another comparison: A cord of pulp wood exported as such yields to Canada and all Canadian interests for cutting, handling, stumpage, transportation, etc., \$6; the same cord converted into paper yields \$38. Thus, there are over six times as much in it for Canada by the conversion of her spruce wood into paper at home as is to be got by letting it be manufactured abroad."

"Further, the contention of the Laurentide Paper Company is that the manufacture of paper in Canada means the creation and assistance of many other industries. To the railroads there is a big gain. In one case their cars go in empty and carry out pulp wood. In the other case they carry in coal, marble, machinery, and mill supplies and all the merchandise necessary to feed and clothe a large population. It would assist our coal companies, as every ton of paper manufactured requires half a ton of coal. Thus, the Laurentide Paper Company alone consumes over 30,000 tons yearly. It would assist our banks by the circulation of money, would encourage skilled labor, and give a chance for our people to earn good wages. Around the mills in the United States large towns and cities have arisen, manned largely by people

from the Province of Quebec, who were unable to find profitable employment at home."

Let me here suggest that there is no better plan of repatriating our Canadians from Quebec who have gone to the States than by the establishment of paper mills at home. I say this advisedly, because I contended with the honorable member for South York (Mr. W. F. Maclean) that there is only one class of Canadians in this country.

These Canadians from the Province of Quebec could be brought back to Canada easier by this method than by immigration methods. I am sure the honorable member for Wolfe (Mr. Tobin) will confirm this from his experience. Here is another statement by this gentleman, Mr. Biggar:

"The subsequent progress of the pulp and paper industry is recorded in the *Pulp and Paper Handbook of Canada* in the various editions as follows:

PULP MILLS.

Year.	Number of mills.	Total capacity in tons per 24 hours.
1888.	34	154
1892.	37	312
1899.	59	1,245
1907.	58	2,361

"The total capacity of the mills producing chemical pulp by the sulphite and soda processes in 1899 was about 50 tons per day, and in 1907 about 550 tons per day, so that the increase in the last eight years has been almost wholly in mechanical or ground wood pulp."

PAPER MILLS.

Year.	Number of mills.	Total capacity in tons per 24 hours.
1888.	40	173
1892.	38	209
1899.	33	328
1907.	46	966

"The era of manufacturing pulp from wood in Canada began in the decade of 1880-1890. The yearly capacity of its pulp mills at the present time is about 700,000 tons of pulp and 290,000 tons of paper. Pulp first figures in the trade and navigation returns of Canada in 1890, when the total export was valued at \$168,180, of which \$460 went to Great Britain, \$147,098 to the United States, and \$20,662 to other countries. In 1897 the total export was \$741,959."

"If this be true—and certainly The Paper Mill can have no object in making matters appear worse than they are—the newspaper publishers of Canada, and the newspaper readers as well—for in this their interests are identical—may well ask themselves a few questions."

"There are in the United States seventy mills engaged in the manufacture of white paper, the daily output of which fluctuates between 4,000 and 5,000 tons—say, 4,500 daily. Should it come about that Canada will be called upon to supply the spruce for all this output, not less than 5,000 cords of wood would be required daily. On a basis of 4 cords to an acre, which, I believe, is considered a fair estimate, we would see in this country 1,800 acres of standing spruce skinned off every day in the year to keep the pulp and paper mills of the United States running. In every 365 days—the Sunday paper is the greatest gourmand of them all—511,000 acres of Canadian spruce land will have been left bare."

"Until within recent months the newspaper publishers of this continent were as indifferent to a prospective famine in their raw material as are the grist millers of the country. Nor is this to be greatly wondered at, for from the lips of engineers and explorers, and even from the pages of the Government reports, they for years heard of 'the boundless areas,' 'the inexhaustible supplies,' etc., of spruce wood and timber. Thus lulled to sleep, the publishers have given their attention to problems which they knew to be real and which were pressing them at closer range."

"But to-day the signs of a sudden awakening are visible in all quarters. The publishers of the large daily papers throughout the United States met in New York last October and made no effort to conceal the alarm with which they viewed the situation. They declared in no uncertain manner that they were face to face with a problem of the most vital nature, and passed resolutions calling upon the President and Congress to adopt measures which only a couple of years ago would have been considered rampantly radical."

"That the situation in Canada is equally serious no one for a moment suggests, but that it is possible to become so in a comparatively short time, unless prudence is displayed at this critical juncture, few will deny."

"Canadians were hardly prepared to read in The Paper Mill, the recognized organ of the paper and pulp makers of the United States, such an astounding admission as the following, taken from a January (1908) issue of that journal:

"The wood situation to-day is a very serious matter. There is not a mill in the United States manufacturing paper and pulp that is not to a very large extent depending on Canada for its wood, and there is no basis to work upon, for the reason that there is no established price for wood either in this country or in Canada, and owing to this fact there is no basis for the paper manufacturer to work upon to establish a price for the finished product."

"Now, when the mills in Wisconsin—planted in the midst of what was regarded as a perpetual supply—have had to import pulp wood to the extent of 70,000 cords during the past season, all the way from Quebec by rail, while some of the paper mills of Maine—the State of 'inexhaustible' spruce limits—are getting supplies of wood from New Brunswick and Quebec, the American famine in pulp wood can no longer be denied."

"The famine was inevitable, but, like most other famines, it was neither foreseen nor provided against by the average man concerned. In ten years after the introduction of the wood-pulp paper process the price of news print was brought down from an average of 9 cents a pound to 4 cents, and since then the improvements in machinery and the increased capacity of the mills have further reduced it, till it recently sold at 2 cents a pound. This cheapening has, in turn, made possible the enormous increase in the size and circulation of

the modern daily newspaper—one of the marvels of the age, and as fearful in its power for evil as grand in its possibilities for good to the world. The increased demand for wood to maintain other industries, added to this remarkable development of the paper industry, explains the wood famine which is now giving the statesmen of the United States such concern, and explains why each year the United States is becoming more dependent on Canada for the raw material for its paper mills.

"During the year ending June, 1907, the United States imported pulp wood from Canada to the amount of 650,366 cords, or enough to manufacture, say, 520,000 tons of news paper, while its imports of ground pulp from Canada were 149,827 tons, valued at \$3,230,272."

As the Globe has said in its special pulp-wood number, one of the greatest, perhaps the greatest of the problems confronting Canada at the present time is the preservation of her forests. While there have been good laws passed regulating our tariffs, restricting our fisheries, controlling our mines, and exploiting our agricultural areas, the forest has been largely neglected.

Sir Wilfrid Laurier, speaking before the Canadian Forestry Association, said:

"We can calculate the number of years—and the number is not very great—when there will not be another tree of the original forest to be cut upon the limits of the Canadian lumbermen. But trees have grown and trees ought to grow again."

"I should like to impress upon every Canadian farmer the necessity of covering with trees every rocky hill and the bank of every running stream. It is very easily done. He has only to scatter the seeds on the ground, fence it, and nature will do the rest."

It is evident that Sir Wilfrid Laurier at that time appreciated, and he must now more thoroughly appreciate the fact, that a wood famine in Canada is imminent unless proper precautions are taken.

Earl Grey, addressing the same convention, said:

"There are no more melancholy reflections than those suggested by the sight of a country once rich and equipped with all the majesty and panoply of power, which has become a waste and a stony desert through the reckless improvidence of its own people."

"It is the object of this convention to fix the attention of the people of the Dominion on the warning which these and other countries hold out to us as the practices we should carefully avoid if Canada is to realize the high destiny which awaits her, or which will be realized if this generation is gifted with sufficient foresight and self-control to husband the resources so abundantly lavished upon the Dominion by a bountiful Providence."

Mr. Gifford Pinchot, Chief of the Forest Service of the United States, is a renowned authority on forestry. He is worth millions of money, but owing to the great interest he takes in this subject gives his services to the Government of the United States for the small sum of \$5,000 a year. Writing in the New York Outlook, Mr. Pinchot says:

"The most prosperous nation of to-day is the United States. Our unexampled wealth and well-being are directly due to the superb natural resources of our country and to the use which has been made of them by our citizens, both in the present and in the past. We are prosperous because our forefathers bequeathed to us a land of marvelous resources still unexhausted."

"Shall we conserve those resources, and in our turn transmit them, still unexhausted, to our descendants. Till now we have allowed our forests to be depleted, our timber, lumber, and pulp wood to be exported, and to-day we have very little to show for our prodigal wastefulness."

"Bound up with the question of forest preservation are many national questions of vital importance. A survey of history shows that the decline of many of the great nations of the world can be traced to the destruction of their forests. Mesopotamia among ancient nations and Spain among modern being examples. Again it has been demonstrated that the planting of forests in a treeless country has increased and regulated the rainfall. Many of the floods from which countries suffer are due to the clearing of forests around the sources of rivers. When we consider the growing importance of water power as a generator of electricity we can readily see the importance of preserving our waterfalls and streams unimpaired. Particularly is this true of a large part of Ontario and Quebec, where there is no coal and where our manufacturers must depend upon water power."

"Assets so vast as these can not be left at the mercy of 'politics.' Let us have a forest commission, independently of party politics to protect our forests, and thereby save our fish, game, and natural scenery."

"What will happen when the forests fall? In the first place, the business of lumbering will disappear. It is now the fourth greatest industry in the United States. All forms of building industries will suffer with it, and the occupants of houses, offices, and stores must pay the added cost. Mining will become vastly more expensive; and with the rise in the cost of mining there must follow a corresponding rise in the price of coal, iron, and other minerals. The railways, which have as yet failed entirely to develop a satisfactory substitute for the wooden tie (and must, in the opinion of their best engineers, continue to fail) will be profoundly affected, and the cost of transportation will suffer a corresponding increase. Water power for lighting, manufacturing, and transportation, and the movement of freight and passengers by inland waterways, will be affected still more directly than the steam railways. The cultivation of the soil, with or without irrigation, will be hampered by the increased cost of agricultural tools, fencing, and the wood needed for other purposes about a farm. Irrigated agriculture will suffer most of all, for the destruction of the forests means the loss of the waters as surely as night follows the day. With the rise in the cost of producing food, the cost of food itself will rise. Commerce in general will necessarily be affected by the difficulties of the primary industries upon which it depends. In a word, when the forests fall, the daily life of the average citizen will inevitably feel the pinch on every side. And the forests have already begun to fail, as the direct result of the suicidal policy of forest destruction which the people of the United States have allowed themselves to pursue."

"They stripped the mountain on each side of the river for miles of its timber. The river, in consequence, was not pouring down its accustomed volume of fresh water regularly. The fish left for new waters; with the fish left the fishermen, and with the fishermen a large revenue."

"You can not have fish without water; you can not have water, pure, sweet, and in full volume without its natural reservoir—the forest. And it has been conclusively demonstrated that forest-clad slopes do more than most other natural conditions to attract the active as well as the passive moisture of the atmosphere."

Mr. E. W. Stewart, late superintendent of forestry for Canada, said: "No time should be lost in taking steps to reserve the whole timber area along the east slope of the Rocky Mountains, in order to preserve the forest there for the conservation of the water for the great rivers that are supplied from this source. If this area is permitted to be denuded of its timber the North and South Saskatchewan, the Athabasca, the Peace, the Liard, and the many smaller streams that receive their supply from this timbered area will be raging torrents for a short period in the spring and almost dry in the hot summer months. The water level in the soil will decrease, and the husbandman of the plains will begin to realize when it is too late why the summer droughts are increasing."

To a greater or less degree what is here predicted by Mr. Stewart has happened in the older portions of Ontario and Quebec.

Mr. MacLaren, who was interviewed by the Globe, takes the view that this is a national question, in which the future prosperity and well-being of Canada are bound up. He favors such a measure being taken as would result in preventing the depletion of our raw material for the benefit of foreign industries. He has no doubt that such a measure would quickly result in a great accession of industries to this country, and that with the splendid undeveloped water powers in Ontario and Quebec there would be no difficulties in the way of establishing such industries.

Mr. MacLaren was equally emphatic in regard to the necessity of a scientific policy of forest preservation. The firm are themselves pursuing such a policy on their own limits. As far as possible they are feeding their mills on the annual growth of the limits. The only remedy is for this government to institute a broad system for the practical training of men whose life duty will be the care of the forests. The forestation or reforestation of areas unfit for agriculture.

"The suppression of that class of 'settler' who is only a 'settler' until he gets all the wood cut off his location, and who then moves on to another well-timbered lot."

"Obviously the initiative in many of these matters rests with the Provinces, and some of them are attempting to deal with them on a broad scale. But the interests of all the provinces, and of the federal government, which likewise controls great stretches of public domain, and of all the forces that work for the country's progress, are so intertwined as to make a united and common basis of action an imperative necessity."

"The history of most nations indicates that very little can be expected in a forestry way from private individuals, even under pretty stringent state control, and it has been found more effective for the state or the community to undertake the work, particularly if it is done on a large scale."

B. E. Fernow, professor of forestry, writes as follows:

"To the editor of the Globe: In responding to your request for an expression of my opinion as to the forestry situation, I can not open the discussion better than by the statement that 'the much vaunted virgin timber wealth of Canada would not suffice to supply the annual consumption of the United States for more than twelve years.' 'The mills of the gods grind slowly, but still more slowly does a democracy learn the lessons of the world and mend the follies of its happy-go-lucky unconcern of the future.'

"B. E. FERNOW."

I wish to read a few more extracts on this subject as quoted in the Toronto Globe, March 7, 1908:

"Perhaps in the light of the late utterance of the President of the United States regarding the plight of the American paper manufacturers, Canadians will wake up to the realization that they have something worth keeping, not only in their pulp wood, but in other timber supplies. I should not have said 'worth keeping,' but worth taking care of and managing for continuity, i. e., applying forestry principles."

"Whether this new interest should take shape in the form of tariff legislation or had much better be fostered by regulating the use of Crown timber lands conservatively is a matter for consideration."

"The President promised to recommend to Congress the removal of the duty, and The Fourth Estate, a well-informed weekly publication of New York, in reporting the interview, says: 'He will give as his reasons the necessity for the preservation of the forests, rather than the relief of the publishers of cheap newspapers and magazines.' * * * One of his arguments will be the recent report of Gifford Pinchot, Chief Forester for the United States Government, who estimates that, at the present rate of consumption, the wood supply of the United States will have disappeared in twelve years."

"According to a special report of the United States Census Bureau the consumption of domestic spruce wood used by the United States pulp mills increased 47 per cent in quantity and 122 per cent in price in the five years from 1900 to 1905, while the consumption of Canadian spruce wood by the United States mills increased 102 per cent in quantity and 150 per cent in price in the same period. The average cost of wood used for mechanical and chemical pulp was more than doubled in the five years named for every variety of pulp wood except domestic poplar. Canadian poplar had increased 176 per cent. If these percentages could be applied to the conditions in 1907, the increase would be still greater."

"To illustrate the nature of the crisis toward which the United States is swiftly tending we may turn to the mills of New York State. This State has 108 mills, largely clustered in the northeastern counties, accessible to the great spruce forests of the Adirondack Mountains. Twenty years ago the mills of Watertown, the chief paper-making center, had supplies of pulp wood at their doors, and it was believed the timber would last forever."

"Now the source of home supply is eighty or a hundred miles away, and an increasing proportion of mills have to get their wood from down the St. Lawrence in Quebec or by rail from that province at a distance of 200 miles or more. The mills of this State have a yearly capacity of 987,000 cords of wood, and on the basis of a growth of ten cords an acre they would strip nearly 100,000 acres a year, and if the lumber cut off this region (estimated in the census at 245,000,000 feet a year) is added, the whole spruce areas of the Adirondacks would be wiped out in seven years were these mills confined to their own State for raw material."

"The average man, however, is more accustomed to estimating values in dollars and cents than in acres and cords, so that possibly such a calculation may be found more interesting. Less than twenty years ago the paper on which newspapers are printed cost the publishers eight cents per pound at the mill. That price fell steadily until the bottom was reached about seven years ago, when at least one large contract was made in Canada at 1.87 cents per pound. With that contract the 'dollar daily' had its birth. For about six years the price fluctuated between 1.87 and 2 cents, but about six months ago unmis-

takable signs began to appear that even 'two-cent' paper would not likely be secured again for a few years, if ever. The price has gone steadily up in this country to 2.25, and in the United States to 2.60, with a strong possibility that 3 cents will be the prevailing figure there within a year.

"It is not pretended that a pulp-wood scarcity alone has brought about this sudden and serious increase. Higher wages, low water, increased cost of chemicals and a tendency to concerted action on the part of the manufacturers may each have contributed somewhat; but after making all possible allowance for these contingencies the fact must be admitted that what is almost a pulp famine in the United States and the increasing difficulty with which pulp wood is secured adjacent to railways and good streams in Canada are the principal causes in bringing about this remarkable increase.

"Ontario and Quebec are blessed with abundant powers commercially adaptable. No country in the world has such abundance of water powers capable of development for commercial purposes as Canada. Whether utilized for electrical energy to be transmitted far and wide to the benefit of the industries everywhere springing up or whether used in their respective localities for the manufacture of lumber and pulp wood in the wooded regions where many of them exist, forest conservation is vital to their continuance. The cutting of timber on such a large scale throughout the Ottawa Valley has already affected the flow of the magnificent Ottawa River, and more than one project is under consideration with a view to preventing further mischief.

"An idea of the vastness of these water powers in the eastern section of the country may be gathered from the statement that within a radius of fifty miles of the city of Ottawa, according to the statements and calculations of experts, there are water powers capable of producing over 900,000 horsepower. Some of these, because of the rivers rising in that Province, are under the control of the Province of Quebec. It is of interest to note here that the authorities of that province have shown a very commendable desire to take any action needed, such as the creation of forest reserves at the headwaters.

"The pulp mill has appeared, and by the higher value of its product it makes for the greater prosperity of the Province. To quote the estimates of one authority, if 1,000 cubic feet of deals be cut, \$7 will have been paid in wages, and the product is worth \$15. The same amount made into pulp is worth \$31.50, and the amount paid in wages is \$12. The capital invested in the sawmill is \$5, where in the pulp mill it is \$41.

"In connection with this a strong agitation is now in progress in favor of a prohibitive export duty on pulp wood, for while a cord of pulp wood may be worth \$2.50 to \$7, made into low grades of paper it is worth \$45, and if into the higher grades \$50 to \$100. It is therefore estimated that if the present export of pulp wood were manufactured into paper at an average value of \$50 per cord \$30,000,000 would be added to the national wealth of Canada. Considerations such as these are inducing lumbermen, legislators, and local boards of trade to favor the imposition of some such duty. The Maritime Board of Trade at its last session in St. John passed a strong resolution in favor of this export duty. The past few years has witnessed the purchase of large tracts of timber lands by syndicates of citizens of the United States. If a federal export duty can be imposed sufficient to compel the paper mills to move into Canada without seriously disturbing any other established industries, immense benefits will accrue to our business interests.

"Canada has the largest forest area in the world and has also the greatest amount of water power in the world. When we consider the relation of forests to water power and of water power to electrical energy in a country largely deficient in coal, we can readily see that the conservation of these forests becomes one of the greatest problems of our national life. One phase of or problem is that of the pulp-wood industry. At present we export large quantities of pulp wood to the United States, where it is manufactured into paper. At a conservative estimate the same amount of wood would yield from twenty to twenty-five millions of dollars if manufactured into paper on this side.

"Thus, if Canada's pulp wood were all manufactured at home, industries would arise whose annual value would be millions of dollars, and at the same time the cutting of our great timber limits would be so regulated as to maintain present rate of reproduction and so conserve the value of our forests forever. Countries like Norway, Germany, and France have been able to restore their depleted forests, and thus derive from them a perpetual revenue.

"While the creation of a paper and pulp industry in Canada would mean much to Canada, yet it is only part of a greater scheme—that of national self-preservation.

"With our forests gone, our water powers are crippled, our agricultural lands spoiled by flood and drought, and our great national prosperity impaired.

"In Ontario's northland the water power possibilities are almost beyond belief. Some of them are being made use of more or less, many others are as yet not available, others are within easy reach of the Canadian Pacific and Canadian Northern railways, and the extension of the Temiskaming and Northern Ontario Railway, and the building of the National Transcontinental Railway will hasten for others the time when they will be harnessed for the use of man.

"Twelve of the largest rivers in Ontario flow toward James Bay, and nearly all of them pass through the great clay belt, where there are approximately 300,000,000 cords of pulp wood, from which in the future the Province must expect to reap no inconsiderable benefit. Of course this land can not all be held forever as pulp-wood land; its agricultural values are too great. But there is no doubt that some plan will be devised whereby areas of it will be so held; and that in the not distant future pulp and paper mills will flourish there, and will be fed for many long years from the raw material at hand.

"There are millions of horsepower undeveloped in our Province," said Mr. Welden, "and in almost every instance these water powers are surrounded with an almost inexhaustible supply of spruce. With judicious cutting and the adoption of reforestation methods, it would be quite possible for any large pulp and paper concern in this way to settle for themselves the perennial worries about wood supply."

"Asked as to what he thought of the effect of the proposed prohibitive legislation on the export of pulp wood from Quebec, Mr. Welden stated that he did not think this would prove to be quite so grave a situation as it was thought to be. 'It may,' he said, 'for a while have the effect of increasing the cost of paper to the consumer, but I am thoroughly convinced that it will only be a short while when the American mills will adopt the practice of manufacturing their pulp right on the ground and save the heavy transportation and other charges incident to the present method of shipping rossed pulp wood from Quebec.'

"In 1905 there was invested in Canadian paper-making establishments \$21,260,157, with 4,974 employees; a product valued at \$9,449,842, and wages of \$2,208,526. In wood-pulp establishments \$11,164,768 was invested, 2,456 people employed, \$1,023,720 paid in salaries and wages, and material to the value of \$3,793,131 was produced.

"In Germany a hundred years ago a real timber famine existed, for then wood was the only fuel, rivers the only means of transportation, and the wood along the rivers had been cut away, and the forest devastation, as with us, had wasted much. It was then that the modern forestry systems took their origin, having before that time been only indifferently and locally developed. It was then that the governments instituted such strong organizations to administer the timber lands, and by foregoing present revenue and making present expenditure prepared the results which they are now reaping.

"The State forests have now, through a hundred years of patient work, been brought into a condition which compares favorably with the results from agricultural soils; they produce annual revenues of millions of dollars, not by cashing capital, but by using interest—the amount of annual growth, which the same area can produce forever.

"PULP WOOD EXPORT DUTIES.

"As the existence of a protective tariff in the Dominion has unquestionably compelled many United States manufacturers to erect branch establishments in this country, it is a reasonable proposition that similar results would follow the imposition of an export duty on pulp wood. At the present moment the United States paper companies are consuming 4,000,000 cords of pulp wood yearly, about one-fifth being drawn from Canada free of import duty. This is of course due to the care taken to support the home industries and so enable them to compete on the most favorable terms in the paper markets of the world. While little United States paper enters Canada, considerable quantities are exported to Britain, South Africa, and Australia.

"The Northern States that are conveniently situated depend largely on Canadian spruce wood, and any restriction on its export or increase in its cost would certainly entail a reconsideration by the manufacturers of their position, at least as regards their foreign trade. Under the present Dingley tariff the import duties into the United States run from three-tenths of a cent on paper valued at 3 cents a pound to 15 per cent ad valorem on the paper valued at over 5 cents a pound. But the tariff also provides for heavy additional duty in the case of paper coming from a country that imposes export duties on pulp wood. It is doubtful, therefore, whether the United States paper companies could supply any part of their home demand from Canada, but it would be even better were the needs of other world markets met by factories established in Canada."

The following article is from the Montreal Herald of August 28, 1907:

"PULP WOOD AND THE STATES.

"The Maritime Provinces Board of Trade, in proposing that the export of pulp wood be prohibited, is but voicing a demand that, in one form or another, is yearly being advanced in more insistent terms. Put briefly, the argument is that the consumption of pulp wood is increasing enormously in the States and Canada; that the chief source of supply is Canada; that the States, by keeping a high duty on pulp and paper, and admitting pulp wood free, is draining this country of raw material while building up its own manufacturing industries; and that an export duty, or the prohibition of export, would force the Americans to come to Canada and make pulp or paper here.

"There can be no question that a change is coming over the temper of Canadians in regard to this subject. There has been a widespread disinclination to adopt what might be considered a narrow and liberal policy. There has been a doubt as to whether the destruction of the United States spruce supply was as complete as represented. There has been a fear of the effects of an export duty upon the settler, to whom the market of the States has certainly been a great advantage.

"In regard to all three of these matters of contention there has apparently been a steady change in public opinion. For one thing, the experience of Ontario in prohibiting the export of unsawn logs has been so satisfactory that it is not unnaturally taken as an illustration of what may be the results of federal legislation along similar lines."

"The result of this legislation is told in the great mills which contribute to the prosperity of almost every port on the Georgian Bay.

"Evidence has accumulated that the Americans have no great reserves of spruce, and men and papers interested in the paper trade now frankly confess that the States have to look to Canada for the bulk of their supplies of pulp wood. Canadian settlers with pulp wood to sell are probably not as numerous as they were, as the lands in the older settlements have now been largely cleared of spruce. But even were this not the case, if it is a fact that the demand from the States would continue in the shape of imports of the manufactured or partially manufactured product, the Canadian settler's market price would probably be maintained, or suffer only a temporary setback.

"The demand for prohibition is based on the argument that an export duty would be met, under the United States law, by the automatic imposition of a countervailing duty on pulp, while there is no such instrument at hand in case the export be prohibited. Of course, it is obvious that if the States must have our spruce in one form or another, no duty will long be maintained that will make it impossible or difficult to buy the Canadian product. So an export duty would sooner or later have the same effect as a prohibiting measure.

"The subject is a large one, and if it becomes a factor in practical politics, will call for the most exhaustive examination and most careful handling. The outstanding fact that will constitute the chief reason for parliamentary discussion is that a vast reservoir of natural wealth, peculiar to Canada, is being drained at an ever-increasing rate, into foreign channels, leaving behind it but a fraction of its potentialities for the country's benefit. To this fact is added the other one, that the legislation of the foreign country to which this wealth is flowing is deliberately devised so as to make it impracticable for Canada to enjoy a greater share of this potential value. In adopting such a policy the United States has made it impossible for it to consider as unfriendly any Canadian legislation on the subject, however radical. If a foreign country will not, without compulsion, permit us to sell to it our pulp and paper, we are quite justified, in pursuance of a policy of development of our national wealth, in saying to that country, if you will not buy our pulp or paper, we will not sell you our pulp wood."

The Toronto Globe of September 20, 1907:

"NEWSPAPERS AND PULP WOOD.

"Special dispatch to the Globe of yesterday contained the information that the American Newspaper Publishers' Association has requested President Roosevelt and Congress to investigate an alleged com-

bine on the part of the paper makers to limit the output of paper and to unduly enhance the price of news print.

"The present import duty on white paper for news print is \$6 a ton, and there is also a duty on wood pulp; the association at its recent New York meeting unanimously requested the repeal of these duties and appointed a large committee to prosecute the movement as vigorously as possible.

"The reason for this action is to be found in a serious scarcity of the paper on which newspapers are printed.

"It may be asked why the newspaper publishers do not recoup themselves for the increased cost of white paper by increasing the price of their journals. This is more easily said than done, but some publishers are doing so in the large cities of the United States. In a number of cases the 1-cent dailies have been put up to 2 cents, and many country weeklies have advanced their subscription prices. Some publishers are cutting down the size of their publications, others are reducing the headlines, and still others are using smaller type. All these remedies go but a little way to relieve the present distress, to say nothing of averting the impending danger. It is too late to do much in the way of conserving the supply of pulp wood in the United States, but there is still opportunity to do a great deal in the way of preventing a like situation from arising in Canada. What is urgently needed is a policy of conservation of spruce forests through judicious selection of the trees to be cut, prevention of destruction by fire, and allowing abundant opportunity for reproduction. Whatever the future may have in store in the shape of substitutes for wood pulp, there is nothing yet in sight to displace spruce wood, and in her abundant supply of that timber Canada has a source of wealth that is worthy of the most careful and intelligent treatment."

I have the statement of the manager of the Eddy works in Hull that, in his opinion, nothing will be found to take the place of spruce for making paper. Here is what Professor Fernow says:

"In the United States to-day the forestry question is regarded as a critical one, the authoritative assertion having recently been made that the exhaustion of that country's supply of timber is in sight. Is Canada to wait until that can be said of her supply before any adequate action is taken? True, something has been and is being done now, but in the opinion of the men best qualified to speak, these steps are not sufficient to guard Canada against experiencing the conditions that are now causing alarm in the United States. For the most part Canada's timber is being cut with prodigal vigor. A considerable quantity is manufactured in the country, but much more might easily be done here; while, in respect to pulp wood, rapidly increasing quantities are being exported to the United States to build up the pulp and paper-making industries of that nation. There is no duty on this raw material; the United States gets it free of duty, handicaps the Canadian pulp and paper industries by putting a duty on their output going into the Republic, and tries to undersell them in the British market with pulp and paper made from Canadian wood.

"The figures cited are, however, sufficiently reliable to make it certain that the United States has already crossed the verge of a timber-famine so severe that its blighting effects will be felt in every household in the land. The rise in the price of lumber which marks the opening of the present century is the beginning of a vastly greater and more rapid rise which is to come. We must necessarily begin to suffer from the scarcity of lumber long before our supplies are completely exhausted. It is well to remember that there is no foreign source from which we can draw cheap and abundant supplies of timber to meet a demand per capita so large as to be without parallel in the world, and that the suffering which will result from the progressive failure of our timber was but faintly foreshadowed by the recent temporary scarcity of coal.

"The chief wealth of the northern forest region of Quebec is in its spruce, however, where it forms three-fifths of the coniferous forest available for commerce. If, as claimed, it is reasonable to allow 25 cords of this wood suitable for the making of pulp to the acre these northern forests should furnish no less than 406,874,470 cords of pulp wood. Enormous quantities of white spruce of a very large size are found in the southern Abitibi, capable of supplying large numbers of saw logs and much pulp wood. Birch and poplar, as well as balsam, are also very abundant in many parts of the northern forests of Quebec.

"The greatest variety and the richest quality of timber are to be found in the central region of the province, and especially in the new forest reserves of Ottawa and the St. Maurice. This region is situated between the St. Lawrence and the forty-eighth degree of north latitude, and is larger than the combined areas of Nova Scotia and New Brunswick. White, red, and banksian pine, white and black spruce, cedar and balsam are the chief varieties of timber in Ontario. There are many fine water powers. On the Mississauga, Mettagami, and Abitibi rivers it has been roughly estimated that as much as 150,000 horsepower each could be developed. The Mississiga, the Onaping, the French, and the Montreal rivers all have great capabilities in the way of horsepower development. On the Vermilion, Spanish, Sturgeon, Rainy, and others rivers, while some powers have been developed, there are many others still undisturbed. For the most part these water powers are still vested in the Crown. The government has therefore a great inducement to offer pulp or paper manufacturers when it decides as occasion arises from time to time to lease pulp-wood areas, good water powers being a most important factor in the economic essentials of the industries mentioned.

"Quebec is no less fortunate in its possession of water powers, though it would appear that a very considerable number of these have passed from the control of the Crown. The tributaries to the St. Lawrence, as well as that great river itself, possess water powers, some of which are already in commercial use and others that will be as the pulp and paper industries particularly call for their being called into use.

"It is significant that in the Province of Quebec the utmost importance is attached to the hearing of the forestry question upon the water flow. Mention has been made elsewhere of the emphasis laid upon this by the provincial forester, Mr. W. C. J. Hall."

Here is an advertisement in the Toronto World of October 18, 1907, inserted by the provincial government:

"TENDERS FOR PULP WOOD CONCESSIONS.

"Tenders will be received by the undersigned up to and including the 15th of December next for the right to cut pulp wood on certain areas tributary to the Nepigon River, in the district of Thunder Bay and Rainy Lake, in the district of Rainy River, and make the same into paper. Tenderers should state the amount they are prepared to pay as bonus in addition to such dues as may from time to time be fixed for the right to operate a paper-making industry on the areas referred to. Separate tenders must be made for each area or territory, and the successful tenderers will be required to erect a mill or mills on each of the territories or in such other localities as may be approved by the government of Ontario.

"Parties tendering for the pulp-wood rights shall accompany their tenders with a marked check for 25 per cent of the amount tendered, payable to the treasurer of Ontario, and to be forfeited in the event of their failing to enter into agreements to carry out conditions, etc.

"With respect to the Rainy Lake pulp concession, tenderers will be required to make a tender for the right to cut pine, tamarack, and cedar on the territory offered. Parties making tender for these timbers to state the amount they are prepared to pay per 1,000 feet B. M. as bonus in addition to Crown dues of \$2 per 1,000 feet B. M. A marked check for \$5,000, payable to the treasurer of Ontario, must accompany the tender for pine timber, and to be forfeited in the event of their failing to enter into agreements to carry out conditions, etc.

"No timber shall be cut on either of the concessions of a less diameter than 9 inches 2 feet from the ground.

"The successful tenderers to enter into agreements with the government for the erection of the mills, expenditure of money, etc.

"For full particulars as to the conditions, etc., application should be made to the undersigned.

"Hon. F. COCHRANE,
"Minister of Lands, Forests, and Mines.

"TORONTO, October 16, 1907."

This is a very important measure, but it can be outwitted by a clever purchaser on the other side. He can send in a lot of stool pigeons to purchase the land. Even where the lumberman has to take off the timber in two years, the stool pigeons and pulp-wood settlers will take the land and pay the price, which will be put up by the corporation on the other side, and deplete that land of all the timber there is on it. By this means the Provinces can be outwitted and our forest wealth taken to the other side of the border.

Mr. LEWIS.

With reference to the help we get in this matter here is an item from the Toronto News:

FIGHTING THE PAPER TRUST—LOCAL TYPOGRAPHICAL UNION ENTERS RESOLUTION OF PROTEST.

"At a meeting of the joint conference board of the Allied Printing Trades, composed of delegates representing the International Typographical Union, International Printing Pressmen and Assistants' Union, International Stereotypers and Electrotypers' Union, International Photo-Engravers' Union, and International Brotherhood of Bookbinders, held at Indianapolis, Ind., December 17, 1907, a resolution favoring the abolition of the duty on white paper, wood pulp, and the various materials used in the manufacture thereof was unanimously adopted, and also at a recent meeting of the Detroit Typographical Union, No. 18, the same measure was presented and adopted by a unanimous vote:

"Whereas we, the workers employed in the various departments of newspaper and commercial printing offices throughout the United States, i. e., compositors, pressmen, stereotypers and electrotypers, photo-engravers, and bookbinders, to the number of more than 100,000, feel that any combination which produces an artificial scarcity of newsprint paper and which unduly stimulates the price of that product is an oppression that affects alike the employee as well as the employer; and

"Whereas the almost prohibitive and ruinous price of such paper has curtailed to an alarming extent the number of workers employed in the printing industry, and has further acted as a preventive to the printing trades artisans from securing higher compensation for their services, to which they are justly entitled: Therefore, be it

"Resolved, That this joint conference board in session at Indianapolis, Ind., December 17, 1907, submit a memorial to the President of the United States and the Congress, and appeal for the abolition of the duty on white paper, wood pulp, and the materials which are used in the manufacture thereof; and be it

"Resolved, That all local unions affiliated with our international organizations are requested to indorse these resolutions and forward copies to their Representatives and United States Senators."

I would ask honorable gentlemen to note the significant bearing of that item, namely, that we have behind us a majority of the unions who are opposed to the corporations that control the paper and pulp mills in the United States.

From the Toronto News of February 15, 1907, I take this paragraph: "Recently reference was made to the economically unwise action of this country in giving away its spruce pulp logs to be manufactured into paper in United States mills. Here is the lesson in a nutshell. Canada has the greatest supply of pulp wood in the world. Great Britain is the greatest consumer of paper, and yet Canada has only a share (how much is not thought worth while giving in these figures) in about 12 or 15 per cent of Great Britain's importations. On the other hand, the United States, which is an exporter of paper practically only because Canada supplies it with raw material, is up among the first three or four nations which send paper into Britain.

"Canada depletes her most valuable forests and sells the product in the shape of pulp wood for \$6 or \$7 per cord. The United States saves her forests and sells our product in the shape of paper for, say, \$30 per cord for good British gold. Are not Canadians what the man in the street would call 'dead easy' to let this go on when we could stop it in six months by prohibiting (as Ontario has done) the export of pulp wood from Crown lands?"

In one respect that item is wrong. If properly investigated, it will be found there are no pulp-wood forests in the United States.

"The Laurentide Paper Company have millions invested in their plant and limits, and it is to their own best interests to preserve their limits. Many of the American companies cut off their timber regardless of the future supply, and in this way waste immense quantities.

"Over 52,000 tons of roll news paper is made every year by this company, and as the Canadian consumption is only 27,000 tons yearly, it means that outside markets must be sought for much of the produce. The market of the United States is barred owing to the duty, yet Canada furnishes them with their raw material. When this raw material happens to be manufactured in Canada it is shut out of the United States. As we have to import much of our heavy machinery from the United States and pay duties, the Canadian manufacturer of paper is handicapped when he attempts to compete with American manufacturers in foreign markets. The Americans have also a big advantage in the cost of coal, in the supply of skilled labor, in lower traffic rates, in cost of machinery and mill supplies, and many other things. Prohibit the exportation of pulp wood from Canada and the American paper makers would be compelled to buy their ground and sulphite pulp from Canada at from \$20 to \$38. If not, then the American paper makers would have to move their entire plants over here, and would thus build up large thriving centers of industry around their plants.

"An argument is made by some that the farmer and settler would suffer if the exportation of pulp wood should be prohibited. The Lau-

rentide Paper Company are buying to-day a large portion of their wood from farmers. The policy of well-conducted paper mills, they say, is to buy all of the pulp wood they possibly can from farmers, in order to save their own limits from the demands made upon them by increasing productions. The paper mills of Canada to-day could use a very large proportion of the wood now being exported to the United States, and with new mills building in Canada the market for the pulp wood and the price would be maintained.

"From the present policy the company says Canada is getting practically nothing. The stumps are left as mementoes, a small amount is obtained for transportation, etc. On the other hand, thriving cities are growing up around American mills whose supplies come from Canada. The Americans are quite content to have things remain as they are, for the present arrangements give them the long end of the deal; in fact, the United States Congress dictates to Canada, and not only makes its own laws, but presumes to say what Canada shall or shall not do.

"Canada gives them all the advantages and gets absolutely nothing in return. Americans own in Quebec Province 12,000 square miles of pulp-wood areas, and this is being rapidly depleted by the hundreds of mills in the United States which are absolutely dependent on Canada for their supplies. It certainly does not seem the part of wisdom for us to continue a policy which has the effect of building up manufacturing centers in the United States when by changing that policy these centers can be developed in Canada. Our present policy of sending our wood to build up a foreign country was just furnishing it with weapons to fight Canada in the commercial world. How well the United States realize the strength of Canada's position on this question was probably never better shown than in the message of President Roosevelt when he practically said, 'It might be well for us to make some concessions to Canada if they will guarantee us free wood.'

"Mr. J. H. Biermans, the managing director, holds strong opinions on the questions connected with the pulp and paper trade that have aroused so much interest in the public mind. On the necessity of this country imposing regulations relative to the cutting of timber he was emphatic. About thirty years ago, he said, the Scandinavians were confronted with the same problem. They, too, had believed that their forests were inexhaustible. It required much persistent and long-continued agitation to awaken them to a realization of the fact that their magnificent forests were being rapidly denuded. To their credit, however, it must be said that when once this fact was borne in upon them they took prompt and effective measures to provide a remedy. Now for every tree they cut down two are planted in its place.

"Mr. Biermans is also a strong believer in the wisdom of keeping our raw material in Canada. He thinks it is foolish and unbusiness-like that we should allow our logs to go free into the United States, especially when the latter country does her best to shut out our pulp and paper by imposing heavy duties. Personally he thinks that prohibition of the export of logs is the best remedy. He considers that the future for the pulp and paper industries in Canada is a dark one unless such action is taken.

"Mr. Riordan is strongly in favor of an unconditional prohibition of the export of pulp wood, whether the United States removes the duty on pulp and paper or not. He believes that our natural resources make it possible for the pulp and paper industry to become Canada's greatest industry, and greater than that of any other country. The cultivation of this industry, he believes, means as much to Canada as the cultivation of the steel and wheat industries that the government has done so much to foster. The remedy might bring about for a time some dislocation of the Canadian pulp-wood business, but he thinks that the end to be gained would justify the government in taking steps to neutralize that dislocation.

"The six daily newspapers of Toronto consumed last year about 9,000 tons of paper, and the consumption has been growing by at least 10 per cent annually.

"To supply these six newspapers required the product of not less than 3,000 acres of spruce. The Toronto newspapers probably represent one-fourth the home consumption for Canada. This country is even to-day exporting five times as much news paper as is consumed at home, and the industry can scarcely be said to have reached more than the infant stage.

"Thus, for the present home consumption alone about 12,000 acres must surrender their product every year, and for the combined domestic and export business 72,000 acres are devastated annually. These figures will, beyond any doubt, increase enormously during the next few years, for more and more Canada is being looked to for the world's supply of pulp and paper.

"Two of the Toronto dailies just referred to have only recently raised their price to subscribers outside of Toronto from \$1 per year to \$1.50 per year. The pinch has been felt more forcibly in the United States, where hundreds of daily papers have raised their prices by from 50 to 100 per cent since the increase in the cost of white paper mentioned above became effective.

"It does not require much argument, therefore, to show that in finding a solution for the pulp-wood problem the newspaper publisher and reader are equally interested. For too long the question has suffered through indifference on the part of the public, who apparently regarded it as of interest only to the pulp and paper makers and the paper users of the country.

"The opposition to the imposition of an export duty on the raw material as a means of stopping the denudation of our forest lands is unpatriotic in its fullest sense. It apparently wishes not only the destruction of the beautiful and the useful, but also to balk the immense industries which may develop by keeping the manufacture of pulp in this country. The Sportsman says to the government: 'Stop the export of raw material, force the mill owner to manufacture in Canada, and attend to forest culture as you have to agriculture, and I will be satisfied.' Moreover, an export duty and strict supervision leaves a government in a good defensive position when it is called upon (as it will be) to face an angry electorate and to explain why the country is being robbed of two of its finest assets, which explanation will be demanded in the very near future.

"Let us examine the work of our cousins over the border. Up to a short time ago they supplied the world with lumber and finished paper from pulp wood. This brought them in millions of dollars. To-day both lumber and pulp wood are about exhausted. To-morrow they will have to spend millions annually for both lumber and pulp wood. Until lately sportsmen and tourists came to the United States from all parts of the world to hunt big game, to admire the scenic beauty found in her forest-clothed mountains, East and West, and to angle in her splendid streams and lakes. Those sportsmen brought in millions of dollars—\$5,000,000 to one State alone, we are told. That simple tool, the ax, has nearly destroyed these two sources of revenue. In justice to the American people, I must say that this destruction was largely the result of ignorance.

"Recently we discussed this question in all its bearings with prominent American sportsmen at the sportsmen's show held in New York.

"All were unanimous in condemning the wasteful methods of the lumbermen and the weakness of the Government in permitting it until too late. Let the Canadian people take this lesson to heart in time; this lesson that the American people are finding so bitter to learn and difficult to turn to account. To-day the American lumbermen and pulp-mill owners look to Canada as the dying Moslem looks to Mecca for salvation.

"Ottawa, Oct. 10.—The petition presented to the government yesterday by a delegation of paper and pulp makers, and which the premier has agreed to take under consideration, is as follows:

"Whereas it has been the policy of the Federal Government to encourage and promote manufacture within the bounds of the Dominion by duties sufficiently high to protect home manufacture, and by bounties to encourage the use of home raw material; and

"Whereas the Federal Government has expended large amounts to promote agriculture and to encourage immigration from the mother land and foreign countries; and

"Whereas we have within the bounds of Canada, as a natural product, spruce pulp wood capable of providing employment for a large number of our present people, and for many who may come to find homes here; and

"Whereas this wood is being raised in Canada and shipped as pulp wood to the United States to keep pulp and paper mills in that country running; and

"Whereas our present natural advantages should make pulp and paper our greatest industry; and

"Whereas the exporters are stripping the lands of wood, while those with permanent interests in the country are striving to conserve the forests; and

"Whereas the crop of pulp wood is of very slow growth, and the supply is already becoming inaccessible; and

"Whereas the free export of pulp wood to the United States, combined with the tariff against our pulp and paper, favors the development of the paper industry in the United States rather than in Canada;

"Therefore your petitioners humbly pray that the exportation of pulp wood be prohibited by the Federal Government.

"This is how the probable prohibition of pulp wood by the Canadian Government appeals to at least one American Congressman, T. LITTLEFIELD:

"Canada has the largest supply of pulp wood in the world. The country has vast timber resources, and there is already an agitation in the Canadas for an export duty on pulp wood. Why are the Canadians asking for this export duty? It is because they want the mills, the millions of capital that would be invested, and the vast sums that would be expended for labor. They want all the returns their forests will give them, and they are right. It is laudable on their part, and it is just as laudable for us. While we stand on the proposition America for the Americans, they shout for Canada for the Canadians. The Canadians have not the same constitutional limitations as embarrass us in this country. Perhaps I should not say embarrass, for I believe that there is not one limitation in the Constitution that is not necessary for our welfare and happiness.

"But while we are restricted from putting an export duty on any of our products the Canadians are under no such limitations. They already have export duty on some articles. One can see what an export duty on pulp wood would do to the pulp manufacturers of this country in the experience of lumber operators in the Province of Ontario."

I shall explain to the House in two words the difference between our constitution and that of the United States. The Federal Government of the United States which has to do with the question of export and import duties has only the powers which are expressly given to it by the Constitution of the United States, whereas the powers exercised by our provincial governments are only those expressly given to them by the British North America act. The Federal Government of the United States has no power to impose an export duty on any article.

I wish now to read an extract from Pulp and Paper magazine of February, 1908, which reads:

"Instead of trying to break our business down and force the new mills, which represent an investment of \$100,000,000, to move to Canada, why do the newspapers not use their columns to build up the business, advocate preservation of the forests, the building of storage reservoirs, for water-power purposes at the headwaters of all streams in the country where practicable, and thus preserve their own existence?"

"The thirty-first annual meeting of the American Paper and Pulp Association took place in New York on the 6th instant, the attendance being larger than ever before."

I have here an article relating to the Watertown Pulp and Wood Supply Company, which reads:

"The above is the name of a company with head offices in Watertown, N. Y., which was incorporated last year under the laws of the State of New York, for the purpose of buying pulp wood in Canada and shipping it to several paper manufacturing companies in the United States. This object is significant, inasmuch as the paper makers in the Republic recognize they can not much longer hunt for individual supplies of raw material either in their own country or in Canada, but find it expedient to join together and draw from one independent source of supply in Canada, over which they themselves will have control. The officers of the company are as follows: J. A. Otterson, president; J. M. Gamble, vice-president; C. H. Remington, treasurer; F. M. Hugo, secretary; W. C. Campbell; E. B. Sterling, general manager. They represent the following companies: The St. Regis Paper Company, the Remington-Martin Paper Company, the Norwood Paper Company, the Raymondville Paper Company, the Carthage Sulphite Company, the West End Paper Company, the Champion Paper Company, the Brownsville Paper Company, the Dexter Sulphite Company, the Carthage Tissue Mills, the Brownsville Board Company.

"The company has an office in Quebec City, managed by E. B. Sterling, who is authorized to buy pulp wood in Canada and ship it to the above companies.

"It was understood that it was the company's intention to build pulp mills in Quebec Province, but J. A. Otterson, of Carthage, N. Y., who is one of those largely interested, informs the Pulp and Paper Magazine that this is not the case. Evidently, while the Canadian government delays in bringing forward measures for restricting or prohibiting the export of pulp wood, the Americans think they may as well get all the wood they can in Canada and ship it to the United States for manufacture."

I have here an interesting paragraph entitled "Our forest wealth," taken from an American paper, reading:

"Seattle papers predict that the timber resources of the Dominion will soon be severely taxed by increased demands. The rate of con-

sumption shows a constant growth. Concrete, brick, stone, and steel are more largely used in all structural work than ever before. But notwithstanding the demand for all classes of structural timber, lumber and wood materials are increasing, too. Other parts of the world have been denuded of trees and are now restocking their forests. In Canada there is still a large virgin area, an apparently inexhaustible forest supply. But rapid settlement of Canada's prairies, the relatively small pine area left in the United States, and the needs of paper manufacturers are making rapid inroads on Dominion spruce and pine, the country's most valuable timber. Europe is looking to Canada now. The United States is buying there, too. The Seattle Post-Intelligencer says that it is the northern wilds that should be Canada's future wood lot. It is there Canada should introduce a practical forestry system that will insure for all time the perpetuation of those forest areas. Growth and reproduction should be continued there indefinitely by scientific forestry methods. If they are those uninhabited wilds will long be the source of Canada's greatest wealth."

A significant dispatch headed "Big timber land deal" appears in the Globe under date of St. John, N. B., October 5, 1907. It reads:

"For the fifth time during the last two years a lumber deal has been completed on the north shore of New Brunswick whereby American capitalists get possession of property valued at nearly half a million."

"To-day the International Paper Company purchased from Ernest Hutchinson, of Chatham, 45 square miles of granted timber lands and 300 square miles Crown lands held under lease from the government; also a large mill. The price is \$500,000."

Mr. W. B. Snowball, of the J. B. Snowball Company, has been a consistent advocate of an export duty on pulp wood and has voiced his opinions and arguments at many of the meetings of the provincial and Dominion forestry associations and elsewhere. He said:

"I am opposed to an export duty on pulp wood. My idea is that the exportation of pulp wood from Canada should be absolutely prohibited. If a duty is decided upon it should be high enough to be prohibitive. That is what we should have in this country."

"I believe that if the governments of the various provinces would follow the example of Ontario and forbid the exportation of pulp wood cut on the Crown lands it would go a long way toward inducing the establishment here of the pulp and paper manufacturing establishments from the United States."

I now come to two interesting extracts from the Montreal Herald, the government organ in Montreal. They are as follows:

"The strong movement to which the Herald directed attention some months ago as growing in force and intensity in favor of a change in the fiscal conditions that govern the exportation of pulp wood has found expression in articles that have appeared in other journals, as well as in the representations made this week to the prime minister, the minister of finance, and the minister of customs by an influential delegation representing the industry."

"HON. MR. TURGEON FAVORS EXPORT DUTY."

"It is," said the minister, "a hard question to deal with, and there are many grave difficulties in the way of a settlement." As minister of lands and forests, and speaking solely from the point of view of my interest, because of that position, in the forests of the province, I think it would be a great boon for the public domain if the federal government put an export duty on pulp wood. On several occasions people have come to this government and asked why we should not put a big tax on pulp wood cut for export. We have had to point out to them that, in the first place, we have no power to enact an export duty, and that, in the second place, the provincial tax on pulp wood cut for export applies only to Crown lands. A careful calculation made by some experts shows that for every cord of wood exported from the province there is left here a sum averaging \$6 per cord. That covers everything—labor, price to the seller, transportation charges, and everything else."

"MENACE TO PULP-WOOD AREAS."

"It is admitted by everybody who has gone into the question that the pulp-wood resources of Canada are vast, but competent authorities declare that it is a mistake to assume that they are inexhaustible. Vast as these areas are in Quebec, Ontario, and some of the other provinces of the Dominion, they are as vulnerable as the herds of buffaloes that once thundered in hundreds of thousands over the prairies, but are to be seen no more. They are as vulnerable as those of the Adirondacks and of northern New York, which gave way before the portable mills of the lumbermen, until the industry disappeared, and only charred dry stumps were left to tell the story of vandalism."

"AN EXPORT DUTY ON WOOD PULP."

"The deputation of manufacturers of paper and pulp which yesterday waited on the prime minister, the finance minister, and the minister of customs evidently presented strong evidence in support of their contention that an export duty should be placed on pulp wood by Canada, or that the exportation of the wood should be prohibited by federal legislation, as it is now in Ontario by provincial legislation."

"It appears to be clear that the United States paper manufacturers must have our pulp wood, and it is equally clear that they are coming to Canada in large numbers, securing timber limits of great magnitude, and stripping them of their pulp wood without doing more for the development of Canada's resources than is implied in the sums they spend for labor and freight. Further, the present condition of affairs encourages jobbers to place 'fake' settlers on Crown lands, get the available pulp wood swept clear and then move the so-called 'settlers' to new fields of labor, leaving behind them lands uncultivated and denuded of timber."

"Were the Canadian paper maker finding a ready market in the States, the situation, from a national standpoint, would not be so absurdly one-sided. As it is he is debarred by a high tariff from selling his finished product in the country which gives free admission to pulp wood, the raw product of the paper maker. The United States tariff being directly designed to encourage the importation of Canadian raw material and discourage that of Canadian manufactured goods, the question arises: How long are we going to rest content with this situation?"

"Ontario has shown by its action in prohibiting the export of saw logs that the process of manufacture of Ontario timber into the finished product could be transferred to that Province. Why should similar action by the Dominion not have a similar result? The two difficulties that appear most prominently in the way are the effect upon the bona fide settler, by diminishing his market, and the possibility of serious reprisals by the States. It is probable that the settler would not find much difference in the value of his timber, owing to the great demand for it, and to the fact that, before long, the States will have to get our paper if they do not get our pulp wood. As to the danger of reprisals, a self-respecting people must do what seems best with their own natural products. If they desire to manufacture them

into finished articles within their own borders, they can not hold their hand for fear of some other people objecting. In fact, it is probable that a firm stand by Canada on this very question would be the most certain means of getting from the United States favorable terms on the importation of pulp and paper. If we could send our paper free into the States, we would not have the same objection to our pulp wood being freely utilized by American paper mills. A fair field is all that Canadians desire. They do not possess it under the existing terms of the United States tariff."

Here is an extract from the Globe of August 31:

"At Sturgeon Falls is one of the great pulp and paper mills of the Province, located on the river that carries down to its doors the spruce which feeds its ponderous grinders and also supplies the power which makes the wheels revolve. The mill—it is probably no secret among financial men of the Province—has had difficulties in the past, partly due to the condition of the pulp and paper market and doubtless to other drawbacks incidental to putting a large industry on its feet. A substantial town with modern buildings and public conveniences has grown up about the mill and within earshot of the cataract which gave the place its name. The whole aspect of the business has changed with the market conditions of the past fifteen months, and the future of the mills at this point is assured. The output is sold before it is manufactured, and an export business has been worked up."

Here is another article from the World, dealing with Wisconsin's paper industry and its moral:

"WISCONSIN'S PAPER INDUSTRY AND ITS MORAL."

"How necessary it is to encourage the development of the paper-making industry in Canada is brought home to the Dominion and provincial governments by a recent article in the Milwaukee Sentinel. Quite naturally, the leading Wisconsin newspaper can not restrain its jubilation over the extraordinary progress made by that State in paper production, in which it declares its manufacturers will soon rival the world. Almost all kinds are made. 'Shiploads are sent to Japan and trainloads to all parts of the West. Several trainloads of paper steam out of the Fox River Valley every evening. It is a small mill which does not make a carload in one day. Some of the machines run a sheet of paper 120 inches wide, 500 feet long, every minute, or a mile of paper every ten minutes, which is rolled into great white rolls and shipped in that manner to the newspapers.'

"Only a few of the paper mills prepare their own pulp. Most of the pulp plants are separate enterprises, dependent for their lumber largely on Canadian forests. 'Thousands of carloads of wood pulp,' says the Sentinel, 'are cut in the northern forests each winter, and large rafts brought over the Lakes from Canada each season and loaded on the cars at Green Bay for distribution to the mills.' Paper making in Wisconsin flourishes chiefly in the valleys of the Fox and Wisconsin rivers, but large works have been placed in other water powers. New plants are being constantly erected, and all the mills are running night and day. But why should Ontario and the other forest areas of Canada content themselves with supplying wood for United States paper mills? Every one of the advantages enjoyed by Wisconsin is possessed by Ontario and bettered—clear water, hydraulic power, proximity to the forests. This province ought to reverberate day and night with the hum of paper factories, just as Wisconsin does. The provincial government should lose no further time in checking the export of pulp wood and in adopting a policy which will not only encourage, but compel the utilization of the raw wood in Ontario."

Mr. Speaker, in detaining you for so long a time with these cuttings, I feel obliged to say that I have taken every precaution to cut out only those parts that are relevant, and with the object of putting the case in regard to pulp wood as clearly as possible. I wish now to quote from a report of the Industrial and Labor Statistics of the State of Maine for 1906:

"The immense increase in the volume of this industry during the past two years is a matter of great surprise to us and no doubt will be to a lot who make the matter a study, but we can not question the correctness of our schedules."

"It is evident to all that this industry is developing the natural resources of Maine as perhaps no other industry has ever done. It is constantly adding wealth to our State, both to the operators and wage-earners, as well as to the merchants and other business men in the communities where the mills are situated. It is adding prosperity to many of our old settled towns and building up new towns in the wilderness. It is giving employment to thousands of our young men who otherwise might be obliged to seek a livelihood in distant parts of the country."

I submit that a great many of these young men mentioned here came from the Province of Quebec.

"It has no doubt been instrumental, to a large degree, in stemming the tide of emigration from Maine, which in the past has carried such a large percentage of the brain and brawn of our rural communities to other States, much to the detriment of our own."

"The farmer and the gardener, as well as the business man and the workman feel the influence of the industry in the new demand for produce, which adds much to their income, where formerly the most remunerative products of the soil, without a local market, were rendered almost valueless on account of their perishable nature."

"The most serious problem in this industry is the question of a wood supply for the pulp mills."

From the closest estimate the writer can make from a compilation of their returns, it appears that after deducting Canadian spruce and the edgings and other mill waste from the total amount used, the Maine forests will soon be depleted. Now, sir, here is a statement taken from a book prepared by the Toronto Globe:

"I do not think there is any doubt but that Canadian mills could and would buy all the wood that the Quebec farmers have for sale at as good a price as they are now getting if the Canadian mills had the protection that the prohibition of export would give them, and the new construction that this protection would bring about would soon make the market larger than ever. Our company are at the present time using from 90,000 to 100,000 cords per year, and we buy a considerable portion of it from farmers."

That is from an interview with the general manager of the Riordan Paper Mills Company. I will now quote from a Globe editorial of September 20, 1907:

"In a number of cases the 1-cent dailies have been put up to 2 cents, and many country weeklies have advanced their subscription prices. Some publishers are cutting down the size of their publications, others are reducing their head line and still others are using smaller type. All these remedies go but a little way to relieve the present distress, to say nothing of averting the impending danger. It is too late to do much in the way of conserving the supply of pulp wood in the United States, but there is still opportunity to do a great deal in the way of preventing a like situation from arising in Canada."

Now, sir, here is the opinion of Mr. Barber, president of the William Barber & Brothers' paper mill at Georgetown:

"I believe in putting an export duty on pulp wood, but it should not be larger than the duty now charged by the United States on our wood pulp. The export duty should be retained until the United States removes the duty on Canadian pulp, and then it should be taken off."

In regard to the retaliatory cry, Mr. Barber says:

"The retaliatory duty which will go into effect in the United States as soon as action is taken by Canada by the putting on of a duty need not alarm either the pulp wood or wood pulp exporters. I venture to predict that if the Canadian Parliament puts on an export duty immediately after the opening of the coming session, the United States Congress would within two months thereafter repeal the retaliatory duty and put Canadian pulp on the free list. A sign of the feeling in the United States was given at the meeting of the publishers of newspapers held last month for the purpose of formulating a demand for the free admission of Canadian paper and pulp. They will be supported in part by quite a large number of American paper makers who want Canadian pulp free of duty, but do not want the paper admitted on the same terms. My opinion is that there will be a compromise of the conflicting interests by admitting pulp wood free without any change in the present duty on paper. If the United States does not want our news paper, other nations do, and with our ample supplies of wood and splendid water powers we can manufacture so as to undersell them in any foreign market."

I freely believe, Mr. Speaker, that if the whole matter is properly explained, the farmers of Canada who have pulp wood to sell—not the manufacturers of the States—will join in the movement to keep Canadian crude products to be manufactured in Canada. At present they hold the dollar so close to their eye they can't see the many dollars beyond. I am reminded of the time the mechanics broke new inventions because they thought they would stop labor; now they realize better pay and shorter hours through same machines. Now, sir, in concluding the compilation of facts considering this great question, facts which have been added to and are being added to every day, I wish to say that my attention was first directed to it specifically by a conversation last fall with a gentleman who had been in the United States, who was fully conversant with the ins and outs of the whole business, and who said if the United States were in our position they would not wait a day before putting on an export duty. Politics steps to one side over there when the mighty dollar is in danger. I also want to say that I presented this resolution entirely of my own motion, that I consulted no one, advised with no one, and am fully prepared to plow my lonely furrow if facts, reason, or other considerations prevent anyone from seeing the case as I see it.

I also wish to say I consider it a question so great, so vital to the national and private weal, that it should be absolutely kept out of politics. I therefore ask the government to appoint a committee of the house, three or five, to take evidence in and out of session and investigate the whole matter and report at another session. In the light of the facts to be found by this committee I trust the government will take some action which will bring into force an export duty, not immediately, but within a reasonable time, giving everybody due notice, which will have the effect of bringing the mills to Canada, and thus having the product of our own country manufactured in our own country.

Preliminary Report of Select Committee on Pulp and Paper Investigation.

SPEECH

OF

HON. JAMES R. MANN,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 28, 1908.

Mr. MANN said:

Mr. SPEAKER: This morning when the House convened at 11 o'clock I asked unanimous consent of the House that the select committee appointed under House resolution 344 to conduct the so-called "pulp and paper investigation" might then have leave to present its report to the House, together with the views of the minority, and that the same might be read. The gentleman from Mississippi [Mr. WILLIAMS] temporarily objected. I had caused advance copies of the report to be printed, so that they might be distributed when the report was taken up in the House, and on making this request these advance copies were at once distributed among the membership of the House.

The reason for the objection by the gentleman from Mississippi [Mr. WILLIAMS] to the request thus made was that the gentleman from Tennessee [Mr. SIMS], the senior Democrat on the select committee, was for the moment absent from the Hall of the House. Subsequently, and after the distribution of the advance copies of the report in the House and while the gentleman from Tennessee [Mr. SIMS] was present, I renewed my former request. The gentleman from Nebraska [Mr. HITCHCOCK] objected to the request to have the report presented to the House from the floor in this public manner, and I thereupon deposited the report in the basket in the usual manner for nonprivileged reports. I now avail myself of the general leave to print, and for the information of the House and the country and for preservation of the report in the RECORD insert the

same, together with the views of the minority, as part of these remarks:

PRELIMINARY REPORT OF SELECT COMMITTEE ON PULP AND PAPER INVESTIGATION.

The select committee of the House appointed under House resolution No. 344, to inquire into the elements and conditions involved in the production and supply of wood pulp and print paper in so far as the same are or may be affected by any combination or conspiracy to control, regulate, monopolize, or restrain interstate or foreign commerce and trade in the manufacture, supply, distribution, or sale of wood pulp or paper of any kind, or any of the articles entering into the same, or any of the products of paper, and how far the same may be affected by the import duties upon wood pulp or paper of any kind, and how far the same may be affected by the rapid destruction of the forests of the United States and consequent increase in the price of wood which enters into the manufacture of wood pulp, and also to inquire whether the present prices of print and other paper are controlled in whole or in part by any combination of persons or corporations engaged in commerce among the several States or with foreign nations, and if so, to inquire into the organization, methods, and practices of such corporations or persons, and also to inquire into certain alleged facts and to obtain all possible information in regard to the same, beg leave to submit a partial and preliminary report and to say that since its appointment the committee has been diligent in making its investigation, and the members of the committee have devoted practically their entire time since appointment to the work of the committee, neglecting their other official duties for that purpose.

The committee listened with interest, attention, and care from April 25 to May 14 to the witnesses appearing in behalf of the contentions of the American Newspaper Publishers' Association, and followed with painstaking care the statements made and evidence presented by Mr. John Norris, who appeared as the special representative of that association. Every opportunity has been given to newspaper publishers to present evidence before the committee, though not all of the publishers who offered to appear or whom the committee would like to hear have yet been examined.

In addition to the testimony presented before the committee, your committee sent out, on May 6, 7,000 letters to various newspapers and other publications throughout the country, asking that a schedule inclosed to them be filled out and returned to the committee, giving certain information as to prices, etc., which schedules, as rapidly as returned, were, up to May 21, turned over to the Census Office for tabulation, and the results of which tabulation have been carefully examined by your committee and are printed in the hearings. Of the schedules which were thus sent out, 919 have been returned and tabulated.

Schedules asking for information were also sent, under the supervision of the Census Office, by your committee to the paper and pulp manufacturers of the United States, but sufficient time has not yet elapsed to have obtained very complete returns from such schedules.

CONTENTION OF PUBLISHERS.

It has been the contention of the newspaper publishing interests—

First. That the price of news-print paper was advanced in September, 1907, to \$50 per ton in New York and correspondingly elsewhere, a figure that was claimed to be \$12 per ton in advance of the price of two years previous, and that a still further advance was threatened of \$10 per ton more, thereby planning, as claimed, an advance of \$22 per ton.

Second. That the advance actually made and the planning of a further advance were both the result of a combination or conspiracy entered into by the news-print paper manufacturers or their selling agents.

Third. That such advance in price and such combination to make further advance were caused, or at least in part aided, by the tariff duties imposed on wood pulp and print paper, and hence that, in justice to the newspaper and other printing and publishing interests of the country, the duties on pulp and paper should be repealed.

Fourth. That the decree of the United States court dissolving the General Paper Company had been willfully violated by paper manufacturers in Michigan, Wisconsin, and Minnesota, parties to that decree, who had in violation of the decree acted in concert and agreed as to prices and to the imposition of conditions upon the manufacture, sale, and distribution of the paper manufactured.

The above may not completely state the contention of the newspaper publishers, but it gives a general and fair idea of their claims.

One of the inquiries submitted to your committee was to the effect of the destruction of the forests of the United States upon the production, supply, and price of wood pulp and print paper.

In the examination of the subject-matters your committee, in addition to the evidence presented to it by the newspaper interests and the pulp and paper manufacturing interests, have had the courteous, attentive, and valuable assistance of the Census Office, the Bureau of Statistics, the Bureau of Labor, the Division of Forestry, and the State and Treasury Departments. Every branch of the administrative service of the Government which has been called upon by your committee has rendered prompt and efficient aid in obtaining valuable information, both at home and from abroad, for the use of the committee and for the benefit of the industries interested.

Prior to the appointment of your committee the statement had been widely circulated that the advance in prices, together with the threatened advance, would entail upon the printing and publishing interests of the United States an additional cost of \$60,000,000 per annum. Subsequently it was explained by the same authority that the actual and threatened advance in news-print paper would be over \$24,000,000 per annum.

NEWS-PRINT PAPER.

Ordinary news-print paper is composed mostly of ground wood. The process of grinding wood consists of pressing it with hydraulic pressure against rapidly revolving grindstones, operated usually with water power. In fact, steam power would be too expensive to grind the wood at the present price of paper. When this wood is ground into pulp and made clean of extraneous matter by various processes, it has mixed with it 20 to 25 per cent of wood pulp or fiber produced by chemical processes, clay to fill the paper to an evenness, coloring matter, etc. The ground pulp is the cheaper, but there is not long fiber enough in it to hold it well together, and the chemical pulp, usually called "sulphite fiber," made from the same wood, is added to give the paper strength.

ESSENTIALS OF CHEAP PAPER.

There are two primary essentials to cheap paper. First, cheap power; second, cheap pulp wood. The cheap power can only be obtained by the development of water power. The use of wood in paper making, while old in various forms, is quite modern in the form of ground wood pulp, and the price of printing paper has been greatly reduced in recent years following the development of the ground wood pulp industry. Probably the lowest price for news-print paper was reached in 1897, though it has been difficult to ascertain the prices at different periods. Most of the news-print paper is sold to the publishers on time contracts and the paper supplied directly from the paper mills.

Usually contracts for news-print paper provide that the manufacturer or other seller shall deliver the paper to the publisher, who is the buyer, so that the contracts generally include both the price of the paper and the freight rate. Just how low the average price of news-print paper went in 1897, along with other things at that general period of depression, we have as yet been unable to ascertain, though it would appear that some paper was sold at about 1½ cents a pound.

The tabulation of the returned schedules of newspapers by the Census Office covers but few of the large metropolitan dailies, which are the heavy consumers. From these returns the average price at present, including in many cases freight charges, to 919 newspapers is \$2.86 per hundred pounds of paper; that of these, 361 using paper in rolls have an average price of \$2.54 per hundred pounds, and 558 an average price of \$3.07 for paper in sheets. From these same returns it appears that in 1890 108 of these publishers paid an average price of \$2.84; in 1894, 132 publishers paid an average price of \$2.46; in 1897, 206 paid an average price of \$2.16; in 1900, 364 paid an average price of \$2.10; in 1905, 636 paid an average price of \$2.43; in 1907, \$15 paid an average price of \$2.38 per hundred pounds. It seems probable that publishers paying high prices most readily responded to the inquiries of the committee.

It appears that the average price received by the International Paper Company for paper delivered was, in 1900, \$2.06; in 1901, \$2.12; in 1902, \$2.07; in 1903, \$2.14; in 1904, \$2.12; in 1905, \$2.07; in 1906, \$1.99; in 1907, \$2.05, and for the first three months of the current year, \$2.20 per hundred pounds.

The average selling price of the St. Regis Paper Company per hundred pounds of news-print paper f. o. b. mill for January, 1903, was \$1.75; January, 1904, \$1.75; January, 1905, \$1.74; January, 1906, \$1.47; January, 1907, \$1.75; January, 1908, \$2.13. The evidence shows that at this mill, while the selling price f. o. b. mill had increased from \$1.75 in January, 1903, to \$2.13 in January, 1908, the cost of production, excluding interest and depreciation, had increased from \$1.30 in January, 1903, to \$1.61 in January, 1908, and that in January, 1906, while the average selling price was \$1.47 the average production cost was \$1.54.

While there appears to have been complaint on the part of paper manufacturers that the selling price of paper for 1906 was too low to be fairly remunerative, yet we are inclined to think that it was not until the summer of 1907 that there was a general increase in print-paper prices. That a general increase was in fact put into effect on new contracts appears to be unquestioned. Some of the contracts then outstanding were five-year contracts, which had several years yet to run. This appears to have been quite generally true of the large metropolitan dailies, who are the principal consumers of news-print paper. In some of these contracts the prices of paper are based upon the cost of production at certain mills. Others are based upon the annual market price with a maximum price named, and others upon different terms. In one long-term contract still in force covering 90,000 tons of paper a year the price is \$1.88 per hundred pounds delivered to the publisher.

It has been impossible for your committee yet to ascertain what proportion of the print-paper consumption in the United States is under new contracts or at advanced prices. But it appears that the International Paper Company, the largest producer of news-print paper, determined in June, 1907, to advance its price of paper on new contracts to \$2.10 per hundred pounds f. o. b. mill, and at a meeting of its selling committee, held October 17, 1907, it was the unanimous sense of that committee that contracts with large customers for 1908 should be based upon \$2.50 per hundred pounds delivered. Other news-print paper makers generally advanced their prices, so far as your committee has ascertained, about the same time or shortly thereafter.

The advance in price made by the International Paper Company on new contracts was close to 50 cents per hundred pounds, or \$10 per ton. While this advance has applied up to the present time on probably less than one-half the news-print paper consumption, yet, if the advance which was made should be applied to the entire consumption of news-print paper in the United States, it would probably amount to an advance of about \$10,000,000 per annum.

This advance in the price of paper to the publisher on new contracts was in a degree coincident with the decline in the quantity of advertising which followed the recent panic.

COMBINATION IN RESTRAINT OF TRADE.

The evidence before the committee so far fails to prove any combination of print-paper manufacturers to advance prices or otherwise in restraint of trade, but considerable evidence was presented which might excite suspicion that such a combination had been made and was in existence. Evidence was presented in relation to a combination of manila and fiber manufacturers, and it seems to be admitted that that combination did exist, has since been dissolved with a fall in the price of its products, and is now under investigation through the Department of Justice in the United States court at New York.

Such of the paper manufacturers as have appeared before your committee during its hearings have strenuously and completely denied under oath the existence of any combination, agreement, or understanding of any nature whatever among the paper manufacturers or their selling agents to regulate, control, or advance the price of paper, the assignment of customers, or for any other purpose in restraint of trade.

INCREASED COST OF PRODUCTION.

The mill owners insist that there has been a decided increase in the cost of producing paper, caused—

First. By the increase in the cost of pulp wood and wood pulp.

Second. By increase in the wages of the employees.

Third. By reduction of the hours of labor per employee per day.

Fourth. By the increase in the cost of other articles which enter into the production of paper.

INCREASED COST OF WOOD PULP.

There seems to have been a decided increase in the cost of pulp wood. This is admitted by everyone. The average cost to the International

Paper Company of pulp wood in the rough per cord, delivered at the mill, from 1898 to 1908 is stated to us as follows:

1898	-----	\$5.33	1904	-----	\$7.49
1899	-----	5.28	1905	-----	7.79
1900	-----	6.07	1906	-----	8.00
1901	-----	6.43	1907	-----	8.54
1902	-----	6.83	1908 (first three months)	-----	10.14
1903	-----	6.77			

The average cost to the Northwest Paper Company, at Cloquet, Minn., for pulp wood per cord, in the rough, 8-foot lengths:

1902	-----	\$3.15	1905	-----	\$4.10
1903	-----	3.40	1906	-----	5.15
1904	-----	3.60	1907	-----	7.40

The average cost of rossed pulp wood per cord to the Remington group of mills, delivered at the mill, was—

1904	-----	\$11.00	1907	-----	\$13.30
1905	-----	11.12	1908 (first three months)	-----	14.00
1906	-----	11.50			

The average cost of rossed pulp wood per cord to the Frank Gilbert Paper Company, delivered at the mill, was—

1894	-----	\$6.25	1902	-----	\$9.00
1895	-----	8.12	1903	-----	10.50
1896	-----	8.12	1904	-----	11.00
1897	-----	8.12	1905	-----	11.21
1898	-----	8.50	1906	-----	11.61
1899	-----	8.75	1907	-----	13.30
1900	-----	8.30	1908 (first three months)	-----	13.80
1901	-----	8.50			

The evidence so far taken would seem to indicate that last summer there became a genuine scare among the mill owners as to the supply of pulp wood for 1908. For the first time the Wisconsin mills purchased pulp wood in Quebec, 1,400 miles distant. Owing to the shortage in the Western available supply of pulp wood, the Western mills purchased 50,000 cords of pulp wood in Quebec during 1907. It is possible this had much to do with the increase in the price of pulp wood and more or less to do with the increase in the price of paper.

COST OF GROUND PULP.

According to the books of the International Paper Company, the average cost to it of producing 1 ton of ground-wood pulp in 1907 was \$14.42, composed of the following items:

Pulp wood	-----	\$9.50
Wages	-----	2.55
Grindstones	-----	.11
Felts	-----	.13
Wires	-----	.04
Screen plates	-----	.05
Belting	-----	.07
Lubricants	-----	.04
Repair material	-----	.77
Repair labor	-----	.32
Fuel	-----	.03
Barn expense	-----	.02
Miscellaneous operating	-----	.07
Office expense	-----	.02
Water rents	-----	.40
Insurances and taxes	-----	.15
Administration expense	-----	.15

The average cost of the amount of ground pulp used in the production of 1 ton of news-print paper was—

1900	-----	\$9.54	1905	-----	\$11.08
1901	-----	10.00	1906	-----	11.49
1902	-----	9.41	1907	-----	12.22
1903	-----	10.24	1908 (January and February)	-----	12.77
1904	-----	11.56			

The cost of production of ground pulp by the Northwest Paper Company per ton, dry weight, was—

1902	-----	\$10.60	1905	-----	\$9.39
1903	-----	12.20	1906	-----	13.52
1904	-----	9.87	1907	-----	17.10

The cost of production of ground pulp to the St. Regis Paper Company, of the State of New York, per hundred pounds, dry weight, was—

1902	-----	\$0.55	1906	-----	\$0.68
1903	-----	.59	1907	-----	.74
1904	-----	.62	1908 (first two months)	-----	.77
1905	-----	.64			

During 1907 ground-wood pulp sold in the market as high as \$30 per ton.

The cost to the International Paper Company of sulphite fiber, per ton, was—

1901	-----	\$25.85
1907	-----	31.38

The cost of production of sulphite fiber to the St. Regis Paper Company, per hundred pounds, dry weight, was—

1902	-----	\$1.36	1906	-----	\$1.54
1903	-----	1.41	1907	-----	1.50
1904	-----	1.46	1908	-----	1.61
1905	-----	1.46			

The average cost to the International Paper Company of the materials used in the manufacture of 1 ton of paper in 1901 was \$21.49, as follows:

Ground pulp	-----	\$10.00	Fillers	-----	\$0.67
Sulphite fiber	-----	9.02	Alum	-----	.27
Sundry fibers	-----	.36	Bleaching	-----	.10
Waste paper	-----	.06	Coloring	-----	.10
Wrappers	-----	.76	Sizing	-----	.15

In 1907 the total cost of materials per ton of paper was \$23.27.

LABOR COST.

The average cost to the International Paper Company of labor in the production of 1 ton of paper from the prepared materials was—

1900	-----	\$3.80	1905	-----	\$3.83
1901	-----	4.00	1906	-----	3.80
1902	-----	4.11	1907	-----	4.19
1903	-----	4.15	1908, January	-----	4.29
1904	-----	3.94	1908, February	-----	4.38

The average cost to the International Paper Company of labor in the production of 1 ton of paper from the delivery of the pulp wood at the mill was—

1900	\$7.74	1903	\$7.86
1901	8.02	1906	7.63
1902	8.13	1907	8.52
1903	8.18	1908 (first three months)	8.81
1904	8.04		

In the Northwest Paper Company the average cost of labor in the pulp and paper manufacture in 1907 was 18 per cent higher than in 1904.

In the John Edwards Mill, of Wisconsin, the cost of labor in the manufacture of 1 ton of paper from the prepared materials was—

1899	\$3.26	1904	\$3.12
1900	3.00	1905	3.12
1901	3.22	1906	3.25
1902	3.28	1907	3.88
1903	3.32		

In the Northwest Paper Company the cost of labor in 1 ton of paper from the tree in the forest to the completed paper in rolls is stated at \$16.23 in 1907, divided as follows:

Labor in 1 ton of paper from tree to the paper mill, including preparation of the materials	\$10.61
Labor in the paper mill proper	5.62

There seems to have been a considerable increase in the average weekly wage of the employees in the paper and pulp mills. This increase has not been greater than seems to your committee to have been necessary, owing to the increased cost of living, and the wages now paid in the paper and pulp mills would not be generally considered high, as compared with other skilled labor, though this may be largely owing to the fact that the mills are generally located on streams apart from large centers of population.

HOURS OF LABOR.

Owing to the fact that the machinery is largely operated in the mills by water power, it is economical to run them night and day. Up to about 1900 or 1901, the employees worked on what is known as the two-four or two-shift system—that is, an employee would work one week eleven hours during the daytime for six days, or sixty-six hours, and the next week thirteen hours during the night for six nights, or seventy-eight hours.

There were and are, of course, some employees about the mill who work only during the day, but the employees connected with the making and preparation of pulp and the making of paper work at machines that run day and night. About 1901 the hours of labor in the eastern news-print paper mills of the United States were generally reduced, so that an employee alternately worked one week eleven hours per day, or sixty-six hours, and five nights per week of thirteen hours each, or sixty-five hours. Under this system the mills shut down Saturday night. This reduction of hours was accomplished without reduction in wages, and in fact it would appear that notwithstanding the reduction in hours there were some increases in wages.

In 1906 and 1907 the International Paper Company and a large number of other eastern news-print paper mills put into effect what is called "the three-four system," under which there are three shifts of men, each working eight hours per day for six days in the week. This shortening of hours was accomplished without reduction in the wages of the men per week, and in some cases the wages have been increased, so that they are now higher under the eight-hour system than they were under the longer hours.

The reduction in the hours of labor has not been adopted in the Wisconsin and other western mills, where the hours still alternate between sixty-six and seventy-eight hours per week, or an average of twelve hours per day.

In the opinion of your committee it would be very unfortunate to adopt any legislation which would result in a return in the eastern news-print mills to the former system of twelve hours' work per day, or which would operate to continue such system in the western mills. While the adoption of the three-four system instead of the two four does not advance the wages paid in the mill to the extent of one-half, yet it makes a very considerable and decided increase in the number of employees paid and the total amount of the wages paid out.

According to the advance figures from the Twenty-second Annual Report on Factory Inspection of the New York State department of labor, kindly furnished to the committee by Hon. L. W. Hatch, chief statistician, it appears there were 14,004 employees in 198 paper and pulp mills in New York State, exclusive of New York City, in 1907. Of these, 4,050, or 28.9 per cent, worked less than fifty-one hours per week, 6,302, or 45 per cent, worked more than sixty-three hours per week. In 1906, 3.9 per cent of the employees worked less than fifty-one hours per week, and the number in 1907 was 28.9 per cent. In 1906, 599 employees worked less than fifty-seven hours per week. In 1907 the number was 5,267.

SOME INCREASE IN THE PRICE OF PAPER JUSTIFIED.

It would appear that the increase in the value and cost of pulp wood, the increase in wages, the decrease in the hours of labor of many of the employees, and the increase in the cost of other materials used, justified some increase in the price of paper over the prices previously prevailing, notwithstanding some economies perfected in the production of pulp and paper. The International Paper Company is the largest producer of news-print paper in the United States, and produces from 30 to 40 per cent of the entire output.

The evidence shows that the net earnings of that company for the fiscal year ending June 30, 1901, were \$3,054,000; that the average net earnings of the company for the fiscal years from 1899 to 1905, inclusive, were \$2,316,000; that for the fiscal year ending June 30, 1906, the net earnings fell off to \$1,985,000, and for the fiscal year ending June 30, 1907, to \$1,623,000, and for the first six months of the calendar year 1907, to \$777,000; that about the middle of the calendar year 1907 the manufacturing department of the said company submitted reports, showing an estimated increased cost of production for the calendar year of 1908 of \$1,500,000 over that for the fiscal year ending June 30, 1907, based on the same quantity of paper. This estimate followed the introduction of the eight-hour system in its mills, and was coincident with the increase in reference to the supply and cost of pulp wood. The estimate was based upon an increase of \$300,000 in the cost of labor and \$1,200,000 in the cost of pulp wood.

The evidence shows that at the Hudson River mill, the best equipped of the International Company, the cost of production per ton of news-print paper in 1907, excluding depreciation, interest, and administration expenses, was \$27.50, and for the first three months of 1908,

\$30.34. At one of the mills of the International Company the same cost for 1907 was \$37.10.

At the St. Regis mill, one of the modern mills, the cost of production at the mill of news-print paper, excluding depreciation and interest, as shown by the books of the company, was—

	Per 100 pounds.		Per 100 pounds.
1902	\$1.34	1906	\$1.53
1903	1.39	1907	1.60
1904	1.42	1908 (January and February)	1.66
1905	1.55		

At the Northwest Paper Company the cost was—

	Per 100 pounds.		Per 100 pounds.
1903	\$1.58	1906	\$1.70
1904	1.50	1907	1.94
1905	1.52		

At the Dells Paper and Pulp Company, Eau Claire, Wis., the cost was—

	Per 100 pounds.		Per 100 pounds.
1902	\$1.45	1905	\$1.45
1903	1.49	1906	1.49
1904	1.48	1907	1.79

At the Dells Paper and Pulp Company the difference between the actual cost of production and the selling price per hundred pounds of news-print paper was—

1902	\$0.50	1905	\$0.44
1903	.51	1906	.23
1904	.53	1907	.15

This last represents the net profits excluding any charge for interest or depreciation.

The sworn evidence in behalf of the International Paper Company, based upon its books, shows that the average total cost to it of news-print paper delivered to the customer was \$40.09 per ton for the calendar year 1907, composed of the following items:

Cost of production, including materials, labor, taxes, insurance, and other mill expenses	\$32.38
Cost of administration	1.04
Interest on bonds	1.99
Expenses of delivery	4.68

Total 40.09

Under the estimate submitted by the manufacturing department of the increased cost of production for 1908, it was estimated that the cost in 1908 of paper delivered would be \$43.41. During the first three months of 1907 the International Paper Company delivered 111,718 tons of news-print paper, which were billed to consumers at \$40.09 per ton, or \$4,569,000. For the first three months of 1908 the same company delivered 90,791 tons, which were billed to the consumers at \$44.14 per ton, or \$4,008,000.

The evidence shows that the grand total of contracts for paper on the books of the International Paper Company May 1, 1908, called for 427,622 tons at an average price of \$44.53 delivered. The evidence shows that the average selling price of the International Paper Company of news-print paper at the mill, not including cost of delivery, on both domestic and foreign business, was as follows:

Fiscal year.	Domestic.	Foreign.	Fiscal year.	Domestic.	Foreign.
1900	\$35.54	\$38.02	1904	\$37.80	\$37.76
1901	36.28	38.78	1905	36.94	38.48
1902	35.80	36.82	1906	35.52	37.76
1903	37.70	36.48	1907	36.64	37.04

THREE-CENT PAPER.

One of the claims urged by the Publishers' Association was that it was the intention of the paper manufacturers to further increase the price of paper on a basis of 3 cents per pound, or \$60 per ton, delivered at New York, with prices corresponding elsewhere. Such a condition would add more than \$10,000,000 above the present cost of paper. The paper manufacturers strenuously denied there having ever been such an intention, and from the evidence submitted to the committee we find that such an advance was never contemplated.

CANADIAN COMPETITION.

The principal competition with the news-print paper and pulp mills of the United States comes from the Canadian mills. From Canada we import a large and rapidly increasing amount of pulp wood. We also import a considerable quantity of wood pulp and are now importing some quantity of news-print paper.

Consul-General Foster, at Ottawa, Ontario, reports that the average price of news-print paper at the Laurentide Paper Company mill, at Ottawa, per ton was—

1902	\$38.41	1905	\$37.46
1903	38.83	1906	36.41
1904	38.17	1907	36.16

While the average price of news-print paper at the Canadian mills may be now a trifle less than in the United States, it was until the last year apparently as high, or higher, at the Canadian mills than at the mills in the United States. It is claimed by the paper manufacturers that the low prices now prevailing at the Canadian mills are temporary in nature and the result of the depression in the news-print paper market in England and Canada.

EXPORTATION FROM CANADA.

Some of the provincial governments in Canada now discriminate against pulp wood for exportation. It is said that most of the forests in the Provinces of Quebec and Ontario suitable for pulp wood are public, or Crown, lands belonging to the provincial governments. The Province of Quebec makes a license or stumpage charge of 65 cents for each cord of pulp wood cut on its Crown lands, with a reduction or rebate of 25 cents for each cord manufactured into pulp within the Dominion of Canada.

This amounts to an export charge of 25 cents per cord, or nearly 40 per cent of the original license or stumpage charge. It is from the Province of Quebec that most of the pulp wood now imported into the United States is obtained. Wisconsin and other western paper

and pulp mills could much more cheaply obtain wood pulp from the Province of Ontario than from Quebec, but the Province of Ontario absolutely prohibits the exportation from Canada of any pulp wood cut on its public lands, though permitting such cutting for manufacture at home.

Canada has immense tracts of spruce forests, spruce being particularly well adapted for making paper. And while these forests have doubtless advanced more or less in value for the production of lumber, yet they ought, together with the spruce forests of the United States, furnish spruce pulp wood in sufficient quantities for paper making for a long time in the future, or perhaps indefinitely with proper conservation.

REMOVAL OF THE TARIFF.

The question as to the removal of the tariff on print paper and wood pulp is intimately connected with the conservation of the forest resources of the United States, as well as its effect upon the paper manufacturing industry and the newspaper publishing industry. Your committee has taken in its preliminary investigation about 2,000 printed pages of testimony, involving many tables of cost and price.

The committee has not yet completed its investigations and is not yet prepared to make a recommendation as to the permanent policy of the United States in regard to the duty on paper and pulp, except that the committee is firmly of the opinion that the tariff on news-print paper and on wood pulp should not be removed as to paper or pulp coming from any country or place which prohibits the exportation of pulp wood, or which levies any export duty on paper, pulp, or pulp wood, or makes any higher charge in any way upon wood pulp or pulp wood intended for exportation to the United States.

The evidence taken so far would seem to indicate that the temporary suspension or entire removal of the present tariff would not have any great immediate effect, and if the tariff is removed at any time it should be coupled with the right to free exportation of pulp wood from the Canadian forests. The removal of the tariff on print paper and wood pulp, if followed by an export duty on pulp wood coming from Canada, would probably result in a considerable increase in the price of print paper and the early destruction of the pulp wood forests in the United States.

A low or even moderate price for print paper in the future is dependent mainly upon the future supply and cost of pulp wood. About one-third of the pulp wood now consumed in the manufacture of paper by our mills is imported from Canada. If an export duty should be levied by Canada upon the exportation of pulp wood, or if the Province of Quebec should follow the example of the Province of Ontario and entirely prohibit the exportation of pulp wood cut on its Crown lands, the cost of pulp wood in the United States would be greatly enhanced and the price of paper would go up.

A mistaken policy now adopted and put into effect by the United States upon this subject might easily prove of inestimable damage and cause the practical destruction of the cheap daily newspaper.

It would seem that for the American publisher to be assured of low prices for his paper, it is essential to maintain paper mills in the United States. Any policy that would give the Canadian mills a preferential advantage over American mills in obtaining the raw material at a lower price must inevitably result in the dismantling of American paper machines and the ultimate dependence of American publishers on Canadian mills. Under such conditions Canada could levy export duties on print paper that would result in enhanced prices without the presence of competition from American paper manufacturers.

So far as the information yet presented to the committee discloses the facts, your committee is inclined to the opinion that if the American mills can obtain pulp wood from Canada on even terms with the Canadian mills, they can make ground wood pulp as cheaply as it can be imported from Canada free of any duty. What effect the removal of the tariff upon paper would have as to Norwegian and other European competition, your committee is at present unable to say, though it has been claimed before your committee that the wages paid in European countries are only one-third to one-half of the wages paid in the mills of the United States, and that under free trade competition the low wages in the European countries would be disastrous to the wage scale and the hour scale in the American paper mills.

Your committee proposes during the summer vacation to continue its investigations and expects to be able to present to the House at the next session of Congress definite recommendations, based upon complete information thoroughly considered, as to the various matters of inquiry submitted to the committee. In not presenting at this time definite conclusions and recommendations your committee is guided in part by the fact that no combination in restraint of trade has been proven by the evidence to exist among the paper manufacturers, and that the evidence does not show any intention on the part of the paper manufacturers to further increase the present price of news-print paper, but that on the other hand the evidence does show that the upward tendency in the price of paper, which was so marked during the year 1907, reached its limit some months ago, probably as the result of economic conditions, and that at present the tendency of the news-print paper market is downward. One contract with a large daily paper was recently concluded on the basis of \$2.20 per hundred, delivered in Chicago.

The scare of last year as to the future supply and price of pulp wood and as to the ability of the mills to furnish news-print paper enough to meet the demands of consumption has subsided, and when new contracts are made during the present year for pulp wood to be delivered in 1909 the price is likely to be lower than the prices now being paid for pulp wood on contracts made last year. The decreased consumption of paper consequent upon the general business conditions of the country means a lessened demand for pulp wood and, we believe, a consequent return to normal prices.

THE STEVENS BILL.

The so-called "Stevens bill" (H. R. 18608) provides for the repeal of the tariff law so far as it applies to wood pulp and printing paper, with the proviso that if any country or dependency shall impose an export duty on pulp wood there shall be imposed a duty on wood pulp and print paper when imported from such country or dependency to the amount in the case of wood pulp of the export duty and to the amount in the case of printing paper of one-tenth of 1 cent per pound for each dollar of export duty per cord of pulp wood and proportionately for fractions of a dollar of such export duty.

The Stevens bill does not purport to repeal or change the tariff laws as to any class of paper or paper products except printing paper, though all other kinds of paper are affected by the same natural conditions which have affected the supply and price of printing paper. We doubt whether anyone, after full consideration, would desire the enact-

ment of the Stevens bill into law in its present shape. The bill makes no provision against the present order of the Ontario government prohibiting the exportation of pulp wood. It contains no safeguard against a similar order by the government of Quebec.

If the Stevens bill should be enacted into law in its present shape and the Province of Quebec should by order provide that no pulp wood cut on Crown lands should be exported from Canada, it would cause an immediate rise in the price of paper; it would enhance greatly the price of pulp-wood timber in the United States; it would cause the destruction of American forests; it would cripple the paper-manufacturing industry in our country; it would in every way do much harm and prove of benefit in no way.

The spruce forests of Canada and the water-power development in the United States can profitably and economically be used together in the production of print paper at low prices. The necessary cooperation of these two great natural resources may be brought about by mutual agreement or treaty between our country and Canada, or perhaps by thoroughly considered and well-safeguarded legislation. It would be much better to secure such cooperation by mutual agreement with the Canadian government, if that can be done. Just what obstacles may be in the way of such an agreement, by reason of the fact that the ownership of the Crown lands is in the provincial governments or for other reasons, your committee has not fully considered.

As the present price of paper would not to any considerable degree be immediately affected by the repeal of the tariff, and as the passage of the Stevens bill in its present form might spell "ruin" to the paper industry and ruinously high prices for paper in the near future, your committee believe it the part of wisdom before making recommendations for positive legislation to await until its investigation has been completed and thoroughly digested.

All of which is respectfully submitted.

JAMES R. MANN.
JAMES M. MILLER.
WILLIAM H. STAFFORD.
HENRY T. BANNON.

VIEWS OF THE MINORITY.

The undersigned members of the Select Committee on Pulp and Paper Investigation, acting under House resolution No. 344, respectfully recommend the passage of H. R. 18608, introduced by Mr. STEVENS of Minnesota.

An acute situation, which might be termed trade hysteria, was precipitated in 1907 in news-print manufacture when a group of sixteen Wisconsin mills, known as the Wisconsin Wood Pulp Association, bought 50,000 cords of pulp wood in the Province of Quebec, Canada. This purchase entailed a transportation of that material a distance of 1,500 miles. It introduced a new and unlooked-for factor into what was more or less of a speculative operation. It demoralized the pulp-wood markets of the United States, as well as of Canada, where nearly 1,000,000 cords of pulp wood are bought for export to the United States. It started paper quotations upward until one paper-trade journal reported that the current prices for news-print paper on July 1, 1907, ranged from \$52 to \$62 per ton. (See Doctor North's letter to Mr. DALZELL, Hearings, p. 219.) This advance had been foretold by papers, salesmen, and others nearly a year prior to a so-called "paper famine."

The Wisconsin and other mills are rapidly exhausting their supply of available spruce, as is shown by their effort to buy and ship wood a distance of 1,500 miles. More than one-half of the spruce wood used in American mills for making news-print paper comes from Canada. At the time that the Wisconsin purchase of Quebec wood caused the trade flurry the officials of the International Paper Company (a corporation producing about one-third of the entire supply of news-print paper manufactured in the United States) computed that the increased cost of their labor by reason of shorter hours had added \$300,000 per annum, or 60 cents per ton, to their expenses and that their wood would cost \$1,200,000 additional, or \$2.40 upon each ton of paper produced, a total of \$3 per ton upon their entire output of about 500,000 tons for news, manila, and other varieties of paper. (Hearings, p. 1096.)

They also figured that of their news-print paper output only 55 per cent could be taxed with these burdens because the other 45 per cent of their news-print production had been tied up with low-priced contracts covering the year. Accordingly, they decided upon \$50 per ton delivered as their minimum upon all future sales, which substantially fixed that price for the entire market. This figure carried with it an average advance of about \$10 per ton in a period of two years. The action was too abrupt. It provoked trouble and resentment at a time when newspaper revenues were shrinking because of depressed business conditions. It brought to the attention of the country a situation that demands rectification.

Immediately following the panic of October, 1907, the newspaper publishers sought to offset their losses caused by diminished advertising revenues and by increased cost of paper. They reduced the number of pages of their papers, resulting in a diminution of consumption. The paper mills, which had been taxed to supply the market, soon found their stocks accumulating, with decreasing demand for their product. The market was soon glutted, and paper makers were confronted with the alternative of reducing their prices or closing their mills and discharging their labor.

They decided to maintain the high prices, and this action on their part threw many of their employees into idleness. They kept their prices so far above the normal level that Canadian mills were able to pay the duty of \$6 per ton and to undersell American mills in the American market, doing this while paying wages for labor that compared favorably with the wages paid by the American mills. (Hearings, pp. 691, 805, 995.) This maintenance of high prices under such conditions brought about the unlooked-for result of giving to Canadian labor some of that work of production which otherwise would have gone to American labor.

Many cases of hardship have been brought to the attention of the committee. For instance, the Philadelphia Inquirer, using 13,000 tons of news-print paper annually, at a price of \$38 per ton, was notified that it must agree within twenty days to pay an additional price of \$12 per ton, aggregating \$156,000 per annum, or take chances upon its supply of paper. (Hearings, p. 393.) Inquiries at that time showed that a supply elsewhere was not obtainable. The Baltimore American was notified that it must pay \$12 per ton advance upon a consumption of approximately 5,000 tons per annum, or a total advance of \$60,000 per annum, and it had no recourse but to pay. (Hearings, p. 242.)

Many papers published in small cities and towns yielding a meager income had found their entire profits to disappear with this advance. Inquiries made by them disclosed the fact that no other mill than the

one from which they had previously obtained their paper could supply them. They were thus forced to the alternative of contracting at the highest price or a suspension of publication. Their embarrassment was aggravated by the inability of newspaper publishers to pass along these burdens of higher price for paper to their customers.

These hardships and this inability to have their customers share the added cost of paper present a case of urgency that differentiates this request for tariff removal from other pending propositions of similar character. The price of a newspaper is like the price of a postage stamp. It is measurably fixed. It can not be raised or lowered to meet the constantly changing prices of raw material. In this respect it is unique.

Evidence of concert of action on the part of the paper makers in obtaining higher prices are furnished by reports from many newspapers located in every part of the country, though actual violation of the criminal statutes has not been shown. However, the paper makers failed to explain the uniformity of price or to entirely justify their advance in price. They admit that numerous meetings of manufacturers have been held, but they deny that prices were definitely fixed at those meetings. They claim that the increased prices were forced upon them by reduction in the hours of labor and by the increased cost of wood.

The total labor cost of the International Paper Company increased 66 cents per ton from 1906 to 1907. An audit of the accounts of the largest mill operated by it (Hearings, pp. 705-710) disclosed the fact that the labor cost of a ton of paper had not increased in that mill in 1907 over 1906, but had diminished \$1.13 per ton by reason of the introduction of improved machinery and of improved methods, and that this diminution in cost was possible and had been accomplished notwithstanding a reduction in the hours of labor of the entire mill force. The testimony also showed that the reduction in the hours of labor was not general throughout the entire country, though all mills raised their prices upon the allegation that "their labor cost had thereby been increased."

The claim that pulp wood had increased in price has more merit than the claim of increased labor cost, but the increase in wood cost did not justify the advances which the paper makers ultimately adopted. The high quotations for pulp wood are open to the suspicion that they are the results of the methods of the larger paper companies which engaged in a scramble for the ownership of timber lands and then bought their supplies in the open market upon the theory that they should conserve their forests and not cut from their own lands but buy from outsiders.

It was shown that the International Paper Company had acquired control of over 4,000,000 acres of spruce timber tracts in the United States and in Canada and that other large investments by American paper makers had been made in Canadian woodlands. (Hearings, p. 486.) As appears from Canadian reports relating to the export of over 1,836,772 cords of pulp wood, there was no increase in cost during the years 1905, 1906, 1907. The average prices certified by the paper makers upon their exportations in these years were:

1905	\$4.38
1906	4.31
1907	4.37

(Hearings, p. 483.)

These prices were certified by shippers who had no apparent incentive for undervaluation.

An extraordinary and unaccountable secrecy marked the relations of manufacturer and publisher; contracts with large consumers were made under obligations of confidence and secrecy. Requests by the select committee to publishers of metropolitan dailies for information which would illuminate the subject were almost uniformly disregarded. Mail and telegraphic invitations to them to appear and testify were accepted by few. The metropolitan dailies had the advantage of long-time contracts, which had been denied to others, and they viewed with a measure of indifference the burdens suddenly heaped upon a considerable number of smaller papers.

It is upon these publications issued outside of the big cities that the advance in paper prices has been made to fall heavily. Five newspapers in New York City, consuming about 550 tons of news-print paper per day, are practically exempt for the time being from additional cost on account of unexpired contracts.

When an industry is made the beneficiary of a protective tariff and consumers everywhere are taxed to support it, it assumes an obligation to provide for expansion as the needs of the country may require.

It is also under obligation to promote the interests of the labor employed in such protected industries. The testimony submitted to the committee indicates that these obligations were not regarded by the paper makers.

The bill which we recommend will check a destruction of our woodlands, which has been estimated to exceed 1,800 square miles per annum, solely for the purposes of pulp and paper manufacture. Mr. Pinchot, of the Forestry Bureau (Hearings, p. 1357), says that from the meager data at hand the available supply of pulp wood in the United States is as follows:

	Years.
New York (which is the principal paper-making State)	8½
Pennsylvania	9
Minnesota	9
Vermont	11
New Hampshire	25
Maine	28½

Every consideration of public policy suggests the conservation of our woodlands. When the trees are cut from the hills, the land loses its absorptive qualities and the rain passes off as if from a tin roof, causing floods and subsequent droughts, carrying rich soil into the rivers, and entailing baleful consequences upon our national resources.

We find that the existing duties have raised the price of wood pulp and print paper not only in itself, but by giving to the paper manufacturers a shelter behind which they could organize combinations which, if not technically susceptible of proof as "unlawful trusts," are, in our opinion, in reality such. It is true that the tariff of itself, perhaps, might not account for the full advance in price, but the tariff, plus the tariff-engendered combinations, do account for all of it.

We find that the revenues derived from import duties on pulp and printing paper are so small, and the benefits to be obtained from the abolition of those duties are so considerable, that we urge the placing of pulp and printing paper on the free list. We believe that relief from existing conditions can be fully and promptly secured only by the immediate consideration and passage of H. R. 18608, known as the "Stevens bill."

T. W. SIMS.
WILLIAM H. RYAN.

Battle-Ship Construction—At Least One Should be Built This Year at the New York Navy-Yard.

SPEECH

OF

HON. WILLIAM M. CALDER,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908,

On the bill (H. R. 20471) making appropriations for the naval service for the fiscal year ending June 30, 1909, and for other purposes.

Mr. CALDER said:

Mr. SPEAKER: I am in full sympathy with the theory that in times of peace we should prepare for war and want to place myself on the side of the men who are to-day advocating the authorization of four battle ships in the pending naval appropriation bill. I would go to any length to assist in bringing about a condition of affairs that would insure the permanent establishment of universal peace. I realize, however, that the millennium has not arrived, that international differences will arise, and that it is essential for a nation to have might on its side as well as justice.

The idea of maintaining a navy is based on the same principle as the establishment of a police force in a great city. I would not permit the charge to go unchallenged that New York City did not contain the most peaceable people in the world. But no intelligent man would attempt to argue that law and order could be maintained in that great city, with adequate protection to the life and property of its people, without the aid of its magnificent police force of nearly 10,000 men. The same principle applies to all large cities and equally so to the control of the seas. Does anyone question for a moment that the policing of the ocean by the navies of the great powers has not only protected the interests of those powers, but has safeguarded the smaller and weaker nations as well?

Personally I would vote for a navy equal in size to that of Great Britain, and if it were in my power would establish permanently in the Pacific Ocean the magnificent fleet now there as a guaranty of the peace and safety of our Western coast and our island possessions in the Orient.

As rapidly as possible I would also build another fleet to take its place on the Atlantic coast. The two-fleet policy—one for the Pacific, one for the Atlantic—will some day be realized. This nation is growing in population, wealth, and responsibilities. Its facilities for maintaining the national integrity, honor, and security must keep pace with the expansion along territorial and commercial lines. This means a bigger Navy.

President Roosevelt, who earned the title of the "Prince of Peace" by stopping the Russian-Japanese war, has taken the lead in the fight for four battle ships. He has proved that the "big stick" and a big Navy can be used to protect the weak and promote that friendliness and comity between nations which is so much desired. I believe, with President Roosevelt, that an American Navy second to none in the world is a guaranty of peace, not only here, but elsewhere, and not an incentive to war.

It is also proposed to amend the pending measure by inserting a provision providing that one of the battle ships authorized under this bill shall be built in a navy-yard of the United States under the direction of the Secretary of the Navy. From the expressions of opinion of a great majority of the Members of the House I am confident this amendment will prevail. An examination of the records of the Navy Department in the construction of the battle ship *Connecticut*, built at the Brooklyn Navy-Yard some three years ago, shows many surprising results. The construction of this vessel, with her sister ship the *Louisiana*, was authorized by Congress in 1902, and at that time the statement was made by the chairman of the House Naval Committee, on the authority of the then Chief Naval Constructor, Admiral Bowles, that it would cost not less than 25 per cent more to build a ship in the navy-yard than by contract.

What is the actual result? The official figures of the Navy Department to September 30, 1907, including the expense of alterations, chargeable to original construction, and also of armor and permanent ordnance, fittings, and so forth, are as follows: *Connecticut*, \$6,367,308.22; *Louisiana*, \$6,037,344.47; a difference of \$330,000, or only a little more than 5 per cent. The Secretary of the Navy, Mr. Metcalf, has informed me that in selecting the *Connecticut* for his flagship, Admiral Evans told him that she was a 25 per cent better ship than the *Louisiana*.

A long and hard battle was fought before the Brooklyn yard was given a chance to compete in modern battle-ship construction with private contractors. The popular notion had to be dispelled that navy-yards were refuges for broken-down political hacks and incompetents, saddled upon the Government like pensioners. Congress did not realize that the demoralizing conditions of fifteen and twenty years ago no longer exist in the navy-yards; that these establishments are filled with skilled mechanics and faithful laborers, and that the strictest rules of discipline and economy prevail. The phenomenal record achieved with the *Connecticut* furnishes a striking proof of the changed conditions. That vessel was built in a shorter time than any battle ship ever before laid down in this country, save the *Louisiana*, and the difference in time here was so small as to be unimportant. The record of the Brooklyn yard with the *Connecticut* gave to the Government a club with which to break up the ship trust, to force cheap bids for future battle ships, and to compel their construction within reasonable time limits.

The official record of the building of the other twenty-one best-known ships in the Navy shows that not one of them was completed in contract time. The *Nebraska*, built by Moran Brothers, of Seattle, and the *Georgia*, built by the Bath Iron Works, of Bath, Me., were over three years longer building than the *Connecticut*. The *New Jersey*, built by the Fore River Ship Building Company, on Fore River, Massachusetts, and the *Virginia*, built by the Newport News Company, at Newport News, Va., were over two years longer building than the *Connecticut*, although the *Connecticut* is larger than any of these ships by 15 feet in length, by 7½ inches in beam, by 9 inches in draft, the displacement being 1,000 tons greater, and the coal-carrying capacity being larger by 500 tons.

The record in building the *Connecticut* has served another very useful purpose. It opened the eyes of the Department to the real cost of ship construction and the margin of profit involved. The difference of \$300,000 or so in the excess cost of the *Connecticut* has already been saved to the Government many times over in cheaper contracts since forced from the contractors, due to the fear of further navy-yard competition. Does anyone believe that the proposals for the battle ships *South Carolina*, *Michigan*, *North Dakota*, and *Delaware* would not have been scaled down to the lowest figures but for the knowledge on the part of the bidders that the Government would no longer submit to extortionate charges for battle ships?

I am confident that the Government saved not less than \$2,500,000 in the bidding on these ships alone because of navy-yard competition.

The old charge that only a private builder can turn out an efficient, up-to-date vessel was exploded when the *Connecticut* was put into commission. We have the word of a great sea fighter, Admiral Evans, that the *Connecticut* is a better ship than her rival craft, the *Louisiana*. If statistical evidence to back up this opinion is needed, it is readily found at the Navy Department. Compare, if you will, the actual cost of repairs on these two ships since their completion. We have the facts at hand, fortunately, because the same report which gives the cost of such repairs to the *Connecticut* as \$94,314 shows that corresponding cost to the *Louisiana* to be \$110,500, a difference of about 17 per cent in favor of the Government craft. As a matter of fact, the comparison is more favorable than appears on its face, because the *Connecticut's* total includes the cost of repairs as a result of the grounding of this vessel, an accident which, of course, is in no sense chargeable to the quality of work on the ship itself.

The reasons given in the foregoing are sufficient, in my judgment, to warrant the House in agreeing to the proposition to give one of these ships to a navy-yard, but I want to call the attention of the Members to a condition of affairs which must be considered in determining the broad policy of national ship construction. We have at the Brooklyn Navy-yard a plant which, with the land and water front, is valued in the neighborhood of \$20,000,000. There is maintained there a force of approximately 3,500 workmen and upward of 50 master mechanics, with a supervisory force of officers about equal to the master mechanics.

This force was gathered together at the time of the building of the *Connecticut*, and to a large extent was continued in the building of the collier *Vestal*. I venture to say that nowhere in the country can there be found a finer body of highly trained mechanics, artisans, and laborers. Anyone who has had any experience at all with a large working plant realizes the desirability of maintaining the force intact, in order that there may be no loss of efficiency from a disruption of units. The adoption of a fixed policy of having at least one battle ship always

under construction at this yard will retain to the Government the benefits of the highly organized working force, will keep the ship trust in check in the matter of bids, will force the prompt completion of ships in the hands of private contractors, and result in innumerable other advantages all tending to improve the efficiency of the American Navy.

Now, it has been proposed as an alternative of four battle ships in this bill that we provide for only two, with an understanding that there shall be at least two more next year, and so on indefinitely. In other words, that this Congress pledge itself to the policy of voting for at least two battle ships of the largest size every year. This is a move in the right direction to which I give my heartiest indorsement.

The United States is the only great world power that has no definite naval building programme. England follows the rule of maintaining a navy equal to the combined fleets of the largest two nations. Germany is working on a policy that will give her a magnificent battle-ship fleet in 1912. Other nations have similar policies, so that there is no interruption to ship-building due to political changes and other incidents.

I violate no confidence in asserting that President Roosevelt favors such a policy for this country. We are wealthy enough to build a navy on a systematic basis, rather than on the hit-and-miss plan that has been followed in the past. National defense is as important as national income, and one should be insured with as much care and system as the other.

The policy of building two battle ships each year should go hand in hand with the policy of having at least one battle ship always under construction in a navy-yard. This programme would require an award to a Government yard only once every three years—one vessel out of six. This is a division of contracts to which even the greedy private builder can not reasonably object. The plan has every reason to commend it, including economy, public welfare, and justice. If the President shall direct the construction of one of these vessels at Brooklyn, we will guarantee to furnish a vessel superior in every way to the *Connecticut* and built even more quickly and cheaper.

Finally, I appeal to this House to uphold the President in his general recommendation that we build a navy that will be commensurate to the dignified position this nation now occupies as a leading world power. The Stars and Stripes are found in the Orient, in the West Indies, and in far-off Bering Sea. If that emblem is to be treated with respect, if it is to be regarded as the flag of a justice-loving people who will as quickly defend the weak and oppressed nations as they will resent national insult and dishonor, then we must have a navy large and powerful enough to compel both respect and fear.

The Currency Bill.

SPEECH

OF

HON. TIMOTHY T. ANSBERRY,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 27, 1908,

On the bill (H. R. 21871) to amend the national banking laws.

Mr. ANSBERRY said:

Mr. SPEAKER: I desire to take advantage of the general leave to print, which I voted against, to have printed in the CONGRESSIONAL RECORD an able editorial from the columns of an independent Republican paper of great influence and large circulation in my State, the *Ohio State Journal*, of date May 28, 1908, which is as follows:

THREATENING THE PORK BARREL.

It is indeed amusing to behold the concern with which some Congressmen regard the alleged emergency bill. They seem to think that the country is not particularly interested in anything else but the Aldrich or Vreeland bill; but the fact is, the country does not care for either of them.

There is Representative BARTHOLOLT, of Missouri, threatening to head up the pork barrel, unless the Vreeland bill is passed. That may fetch 'em. "Give us emergency," shouts BARTHOLOLT, the missionary of peace, "or you shall not have a pound of pork from the barrel." This awful alternative staggers Congressmen and brings them to a sense of obligation that is due to themselves.

But isn't it strange that a high-minded legislator should say to a brother Member, "unless you violate your sense of duty and vote for my bill, the one you favor shall not pass?" That is the situation, if we are to believe the dispatches from Washington. We say, "if," because it is hard to believe that BARTHOLOLT, with his record for world peace, could bring himself to the adoption of so contemptible a course.

It might do for just ordinary, boodler politicians to carry measures by such means, but for gentlemen with an intelligent appreciation of duty to do so is hard to believe.

I also desire to have published in the CONGRESSIONAL RECORD a letter from a Republican banker and business man from one of the progressive and prosperous counties of my district. I also desire to say that I voted against this hybrid bill, made up as it is of equal parts of two admittedly bad bills, and it passes understanding how a good measure can be made out of two bad ones:

THE PAULDING NATIONAL BANK,
Paulding, Ohio, May 11, 1908.

Hon. T. T. ANSBERRY, Washington, D. C.

DEAR SIR: We have taken the liberty to wire you protesting against the passage of the Vreeland bill.

I can not understand why the dominant party in the House of Representatives should think that the people of this country want or need such makeshift legislation. It is utter ignorance of the first principles of financial stability. The currency question is too dangerous a thing to tamper with and one that ought to be handled without any regard to politics, and if the Members of Congress do not know what they are voting for, as the junior Senator from Iowa so frankly said, then it ought to be left with experts who do know what they are talking about or put in the hands of a commission until the Members of Congress take some lessons and learn what it all means.

I know but little about it myself, do not claim anything, and I can understand easily why so few do know so little, but I am willing to refer to such financial experts as Lyman J. Gage or Charles N. Fowler, who has made a life-long study of the question, and who I consider the greatest authority on the subject in America to-day. I am aware that you will have very little chance to be of service if the Republicans make this a party question in the House, providing of course that you take my view of the question, but I can not help but enter my protest of the passage of this worse than makeshift legislation.

Yours, truly,

C. H. ALLEN.

A Review of Bryanism.

REMARKS

OF

HON. HENRY C. LOUDENSLAGER,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. PAYNE. Mr. Speaker, I move to suspend the rules and agree to the following order, which I send to the desk and ask to have read.

The Clerk read as follows:

Ordered, That general leave to print be granted Members from the adoption of this order until five days after the adjournment of the present session of Congress.

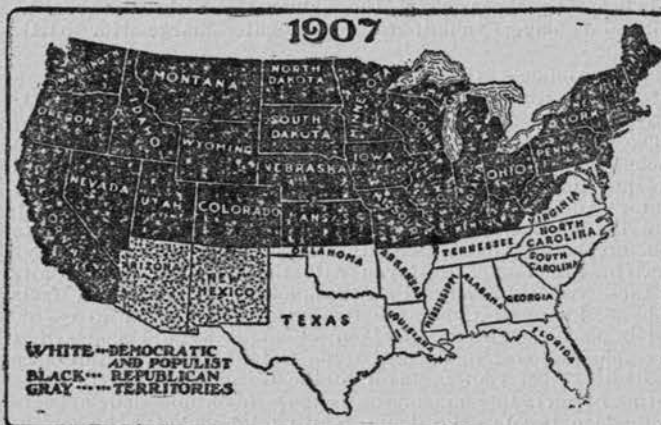

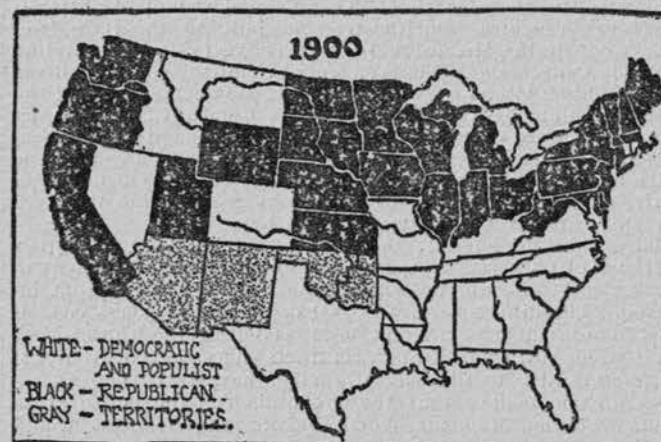

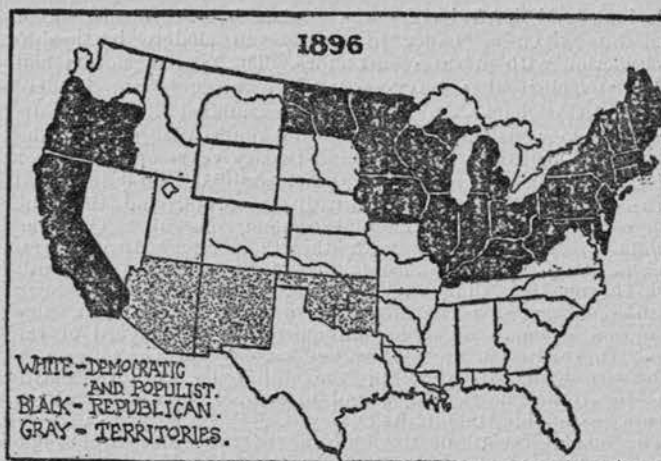

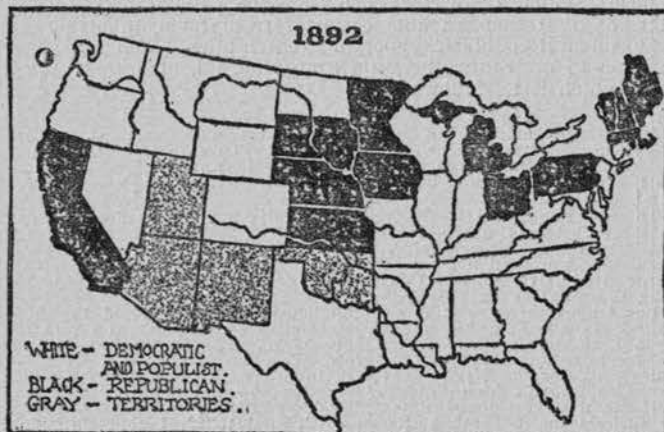

Mr. LOUDENSLAGER said:

Mr. SPEAKER: Under the leave to print granted by the House, I desire to place the following in the RECORD, believing that it will not only be of great benefit by way of information to the Members, but also to the readers of the CONGRESSIONAL RECORD. The subject-matter was printed in the New York World in February, 1908:

TWELVE YEARS OF BRYANISM.

For nearly twelve years, Mr. Bryan, you have been the leader—yes, the dictator—of the Democratic party of the United States. With but one exception its policies have been your policies, its principles your principles, its platforms your platforms.

After twelve years of such domination, during which time the party has gone down to three successive national defeats, piling disaster upon disaster and ruin upon ruin, your friends insist not only that you are the most available candidate for the Democratic Presidential nomination in 1908, but that you are the only available candidate, and you yourself have issued a statement expressing your readiness and willingness to accept the nomination. * * * For the purpose of demonstrating the error of your assumption more plainly than in words or figures, we print herewith maps of the United States showing the States carried by Democrats and Republicans in the years 1892, 1896, 1900, and 1907:

These maps speak for themselves.

The Democratic party went out of power in the nation March 4, 1897. Four years earlier it controlled 23 of the 44 States, the Republicans 17, and the Populists 4.

In Congress the party division was as follows: Senate—Democrats, 44; Republicans, 38; Independent, 1; Alliance, 2; vacancies, 3. House—Democrats, 220; Republicans, 128; Populists, 8.

What was the situation November 14, 1907, Mr. Bryan, after eleven years of your leadership, when you announced your receptive candidacy?

Of the 46 States the Democrats controlled 13 and the Republicans 33. In Congress the party division now is: Senate—Republicans, 61; Democrats, 31. House—Republicans, 223; Democrats, 168.

Whole States at the North are without Democratic representation in Congress, and from the Atlantic to the Pacific, north of the Ohio River, there are but 6 Democratic governors.

Such to-day is the condition of the historic Democratic party, Mr. Bryan, after twelve years of your leadership.

BRYAN THE CANDIDATE OF THE SILVER TRUST.

Your leadership of the Democratic party, Mr. Bryan, began with the national convention held in Chicago in 1896. It was an unfortunate year for a national campaign.

The American people were paying the penalty of thirty years' of trifling with their currency and their monetary standard of value. Industry was half paralyzed, commerce semiparalyzed. Crops had been poor, the price of farm products was low; the farms themselves were generally mortgaged. The National Government itself, with a demoralized Treasury, was borrowing money to pay its current expenses under the form of maintaining the gold reserve. Bond sales to favored syndicates had aroused the indignation of the people, without regard to party. Probably a million men in the cities were out of work. Soup

houses had been opened during the two preceding winters, and in every large center of population police stations had been filled nightly by homeless wanderers.

Armies of tramps moved sullenly along the highways. A Democratic Administration was in power which seemingly had no friends except its own appointees and beneficiaries. Discontent was almost universal. It was the hour of the agitator, and the Democratic national convention was his opportunity.

When a temporary organization of the convention was effected the elements of repudiation and political revolution found that while they had a majority of the delegates, they did not have the two-thirds majority necessary, in accordance with Democratic precedent, to nominate a candidate for President. This embarrassment was short lived.

The silver forces, by prearranged plan, had sent contesting delegations from many States, including Nebraska. Only a majority vote was necessary to adopt the report of a committee. The committee on credentials therefore unseated enough conservative delegates to insure a radical two-thirds majority for nominating purposes, and the issue was no longer in doubt.

You, Mr. Bryan, were at the head of the contesting delegates from Nebraska when they marched into the convention hall to take the seats of the sound-money delegates that had been evicted.

The money plank in the platform, which the convention adopted by a vote of 628 to 303, was as follows: * * *

"We demand the free and unlimited coinage of both silver and gold at the present legal ratio of 16 to 1 without waiting for the aid or consent of any other nation. We demand that the standard silver dollar shall be a full legal tender, equally with gold, for debts, public and private, and we favor such legislation as will prevent for the future the demonetization of any kind of legal-tender money by private contract. * * *

The great silver-mine owners of the world were in despair over the depreciation in price of their metal. Its use for money of redemption had been discontinued by the leading commercial nations. The India mints had been closed to its coinage. Congress had been forced to repeal the Sherman silver act, which had made the National Government a heavy purchaser of silver in the market.

The business of the mining operators was in a bad way and ruin stared many of them in the face unless the Government of the United States created an unlimited market for their product by throwing open its mints to the free and unlimited coinage of silver.

Never was a political propaganda more vehemently and desperately advocated, and never were the selfish interests behind it more adroitly concealed. If the obvious self-interest of the silver miners in the 16 to 1 crusade carried on by Democrats and Populists in 1896 had been as well understood as it should have been, the names of these men would be as closely associated in the public mind with the silver trust as Rockefeller's is with oil or Armour's is with beef.

The proposition which you advanced, Mr. Bryan, contemplated opening the mints of the United States to the free coinage on private account at the rate of less than 50-cents' worth of bullion to the dollar of whatever portion of this enormous stock of silver its owners or speculators might be moved to present. You asserted that free coinage and the fiat of Government would instantly raise every 50-cent token thus minted to parity with gold.

If so, the wealth of all owners and producers of silver would have been doubled.

Here is a list of some of the gentlemen who assisted in financing your theory that 50-cents' worth of silver bullion ought to be worth a dollar:

CONTRIBUTIONS TO MR. BRYAN'S CAMPAIGN FUND.

Marcus A. Daly, Montana, principal owner of Anaconda mine. This sum of \$159,000 represents Mr. Daly's own contribution and sums collected by him	\$159,000.00
David H. Moffat, First National Bank, Denver, Colo.	18,000.00
W. S. Stratton, Colorado, owner of Independence mine.	12,000.00
William A. Clark, of Montana	45,000.00
Dennis Shеды, Colorado National Bank, Denver, Colo.	7,500.00
Charles D. Lane, of California	15,000.00
D. M. Hyman, Denver, Colo.	7,500.00
Other Colorado mining interests	6,000.00
Utah mining interests	18,372.70
The treasurer of this fund was J. R. Walker, of Walker Bros., bankers, Salt Lake City. The chief individual contributors were as follows:	
J. E. Bamberger, president Daly-West Mining Company	250.00
W. W. Chisholme, mine owner	250.00
John Beck, mine owner	500.00
T. R. Jones, ore buyer	250.00
O. J. Salsbury, mine owner	500.00
Frank Knox, president National Bank of Republic	100.00
J. McGregor, mine owner	300.00
Centennial Eureka Mine	1,500.00
Daly-West Mining Company	500.00
W. S. McCormick, president Utah National Bank	300.00
First National Bank of Park City	500.00
Salt Lake Valley Loan and Trust Company	500.00
Daly Mining Company	1,000.00
Bullion-Beck Mine	1,000.00
F. Farnsworth, manager Bullion-Beck Mine	250.00
R. C. Chambers and others, owners Ontario Mine	2,000.00
Swansea Mining Company	200.00
Mammoth Mine	249.00
Mammoth Mine employees	120.00
Mammoth Mining Company	1,000.00
Eureka Hill Mining Company	242.00
Gemini Mining Company	122.00
Godiva Mining Company employees	34.00
Swansea Mining Company	69.00
John Beck, mine owner	300.00
Bullion-Beck Mine employees	537.00
Geyser Mine employees	116.00
Horn Silver Mine employees	307.00
John Beck	200.00
Total contributions of the silver-mine owners to your campaign fund	288,000.00

These contributions, as you doubtless know, Mr. Bryan, were all recorded in the books of the Democratic national committee, although in your eloquent appeals for publicity of political contributions you have never referred to the fact that the silver interests financed your Presidential campaign. * * *

You began your domination of the Democratic party in a period of great financial disturbance. You now purpose to be the Democratic candidate for President in another period of great financial disturbance, as the nominee of a political party whose reputation for financial sanity you have discredited all over the civilized world. Not only have you failed to recant as to your past financial heresies, but you have steadfastly adhered to your free-silver delusions. No longer ago than December 7, in a speech at Freeport, Ill., you declared that your financial policy in 1896 had been "vindicated."

THE DEVELOPMENT OF BRYANISM, DEMOCRACY, POPULISM, SOCIALISM.

No review of your leadership of the Democratic party would be just or adequate, Mr. Bryan, which did not uncover the sources of your political policies and principles.

Your first notable appearance in public life was in 1890, when you were elected to Congress from Nebraska in the popular uprising against the McKinley tariff. At that time, we believe, you were an ardent free trader, and you were also a believer in the free and unlimited coinage of silver at the ratio of 16 to 1, which was then more or less of an academic issue in spite of a growing agitation.

In 1892 you were a candidate for reelection. The Populist party had then reached formidable proportions in many Western States, including Nebraska. It was composed almost wholly of discontented Republicans. You and certain other Nebraska Democrats in that year arranged an illegitimate fusion with the Populists, by which the Democratic vote was to be cast for General Weaver, a Populist who was formerly a Republican. This succeeded so well that Mr. Cleveland received only 25,000 votes. You yourself voted the Weaver ticket, under "instructions," as you say, and were a warm admirer of the Republican-Greenback-Populist leader.

At the close of your second term you retired from Congress. It was said that you had lost faith in the Democratic party, believing that it, no less than the Republican party, was committed to privilege and plutocracy. It was reported, too, that you would devote yourself to the free-silver propaganda under the patronage of certain mine owners. Whether there was any truth in this gossip or not you achieved a journalistic coup soon after your retirement from Congress by which you became editor in chief of the Omaha World-Herald, and a conservative Democratic newspaper was transformed into an organ of aggressive Populism.

Dr. George L. Miller, who founded this newspaper and managed it for twenty-five years, said in 1903:

"It is perfectly well known that Bryan, always very poor and as a lawyer practically clientless, raised a large sum of money from the silver barons and used it to bring about the change in the World-Herald. Mr. Bryan thus became the editor, and from that hour he has been a Populist."

We find that the Populist national platform of the year 1892, when you voted the Weaver ticket, defined the following articles of faith: (1) Government ownership and operation of all railroads. (2) The free and unlimited coinage of silver at the ratio of 16 to 1. (3) Inflation of greenback circulation. (4) Government ownership and operation of all telegraph and telephone lines. (5) Restriction of immigration. (6) The initiative and referendum. (7) The election of United States Senators by direct vote of the people.

This platform also expressed the belief that the nation had been "brought to the verge of moral, political, and material ruin;" that legislatures, Congresses, and courts were corrupt; that the press was subsidized; that there were only two classes in the country, tramps and millionaires, and that both the old parties were keeping up a fictitious hostility in order to hoodwink the people for the profit of the money changers.

The political alliance which you helped to form that year in Nebraska has since been made permanent, the Populists supplying the platform in each campaign and the Democrats the votes.

An examination of the Democratic and Populistic platforms in Nebraska since 1892 shows how, from time to time, the issues of that year have been reaffirmed and amplified.

In 1897 the Democrats condemned United States judges who interfered with lawless strikers. In 1898 they demanded the abolition of banks of issue and the prohibition of private contracts for the payment of gold. In 1899 they indorsed everything contained in the Populistic platform of 1892 and the Democratic-Populistic platforms of 1896. In 1900 they reaffirmed all that had gone before, added a denunciation of Government by injunction, and favored municipal ownership and the referendum.

In 1902 they demanded the taxation of all railroad property, tangible and intangible, to its full value, and favored a reduction of 15 per cent in freight rates on various commodities and the abolition of the fellow-servant law. In 1903 they denounced asset currency, preferring fiat money. In 1904 they subscribed to a stump-speech sort of platform, telling what they would have done during the preceding ten years if they had been in power. In 1905 they wanted to make the giving and the acceptance of a free railroad pass a criminal offense and to establish direct primaries. They also made light of Republican prosecutions of the trusts. In 1906 they rejoiced that Mr. Bryan had become the "first citizen of the world," and deplored the fact that corporate influence was paramount in government.

In 1907 they made a new assault on the Federal courts under pretense of defending State rights. As you drafted that plank, Mr. Bryan, you will doubtless thank us for reproducing it:

"Believing with Jefferson in 'the support of the State governments in all their rights and the most competent administrations for our domestic concerns as the surest bulwark against anti-Republican tendencies,' and in 'the preservation of the Federal Government in its whole constitutional vigor as the sheet anchor of our peace at home and safety abroad,' we are opposed to the centralization implied in the suggestions now frequently made that the powers of the General Government should be extended by judicial construction. While we favor the exercise by the General Government of all its constitutional authority for the prevention of monopoly and the regulation of interstate commerce, we insist that Federal remedies shall be added to and not substituted for State remedies."

Stripped of its verblage, this means neither more nor less than that when a State legislature has passed a railroad-rate law the Federal courts must not suspend the act by writs of injunction preparatory to determining whether or not the statute is in conflict with the Constitution of the United States. Thus your new State rights, Mr. Bryan, is really your old "government by injunction" issue under an alias.

The Populistic, the Silver Republican, and the Middle-of-the-Road Populistic conventions in Nebraska for the last fifteen years have uniformly adopted platforms which did not vary much from those of their Democratic allies except that in two or three instances they called for an irredeemable paper currency. In all of these platforms it is to be

understood that the issues raised in 1892 by the Populists and in 1896 by the Democrats were affirmed either by specific reference or as a whole.

In your own State, Mr. Bryan, you are no less well known as a maker of platforms than as an orator. It is to be presumed that you were not only consulted about all these various party pronouncements, but that practically all of them were the work of your own brain. To call the long roll, therefore, we find that you, Mr. Bryan, as the foremost Populist in America, have supported and voted for candidates who represented the following political principles:

Free silver, 16 to 1, without the concurrence of other nations.
Government loans to farmers.
Government ownership and operation of railroads.
Greenback inflation (irredeemable).
Government ownership and operation of telegraph and telephone lines.

Election of United States Senators by popular vote.
Initiative and referendum.
Election of United States judges by direct vote and for short terms.
A promise to pack the Supreme Court of the United States.
No government "by injunction."
Opposition to private contracts providing for the payment of gold.
Government ownership of interstate railroads and State ownership of State railroads.

Municipal ownership of all public utilities in cities.
Crippling the United States courts and contracting their jurisdiction over questions arising under the Constitution.

We can well believe, Mr. Bryan, that you were well satisfied with that Populist platform of 1892, when you voted the Weaver ticket; for with the exception of anti-imperialism every important issue which you have since foisted, or tried to foist, upon the Democratic party was taken from that platform.

A man of your ability and address, Mr. Bryan, can not forever assail constitutions, courts, law, wealth, property, credit, national honor, and private faith without building up a following which will have to be reckoned with some time. He can not forever inflame social discontent without creating class hatreds and sowing the seeds of a class war.

Socialism is more active and eager now than ever before, and, as most people know, the line dividing socialism and anarchy, though in theory they are far apart, is not always definite. Socialism, listening expectantly for your footsteps, has heard them in rapture more than once. Whether you know it or not, that is the direction in which you are leading.

THE DISCREDITED PROPHET.

If you, Mr. Bryan, and the Chicago Convention had been right, your overthrow at the polls in November, 1896, should have been followed by continued depression and disaster. You foretold them both.

As a matter of fact, the votes by which you were condemned had hardly been counted when there were signs of business revival, and in an incredibly short space of time the change for the better had become so pronounced that complaint practically ceased, agitation was abandoned, and the sporadic orator of calamity was greeted with derision.

Never before in the history of the world was there so sudden and so complete a restoration of confidence and a revival of industry and commerce. Never before was there so convincing a demonstration of the truth, long known, that the surest way to destroy prosperity is to debase the currency, and the most certain way to restore it under such circumstances is to take a firm stand in favor of the best money known to men.

In measuring the prosperity with which this country has been blessed since the menace of cheap silver was removed, figures rather than words are necessary. Referring to those furnished by the Chief of the Bureau of Statistics at Washington, we find these instructive comparisons as showing the crucifixion of mankind upon "a cross of gold":

A marvelous comparison.

It may be that some statesman or economist or dreamer has had visions of such activity and progress as these figures set forth most eloquently, but it is certain that in real life they have never been equaled at any other time or in any other place.

They are worthy of painstaking study, not only because they set forth the greatness and the glory of a free people, but because they crush absolutely all the sophistry, all the error, all the misrepresentation, and all the downright calumny on which you and the other honest "Sons of Thunder" made their memorable campaign in 1896.

There is now \$900,000,000 in gold in the United States Treasury. The value of the farm products for the year 1907 is estimated by the Secretary of Agriculture to be over \$7,400,000,000. Yet you presume to say that events have "vindicated the Democratic position"—that is, your position.

BRYANISM MADE THE SOLE TEST OF DEMOCRACY.

For years you and your friends have insisted, Mr. Bryan, that Democrats who refused to support you on principle in 1896 should be treated as traitors to the party. You have implored your followers to "make treason odious," and, judging from your attitude alone, a foreign observer of American affairs, like De Toqueville, Bryce, or Von Holst, would be justified in assuming that the Gold Democrats of 1896 were inhabitants of a conquered province.

For the only Democratic President elected since the civil war you have reserved your choicest vituperation. Hardly four years ago you said to him in a speech at Urbana, Ohio: "The Democrats in 1892 played a confidence game on the people and put a bunco steerer at the head of the party." In a signed statement issued June 22, 1902, you said that Mr. Cleveland secured his nomination in 1892 by a secret bargain with financiers; that he spent the largest campaign fund the party had ever had; that he filled his Cabinet with corporation agents; that he placed railroad lawyers on the bench of the United States Supreme Court, and that, having debauched his party, he stabbed it to death to prevent its return to the paths of virtue.

When an Indiana Democratic convention indorsed you for President but failed to reaffirm your 16-to-1 theory, you publicly rebuked the delegates and insinuated that they had made a compromise with the enemy.

You have repeatedly refused invitations from Democratic clubs, in which refusals you ridiculed the idea of harmony in the party and questioned the honesty of those who urged it.

When the Iowa Democrats neglected to indorse the free coinage of silver and timidly ventured to suggest that "the money of the nation be guarded with zealous care," you told them that their financial plank savored of Wall street and that it was framed to deceive the people.

You ordered the Democratic national committeeman from Illinois to resign, and when he refused you commanded the State convention to repudiate him. When the convention declined to obey your instructions you intimated that there was no true Democratic party in the State.

In May, 1903, you made an attack upon the Democratic press of the United States, saying that it was as monopolistic as any of the Republican newspapers. October 10, 1907, in a speech at Richmond, Va., you charged that the great metropolitan newspapers, which are all but unanimously opposed to you, were controlled by the trusts and their columns open to the highest bidder.

When the Democratic national convention of 1904 met in St. Louis, Judge Parker's nomination for President was assured, despite the fact that the Nebraska Achilles was sulking in his tent. Your objection to Judge Parker was based on the solitary fact that some of his most ardent supporters had not been Bryanites, although the poor Judge had voted for you both in 1896 and in 1900. Your influence on the convention destroyed in advance all prospects of a Democratic victory and gave Mr. Roosevelt a walkover.

BRYAN ON GOVERNMENT OWNERSHIP OF RAILROADS.

Most people believe, Mr. Bryan, that your first proclamation of government ownership of railways was made at New York City August 30, 1906, on your return from Europe. Such is not the case. The plan of reorganization to "rid the Democratic party of plutocracy," which you promised on the adjournment of the Kansas City convention in 1904, was given to a waiting world on July 21, 1904. You stated the case of government ownership of railroads as follows:

"I have heretofore refused to take a position on the question of government ownership of railroads, first, because I had not until recently studied the subject; and, secondly, because the question had not been reached. Recent events have convinced me that the time is now ripe for the presentation of this question. Consolidation after consolidation has taken place until a few men now control the railroad traffic of the country and defy both the legislative and executive power of the nation. I invite the Democrats, therefore, to consider a plan for the government ownership and operation of the railroads. The plan usually suggested is for the purchase of those roads by the Federal Government. This plan, it seems to me, is more objectionable than a plan which involves the ownership and operation of these roads by the several States. To put the railroads in the hands of the Federal Government would mean an enormous centralization of power. It would give to the Federal Government a largely increased influence over the citizen and the citizen's affairs, and such centralization is not at all necessary. The several States can own and operate the railroads within their borders just as effectively as it can be done by the Federal Government, and if it is done by the States the objection based upon the fear of centralization is entirely answered. A board composed of representatives from the various States could deal with interstate traffic just as freight and passenger boards now deal with the joint traffic of the various lines. If the Federal Government had the railroads to build there would be constant rivalry between different sections to secure a fair share of the new building and improvement, but where this is left to the State the people in each State can decide what railroads they desire to build or to buy. While the Democratic party in the nation is advocating the government ownership of railroads the Democratic party in the cities should, upon the same theory, espouse the cause of municipal ownership of municipal franchises."

Later, in April, 1905, at a dinner given by the Iroquois Club, of Chicago, on the birthday of Thomas Jefferson, the greatest of American individualists, you repeated and elaborated this highly ornamental scheme of triple State socialism.

August 29, 1906, you returned to New York in triumph from a trip around the world, to be greeted by Democrats from nearly every State in the Union as their candidate for President. In the course of an interview at London, where you had distinguished yourself at the Peace Congress, you said you were more radical than ever.

To prove your own words, you undertook in your speech at Madison Square Garden, August 30, to sound the keynote of a government ownership campaign:

"I have already reached the conclusion that railroads partake so much of the nature of a monopoly that they must ultimately become public property and be managed by public officials in the interest of the whole community, in accordance with the well-defined theory that public ownership is necessary where competition is impossible. I do not know whether a majority of the members of the party to which I have the honor to belong believe in the Government ownership of railroads, but my theory is that no man can call a mass convention to decide what he himself shall think. I have reached the conclusion that there will be no permanent relief on the railroad question from discrimination between individuals and between places and from extortionate rates until the railroads are the property of the Government and operated by the Government in the interest of the people. And I believe that there is a growing belief in all parties that this solution, be it far or near, is the ultimate solution. But to me, my friends, the danger of centralization is a danger that can not be brushed aside. The greatest danger of a republic is the centralization of power at the capital remote from the people, and because I believe that the ownership of all the railroads by the Federal Government would so centralize power as virtually to obliterate State lines, instead of favoring the Federal ownership of all railroads, I favor the federal ownership of trunk lines only and the state ownership of all the rest of the railroads."

Fortunately for Republican institutions, Southern Democrats had not wholly forgotten the historic principles of their party. While most of them had favored Mr. Roosevelt's policy of government regulation, few of them were in sympathy with your policy of government ownership.

Impressed by vehement protests against the marriage of Democracy to State socialism, you began at Louisville, September 12, 1906, your masterful retreat:

"I advocate strict regulation and shall rejoice if experience proves that that regulation can be made effective. * * * Yet I would not be honest with you if I did not frankly admit that observation has convinced me that government ownership can be undertaken on the plan indicated with less danger to the country than is involved in private ownership as we have had it or as we are likely to have it. * * * You say that all these abuses can be corrected without interference with private ownership. I shall be glad if experience proves that they can be, but I no longer hope for it."

The retreat ended at Lincoln, July 19, 1907, when you asked for an armistice in these words:

"Government ownership is not an immediate issue. A large majority of the people still hope for effective regulation, and while they so hope they will not consider ownership. While many Democrats believe"—and Mr. Bryan is one of the number—"that public ownership offers the ultimate solution of the problem, still those who believe that the public will finally in self-defense be driven to ownership recognize that regulation must be tried under the most favorable circumstances before the masses will be ready to try a more radical remedy."

"Regulation can not be sufficiently tried within the next year. There is no desire anywhere to make government ownership an issue in 1908."

At present there may be no desire anywhere to make government ownership an issue in 1908, but if you are the Democratic candidate for President the Republicans will force the issue upon the country. There can be no escape from it.

Do you think the Democratic party can convince voters that it honestly favors regulation of railroads if it nominates a candidate who believes in government ownership and who has proclaimed in advance his belief that regulation will prove a failure? Do you think that the American people could safely trust you to carry out a policy of regulation with which you have no sympathy and for whose effectiveness to remedy abuses you have no hope?

MR. BRYAN AND THE COURTS.

Let us see, Mr. Bryan, whether your campaign against the Federal courts had a more rational inspiration than your campaign for a 50-cent dollar.

You and your associates gave your followers to understand that the United States courts were prejudiced in behalf of the rich and powerful—were, in fact, controlled by trusts and corporations—and were deaf to the welfare of the people as a whole. Not only have you appealed to mob passion against Federal courts of justice and threatened to pack the Supreme Court, but you have persistently advocated short terms and popular elections for United States judges in order to make them creatures of popular clamor. We have, therefore, thought proper to indicate here as briefly as possible important cases arising since 1898 in which proceedings have been begun or judgment has been entered against the very interests which you charged were privileged.

The list is instructive in many ways, but in none is it more so than in its complete refutation of the slanders of socialistic demagogism.

In 1898 the Supreme Court of the United States reversed the circuit court, southern district of New York, and the circuit court of appeals, and enjoined the Joint Traffic Association from violating the antitrust law. Thirty-one railroad companies engaged in transportation between Chicago and the Atlantic coast had formed themselves into an association to control competitive traffic and fix rates. By the action of the court it was dissolved.

In 1899 the Supreme Court sustained the circuit court of appeals, sixth circuit, in the matter of an injunction restraining the operations of the cast-iron pipe trust, which attempted to increase the price of cast-iron pipe by controlling and parceling out the manufacture and sale thereof throughout the several States and Territories to the several companies forming the combination. This is known as the Addystone Pipe case, and it stands as a precedent in all similar proceedings against trusts.

In 1900 the Supreme Court decided that the inheritance-tax law of 1898 was constitutional. Under this act a legacy to a husband or wife was exempt. Legacies to others paid a tax, which increased as the degree of kinship was more remote, until property passing to strangers in blood paid 5 per cent. To this initial rate a progressive rate according to the value of the legacy was applied. Property valued at \$10,000 or under was exempt. Exceeding \$10,000, but not exceeding \$25,000 the rate was fixed by kinship. The rate increased with the amount, until property exceeding \$1,000,000 was required to pay the rate fixed by kinship multiplied by three. This law was afterwards repealed by Congress, but the court has established the principle of a graduated inheritance tax for all time.

In 1900 the Supreme Court sustained the constitutionality of the antitrust law of Texas, one of the most drastic yet adopted by any of the States. State prosecutions of trusts in Texas have been frequent and determined.

In 1901 the Supreme Court, in the insular cases, held that the President and his Cabinet officers could not constitutionally govern and make rules and regulations for the Philippines and Porto Rico in time of peace, that power belonging to Congress. These decisions checked a tendency on the part of the Executive to establish military government in our dependencies.

In 1904 the Supreme Court, having the cases against the beef trust before it, decided: (1) Traffic in live stock transported from State to State is interstate commerce, and persons engaged in buying and selling such live stock are engaged in interstate commerce; (2) the combination between dealers to suppress all competition in the purchase of live stock is an unlawful restraint of trade; (3) the combination between dealers to fix and maintain a uniform price in the sale of meat throughout the country is an unlawful restraint of trade; (4) the combination of dealers to obtain preferential railroad rates is an unlawful restraint of trade, and (5) all combinations suppressing competition fall under the prohibition of the Sherman antitrust act. On the general principles outlined in this great judgment the numerous prosecutions of the beef trust and other combines are now proceeding, although we admit, alas, too slowly.

In 1904 the Supreme Court affirmed the decree of the circuit court, Minnesota, enjoining the Northern Securities Company from purchasing, acquiring, receiving, holding, voting, or in any manner acting as the owner of any of the shares of stock of the Northern Pacific and Great Northern Railway Companies, and restraining the Northern Securities Company from exercising any control over the corporate acts of said companies. It was held that the Securities Company was formed for the purpose of acquiring a majority of the stock of the two companies in order to effect practically a consolidation by controlling rates and restricting and destroying competition in violation of the Sherman antitrust law.

In 1905 the Supreme Court affirmed a decree of the circuit court, northern Illinois, enjoining various great packers in Chicago, commonly known as the "beef trust," from carrying out an unlawful conspiracy entered into between themselves and certain railway companies to suppress competition and to create a monopoly in the purchase of live stock and the sale of dressed meats. This injunction is perpetual. On an indictment of these packers for continued violation of law the individuals were dismissed on the ground that they had been granted immunity by giving information to the Department of Commerce and Labor, but the indictments against the corporations were sustained.

In 1906 the Supreme Court affirmed various judgments of United States courts in Wisconsin and Minnesota against the General Paper Company, which had been proceeded against as a trust. After more than two years of litigation the combination was, by the decision of the Supreme Court, finally dissolved.

In 1906 the Supreme Court decided the celebrated Chicago street railway franchise case in favor of the city and against the traction trust. By bribery and trickery the street railway companies had attempted in 1865 to secure from the legislature a franchise extension of more than one hundred years, but the law was carelessly drawn, and although it had been sustained below, the Supreme Court held it to be invalid, thus depriving the corporations of so-called "rights" in the streets which had been capitalized at more than \$100,000,000.

The notable decisions of the Supreme Court of the United States mentioned above having established the constitutionality of the laws most frequently invoked against combinations and mergers in restraint of trade, a great number of prosecutions have been begun in the inferior United States courts, nearly all of which are still pending. Of those wherein indictments have been found or judgment reached, some of the most important are these:

In 1899 a bill was filed in the circuit court, southern Ohio, to annul a contract and dissolve a combination of producers and shippers of coal in Ohio and West Virginia, formed for the purpose of selling coal at not less than a given price, to be fixed by a committee. The trust was enjoined, and the combination was dissolved.

In 1902 the circuit court, northern California, perpetually enjoined the Federal Salt Company (the salt trust) from suppressing competition west of the Rocky Mountains.

In 1903 the salt trust was indicted in the same court, pleaded guilty, and was sentenced to pay a fine of \$1,000.

In 1905 the Chicago, Burlington and Quincy Railroad Company was convicted in Missouri, under the Elkins Act, of charging less than established freight rates, and was fined \$15,000. Similar prosecutions in Kentucky resulted also in convictions and fines.

In 1905, in Missouri, Thomas & Taggart were convicted of conspiracy to obtain rebates. Thomas was sentenced to jail for six months and fined \$9,000, and Taggart was sentenced to jail for three months and fined \$4,000.

In 1905 Well and others were convicted in Illinois of receiving rebates and were fined \$25,000 each.

In 1905 the Chicago, Burlington and Quincy Railroad Company and various of its officers were convicted in Illinois of granting rebates. The corporation was fined \$40,000 and the officers \$10,000 each.

In 1906 proceedings were begun in the southern district of New York against the tobacco trust. These resulted in several convictions, fines of \$10,000 and \$8,000 being inflicted upon two of the defendants.

In 1906 bills to restrain the National Association of Retail Druggists were filed in Indiana, and indictments against thirty-one corporations and twenty-five individuals engaged in a combination to control the manufacture and sale of fertilizers were found by the grand jury in the middle district of Tennessee.

In 1906 Swift & Co., Armour & Co., Nelson Morris Company, and the Cudahy Company, of Chicago, were convicted in Missouri of receiving rebates and were fined \$15,000 each.

In 1906 the American Sugar Refining Company and others were convicted in New York of receiving rebates, and fines aggregating \$88,000 were inflicted.

In 1906 the New York Central and Hudson River Railway Company and others were convicted in New York of granting rebates, and fines aggregating \$114,000 were assessed.

In 1906 the Ann Arbor Railroad Company was convicted in Michigan of granting rebates and was fined \$15,000.

In 1907 John M. Faithorn, of the Chicago and Alton Railway Company, was convicted in Illinois of granting rebates and was fined \$25,000.

In 1907 the Standard Oil Company, of Indiana, was convicted in Illinois on 1,462 counts of receiving rebates and was sentenced to pay a fine of \$29,240,000.

The National Government now has suits against the Standard Oil Company pending in five States—Missouri, New York, Louisiana, Tennessee, and Illinois. The total number of counts in all the indict-

ments is 6,326. The suit in Missouri is for the dissolution of the trust.

In 1907 the Chicago, St. Paul, Minneapolis and Omaha Railroad Company was convicted on fifty counts in the United States court at St. Paul of rebating.

People who are inclined to accept your dissertations on "government by injunction," Mr. Bryan, as something particularly dangerous to the poor, will not overlook the fact that in most of the proceedings against trusts, combinations, and rebaters the Government's first move has been made by injunction. They will not overlook the fact that the injunction is employed fully as often for the protection of the public as for the protection of private property.

The cases here cited destroy your assertions and arguments as to the Federal courts as effectively as the record of the country's material prosperity has confounded your free-silver prophecies of calamity.

Alcoholic Liquor Traffic.

REMARKS

OF

HON. JOSEPH G. CANNON.

Mr. CANNON, by leave of the House, inserts in the RECORD the following report of an interview between the Speaker of the House and a committee of the General Conference of the Methodist Episcopal Church, in session at Baltimore, Md., composed as follows:

Governor J. Frank Hanly, of Indiana, chairman; Governor E. W. Hoch, Kansas; Samuel Dickle, Dr. A. B. Leonard, Dr. D. D. Thompson, John T. Holland, Dr. Levi Gilbert, Hon. J. E. Andrus, Dr. R. T. Miller, J. A. Patten, Summerfield Baldwin, Homer Eaton, C. L. Meade, L. C. Murdock, George D. Selby, W. S. Boyard, E. A. White, Rev. N. Luccock, T. J. B. Robinson, Samuel Van Pelt, H. W. Bennett, Charles A. Pollock, Christian Golder, and A. W. Adkinson.

INTERVIEW.

SPEAKER'S ROOM,

HOUSE OF REPRESENTATIVES,

Washington, D. C., May 8, 1908—3.30 p. m.

Hon. J. FRANK HANLY, Governor of Indiana. Mr. Speaker, let me present to you the members of the committee appointed yesterday by the Methodist Conference. These are the gentlemen.

The SPEAKER. I am glad to meet you, gentlemen.

Governor HANLY. This committee, Mr. Speaker, represents the Methodist Episcopal Conference, rather the Methodist Episcopal Church, assembled in general conference in the city of Baltimore. It bears to you a resolution passed yesterday by the conference with a unanimity and intensity of conviction that represents the conscience, the thought, and the best resolve of that great body and of the constituency it represents; a body composed of almost a thousand representatives, having for its constituency more than 3,000,000 communicants, representing directly about 10,000,000 of people, and voicing the sentiment and the thought of millions of other Christian men and women in the country.

The resolution relates to pending legislation in reference to the interstate shipment of intoxicating liquors into dry territory in the several States. We present it to you in the performance of our mission, with the request from the conference that you, for us and the conference, lay it before the House of Representatives. We do this that the House may know our conviction on this great question. Without further words, we thank you for your kindly courtesy and beg to leave with you this resolution. [Submits resolution.]

The SPEAKER. I shall be glad to see the resolution. [Reads aloud]:

Memorial of the General Conference of the Methodist Episcopal Church.

Whereas a majority of the States of the Union, in the exercise of police powers acknowledged and inherent in them, have excluded by legislative enactment the traffic in intoxicating liquors from large areas of their territory; and

Whereas seven other States have by like enactment or by constitutional provision wholly inhibited such traffic; and

Whereas the territory from which such traffic has been excluded constitutes in the aggregate more than 70 per cent of the whole territorial area of the United States and contains a population of more than 38,000,000 people; and

Whereas the effectiveness of such inhibition by the several States, both legislative and constitutional, is seriously impaired for lack of Federal legislation prohibiting interstate shipments of intoxicants into such territory; and

Whereas such legislation has been for many years annually presented to the National Congress and urged upon its consid-

eration through the petitions of millions of American citizens; and

Whereas no effective action has ever been taken thereon by the Congress; and

Whereas there is now pending before the Judiciary Committee of the House of Representatives an effective and satisfactory measure, known as "the Littlefield interstate liquor shipment bill," and has been so pending from the day of the organization of the present House of Representatives; and

Whereas such committee has failed to act upon such measure upon the ground of doubt as to the constitutionality thereof; and

Whereas able jurists and profound constitutional lawyers differ upon the question of such constitutionality; and

Whereas certainty as to the constitutionality of such measure in this age of multiplying, varying, and conflicting precedents by divided courts, is impossible prior to its interpretation by the Supreme Court of the United States; and

Whereas failure of the Federal Government to act in this behalf daily nullifies the enactments of the several States as aforesaid in a matter of grave import affecting the peace, happiness, and welfare of society throughout every State which has sought to limit the evils of such traffic by excluding it from a part or all of its boundaries: Now, therefore, be it

Resolved by the representatives of the Methodist Episcopal Church now in this goodly city, the cradle of Methodism in America, in general conference assembled, That it is our conviction that all doubts as to the constitutionality of such measure should be resolved in behalf of the people and of the public welfare; that said committee should report the same to the House of Representatives with favorable recommendation; that the House should thereupon enact the same and send it to the Senate for its consideration and action before the adjournment of the present session of Congress, and that in this we voice the awakened conscience of a Christian people and the high resolve of millions of Christian freemen, who intend that the results achieved by them in the control and inhibition of the traffic in intoxicating liquors by State government shall be preserved without further impairment by Congressional enactment: Be it also further

Resolved, That a committee be appointed by the board of bishops, consisting of one member from each general conference district and ten members at large, and that such committee be, and the same is hereby, directed to repair to Washington and to respectfully present a copy of this resolution to the Hon. JOSEPH G. CANNON, Speaker of the National House of Representatives, with the request that he cause the same to be submitted to that body for its consideration.

Respectfully submitted.

J. FRANK HANLY.

P. A. BAKER.

C. A. POLLOCK.

WILLIAM H. ANDERSON.

W. H. BERRY.

D. D. THOMPSON.

The above action was unanimously taken by the general conference of the Methodist Episcopal Church on May 7, 1908.

EARL CRANSTON, President.

J. B. HINGELEY, Secretary.

BALTIMORE, Md., May 7, 1908.

Gentlemen, I have received what I have read. As a Member of the House of Representatives, under the rules of the House, the memorial or petition will be referred to the proper committee, complying with the rules of the House. Of course that gives the jurisdiction under the rules for the consideration of the memorial by the committee. Of course it goes without saying that the great constituency that you desire to reach will be reached through the press touching this memorial.

May I add one additional word? "Of doubtful constitutionality, you say." Therefore you desire the legislation should be enacted. Perhaps the most exhaustive and able report that has been made upon this subject was made by the Senate Committee on the Judiciary upon what is known as the substitute bill for all the bills pending by Senator KNOX. The whole matter of constitutionality seems to have been most exhaustively discussed by that committee and by the report, if I may be permitted to call it to your attention. "Mr. Alvord," says Senator KNOX in his report, "Mr. Alvord, attorney for the antisaloon interests, said:

"So I think that naturally this committee will be inclined to give us relief, if it has the power, and thinks it has—I do not ask it to do anything that is unconstitutional. I am not asking it to take a gamble on what the Federal courts will say. I should say this, however: If the committee were equally di-

vided on the question, some thinking it constitutional and others thinking it unconstitutional, the necessities of the situation are such that perhaps they ought to take some little chances on it. But I do not believe, as the chairman of the House Judiciary Committee said this morning, that just to please somebody you ought to shove up propositions to the Supreme Court which you believe in your conscience and under your oath to be unconstitutional."

So said the representative of the antisaloon interests before the Senate committee. You seem to be perhaps in as much doubt touching the matter. I do not know how many of you may have examined this matter from the constitutional standpoint. I do not know how many of you have read the Littlefield bill. I wish you would hold up your hands, those of you who have. [After a pause.] One, two, three, four, five, six, seven, eight, nine, ten—ten. How many are there present on this committee?

Governor HANLY. Twenty-five present.

The SPEAKER. Twenty-five. Now, then, the Senate Judiciary Committee by a very decided majority—I believe all but three—reported against all the bills pending and reported a substitute which Senator Knox and that committee believed to be constitutional. In substance that substitute, under the power that Congress has to regulate commerce among the States, proposes the enactment of a bill which prohibits a common carrier engaged in interstate commerce from being the agent of the vender or purchaser of liquor; also prohibits under that same principle the sending of liquors c. o. d., under which I apprehend most of the abuses that are in your minds are worked out. Senator Knox indorses that legislation. He believes that it is as far as the Federal Government has power to go in the premises.

I think no lawyer can read this report, if he be a pure lawyer, and come, perhaps, to a different conclusion from what the Senator came to. Clear as the noonday sun, he speaks of the power of Congress in the premises; that Congress can not even prohibit the sale or manufacture of liquor in any State; the State has plenary police power touching such matters; and he well says that it will be time enough, even if we had the authority to enact the legislation, some of it mentioned in the Littlefield bill, when the States exercise their police power. I do not know—perhaps with the exception of Kansas, and I am not sure about that—I do not know that any State has prohibited the manufacture.

Judge CHARLES A. POLLOCK. Yes, sir; North Dakota.

Governor HANLY. So has Maine, except for medicinal purposes.

A VOICE. Kansas has one.

The SPEAKER. That is one of the three. Now, as Senator Knox discusses the question, has any State in the Union prohibited the use of spirituous, malt, or vinous liquors to its citizens?

A VOICE. Do you mean as a beverage?

The SPEAKER. Yes; their use as a beverage. In other words, is there a penalty for you in the State where you may reside if you desire to use malt or vinous or spirituous liquors?

A VOICE. No, sir; I do not think so.

The SPEAKER. Yet Senator Knox makes it perfectly clear that in the exercise of the police powers you could do just that very thing if you thought it politic to do it.

Now, this is a measure to prevent the shipment of liquors from one State to another, Congress having the power, as it is claimed, in the regulation of commerce among the States, to do so. In certain things good lawyers believe that Congress has the power; in certain things, not the power.

Now, from a practical standpoint, is there any State in the Union, including Indiana, Governor [addressing Governor Hanly], that has prohibited the shipment of spirituous liquors, to illustrate, from Indianapolis to Danville, Ind.?

Governor HANLY. May I answer you?

The SPEAKER. Certainly; because I asked it.

Governor HANLY. Certainly not; because it is not necessary; because the same law obtains throughout that jurisdiction, and the shipment from Indianapolis to Danville would not change the application of the legal principle to intoxicating liquor. The law would inhibit its unlawful use the same as in any other case within the jurisdiction of the State.

The SPEAKER. I am speaking of the jurisdiction of the State. Have you any doubt about the police powers under the State of Indiana, that you can prohibit the shipment of liquors from one point in the State to another?

Governor HANLY. No, sir; I have not.

The SPEAKER. Have you done so?

Governor HANLY. No, sir; but that is beside this question.

The SPEAKER. I beg your pardon. In the language of Senator Knox, for whose opinion I have great respect, what good would it do to prohibit the shipment from Cincinnati or Dayton to Indianapolis, when the liquor manufactured under the law in Indiana can be shipped from the distillery or from any point in Indiana to another point? Might it not be well said from the practical standpoint to the various States, if Senator Knox be correct and the Senate Judiciary Committee in its view that Congress has not the power to enforce the police powers of a State be correct—if they are correct, which is a contested matter of grave doubt—I suggest with all becoming modesty to the various States, had we not better remove the beam from our own eyes before we seek to remove the mote from the eye of the neighbor?

Judge POLLOCK. There are some of us, Mr. Speaker, who have removed the mote entirely.

The SPEAKER. Ah, has any State prohibited the manufacture?

Judge POLLOCK. Yes, sir; in North Dakota we have, and in Kansas.

The SPEAKER. One step further. Has any State prohibited its citizens from consuming?

Judge POLLOCK. No, sir.

The SPEAKER. And yet there is full police power to do it, according to Senator Knox's opinion.

Rev. Dr. A. B. LEONARD, of New York City. But, Mr. Speaker, what has that to do—will you explain—with the proposition that is before you in that paper?

The SPEAKER. The Congress of the United States has the power to regulate commerce among the States, but it has not the power to legitimate or prevent the manufacture or use of liquor in any State. Now, then, I commend the report to you. I have a copy or two. I sent for it this morning. I commend it to you. I wish my secretary would get two or three of those.

Now, one further question, one further matter: This great committee, from the great conference, is entitled to the most courteous treatment and hearing by any individual, and much more so by anyone clothed with the power to affect legislation. It were better to legislate where we can than legislate where we can not.

Governor HANLY. Is the minority report there?

The SPEAKER. Oh, yes. I think they are both there. You have the same that I have.

Governor HANLY. Your secretary just handed it to me. I ask for information. As I understand, there was a minority report and both sides of the question are presented, and I wanted to know if they are in this document.

The SPEAKER. Absolutely, as I understand it. I glanced at it and I read it somewhat carefully. Three members of the Judiciary Committee of the Senate united in dissenting from the majority.

Governor HANLY. They are lawyers, are they not?

The SPEAKER. I think they are lawyers; but the Judiciary Committee of the Senate consists of ten, if I recall aright—possibly twelve.

But I merely refer to these matters, gentlemen. One word in conclusion: As citizens, as members of that great church, as members of this great conference, you have your duties to perform. If there be differences, it is best to ascertain first what they are; if remedies are needed, to ascertain what is practical, and, while you are entitled to the highest respect, to have your suggestions and resolutions considered in the last analysis, when you come to the legislative body responsible to the people who chose them, responsible to their oath of office, they must, after listening to all that is submitted—and will, if they have true manhood—do the right, as God gives them to see the right.

Governor HANLY. May I add a word, Mr. Speaker?

The SPEAKER. Certainly.

Governor HANLY. It is our understanding that this report by the Senate Judiciary Committee is a divided report.

The SPEAKER. A decided majority stood with Senator Knox. I said I believed three, now holding different views, and it is either seven or more holding the views that Senator Knox holds.

Governor HANLY (continuing). That, notwithstanding the distinguished ability of Senator Knox and the clearness with which he has presented his views, three lawyers, probably of equal ability, have found themselves unable to agree with his conclusions.

In answer to the suggestion that the State of Indiana has not inhibited the shipment of intoxicating liquors from one point in the State to another point in the State, permit me to say, sir, that the State of Indiana has enacted legislation that will enable it to put its hand upon intoxicating liquors shipped

into any dry territory, no matter from what point in the State it was shipped. I beg also to suggest with the utmost deference that those questions are somewhat beside the matter presented in this resolution. If it were true that the States were failing to avail themselves of all the police power invested in them in their treatment of this crime, it would still be no defense for the failure of the Congress of the United States or the Federal Government to the extent of its constitutional ability to protect the territory of the several States that have sought as best they know to inhibit this traffic within their own borders.

We quite agree with you, sir, that when you have heard us, when you have heard others who are interested, when you have examined these questions, that under your oath of office and your duty to the people you will do what seems to you to be right and proper; but, representing this great church and the Christian people of this nation, we wanted you to know our conviction on this question. We wanted the House to know, for, in the last analysis, the people make Congress. They make Presidents. They are responsible for the government in this country.

We would be glad to take back, if we may, your compliments to the great conference, to assure them of the courteous hearing we have received, and to leave this word with you, that we have for you, sir, and this great body the profound respect and consideration to which your exalted positions entitle you. We come not as enemies, but as friends, asking to be heard and asking that our petition be considered.

The SPEAKER. One word further, by way of suggestion rather than reply. Under the Wilson law Congress has already enacted legislation touching the transportation of intoxicating liquors. You are familiar with it. It is not necessary for me to refer to it further. The only power—and I put it to you, Governor, as a lawyer—that the Congress has is to regulate commerce from one State to another.

Governor HANLY. I frankly concede that.

The SPEAKER. Yes. And Congress has no power whatever to undertake to exercise police powers of the States, in the State of Indiana or in any other State.

Governor HANLY. If Congress tried it, sir, we should resent it quickly.

The SPEAKER. Absolutely so. Now, under existing law—and I want to put this, because we must be practical as we go along—under existing law any man may have intoxicating liquors, bought in one State and shipped to another, protected from the point of departure to the point of receipt.

Governor HANLY. And there, if it is in the original package, he can sell it in the original package.

The SPEAKER. I do not think he could sell it in the original package, although I would not say he could not when you say he can, in the original package. But it is out of the power of the United States to make a penalty for somebody who buys liquor in Cincinnati and ships it to Indianapolis or into dry territory for the sale of it by retail or wholesale. It is in the power of Indiana or any other State to prohibit it.

Now, I think we understand each other when I say that in a "dry" territory I believe that, utilizing the express companies, there have been abuses that are in fraud of the State laws. I will suppose that a hundred bottles of liquor, or bottles of beer, or cases of beer, are shipped from Kentucky or Ohio to a "dry" county or township in the State of Indiana. It is protected under law from the time it departs until it is received. But it is alleged by many, and I believe it to be true, that a fraud has been committed upon the law in many instances by somebody suggesting a consignment to ten or twenty or a hundred individuals at the "dry" point in Indiana or the other States, and as nobody comes, there are charges. It has even been alleged that the agent of the common carrier, perhaps sympathizing, seemingly being protected under the interstate-commerce law, puts it to "Sam" or "Tom" or "Jim." "Why, here it is—\$1 cost, 25 cents expressage," and writes his name down, and he takes it.

That is not a sale, free from the penalties, under the State law. That is in fraud of the law of Indiana, absolutely. It is in fraud of the law of the United States, and when the Federal court should have the proof that such transaction was going on, without having paid the license to the United States, which is in the shape of tax for retailing or wholesaling liquors—either one—there would be a conviction in the Federal court and, at the same time, upon that fact appearing, a conviction in the State courts.

Now, then, let us take the Knox bill. The Knox bill, which I believe to be a constitutional measure, if enacted, it seems to me would be an effective measure to cure the evil that I have just referred to; would prohibit the common carrier, would pro-

hibit the express company, which is a common carrier, from being the agent of the seller across the boundary in the other State, or the agent of the buyer. That would cut up that fraud on the law that you practically find so hard to make the proof on when you come to make the prosecution. But nevertheless the transaction is illegal.

Further, Governor Hanly, on behalf of the Congress of the United States, as well as myself personally, you may present my compliments, and I believe those of the House, to that great body, the Methodist Conference. We have confidence in its wisdom and in the wisdom of the great organization that makes that great body. I have been familiar with that organization for sixty-five years, and entertain the greatest respect for it; and in all those years that great organization on the average has been a level-headed organization, zealous for the right, and practical, and I have no doubt it will continue so to be.

Judge POLLOCK. Mr. Speaker, may I say just one word?

The SPEAKER. Yes, sir.

Judge POLLOCK. Coming from a prohibition State, and for twelve years occupying the position of a judge upon the bench, I feel very deeply upon this question, and I want just to quote three lines from the decision of the Supreme Court of the United States, which, it seems to me, would be as authoritative upon this question as the opinion of Senator Knox, for whose legal ability I have the most profound respect, and for whose political sagacity I have an equal amount. It is this: "It is incumbent upon Congress, so far as the regulation of interstate commerce is concerned, to remove the restriction upon the State in dealing with imported articles of trade within its limits, which have not been mingled with the common mass of property therein, in its judgment the end to be secured justifies and requires such action." And the decision wound up with what seemed to me to be the most important feature of the whole decision, in which they said: "The Federal Government ought to engage in a frank and candid cooperation for the general good." That is all we ask.

The SPEAKER. I do not know the case you quote from.

Judge POLLOCK. This is the *Mugler, Kans.*, case, which was decided over twenty years ago.

The SPEAKER. I say I do not know the case to which you have referred, nor what the facts were, nor what qualifying language was used. I do not know it from the extract as read, but the extract as read does not disagree with the power of Congress to deal with the matter. It is purely to regulate commerce among the States; and if the Congress in the faintest degree undertook to enforce the police powers of the States, the States would thunder; and if the courts attempted to usurp legislative powers, the Congress would thunder.

Doctor LEONARD. May I say a word?

The SPEAKER. Yes.

Doctor LEONARD. I am not a lawyer, but I think I represent a vast multitude of lay people concerning this question. The matter we have in mind is this: Has the Congress of the United States exhausted all its resources for the protection of dry territory against the importation of intoxicating liquors? It is not a question in our minds as to whether the States have exhausted their ability in the management or control or suppression of the liquor traffic, but the question in the public mind is this: Has the Congress of the United States exercised all the power it possesses for the protection of dry territory against the importation of intoxicating liquors? There is a profound conviction throughout this country, among its best people, that the Congress has not exhausted its ability. If it has, those people will be satisfied if they can know that it has; but the feeling is to-day that Congress is not protecting the dry territory up to the limit of its ability.

The SPEAKER. I am aware of the sentiment. There is sentiment and sentiment in great movements that affect eighty millions. There are wise people and unwise people. All of them can not control at the same time.

Governor HANLY. We will take it by turns, Mr. Speaker. [Laughter.]

The SPEAKER. Yes; take it by turns. Yes; and it is quite one thing to be vested with responsibility and power, and it is quite another thing to sit down and say, "That is wrong," and "That is right," and "Why does not he do this, and that, and the other." I say this respectfully—

Governor HANLY. Some of us can appreciate that.

The SPEAKER (continuing). Because, after thirty-odd years' service in public life, I have been quite as frequently condemned and criticised by a good portion of my constituency as I have been commended. I will say that old adage is to my mind as true now as it was when first pronounced, that "God helps those who help themselves." It is not for me to say further, or criticise States that have not exercised all their police

powers. I do not know that I could add any detail further that I desire to say.

Governor EDWARD W. HOCH, of Kansas. Will you permit one word further, Mr. Speaker?

The SPEAKER. Certainly.

Governor HOCH. I want, first, to revoice the gratitude of Governor Hanly for your courtesy in giving us this hour, and in this I am sure I voice the sentiment of the whole committee and of the great conference assembled at Baltimore. The State I have the honor to represent here, Mr. Speaker, prohibited the manufacture and sale of intoxicating liquor by constitutional amendment in 1880, except for three purposes. As governor of the State for the past three years, I have been up against a practical proposition of enforcing the law. I am not here, Mr. Speaker, and I think this committee is not here, primarily, in the interest of temperance—in the interest of prohibition. We are here primarily—I am, at least—in the interest of law and order and good government. It seems unreasonable to me that the nation, through that coordinate branch of Government known as the Supreme Court, should concede and reaffirm the right of the State to do a thing, and then that the two other coordinate branches of Government, the legislative and the administrative, should pursue a policy that practically paralyzes and prevents the State from doing that thing which the coordinate branch known as the Supreme Court has conceded it to be the right of the State to do. That is an anomaly in government. I do not believe—and I beg your pardon—that that is good law. I do not believe that a government divided can stand, and that is a divided government, it seems to me as a layman. And I believe I voice the sentiment of the great mass of Christian people in this country when I say that interstate commerce in any reasonable interpretation is commerce in legitimate things, and not commerce in contraband articles, and that if there is to be a decision upon that question the people upon the side of the geographical line which has declared it to be contraband should at least have as much to say in the National Government as to the interpretation as to what is interstate commerce as those upon the geographical line which have not made that distinction. And I come back and say, Mr. Speaker, speaking for my people and saying to you, that the great obstacle to the enforcement of law in my State has been the attitude of the National Government toward a law, through its legislative and judicial and administrative departments, in a State where the judicial department has conceded us the right to do this thing. Now, I am not a lawyer—

The SPEAKER: I presume you are not—

Governor HOCH (continuing). But the common people often get better conceptions of law than the most eminent lawyers, and it is frequently the case that the great lawyers split hairs about unimportant things and forget the great vital principles of the law. I beg pardon for speaking with some vehemence, because, as I say, I have been practically up against this proposition, and it grieves me, Mr. Speaker, as an American citizen, proud of my country—it grieves me that this great nation shall concede to us the right to prohibit this traffic through its judiciary department and then in other ways practically make it impossible for us to do that thing. That is just plain common sense, Mr. Speaker.

The SPEAKER. Mr. Governor, you need not have told me that you are not a lawyer. Having heard your speech, even though I had never seen you, I could prove that you were not a lawyer. The great common sense and heart and conscience of the people in the last analysis control all; but if I were governor of the State of Kansas and had an appointive judiciary, I would not put you on the bench until you had read law. [Laughter.]

Now, I want to say, not by way of reply so much as by way of suggestion, that you seem not to get the distinction. The Supreme Court of the United States has never said, the Constitution of the United States has never said, the laws of the United States have never said, and none of them have had power to say, what the State of Kansas shall do. You have prohibited the manufacture of liquor; you have prohibited the sale; you have not prohibited the personal use. You have the power to do it, and that which you speak of as contraband, from the legal standpoint, perchance, is not contraband. But, after all, this great conference is not going to resolve itself into a court, composed of laymen, of lawyers, or both, to construe the Constitution. You are there for the purpose of speaking for a great constituency that touches the hearts and consciences of men, the religion of men. There is a maxim attributed to Crockett: "Be sure you are right; then go ahead."

Governor HANLY. We are going to take that advice.

Governor HOCH. We have had that for twenty-five years.

The SPEAKER. Right; take that advice. I, along with every

other Member of Congress, cocitizens, think it would be immensely better to take the practical that Senator Knox suggests than to take the impractical, perchance, that the minority of the Senate committee suggests.

Mr. L. C. MURDOCK, of Kingston, Pa. Mr. Speaker, may I ask a question?

The SPEAKER. Yes.

Mr. MURDOCK. This committee does not come as a judge upon the Congress of the United States and their action. We stand between Congress at the present time in this capacity and the people whom we represent, and there is a feeling that comes to us that is general—I doubt not it has come to you—that Congress is not doing what it can do, and in view of the aroused consciences of men in regard to the curse of this traffic in intoxicating liquors, is not doing what it ought to do; and we shall go throughout this nation to our different places, and if you can answer this question that has been asked by Doctor Leonard and tell us that Congress is doing what it can to regulate this traffic in accordance with the desires and enlightened conscience of the moral people of this nation, we can possibly allay the dissatisfaction. If you feel in your heart that that is what Congress is not doing, our petition then, sent by this general conference, we desire to have you consider most carefully. We did not come to suggest law to you, but to request that Congress exert its influence and its power to help out in this problem as fully as the citizenship of this nation demands that it should do. If you could answer the question and say that Congress is exhausting its resources, it would help us very much as we go back to our constituencies, and possibly help Congress.

The SPEAKER. Many men of many minds. There are some people devoting, for the time being, exclusive attention to a single idea to such an extent that sometimes they become enthusiastic. [Laughter.] I do not, sir, believe that you are one of them.

Mr. MURDOCK. No, sir; I do not.

The SPEAKER. Now, then, answering your question, and measuring my words, I have no doubt that the Congress of the United States is proceeding along the lines, under the oath which the membership thereof have taken, to consider, and after considering, to register its will along legal, correct, righteous lines.

Mr. MURDOCK. That is what we want.

Governor HANLY. Thank you, Mr. Speaker.

Refunding Stamp Taxes.

SPEECH

OF

HON. BENJAMIN G. HUMPHREYS,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

On the bill (H. R. 21129) to provide for refunding stamp taxes paid under the act of June 13, 1898, upon foreign bills of exchange drawn between July 1, 1898, and June 30, 1901, against the value of products or merchandise actually exported to foreign countries, and authorizing rebate of duties on anthracite coal imported into the United States from October 6, 1902, to January 15, 1903, and for other purposes.

Mr. HUMPHREYS of Mississippi said:

Mr. SPEAKER: As the gentleman from Illinois objects to any amendment which would provide for a return of the illegal cotton taxes which were collected just after the war, it is hardly necessary for me to say anything further. A number of bills are now pending in this House, all having in view the refunding of these taxes, though there is quite a range in the variety of methods proposed. It is very generally conceded that the law under which these taxes were collected was in violation of the Constitution, and this money was therefore taken from the people without due process of law. The bill which we are now considering proposes to refund stamp taxes "which were illegally assessed and collected," and if that be true, the bill ought to pass. Under the ordinary rules of procedure it would certainly be in order to amend this bill by providing for the refund of the cotton tax, which was also "illegally assessed and collected." I regret that the special rule under which we are now proceeding forbids any amendment except by unanimous consent.

The people of Mississippi, under the acts of Congress of 1866 and 1867, after the war was ended, paid in round numbers

into the United States Treasury \$8,000,000 taxes, which had been "illegally assessed and collected" on their cotton, and no reason can now be assigned for the refunding of the stamp taxes as proposed in this bill that will not apply with equal force for the refund of the cotton tax. Both were "illegally assessed and collected," and both should be returned to the citizen who was held up by the Federal taxgatherer and required by him to stand and deliver. My friend here suggests that I am kicking against the pricks. Better that, Mr. Speaker, than no kick at all. The committee to which these bills have been referred refuses to report them out, and so our only chance to get a vote on them is to offer them as amendments to such bills as are fortunate enough to get before the House. I had not intended to say anything at all on this bill—in fact, I never heard of the bill until it was called up just now—but it occurred to me while it was being read that it was along lines so thoroughly identical with the bills which propose to refund the old cotton tax that I could not resist the temptation at least to make the request that it might be amended so as to give the stepchild, as we over here are sometimes called, a bite at the apple. I hope the justness of our claim may induce the gentleman in charge of the bill to relax somewhat the rigor of the rules and temper his judgment.

Tariff Reform in the Interests of the People.

SPEECH

OF

HON. LINCOLN DIXON,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 27, 1908.

Mr. DIXON said:

Mr. SPEAKER: To all demands of the people for relief from the present tariff laws the political party in control of Congress turns a deaf ear. The demand for this relief comes from all sections of the country and from members of all political parties. I desire to call attention to some of the iniquities of the Dingley Act and the evil consequences flowing therefrom.

The tariff is a tax on the exchange of goods. Whether for revenue or for protection, it is always a tax levied by our Government on imported goods. Our Government Treasury is benefited when it receives the revenue, but when the goods are excluded by reason of the tariff the Government not only loses the revenue, but the special interests thus protected from competition reap the benefit.

The tariff as arranged by the Dingley Act protects the wrong man. It is in operation and effect a process by law of transferring the money from one class of people to the pockets of another. It has built up monopolies, multiplied trusts, and plundered the people.

The tariff is a tax or duty levied upon articles imported into this country. Articles thus imported are taxed according to the tariff schedules, and this tax is first paid by the importer, but the price of the articles is increased by the duty thus collected and the consumer ultimately pays the duty. It is a tax, and whether levied for the purpose of revenue for the support of the Government or for the sake of protection to favored manufacturers, it is always a tax paid by the people.

To the extent that a tariff is for revenue, the tax is levied upon the imported article and is ultimately paid by the consumer, but the money paid in the first instance by the importer goes into the National Treasury. To the extent that the tariff is protection, the tax is always paid upon the article by the consumer and goes into the pocket of the protected producer. One system is legitimate taxation; the other is taxation for special interest.

The people have a right to complain when the tariff schedules are arranged to help the business and profit of favored individuals and corporations. The favors thus shown are at the expense of all the people.

A tax is not a source of wealth or a means of development. The effect of a protective tariff is to unfairly distribute the reward of labor, prevent its natural diffusion, and concentrate it in the hands of a few people. It is a tax levied by the Government on all the people for the benefit of a favored few. The tariff necessarily increases the cost of an imported article to the consumer, and the schedules of the Dingley bill are so high that in most cases the price to the consumer is necessarily higher than the homemade article, with the natural result that such

articles are excluded from our markets. By such schedules the foreign articles are excluded and the home manufacturer has an absolute monopoly of the home market. Foreign competition being thus impossible, the home manufacturers pool their interests and agree on a price just below the price at which the foreigner must sell his goods after paying the tariff tax and thus levy their exactions upon the people.

The Government receives no revenue, the consumer pays the enhanced price of the home articles, and the manufacturers get the benefit of the enhanced price. The consumer can not get the goods lower than the price agreed upon by the manufacturers.

The origin of the name in a measure throws light upon its operations. In the very southernmost point of Spain which juts down into the Strait of Gibraltar is located a town called Tarifa, named for a Berber chief who crossed over from Africa to reconnoiter the country prior to its conquest by the Moors. After the Moorish conquest a castle was located upon this point which commanded the strait, and vessels passing out or into the Mediterranean were stopped and forced to pay duties upon their cargoes. From this place the name passed into the English language. It means to-day what it did then, a taking away. Every vessel leaving Tarifa was poorer for its experience at Tarifa.

The people must support the Government, and the money for said support must come from the people. No good citizen can object to contributing for that purpose when the money goes into the National Treasury and is used with economy. Every taxpayer can compute his contribution toward the support of his State and municipal governments, but no such knowledge can be gathered as to how much he contributes to the National Treasury.

Whatever be the kind of government, be it a republic, a monarchy, or a complete despotism, there must be some way to raise revenues to carry on the government. It is the highest patriotism to contribute toward this purpose. It is not only a duty, but a pleasure.

The main support of the Government is from the internal revenues and the duty placed on imported goods. This has always been the chief source of revenue for the Government and always will be. The Government will never provide for direct taxation, for the reason that it would be unjust and inequitable. The Constitution provides that such taxation should be levied upon the different States in proportion to their population instead of in proportion to the value of the property therein. In other words, the poorer States would pay a sum out of proportion to the sum they should rightly pay.

The men who framed the Constitution did not see the great growth and development of the country; that a part of our people would be rich and a part poor; that some sections of our country would have concentrated within their limits great wealth while other sections would be poor. If Congress should resort to direct taxation, it would compel the populace in the poor States to raise as much as those in the wealthy States; it would tax the rich and poor alike, without regard to their ability to pay.

The Government, deriving more than one-half of its revenue by means of the tariff, is bound to give, in a measure, protection upon the articles thus selected, and to this extent this advantage will ever be given the American manufacturers. The tariff as originally adopted was for the purpose of encouraging infant industries. It was never intended to make the people forever contribute toward their support. It was at first but 10 per cent, and this was deemed sufficient. The tariff was not originally established nor justified in order to shield the American manufacturer from the world's entire competition in trade and to deprive the American consumer forever of the benefits of the world's markets, but to encourage the American manufacturer to embark in a competition with the world in trade and production and to give him the advantage of a moderate tariff that he could equip himself to compete with the world.

The idea of partitioning off the American people as forever excluded from the benefits of the world's markets and doomed to be victims by legal compulsion of trust prices and trust trade only is a modern curse that looks to the Republican party for perpetuation and fellowship.

Senator TILLMAN, a few years ago, said in the Senate:

If there be any industry in this country which by reason of foreign competition can not live and give diversified labor and employment to our people, and which by a small tariff can be protected to the extent that it can get on its feet, I say it would be the part of wisdom to give it.

The only trouble is that when you have started your infant by giving him milk and then bread, and raising him up to be a man, you continue to protect him until he begins to feel the effects of protection, and then he forms a combination or trust and marches abroad in the open light of day a robber, to take from every household in the land tribute levied through the forms of law by Congress under the system of protection.

There is where I draw the line. I say you ought not to allow a single trust or combination to come in here and get a duty on anything, because you levy unjust tribute on the American people when you do it.

Henry Clay, the great apostle of protection, said in 1833:

The theory of protection supposes that after a certain time the protected manufacturer will have acquired such strength as will enable him subsequently unaided to stand against foreign competition. No one in the commencement of protection ever supposed that it was to be perpetual.

In the effort of the trust barons and their Republican allies to fix the policy of a perpetually high tariff upon the country, they seek to deprive the Democratic party of all credit for its efforts in behalf of a moderate revenue tariff in the past history and development of this country, and they constantly shriek their epithet of free trade at the Democratic party upon its every effort to give salutary regulation. They presume to warn the country that no phase of protection ever found favor with a Democrat or failed of favor with a Republican.

When that great leader to whom the Republican party has ever looked for so much of its inspiration and patriotism, Daniel Webster, was arraigned in the Hayne debate for his attitude toward protection, he replied:

In 1816 I had not acquiesced in the tariff then supported by South Carolina, and I say now, as an original question, the authority of Congress to exercise the revenue power with direct reference to the protection of manufactures is a questionable authority, far more questionable, in my judgment, than the power of internal improvements. With a majority of the Republicans of Massachusetts, I voted against the tariff of 1824, but, notwithstanding our dissent, the great States of New York, Pennsylvania, Ohio, and Kentucky went for the bill in an almost unbroken column, and it passed. The duty of the Government at the present moment would seem to be to maintain the position it has assumed, and for one I shall feel it an indispensable obligation to hold it steady, as far as in my power, to that degree of protection which it has undertaken to bestow.

In view of the fact that the great apostle of protection, Henry Clay, never wished that it "should be perpetual," so as to pen up the American people in trust-fixed schedules, helpless victims of trade conspiracies; in view of the fact that a great Republican leader, Daniel Webster, declared that he would hold the protectionist doctrine to that degree of protection then undertaken, and in view of the fact that the Democratic party secured to the American manufacturer a reasonable and moderate advantage over foreign competitors, the Republicans should cease their continued talk of free trade as the synonym of our policy of tariff for revenue.

The Republican party, through its present misguided leadership, now wants the people to ratify its distortions of the protective system from its former purposes and scope to the present trust-fixed schedules, whereby trade conspirators, controlling the output of American manufacturers, may force the sale of their wares upon 85,000,000 American citizens, free from competition of either home or foreign rivals, and, of course, at their own prices. So glaring a hold up of American citizens by syndicated capital through the act of the law would hardly have been attempted but for the fact that party methods and party machinery have been found adequate to screen from popular reach and redress the gravest wickedness and wrong.

Organized capital twice changed the contract for the payment of the public debt due to it, to terms more favorable, and suppressed a Congressional resolution to investigate how it was accomplished; it demonetized by stealth a current coin of the Constitution and the Republic to the enhancement in value of the vast volume of indebtedness due to it; it usurped from Congress and arrogated to itself the function of "coining money and regulating the value thereof," and it is doubtful if Congress shall ever again reclaim from the banks its own sole and exclusive function; it has placed upon the United States Statutes a trust-fixed tariff schedule by means of which, after bringing under its control the output of all important and formidable American manufacturers, it levies exaction at its will without the menace of competition in the world's greatest market, that of the United States. Under the wolfish and hypocritical pretense of wishing to reach the world's markets where competition must ever limit its sales and profits, it pockets its greatest gains from the people of the United States, of whose markets it holds a licensed monopoly. What wonder, then, it is that Senator Hoar from his place in the Senate uttered this solemn warning:

Now, if the accumulations of large estates in single hands under primogeniture were the fortress and bulwark of monarchy and aristocracy, and the division among all the children were sure to bring with it republican liberty, is it not equally true that the accumulation of vast fortunes in individual hands or the subjecting of great masses of wealth and great industries to individual control by means of corporate power will have a corresponding effect to destroy or overthrow or at least to impair and limit republican liberty.

What impairment of or limitation upon republican liberty could be more obvious to the perception or more galling to the sensibilities or more hurtful to the people of the United States

than their subjection to the markets where foreign competition could not enter and where home competition is abolished by capital, trusts, and combinations?

The two great systems of law which have preceded our own, the civil and the common law, protected the people over whom they prevailed from trickery in their markets, and engrossing, forestalling, or monopolizing the market were crimes punishable by law. And can it be possible that the people of the United States will see with tame submission their markets and the great staple productions and manufactures of this busy land used for the plundering of the many and the enrichment of the few and the banishment of all competition, home and foreign, from the domain of trade?

In obtaining foreign trade the United States capitalist must always meet the world's competition as well as legislative barriers beyond this jurisdiction and could expect but a reasonable profit. His chief aim and richest harvest is the market of the United States—the widest and largest of the world, and the only one over which he could obtain dominion by law. It is this market that is the object of his chief concern; that is the bird he holds in his hand, and his frantic efforts over the bird in foreign bushes, however natural and justifiable, serves mostly to lull the home bird to a forgetfulness of its captivity and enables the United States capitalist to cloak his oppression of his own people under the spurious guise of patriotism of seeking foreign trade.

The domestic commerce and interstate commerce of the United States is twenty times as great in volume and value as our foreign trade has ever been at its very best. Our home market is twenty times as valuable to the manufacturers of the United States as our foreign trade is at its topmost figure. Competition and legislative barriers must ever be met by the American manufacturer, and though it is creditable and profitable to seek dominion and a market there, his American commerce and interstate traffic at home will likely ever remain in great excess of the foreign trade; and if he can only remain the master by law of the American market, freed from the peril of competition and at liberty to fix his own price for his wares, he may swell his fortunes as he chooses, levy his exactions upon the people as he wills, and transmit to successors and children as valuable prerogatives as primogeniture itself ever bestowed.

The Dingley Act is, in the main, private legislation, secured by private interests and for the sole benefit of favored interests. While upon some schedules it raises revenues, it has, in the main, fixed the rate so as to exclude competition and restrict importation. The Dingley Act has resulted in practically preventing foreign competition, and the protected beneficiaries have excluded domestic competition. Surrounded by a tariff wall that no foreign competitor could scale, they have pooled their interests, limited their production, fixed a schedule of artificial prices, and compelled the consumers to pay the prices and in this way transferred from the farmer, the laborer, and all other people the money to fill their own coffers. The amount of these exactions is measured only by the greed of the special interests. The Dingley Act, by reason of its high schedules, prevents the importation of many goods that would come into competition with our homemade goods and give the consumer lower prices, and also the manufacturer at home reasonable profit.

But our home manufacturers raise their price to the highest point possible to keep out foreign competition, and this increased price does not go into the National Treasury, but to the favored manufacturer. The people pay the increased price, the Government gets no revenue, and the protected interests add to their treasury.

It is frequently claimed that the tariff does not increase prices, but Congress has itself by legislative enactment contradicted such a proposition. In 1872, after the great Chicago fire, Congress passed a bill exempting from duty all building materials, except lumber, for a period of one year. The object of the bill and the anticipated result was that it gave to the people of Chicago a cheaper market in which to buy the material to rebuild that city. It was a great help to the people of that city, and this bill was a legal confession that the tariff increases the price to the consumers. The farmers and the working classes are the greatest buyers, and the tariff exactions fall heaviest on them. It increases the price of everything they buy, since there is a tax on nearly everything they use or wear. Who pays the tax on the blacksmith's hammer? The farmer when he has his wagon and farming tools repaired. Who pays the tax on the horseshoe nails? The farmer when he gets his horses shod. Who pays the tax on lumber? Every man who builds a home, a barn, or fence, as also the renter who must pay a rate proportionate to the cost of the home he rents. Who pays the tax on paper and wood pulp? The readers of the papers and books, and this is a tax on education and intelligence.

The Dingley tariff taxes the poor at a heavier rate than the rich, and exacts a higher rate on the cheaper goods purchased by the poor than on the finer and costlier goods purchased by the wealthy. Mahogany, ebony, rosewood, and satinwood are exempt from duty. Pine lumber, the material used in the construction of the poor man's home, is taxed at \$2 per thousand feet, and if planed on one side and tongued and grooved an additional \$1 per thousand feet. If he uses clapboards with which to cover it, he is taxed \$1.50 per thousand; while if he uses shingles, he is taxed 30 cents per thousand. The laths are taxed 25 cents per thousand. Plows, harrows, harvesters, reapers, and agricultural implements are taxed at 20 per cent ad valorem. A perusal of the Dingley Act will convince any unprejudiced person that the burden of taxation falls heaviest upon the consumers of the necessities of life.

Our domestic commerce is more than twenty times as great as our foreign commerce. The foreign commerce of the world is very small when compared with the domestic commerce of our land. No statistician has been able to estimate it, and it is said to be greater than all of the domestic and foreign commerce of the rest of the world.

The United Kingdom has but 20,000 miles of railroads, and the United States has 222,635 miles of railroads, nearly twelve times as many. The area of the United States is as great as that of Great Britain, Ireland, France, Germany, Spain, Portugal, Switzerland, Sweden, Denmark, Belgium, and Italy. It would be impossible to find a parallel to the prosperity and progress of the United States. Every day the sun shines upon the American people we see an addition of nine and one-half millions of dollars to the accumulations of wealth in the Republic.

During 1906 the sale of manufactured products to foreigners amounted to \$459,812,656, of which 85 per cent, according to the estimate of experienced exporters, were sold at cheaper price than that paid by the people of this country for the same articles.

The average price of these goods abroad is 20 per cent cheaper than the selling price in our own market. Many articles are sold 100 per cent cheaper abroad, while on a few the difference is 200 per cent. The American farmer, who has been taught to believe that the tariff was made for his benefit, buys the agricultural implements made at home at a price higher from 10 to 50 per cent than the same goods are sold by the same companies abroad. For instance, the carpenter at home pays from 25 to 50 per cent more for his tools than the same tools can be bought for abroad, though made by the same American manufacturer.

The export price list published by our American manufacturers contains the proof of the fact that they discriminate against their own people. Here are a few articles, with domestic and foreign prices:

Articles.	Domestic price.	Foreign price.
Cultivators.....	\$11.00	\$8.40
Plows.....	14.00	12.60
Axes, per dozen.....	8.25	7.20
Kettles.....	1.40	.85
Wire nails, per hundredweight.....	2.25	1.35
Table knives, per gross.....	15.00	12.00
Horseshoe nails, per hundredweight.....	3.00	2.00
Barbed wire, per hundredweight.....	3.00	2.00
Rivets, per hundredweight.....	10.00	5.55
Typewriters.....	100.00	60.00
Sewing machines:		
Fine.....	27.50	20.75
Medium.....	22.00	17.50
Cheap.....	18.00	12.00

These extracts are taken from a publication called "Protection's Home Market," published several years ago, and while the prices are not exactly the present ones, the difference between the prices, domestic and foreign, remains practically the same.

In my own State, I regret to confess, the examination of the foreign and domestic price list of some of our manufacturers show that they have sold their products cheaper in Europe than in Indiana. Saws manufactured in Indiana sold abroad at a difference of 33 per cent in price. Hardware manufactured in Indiana sold abroad at a difference of 25 per cent. Scoops, shovels, and spades made in Indiana sold abroad at a difference in price of 33 per cent.

Scythes and oilstones are sold abroad 50 per cent cheaper than at home; crosscut saws, 53 per cent cheaper; harness snaps, 42 per cent; levels and plumbs, 36 per cent; zinc washboards, 60 per cent; corn shellers, 20 per cent; butchers' tools, 15 to 40 per cent; horseshoes, 21 per cent; carpenter tools, 20 to 45 per cent; varnish, 5 per cent; stoves, 33 per cent; safes, 17 per cent; plows, 11 to 25 per cent; cylinder and machine oil, 40 per cent; tack hammers and screw-drivers, 50 per cent; dry

paint, 25 to 33 per cent; clocks, 33 per cent; kerosene oil, 35 per cent; gasoline, 13 per cent; shot, 100 per cent; watches, 25 per cent.

The fact is no longer denied by Republicans that the American manufacturers sell their products cheaper abroad than at home. While the Republican leaders for years denied this fact, it is so well known now that denial is impossible.

The exports of agricultural implements are as follows:

Exports of agricultural implements.

[Statistical Abstract—1905.]

* The manufacturers of agricultural implements have attained the position of being able to supply our home market and sell abroad over twenty-four and one-half million dollars' worth of goods. As these sales are made in competition with the world, it is proof that either no protection, by means of a tariff, is required at home or the sales abroad are made at lower prices. The sales abroad are nearly one-fourth in value of the total manufactured. The total value of agricultural implements manufactured in 1905 was \$112,007,528, and the amount exported was \$20,721,741, leaving for home consumption a little over \$90,000,000. If these implements had been sold to the American farmers at the same price the farmers of Russia and of Europe paid for them, there would be left in the pockets of the American farmers of this country the neat sum of at least \$18,000,000. This is a yearly contribution, and is paid by the farmers. The tariff excludes competition and importation. There has not been a dollar received by the Government from the tariff on agricultural implements in the last eight years. The trust controls the entire market and has lessened the number of factories. In 1890 there were 910 factories; in 1905, but 648. The capital invested has gradually increased, as has the value of the finished product.

Our manufacturers not only supply our home market, but sell abroad the immense quantities which I have mentioned. They compete with foreign manufacturers in all their sales. If they compete abroad, why do they demand protection from these same competitors in our own markets? They are given protection by tariff duties of from 20 to 50 per cent. We furnished the United Kingdom with 78 per cent of her imported agricultural implements and competed with her most successfully on her own hearthstone, yet it is claimed that we can not compete with her on our own hearthstone. Is it just or right that our people should pay for goods manufactured here more than the same goods are sold for everywhere else?

The sale of goods abroad so much cheaper than at home has resulted in our business men having agents abroad who buy our goods at the low price, then reship them to this country and undersell the merchant of the same goods in this country. This is especially true of American watches. The American watch trust not only practically controls the price to retailers, but forces the retailers to sell to their customers at certain prices. A watch the retailer sells at \$75, and can not sell at less than \$60, can be bought in England, shipped back to New York and pay all the shipper's expenses, and be sold for \$42.30, and this applies to all other classes of watches. What possible

excuse can the watch trust give for this robbery of the American people?

American thrift, enterprise, industry, and ability lead the world, and in this we rejoice. Our manufactured goods are sent to every country under the sun; our agricultural implements are found everywhere; the products of our steel manufacturers are found wherever there is a railroad and wherever a carpenter or mason can be found. Our wire fencing, nails, shovels, and spades are distributed over the world. An American traveler finds our goods at every point he visits. Our engines are found upon every railroad, and our steel bridges are found spanning the rivers of all lands. We rejoice in the fact. Yet we are humiliated that these things are all sold abroad from 30 to 50 per cent cheaper than our own people can buy them in the city where they are manufactured. Abroad they compete with the world; at home they have no competition. The farmer remembers the former rivalry between the different harvester machine companies, but to-day most of these companies are together as stockholders in the International Harvester Company, and a note given in payment of nearly any machine will be sent to the treasurer of the International Harvester Company, and when collected goes into the treasury of the trust.

On December 19, 1907, at the beginning of the present session, I introduced the following bill, H. R. 10473:

A bill to amend section 1 of "An act to provide revenues for the Government and to encourage the industries of the United States."

Be it enacted, etc., That section 1 of "An act to provide revenues for the Government and to encourage the industries of the United States," approved July 24, 1907, be amended by appending at the end thereof the following proviso: *Provided, That whenever it shall be made to appear to the Secretary of the Treasury that the manufacturer, maker, or producer of any article, manufacture, compound, or product made in the United States the like of which, when imported, is made dutiable by any of the provisions of this section bargains, sells, transfers, or disposes of, or agrees to bargain, sell, transfer, or dispose of any such article, manufacture, compound, or product upon condition that the same shall be exported, or for export, at a sum or value less than that for which the same or a like article, manufacture, compound, or product is or was bargained, sold, or disposed of without any such condition, the Secretary of the Treasury shall forthwith, upon proof of such sale, order and direct that all such articles, when imported as prescribed in this section, shall be admitted free, and thereafter no duty shall be assessed or collected on any such article, manufacture, compound, or product.*

This bill has, ever since its introduction, slept quietly in the pigeonhole of the Committee on Ways and Means. The passage of this bill would destroy at once many of the trusts and be of inestimable value to the American people.

All the surplus of our farm products is exported; wheat, corn and beef are exported. The tariff upon them is of no value to our farmers. The tariff on wheat was for the purpose of deception, to make the farmers think that it was a benefit to them. We raise more wheat than we can use, and the surplus must be sold abroad, and the price there is not only fixed by competition, but establishes the home price. Wheat and corn have ever had a higher value under low tariff than under high tariff. From 1850 to 1860 the average tariff rate was 24 per cent, and during this time the average price of corn was 70½ cents, and of wheat, \$1.66 per bushel; from 1896 to 1907 the average tariff rate was 44 per cent, while the price of corn was 48 cents, and the price of wheat averaged 48½ cents per bushel.

The foreigner uses the agricultural implements made in America to cultivate his crops, purchased at cheaper prices, and sells his products in the same market as the American farmer. The farmer in foreign lands plows his fields with an American plow, bought from 30 per cent to 40 per cent cheaper than our farmers can buy it; he uses an American harrow to pulverize and prepare the soil for seeding. This harrow is bought cheaper than our farmers can buy it, though our farmer may live in the county where the implements are made; cuts his wheat with an American machine bought 25 per cent to 35 per cent cheaper than it can be bought in this country; thrashes his wheat with an American machine run by power furnished by an American engine, bought cheaper than our farmers can buy it; hauls his wheat to the railroad in an American wagon purchased cheaper than it can be bought by our farmers; the chains, snaps, and harness on his horses are American make, and purchased cheaper than our people can purchase them.

The wheat is thrown into bins or elevators, and the scoops used in handling it are American make, sold cheaper abroad than at home; the cars carrying the wheat to Liverpool can run over American rails sold from \$8 to \$12 a ton cheaper than our railroads have to pay, and this wheat is placed for sale in competition with American wheat, and controls the price of every bushel of wheat raised in the United States, and this is the protection furnished the American farmer by the Dingley bill and the Republican party.

The tariff is a hardship on the farmer; he sells his products in competition, but all he buys is in a protected market. The

tariff compels the farmer to pay higher transportation for his products. The increased cost of railroad construction by reason of the tariff on lumber, steel, and iron is estimated at \$4,000 per mile. The Republicans say that this is paid by the railroads. While in a sense this is true, yet in the end it comes from the pockets of the people in increased freight rates. It increases the cost of nearly every article that he needs and must have. The surplus of the farms is sold in foreign lands. When the farm products reach Liverpool the schedules of the Dingley bill do not render any aid.

The farmer buys his supplies in a highly protected market and sells his products in a free market. He pays into the coffers of the trusts and protected producers for all his farm tools, his clothes, his hat and shoes, his tableware, stoves, for his harness and chains. He is taxed for everything he needs, from the swaddling clothes put upon his baby to the coffin in which he is finally laid, and his children are taxed for the little monument they erect at his grave.

The farmer has in the past been assured that protection is extended to the products of his labor against the competition of similar products imported from abroad for sales in our markets. This proposition assumes that our farmers are ignorant and easily deceived. Do the home markets invite the great staples of agriculture from abroad? What farmer in this country ever saw in our markets for sale corn, wheat, or oats from a foreign country? Our farmers sell abroad and feed the world. Every claim of protection for the home market is a sham and a fraud. Under the hypocritical pretense of protection for what the farmer sells, he has been for years and is now compelled to pay taxes on the necessities of life.

They used to tell us that the low tariff caused panics and led many to believe that the panic of 1893 was caused by the Wilson bill that went into effect in August, 1894, a wonderful back-action effect of that measure. But to-day that claim is abandoned, since with a high protective tariff and in the midst of the most wonderful prosperity we have a panic. The old argument with which they deceived the people has been proved to be false. The papers are filled with accounts of failures and bankruptcy. Labor is unemployed and a million of men are hunting for work. Soup houses have been established in our cities and the demand for help to sustain life is without a parallel in our nation's history.

While we have in the last few years been prosperous, this was not caused by our tariff laws. Under the low tariff law of 1846 the census reports show greater per cent of gains in value of all farm products than in the last ten years.

In the production of corn, the great basic product of agriculture in the Middle West from 1850 to 1860, under a Democratic tariff, there was an increase of 41.7 per cent in the United States. From 1880 to 1890, under a Republican tariff, there was an increase of 21 per cent. Under Democratic tariff, railroad mileage from 1850 to 1860 increased from 10,982 miles to 30,626, an increase of nearly 300 per cent. From 1890 to 1900 the increase was from 166,703 miles to 194,262, or an increase of about 16½ per cent.

The value of farm animals increased between 1850 and 1860 to 1900 from \$3,067,343,580 to \$7,980,493,060, an increase of over 101 per cent. From 1880 to 1890 the increase was from \$12,180,501,538 to \$16,082,267,689, a little over 30 per cent. From 1890 to 1900 the increase was but a little over 20 per cent.

The value of farm animals increased between 1850 and 1860 over 100 per cent. Between 1880 and 1890 the increase was but 55 per cent; between 1890 and 1900 there was a decrease in value of \$190,642,894.

Our exports increased from 1850 to 1860, 163 per cent. From 1880 to 1890 there was an increase of 2½ per cent. From 1890 to 1900 there was an increase of a little over 60 per cent; from 1900 to 1907 about 34 per cent.

In wealth we increased from 1850 to 1860, 125 per cent; from 1880 to 1890 the increase was 46 per cent; from 1890 to 1900 the increase was 37 per cent. The capital employed in manufacturing industries increased 89.4 per cent from 1850 to 1860; from 1890 to 1900 the increase was 50.7 per cent. From 1850 to 1860, under low tariff, rural wealth increased over 100 per cent; from 1890 to 1900, under high tariff, rural wealth increased but a little over 20 per cent. On the other hand, urban wealth doubled in every decade except from 1880 to 1890; and from 1890 to 1900, when the increase was only 50 per cent. The average per capita wealth of the farmer remained the same from 1860 to 1900, yet that of the urbanite increased over sixfold. Of the \$78,000,000,000 increase of national wealth from 1860 to 1900 but a little over one-fifth went to the farmers, who represent one-half of the population; yet of the \$9,000,000,000 increase of wealth during the low tariff decade from 1850 to 1860 over 44 per cent went to the farmers.

We are told in every campaign of the great increase in our national wealth under protection. This country is so situated and has such immense resources that its development and increase of wealth would be wonderful under any kind of tariff laws. We have fertile soil, inexhaustible mines of hidden wealth, and the most intelligent people on the globe. Prosperity is not produced by law. Many years ago men believed in the divine right of kings and their power to make people happy and prosperous. Our people have discarded such beliefs. Prosperity comes through natural processes. It is not handed out by the President or by Congress. It comes by industry, fertility of the soil, and the intelligence of our people combined. Our country, with its broad and fertile plains, vast mines of mineral wealth, and enormous resources, will be prosperous and progressive.

For the year ended June 30, 1907, the domestic export of farm products were of the value of \$1,055,000,000, being the first year in the history of the world that a country exported agricultural commodities of home production to a value in excess of a billion dollars. Farm products furnish 63½ per cent of the total exports of our country. Since 1890 the farmers have not failed to secure the balance of trade in our favor; during that time the aggregate of the balance is \$6,500,000,000, while the trade in all the other commodities has resulted in an adverse balance of \$456,000,000. The farmers have furnished the wealth to offset the balance of trade in other commodities, and to them is to be given the credit for this great work of adding to the country's wealth, capital, credit, and welfare.

Four-fifths of the world's production of corn is grown in the United States, and the value of the 1907 crop was \$1,350,000,000. Eight years' crop would pay for building every mile of railroad in the country. The hay crop for 1907 was 61,420,000 tons, and its value was \$660,000,000; the cotton crop was worth \$650,000,000; the wheat crop was worth \$500,000,000; oats were worth \$360,000,000; rye, \$23,000,000; potatoes, \$190,000,000; barley, \$115,000,000; tobacco, \$67,000,000; rice, \$19,000,000; buckwheat, \$10,000,000. The total value of the products of the farms in this country in 1907 was \$7,412,000,000. It was 10 per cent greater than in 1906, 17 per cent over 1905, 20 per cent over 1904, 25 per cent over 1903. The value of eggs and poultry produced on the farms in 1907 was over \$600,000,000. In 1907 we exported cotton to the value of \$481,277,797.

We exported in 1907 domestic merchandise to the value of \$1,853,718,034. The products of the farm constitute the larger part of the immense sum and have changed this nation from a debtor to a creditor nation. We have fed and clothed the people of other countries, and the farmer is the source of the national wealth and prosperity. The domestic exports of farm products for the year ending June 30, 1907, were valued at \$1,055,000,000. The value of the grain exported was \$184,000,000, of animals and meat products \$255,000,000. Live animals exported were valued at \$41,000,000 and dairy products \$6,600,000.

Our farm property in 1850 represented one-half of our total wealth, in 1870 it represented but one-third, and to-day it is not equal to one-fifth.

We have immense wealth; the last showing was in the census report of 1904 and amounted to \$107,104,211,917, yet 70 per cent of it was owned by 200,000 people, and the other 30 per cent is owned by the remaining 85,517,230 people of the country. It is said that when the directors of the United States steel trust meet one-twelfth of the total wealth of the country is represented around the directors' table. Five thousand men in this country actually own one-sixth of our entire national wealth, leaving the balance to be divided among the remaining 85,512,239 people. What is the income of our people? Waldron's Handbook of Currency and Wealth estimates the incomes as follows:

One in twenty of the families is able to secure an income of \$3,000 a year and over.

Two-thirds of the families get less than \$900 per year.

More than one-half get less than \$600 per year.

While more than 4,000,000 families, comprising one-third of the nation, must get along on an income of less than \$400 per year.

The tariff has contributed more than all other things combined to produce this unequal distribution of wealth, stimulating, supporting, and producing trusts. These advantages are given by law. The law gave the right and the opportunity to organize the American Steel Corporation with a capital of more than a billion dollars. It gave the same opportunity to the Standard Oil Company, the cotton-seed oil trust, to the International Harvester Company, and to the hundreds of others.

The census of 1900 shows that of the 16,000,000 families in the United States less than 5,000,000 owned their own homes free from incumbrances, and that 11,000,000 families either do not own their homes or have them mortgaged. While the total wealth of our people is immense, it is concentrated in the hands

of a few. The mortgaged indebtedness in the United States increased from \$6,019,679,985 to \$8,394,728,733 from 1890 to 1900, an increase of 39 per cent. In Indiana during the year 1905 the mortgage indebtedness increased \$123,549,506. Of this vast increase the mortgages upon farms represented \$55,875,864, while the mortgages upon city and town property increased \$67,673,636. The increase of mortgage indebtedness is not an indication of general prosperity.

Who are the beneficiaries of the Dingley bill, the beneficiaries of the taxes on the product of wages and labor? Occupation, as compiled by Edward Atkinson, is shown by the census of 1900:

Employed in lawful occupations:	
Males.....	23,754,205
Females.....	5,319,192
Total.....	29,074,117
Agriculture:	
Subject to foreign competition.....	200,000
Free from foreign competition.....	10,181,765
Professional service, free from foreign competition.....	1,258,735
Domestic and personal service, free from foreign competition.....	5,580,687
Trade and transportation, free from foreign competition.....	4,766,964
Manufactures, mechanic arts, and mining:	
Subject to foreign competition.....	400,000
Subject in part to foreign competition.....	400,000
Free from foreign competition.....	6,285,992

By this classification 1,000,000 persons only are engaged in those occupations where their labor can be considered in any possible way as subject to foreign competition. It is this class only, if any, whose wages can be affected by the tariff. The railroad industry is not affected by such a law, and it employs 1,521,355 men and paid \$900,801,653 in wages last year. This industry pays higher wages and more wages than the highly protected industries engaged in manufacturing cotton, silk, and woolen goods, iron and steel, and in making pottery and glass.

How does the tariff increase the wages of persons engaged in agriculture? The law taxes the articles they consume and thereby lessens their earnings. The protected industries do not sustain 4 per cent of our people.

The argument that protection means high wages can not be maintained. The duties are not imposed for the purpose of equalizing wages between foreign and domestic labor. The wages paid here is because the work in the factories, by reason of machinery, is so much more effective, the amount performed is so large, and our workmen do so much more in a day. Mr. Hill, a statistician of the State Department, testified before the Tariff Commission that by reports of the American consuls in Great Britain the 5,250,000 workmen in America produced double what 5,150,000 in Great Britain performed.

Mr. Maurice Low, a thoroughgoing protectionist, says:

We have the authority of all competent observers in America that one of the reasons to explain the secret of American prosperity is the great productive power of the American workman, his output being so much larger than those of his foreign competitor that the cost of the American product is less than that of any other workman; and it has also been demonstrated that wages and labor cost bear not the relation that is ordinarily supposed; that is, it is not true that low wages are an indication of low labor cost, but rather the reverse, the low-priced workman being usually an unintelligent and unskilled worker and unable to compete with the high-priced worker of greater intelligence and skill.

In 1878 William M. Evarts, then Secretary of State, through American consuls in different parts of the world, collected the facts as to the amount of production and cost of labor in continental countries, and summarized those reports in the following language:

The average American workman performs from once and a half to twice as much work in a given time as the average European workman.

Andrew Carnegie said a few years ago:

It is not the lowest, but the highest, paid laborer, with scientific management and machinery, which gives cheapest products. Some of the important staple articles made in Britain, Germany, and America are produced cheapest in the last, with labor paid double.

Mr. Blaine, upon information from American consuls when he was Secretary of State in 1881, said:

Undoubtedly the inequalities of wages of English and American operatives are more than equalized by the greater efficiency of the latter and their longer hours of labor.

Senator BEVERIDGE, of Indiana, speaking of the wages of the operatives in Russian factories, says:

But low as these wages appear, yet, in comparison with the same American labor, these common working men and women of Russia may truthfully be said to be overpaid. Their wages are less than the wages of American workmen, their working ability is still smaller. One can not believe, either, that the Russian working man or woman for a long time will be as efficient as the American workman or woman.

The wages in the protected industries are not the highest paid in the country to the laborers, and the tariff does not establish high prices for labor. The highest wages are paid to our masons and carpenters, plumbers, plasterers, painters, and similar occupations, and in these trades the tariff has no effect.

The actual price of labor is the amount of the necessities of life you can buy with those wages. The amount of the wages left after the purchase of the necessary supplies is the only measure of a man's prosperity. If the wages are increased but the cost of the necessary supplies every laborer must buy have increased more rapidly, then the laborer is poor, even though his wages be larger. The tariff taxation being assessed on what we wear and must have is as heavy on the man worth \$100 as on the millionaire. Every article of clothing worn by a man or any member of his family from his hat to his boots costs from 50 per cent to 150 per cent more by reason of the tariff. The trust robs us every day by its excessive prices. It taxes all the glass, cutlery, and pottery in the home and makes you pay tribute upon every article of wool, cotton, and furniture you use.

The increase in prices since 1897 amounts to 55 per cent; while wages have increased 19.5 per cent.

The high protectionist claims that his policy protects our laborer from competition with foreign labor; that a tariff-for-revenue policy would reduce the wages of our workmen or force them out of employment.

This claim is made to deceive labor. The important thing for the laborer is to secure the highest return for his labor. He does not work for the sole sake of employment but for clothes, food, and for the needs and comforts of his home. Wages are not measured in dollars, but in the purchasing power of the wage. As the wages have increased the prices of the articles necessary for the laborer have increased at a higher rate.

It is labor that supports the Government. We forbid the foreign goods, but bid the foreign laborer welcome. The foreign laborer competes with our laborer in every field of industry and much more in the protected industries themselves. The manufacturers are protected, but the laborers are left unprotected. The laborer buys the necessities of life and the comforts of his home in a highly protected market. But he is left himself to compete in the open and free market. Protection claims to increase wages, but it is a false cry that has so often been repeated that many people now think it is true.

The law of competition is a natural power. It was given to man to curb his avarice and it is dangerous to interfere with its operations. Our manufacturers say they can not compete with the manufacturers of foreign countries who employ cheap labor. Protect us against cheap labor; we can compete with our home manufacturers since they have to pay the same price for labor.

This sounds well. The Government responds to the cry and forbids the foreigner to place his wares in competition with our home-manufactured articles unless he pays a high tariff for the privilege. While we thus protect our home manufacturer, we compel the consumer to buy of the home manufacturer.

The home manufacturer, after receiving this protection, should at least feel under obligation to deal fairly with our people. But how have they conducted themselves after this treatment? Safe from foreign competition by reason of a tariff wall so high as to exclude foreign goods, they at once enter into the free-trade market to secure their labor. This is their treatment of American labor. Not content with this, they form themselves into trusts, so as to exclude domestic competition. Nearly all the protected interests are controlled by trusts. Manufacturers of watches, rope and cordage, nails, screws, paper, envelopes, iron, steel, wall paper, buggies, barbed wire, plated ware, glass, lumber, wood and iron, oilcloth, carpets, and silver plate have all gone into trusts.

There is hardly a protected industry that has not resorted to the trust to destroy competition. The Government by the tariff prevents foreign competition; the interests by their trusts prevent home competition.

During the last fiscal year the value of the dutiable merchandise imported into this country from abroad as shown by the report of the Secretary of the Treasury was \$1,434,421,425. There was collected upon this merchandise at the custom-houses \$333,230,126, being an average of a little over 43 per cent.

This is the total amount of the revenue derived from the tariff during the last year. This represents the amount the Government received by reason of the tariff. How much do the home manufacturers receive from the tariff?

The census of 1905 showed \$14,902,147,687 as the value of the products of manufacture in this country, and taking the amount exported therefrom, there remained and were consumed in this country at least \$14,000,000,000 worth of manufactured goods. Now, all these manufactured articles are increased in cost to the consumer by the amount of the tariff levied on them;

this duty is an average of 43 per cent and this goes, not into the Treasury of the Government, but into the pockets of the manufacturers.

So in 1907 the figures show the result of tariff taxation and the distribution of its proceeds as follows:

Revenue received by the Government.....	\$333, 230, 126
Bounty received by manufacturers.....	6, 020, 000, 000

This shows that, under the beneficent effect of the Dingley bill, for every dollar paid into the Treasury of the Government \$18 at least goes into the pockets of the manufacturers, and all this comes directly from the pocket of the consumers. If this money was paid by direct taxation of the consumer for the benefit of the special interests protected by the Dingley bill, the system would not be sustained over one election. This vast sum is paid in an indirect manner by our increased price on everything the people consume. It takes tribute from nearly everything we eat and wear; on every tool and implement used by the mechanic, mason, and carpenter; on every article used in the construction of a house or barn; fence, either of wood or wire; on the farm implements, and on the books and newspapers. There are nearly 4,000 articles on the tariff list, and on the articles used by the poor the tariff is much higher than on articles used by the wealthy. Articles of necessity are unfairly taxed over articles of luxury.

Of the \$300,251,878 of revenue collected by the Government under the tariff in 1906, six commodities and classes of commodities yielded 58.79 per cent of the whole. I have taken the following items from the report of the Bureau of Statistics for 1906:

Of the total amount of duties collected on imports, the duties on—

Sugar and molasses were.....	\$52, 594, 752
Wool, manufactures of, were.....	37, 968, 695
Iron and steel, manufactures of, were.....	9, 437, 918
Cotton, manufactures of, were.....	33, 349, 342
Tobacco, manufactures of, were.....	23, 927, 701
Fibers, thread, twine, and yarns, were.....	19, 242, 164
Total.....	176, 520, 522

The duties collected on these commodities amounted to \$176,520,522, and constituted 58.79 per cent of the total amount of duties. This is evidence conclusive to prove the reckless perversion of the taxing power exercised in the construction of the present tariff. Why does it take all the other dutiable articles to make up the 41.21 per cent of the revenue received by the Government when these six commodities produce so much. The reason is plain. The duty on the other 4,000 articles is so high, so extremely protective, that very few foreign goods are imported, so the Government receives very little revenue, but the same excessive duties are added to the price of the domestic article and all of it goes into the pocket of the manufacturer. On these numerous articles the tariff is practically prohibitive and the manufacturer can make his price whatever he pleases, and such is the injustice of this tariff, made to drain the pockets of the people for the benefit of the privileged few.

The Dingley tariff, as a protective measure—in many cases by restricting, in other cases by excluding foreign competition—makes it possible for the trusts to exact higher prices for their products. Since the enactment of the Dingley Act there has been a wonderful development and extension of the principle of combination, so as to create large corporations practically controlling certain lines of industry.

At first protection advanced as one of its arguments that domestic competition could be safely relied upon to reduce the price of commodities and prevent an increase above a reasonable profit. The farmers are all producing products in which there is competition. In the industrial world to-day great combinations and trusts, taking into their possession competing concerns, have eliminated competition.

The tariff is responsible for the trusts, and to-day nourishes and protects them. The world never before has seen such highly thriving combinations as we have to-day. The home-market monopoly was created by reason of the outrageous high schedules of the Dingley Act. The protective tariff, by excluding foreign competition, restricts the same to the country protected. Protected countries are overrun by trusts; free-trade countries have but few, if any. The financial success of a trust depends upon the amount of the tariff schedule on the article controlled by the trust. Trusts have multiplied by the hundred and began to be organized upon the passage of the Dingley Act. We practically had no trusts under the lower tariffs. To-day there are nearly 500 trusts of industrial combinations, with a capital of \$10,000,000,000.

The Industrial Commission, a Republican protectionist body, sent a representative to Europe to discover trusts, and in Eng-

land he discovered thirty-five trusts, with a capital of \$460,000,000, or less than one-third of our one steel trust. In England the trusts have had no effect in increasing prices.

Mr. Wilhelm Berdrow, a German economist, says:

As far as England is concerned, it must be admitted that the trust system has as yet found but tardy acceptance in that country. This is doubtless due, in some degree, to the thorough appreciation of free trade, for it is well known that the largest trusts are powerless unless their interests are secured by a protective tariff excluding from the whole market the product of foreign countries.

Mr. Thomas Scanlon, of Liverpool, writing of trusts in England, said:

It can not be said that we suffer in any appreciable degree from these combinations of producers to keep up prices.

All the authorities agree that instead of the price-controlling trusts, like we have, they have combinations that can produce these articles more economically on a large than on a small scale, and they do not attempt to control the price. They attempted to organize a trust similar to ours in the soap industry, but it endured less than a month. The people there will not tolerate such combinations. The protective tariffs of Austria and Germany have resulted in fostering trusts.

Census Bulletin No. 22, issued in 1900, showed the existence of 183 industrial combinations with a capital of \$3,607,539,200, and nearly all of them were formed immediately upon the passage of the Dingley Act. In 1904 Mr. John Moody published a list of 318 industrial trusts, with a capital of \$7,246,342,533.

There were ten trusts formed during the period of the operation of the Wilson bill. Most of these were patent combinations, and the total capital of all was but little over \$100,000,000. The rapidity of the growth of these trusts under high protective tariff is a sufficient proof of the dependence of the trusts upon the tariff.

With the formation of trusts came the era of high prices. Trusts are formed to create a monopoly, to reduce expenses of production, and to increase profits. As soon as a trust is organized prices begin to rise on some articles 25 per cent, on others 75 per cent, and in many 100 per cent. The price of wire nails jumped from \$1.40 per keg in July, 1898, to \$2.45 in July, 1899, and to \$3.30 in January, 1900. The price of barbed wire, by action of the trust, was increased from \$1.80 per 100 pounds in July, 1898, to \$4.13 in June, 1900. The American Steel and Wire Company controlled the industry. Tin plate was increased in price from \$2.88 to \$4.84 within the space of one year. Steel beams jumped from \$1.20 to \$2.40, an increase of 100 per cent. Window glass was increased from \$1.75 to \$4.80.

The protected trusts have increased prices from 50 per cent to 250 per cent.

The tariff exactions in this country are estimated at \$6,020,000,000. It is equal to the gross earnings of all the railroads. The railroad rebates and overcharges and the insurance stealings are not in the same class as the tariff exactions. The largest and most successful trust in the world is the steel trust; its exaction, by reason of the tariff, is from fifty to one hundred millions a year. The Administration claims great credit for suits against trusts, but in what instance have the people been benefited or the price of an article reduced? The only remedy is through the reduction of the tariff.

The tariff was adopted with the idea that there would be domestic competition. John Sherman said in 1899:

The primary object of a protective tariff is to secure the fullest competition by individuals and corporations in domestic production. If such individuals or corporations combine to advance the price of the domestic product and to prevent the free result of open and fair competition, I would without hesitation reduce the duties of foreign goods competing with them in order to break down the combination.

The mere fact that savings banks have large deposits does not establish the claim that our laborers receive large wages and are saving money. The statistics show that in other countries the deposits are larger than in ours.

The following figures are given out by the Bureau of Statistics and show money deposited in the savings banks of the countries named:

	Per Inhabitant.
Australia	\$43.47
Denmark	96.41
Germany	39.41
Prussia	43.10
New Zealand	49.61
Switzerland	62.26
Average in above countries	53.96
Average in United States	37.38
Average in Canada	99.50

Our country makes the poorest showing of any of them. The daily wages of skilled labor in the protected industries is less than in the unprotected industries, although a stock argument for protectionists is that they pay their employees large wages.

The twelve leading industries and wages paid in each are as follows:

	Annual wages.	Weekly wages.	Daily wages.
Boots and shoes	\$414.00	\$7.92	\$1.32
Blacksmiths	496.00	9.54	1.59
Carpenters	573.00	11.22	1.87
Clothing for men	415.00	7.98	1.33
Clothing for women	389.00	7.50	1.25
Iron and steel	653.00	19.44	1.74
Lumber	370.00	7.14	1.46
Masons, brick and stone	546.00	10.50	1.75
Nails, iron and steel	456.00	8.76	1.46
Woolen goods	359.00	6.90	1.15

Of these industries nine are protected by the Dingley law and three are unprotected. The average daily wages are as follows:

Average daily wages, (9) protected industries	\$1.30
Average daily wages, (3) unprotected industries	1.74
Average weekly wages, (9) protected industries	7.10
Average weekly wages, (3) unprotected industries	10.44
Average yearly wages, (9) protected industries	405.00
Average yearly wages, (3) unprotected industries	542.00

These figures are taken along with several other tables cited by me from a recent publication of great merit on Industrial Questions, published by M. A. Donahue & Co., of Chicago.

The claim for protection, that it is only for the purpose of equalizing wages here and abroad, is palpably false, when you remember that on most goods the tariff is three to four times the entire cost of the labor. No one would raise a voice of protest against a tariff levied on the basis of equalizing wages at home and abroad. The claim of protection is false.

The following leading industries of our country with the tariff on finished product and the per cent of labor cost show completely the false cry of the manufacturers:

	Per cent labor cost.	Per cent tariff tax.
Clothing for men	19	83
Clothing for women	20	83
Furniture	27	35
Hats, woolen	25	85
Hosiery, knit goods	25	90
Iron and steel	15	32
Nails	14	38
Woolen blankets	20	84
Sugar and molasses	30	84
Woolen cloth	20	97
Woolen dress goods	20	108

It is readily perceived how greatly reduced the prices of so many necessities would become by such a revision and no possible injury to labor, but a saving of millions to the people and an equal loss to the trusts and manufacturers.

From 1850 to 1860, under a low tariff, there was not a child under 16 years of age employed in any of the factories of this country. Since, we have had the high protective tariff that has resulted in the gigantic trusts that have raised the cost of living so high that parents can not make enough to support their families, and the little children must be employed to assist. This is a national disgrace.

The manufacturers say that they need protection in order to pay their employees higher wages. If this is true, a tariff rate equal to the entire labor cost in the finished product would certainly be sufficient, since in this case the amount of wages would not be considered in competing with foreign goods, and our people would have this great advantage, since foreign manufacturers must pay some wages at least. A tariff based on an advantage covering the entire labor cost would be a great revision downward.

There are many articles of daily use in American families where the duty is over 100 per cent, and in these cases it is clear that the total price is much larger than the single item of expense—that of labor. Among others are:

	Per cent.
Many dyes, drugs, and medicines	123 to 139
Cotton:	
Cotton duck	103
Dress facings and skirt bindings	201
Marble, sawed and dressed	197.43
Yarns	138
Blankets:	
Valued not more than 40 cents per pound	104
Valued not more than 50 cents per pound	106
Valued not more than 70 cents per pound	125
Flannels for underwear	107 to 130
Ready-made clothing	100
Shawls, knitted or woolen	100

The Dingley bill has made millions of dollars for the Standard Oil Company. Protection for the benefit of infant industries

is a sham, while protection to shelter and strengthen the trusts is a reality. No one doubts but that the Standard Oil Company is strong enough to stand alone, and everyone must acknowledge that its exactions upon the people are enormous, and that while the law taxes the people for its benefit it respects neither the people nor the law.

But a very small revenue is received from the importation of oil, less than \$40,000 in six years, and the rates charged were 5.4 cents per gallon on crude and 2.34 cents on refined oils. The mere fact that some oil was imported under such high tariff charges indicates to what extent this great monopoly is shielded from competition by reason of the Dingley tariff.

It is said this trust, the second greatest in the world, is not the creature of the tariff, since oil is on the free list. The Dingley bill, it is true, places forty-two kinds of oil on the free list, but it provides that if there be imported into the United States crude petroleum or its products, produced in any country which imposes a duty on petroleum products exported from the United States, then there shall be levied in such case a duty equal to the duty imposed by the country importing. Russia is the only country that is able to ship petroleum in any quantity into this country, and she levies a duty of from 100 per cent to 200 per cent. The Standard Oil Company contrived to insert this proviso in the Dingley bill, which gives the oil trust much more than it could have received openly. This trust is protected at home by a tax of about 150 per cent. But this company, like so many others similarly protected, sells its products to the American consumers at one price and to its foreign consumers at a greatly reduced price.

In 1903 the average price of American oil in the United States was 10.9 cents per gallon; the export price for the same oil was 5.9 cents per gallon, the American paying 84 per cent more for the same oil than if sold for foreign consumption. The product of the Standard Oil Company is, after the payment of all transportation charges and expenses, sold to the people of Europe 22 per cent cheaper than in this country; the average price for this country was 9.2 cents per gallon, a difference of 4.9 cents from the price for which this oil was sold in Europe, being more than the export price. The price of oils abroad is from 30 per cent to 50 per cent cheaper than in America, yet the Standard Oil Company is able to sell its products in competition with the world. Our own people simply pay what this great monopoly sees fit to demand, and are absolutely at its mercy. If our people were able to buy at the same price that the oil is sold to exporters, millions of dollars would remain in the pockets of our citizens. No one believes that a profit is not made in the export trade, and the immense profit, at the greatly enhanced price paid by American consumers, can be readily seen. Aside from millions in contribution to the campaign funds of the Republican party, what excuse can be given for allowing this monopoly to take annually from the hard earnings of laborers millions upon millions of dollars? All the efforts to revise the schedule of the Dingley bill permitting this outrage are futile. "We must wait till after election." And what is there in the history and conduct of the Republican party to induce anyone to believe that this great monopoly will be touched. The United States Commissioner of Corporations, speaking of this Standard Oil Company, says:

American consumers might, for the sake of maintaining a large foreign trade and thereby benefiting American industry, be willing temporarily to pay prices a little higher than are charged for the same product abroad. That American consumers, however, should be compelled to pay prices so high that, when an immense quantity of oil is sold by the Standard in foreign countries on the basis of little or no profit, the total profit on domestic and foreign business combined should be 50 or 60 per cent on its capital, is an obvious injustice.

The prices charged by the Standard Oil Company in the United States are, on the average, altogether excessive, and they have greatly increased during recent years. These facts, however, do not tell the full story with regard to the Standard's domestic price policy. The prices in large parts of the country are much more extortionate than the average prices for the country as a whole.

The prices charged by the Standard Oil Company for petroleum products in the United States differ widely in different places according to the degree of competition or monopoly. This is true of all classes of petroleum products, but is most conspicuous and most easily demonstrated with respect to illuminating oil and gasoline. After deducting freight rates, which often constitute a large element in gross prices, extraordinary differences in prices appear, (1) as among different States or sections of the country, and (2) as among towns in the same general vicinity—for example, within the borders of a single State. These differences in price are to some extent due to differences in the cost of producing the oil and gasoline sold in different sections and in part to differences in the cost of marketing. In many cases, however, they are due solely to differences in the degree of competition, and in other cases a large part of the difference in price is due to difference in the degree of competition.

The methods of marketing oil products lend themselves to this practice of price discrimination. Illuminating oil and gasoline—and the same is in less measure true of other petroleum products—are not to any large extent sold at central markets or through jobbing concerns independent of the refiner. The Standard Oil Company sells most of its illuminating oil and gasoline in the United States directly to retail

dealers at their own towns. They are largely delivered to retail dealers at their own stores by means of tank wagons. Consequently the prices of oil and gasoline are in general purely local prices. The retail dealer is ordinarily not familiar with prices charged in other towns or in central markets, but even if he were he could not take advantage of lower prices prevailing elsewhere to buy oil there and bring it into his own town. The cost of transporting oil in barrels, particularly in less than carload lots, is higher than in tank cars. Moreover, tank-wagon delivery is so much more convenient than barrel delivery that the retail dealer is ordinarily unwilling to buy barrel oil even at a lower price.

The Standard Oil Company has established the system of tank-wagon delivery in the larger town in all parts of the United States and in a large proportion of the smaller towns in the more populous sections. The business of its competitors is largely confined to a limited area and to a limited number of towns within that area. In towns and sections where there is no competition the Standard can charge monopoly prices, and by reason of the high prices thus obtained it can afford to reduce prices in competitive areas and towns to a point which leaves no profit for the independent concern.

Independent concerns are compelled to confine their business to a limited area and usually to a limited number of places in such area; first, by reason of the fact, already stated, that delivery in barrels is either more expensive or less satisfactory than delivery by tank wagon; and second, because the limited volume of their business does not permit them to establish tank-wagon delivery in many places, since, in order to reduce the cost of tank-wagon delivery to a reasonable amount per gallon, it is necessary that a concern should secure a considerable volume of business in each town it enters. Only a concern with enormous capital could afford to establish a marketing system in competition with that of the Standard throughout the entire country and thereby force the Standard, if it desired to cut prices, to sacrifice profit on its entire business.

It is clear from these considerations that the Standard has an enormous advantage over any of its competitors in the marketing of oil. By a vigilant policy of aggressive attacks on competitors competition is kept strictly localized and scattered, and thus easily controlled. The Standard can make huge profits on its total business while reducing the profits of its competitors to a small amount, or even forcing them to sell at a loss.

The attention of the House was recently called to this statement of the Commissioner of Corporations in a speech delivered by Mr. KÜSTERMANN, of Wisconsin.

The profits of the Standard Oil Company are known to be enormous. The report of the Commissioner of Corporations shows that for the years 1897 to 1906 the estimated profits were about \$546,000,000, or \$54,600,000 per year. This was equal to 55.9 per cent on the average amount of stock outstanding.

The protected interests have grown so strong and powerful that they control absolutely the Republican party. They are willing to divide their profit in the way of financing the Republican campaign so long as they can write the tariff schedules of the tariff laws. The people will never receive just treatment as long as that partnership continues.

The newspapers of the country have been demanding the repeal of the tariff tax on wood pulp and print paper, that they may escape the exactions of the paper trust. This demand is not limited to Democratic publishers, but includes the Republicans as well. I have received petitions from the Republican publishers of my district asking for this relief. Early in the session I responded to this personal appeal by introducing a bill to place wood pulp and print paper on the free list; but that bill, with many others on the same subject, was pigeonholed by the Republican majority of the Ways and Means Committee. I submit herewith a copy of this bill which I introduced.

A bill to put wood pulp, printing paper, and all materials used in the manufacture of the same, and also linotype, typesetting, and composing machines on the free list.

Be it enacted, etc., That no import tax duty shall be collected upon wood pulp, print paper, or any paper suitable for the printing of newspapers or books, or upon any materials used in the manufacture and composition of the same.

SEC. 2. That no import duty shall be collected upon linotype, typesetting, or composing machines.

SEC. 3. That this act shall be in effect from and after the date of its passage.

SEC. 4. That all laws and parts of laws in conflict herewith are hereby repealed.

The President in one of his messages recommended legislation along this line, but his efforts have been in vain, and the paper trust still continues to extort annually \$60,000,000 from the printing and publishing interests of the country.

The Indianapolis News, a paper that has for years advocated tariff reform, but has also regularly advocated the election of the Republican State and national tickets, in an editorial of its issue of January 9, 1908, on this subject said:

OPPRESSIVE DUTIES.

It seems to be agreed that there is absolutely no chance of getting Congress to pass a law repealing the heavy duties on wood pulp and white paper, which are so burdensome to publishers and so nourishing to the "infant" paper trust. It has been decided by the Republican leaders that the sacred tariff shall not be touched at this session; that even wickedly high and destructive duties shall continue to be levied. Thus a simple act of justice is not to be done, because to do it might be to open up a discussion of the whole tariff question. And as the last thing that our friends want is discussion, they are going to stand pat on these paper and pulp duties and on all other duties. In the News of Monday was printed a statement in which the facts were given concerning this situation. The President refused to recommend the repeal of these duties in connection with any plan of tariff reform, but he did suggest that the duties on all forest products, as well as the duty

on wood pulp, be removed, and this in the interest of forest preservation. "The repeal of the duty on wood pulp" he said, "should, if possible, be accompanied by an agreement with Canada that there shall be no export duty on pulp wood." Nothing was said about the paper duties.

But even this conservative and timid plea has failed to move Congress. The welfare of American publishers and the preservation of American forests do not interest men whose chief concern seems to be to protect as greedily a trust as we have in this land of trusts. The paper trust, it was shown, earns gross profits of \$23,000,000 a year on a book capitalization of \$40,000,000. The capitalization of the trust amounts to \$43,000 for each ton of daily output, and is believed to be \$35,000,000 in excess of the accepted basis of investment in the paper trade for mills of modern construction. It owns vast timber tracts in Canada, as well as in this country. In one of the four land offices of the Province of Quebec the International Paper Company has registered timber limits for 2,597 square miles. A large proportion of the timber lands in Quebec is owned by American paper mills. Some of our domestic concerns have acquired the finest forests and waterfalls in Canada, and are able to make paper profitably at \$20 a ton. At the time of the consolidation the trust came into possession of 1,600 square miles of timber in the United States. And as a result of it all "the newspapers," according to the statement in the News of Monday, "are bearing the burden of this gigantic speculation in woodlands, because they are taxed to pay the interest-carrying charges on these purchases of timber that can not be marketed for twenty or more years."

The price of paper has been rapidly and enormously advanced in the last few years. As usual, the trust is selling more cheaply abroad than at home, competing successfully with the mills of Germany, Great Britain, Canada, and Norway. Many would-be purchasers are unable to obtain any quotations at all, and do not know where to turn for their paper. Not only that, but we have practically exhausted our timber supply. To-day we are consuming three times as much wood as our forests are bearing. The destruction of our woodlands is going forward at the rate of 50,000 square miles a year, which is one-twentieth of the entire timber area of the United States. And now the demand for pulp wood is in excess of the ability of the country to meet it. An area as large as the State of Rhode Island is stripped of its spruce every year to supply the pulp mills. In the year 1906, 3,000,000 cords of domestic pulp wood were used in addition to 738,872 cords of Canadian wood. Here is a summary of the consequences—not to the publishers—but to the country from thus putting a premium on forest waste:

Every material interest is threatened. Rivers have been dried up at the source, so that sawmills dependent on water power have been driven out of business, and other manufacturing interests have suffered. Farms have been given up in regions thus deprived of moisture because there was no longer enough water for stock or home use, and disastrous floods in springtime are followed by droughts in summer. The wholesale destruction of forests threatens the country with the calamities experienced from the same causes in Europe and Asia. Our lumbering methods, if continued, will entail baleful scenic, climatic, and economic results, injuring health, property, and occupations of all citizens, and impairing industrial development by making intermittent the flow of the rivers, which are most important to agriculture and manufacture.

Finally, to complete the starvation—which we have deliberately invited—the Canadian government is threatening to put an export duty on pulp wood or else to forbid its exportation altogether. Now, it is a fine business to "bust trusts" when the busting process accomplishes nothing. It is a great thing to fine the corporations themselves, the people, of course, having to pay the fine in increased prices imposed to cover it. It is very brave to talk about national incorporation laws and Federal licenses for interstate corporations. Nor is it difficult to pass rate bills, which are found to be so defective as to need amendment, as admitted by their friends, within a few months. But when it comes to going after a trust in good earnest, as in this case, the trust busters have no stomach for the enterprise. Here are three great objects to be attained, all of which have at least a very great theoretical interest for the President—namely, to give "a square deal" to a great industry, to shackle the greedy paper trust, and to save American forests. Concerning all these subjects the President has spoken and written volumes. But he and his party are permitting the wholesale devastation of our forests and putting a premium on it, are consenting that a great industry be oppressed and despoiled, and are standing stolidly in the interest of an oppressive and insolent trust which makes millions of dollars each year out of a protection that it does not need, and to which it is not entitled. But the duties on wood pulp and white paper must be maintained. We commend this case to the consideration of those able editors and publishers who have for years been fighting for protection. They now know how it is themselves. May they learn the lesson and draw the proper moral.

I desire now to call attention to section 4 of the Dingley bill that is a substantial confession of the exorbitance of its rates and the propriety of the law itself. I refer to section 4, which authorized the President to negotiate treaties of reciprocity with any and all nations of the world, by the consent and advice of the Senate, for a reduction of 20 per cent of any duty in the bill. The usual answer of the apologist of the Republican programme that the provision related only to non-competitive articles, to articles not produced in the United States, is false and misleading, for its authority to the President in connection with the Senate, reciprocal treaties for a reduction of 20 per cent of the rates specified in the bill extended to all articles competitive as well as noncompetitive, and the fact and the record stand indisputable that the Dingley Act contained a provision for relief from its apprehended hardships and injustice.

"The revision of the tariff must not be considered before an election." Its consideration would expose its wrongs and injustice and the faithless stewardship of the Republican party. It would expose the protection given the trusts by that party. It is much easier to make promises in party platforms and to deceive the people and if again given power and responsibility to forget the pledges upon which such power was granted as has always been the practice of the Republican party.

As a matter in harmony with the Republican methods to wreck the fundamental principles of our Government, to supplant a Government of the people, for the people, and by the people with a government of the privileged classes, for the favored magnates, and by the political brigands, there should be borne in mind the uncandid and deceitful course of the Republican party in implanting in the public laws the policies of which it is now boasting, and the consequent violence to the cardinal doctrines of instructions from the people and obedience to their will in the enactment of the nation's laws.

Since the close of the civil war there has not been a single great measure of the Republican party put into law by a candid and open advocacy of its merits and a plea for popular indorsement and authorization therefor before the people at election. The adjustment of the war debt on terms dictated by the public creditors and bondholders was finally made directly contrary to the terms which the Republican party promised should be made when before the people at the election for their votes.

The campaign promises, on the part of the Republican party, to revise the tariff were always repudiated by the leaders when they reached their seats of power and a directly contrary policy prevailed. The campaign method of the Republican party in foisting the gold standard upon the people by an assurance to the people during the campaign of their purpose to promote and establish bimetalism, whose wisdom and justice they did not assail but freely admitted, is yet fresh in every voter's mind.

What singular lack of conscientious indorsement of their now accepted doctrine! What lack of political courage and fairness does such a course of party conduct reveal! But what is more, what danger does such party method and such sharp practices, such glaring deceit bring to a free government based on the people's will and subject to their instruction?

Among all the apologists for vicious systems of government not one has ever yet been found who could justify the taxing of all the people for the benefit of the few. The theory that the prosperity that results to favored classes from such special laws finds its way back to and is generally shared by the masses; that the prosperity of the classes means the prosperity of the masses may be consonant with the principles and the practices of an aristocracy, but it finds no logical place in a democracy.

Agreeable to the principles of our democratic Government, and in accordance with the historic tenets of my party's faith, I believe the people themselves are not only the seat of political power, but also the source of economic wealth. I believe that true government and real prosperity comes from the masses and not from the classes, and that the people next November will select a Congress pledged to tariff reform, and that it will be a Democratic Congress that will revise the tariff in the interests of the people instead of in the interest of the trusts.

The Currency Bill.

SPEECH

OF

HON. PHILIP P. CAMPBELL,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. CAMPBELL said:

Mr. SPEAKER: The senseless filibuster, with useless roll calls, under which the House has done business for two months has prevented consideration of many worthy measures. I secured a favorable report from the committee to which it was referred on House bill 20111, a bill to prohibit the running of bucket shops and stock and grain gambling in Washington and the District of Columbia. I want to take this opportunity to call attention to some of the evils at which this bill strikes—and there are few, if any, greater evils affecting our commercial, financial, and business life. There are hopeful signs that we may yet rid the country of the harm that comes to it from gambling in the price of other people's property, largely with other people's money. It is in this way and, in my judgment, only in this way that we can protect ourselves from what is now commonly known as "gamblers' panics."

Gambling in stocks and commodities has been the subject of regulation and prohibitive legislation in Arkansas, California, Colorado, Connecticut, Georgia, Illinois, Iowa, Kansas, Louisiana, Mississippi, Michigan, Massachusetts, Missouri, North Carolina, New Hampshire, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, Vermont, and Wisconsin.

The constitutions of California and Louisiana prohibit dealing in stocks on margins and for future delivery. There was recently passed by the New York legislature a bill very similar in its provisions to the bill I am seeking to pass.

The intent and purpose of the law in all cases is to prohibit the gambling that is done in the price of stocks, securities, and commodities.

Gambling in stocks and food commodities is a subject of discussion in many of the countries of the world. Within the past decade the subject has been under consideration in some form or other by the Argentine Republic, Austria, Belgium, Bulgaria, Denmark, France, Germany, Greece, Hungary, Italy, the Netherlands, Norway, Portugal, Roumania, Russia, Servia, Spain, Sweden, and Switzerland.

The Canadian government has passed an effective law upon the subject. Throughout the European countries a popular protest has arisen against gambling on the prices of commodities that compose the necessities of life.

It is thought wise to prohibit this species of gambling that is widely indulged in and most injurious in its consequences. Men who can ill afford to lose gamble and lose their money in bucket shops and stock exchanges, betting on the differences in prices of stock and commodities. Thousands have thought they could win in stock and commodity gambling and have gone to their ruin. They have started in the bucket shop on a small scale, settling the differences between prices, and ended in ruin, the penitentiary, or the grave of a suicide.

It is estimated that within the last twenty-five years \$2,500,000,000 have been lost in this species of gambling by those who could not afford to lose.

Embezzlement, imprisonment, ruin, suicide, and panic have been the results. Some of the principal victims were recently mentioned in a New York paper. I call attention to them here. Their experience should not be lost to others and to the country:

"1884. The Marine National Bank of New York City was looted by two of its directors, who, in their Wall street speculations on margins, lost \$2,000,000. The Second National Bank, through the Wall street speculations of John C. Eno, its president, lost \$4,000,000.

"1891. John T. Hill, president of the Ninth National Bank of New York City, speculated away \$400,000.

"1894. Frederick Baker, a depositor, and Samuel C. Seely, bookkeeper in the National Shoe and Leather Bank of New York City, lost \$354,000.

"1895. Frank C. Marvin, lawyer, Brooklyn, \$75,000.

"1898. John S. Hopkins, cashier of the People's Bank of Philadelphia, lost the bank's funds in speculation and killed himself, \$700,000.

"The Chemical National Bank, of New York City, lost through 'mistakes of judgment' on the part of the cashier \$393,000.

"Ex-Mayor F. H. Twitchell, of Bath, Me., \$60,000.

"1899. George M. Valentine, cashier of the Middlesex County Bank and treasurer of the Perth Amboy (N. J.) Savings Institution, confessed to losing in speculation \$125,000.

"1900. Cornelius J. Alvord, jr., note teller of the First National Bank of New York City, lost in stock speculation \$690,000.

"William Schreiber, clerk in the Elizabeth Banking Company, Elizabeth, N. J., squandered in Wall street \$106,000.

"A confidential clerk of a wholesale house in Walker street, New York City, lost in Wall street \$200,000.

"1903. Frank V. La Bountie, confidential clerk for law firm of Wilson & Smith, of Chicago, \$500,000.

"William S. Allen, treasurer Preachers' Aid Society, Boston, \$70,000.

"United States Playing Card Company, of Cincinnati, robbed by a trusted woman employee of \$100,000.

"Enoch L. Cowart, cashier of the Navesink (N. J.) Bank, \$40,000.

"John A. Scott, cashier of the New York office of the London Assurance Company, \$25,000.

"William B. Given, president of the Lancaster County (Pa.) Railway and Light Company, \$100,000.

"Thomas W. Dewey, cashier of the Farmers and Merchants' Bank of Newbern, N. C., \$125,000.

"James M. Watson, jr., clerk for auditor of the District of Columbia, \$100,000.

"Trusted clerk at the Hotel Beresford, in New York City, \$50,000.

"1904. Arnold Beathlen, cashier of a bank at West Liberty, Pa., \$85,000.

"John F. Goggin, treasurer of the Nashua Trust Company, of Nashua, N. H., arrested, charged with defalcation of \$100,000.

"George A. Rose, cashier of the Produce Exchange Banking Company of Cleveland, \$170,000.

"Wallace H. Ham, Boston agent of the American Surety Company of New York City, \$286,000.

"Ex-Mayor S. F. Smith, of Davenport, Iowa, \$150,000.

"F. H. Cutting, bank president, of Ota, Iowa, \$112,000.

"1905. Ex-Tax Collector E. J. Smith, of San Francisco, \$60,000.

"Paul O. Stensland, Chicago banker, who was captured abroad, \$1,500,000.

"Cashier of the Cornwall (N. Y.) Bank, \$45,000.

"W. W. Karr, accountant of the Smithsonian Institution, Washington, D. C., \$50,000.

"Mayor William H. Belcher, Paterson, N. J., \$150,000.

"Frank G. Bigelow, head of the First National Bank of Milwaukee, \$1,450,000.

"F. H. Palmer, cashier of the State Bank, Peconic, Long Island, \$40,000.

"Denver (Colo.) Savings Bank, looted by speculating officials of \$1,700,000.

"Newton C. Dougherty, superintendent of schools, Peoria, Ill., \$250,000.

"T. Lee Clarke, cashier of the Enterprise (Pa.) Bank, \$1,200,000.

"F. R. Green, cashier Fredonia National Bank, \$300,000.

"1906. Joseph A. Turney, note teller in the National Bank of North America, of New York City, took from the institution and lost in Wall street \$34,000.

"County Treasurer F. E. Smith, of Akron, Ohio, \$282,000.

"Gordon Dubose, president of the First National Bank, Ensley, Ala., \$40,000.

"Frank K. Hipple, president of the Real Estate Trust Company of Philadelphia, \$7,000,000.

"C. S. Hixon, bookkeeper, Union Trust Company of Pittsburgh, \$125,000.

"1907. Charles T. Barney, president of the Knickerbocker Trust Company, who killed himself when the financial crash came. It is estimated by his close friends that the total amount lost by him in speculation was almost \$10,000,000.

"F. Augustus Heinze, whose losses in the market fluctuations, according to a statement made by him to a friend, were \$9,000,000.

"Charles W. Morse, whilom 'ice king,' 'steamboat king,' and 'bank chainer,' whose losses in market fluctuations are figured at \$20,000,000.

"Chester Rumyan, bank clerk, New York City, \$86,000.

"George H. Brouwer, known as the 'soul of honor,' confidential man for James H. Oliphant & Co., stockbrokers, of New York City, \$90,000.

"Clerk for the tax collector of New Orleans, \$100,000.

"William F. Walker, treasurer of the New Britain (Conn.) Savings Bank, \$600,000.

"Miss Flora Steipel, cashier in a Philadelphia department store, \$25,000.

"Oliver M. Dennett and William O. Douglass stole \$1,300,000 in securities from the Trust Company of America and pawned them for \$140,000."

Mr. Speaker, these enormous losses were the result of gambling in stocks and commodities—not in the legitimate purchase of railroad or industrial stocks, or grain, or cotton, or produce of any character. It was not investment; it was gambling in options, futures, and the differences in prices of the products of the farm and stocks and securities of the transportation and industrial companies of the country.

It is safe to add to the injury that falls to the lot of the unfortunate individual who thus "speculates" and loses, and his family, the injury that comes to the whole country. Gambling in the price of other people's property, with other people's money, has more than once led the country into financial panics that have had a most harmful effect upon the otherwise prosperous business of the country. Thousands of industrious men, through no fault of theirs, have been thrown out of employment because other men gambled with the property they produced or worked with.

Mr. Speaker, I sincerely regret that the provisions of my bill can not be made to apply to the whole country; they can only apply in the District of Columbia.

The police power of the State has been extended far for the protection of the community against practices by some that are injurious to others. The States have placed restrictions of one kind and another upon games of chance, and many States have made gambling a penal offense. In these restrictions, States have sought to protect the rights of the whole community from wrongs that are incident to the practices of a few individuals.

The rights of one man end where wrongs to another man begin. The peace and prosperity of the community are, and ought to be, of the first concern to government. Every man and every community has a right to protection in his business, in his prospects and in his happiness from wrongful or fraudulent practices by others. The prosperity and happiness of the whole people are largely dependent upon the security of legitimate business from injury by a business that is harmful or unlawful. What is now commonly known as overspeculation, stock manipulation, and gambling have been and are common enemies of legitimate enterprise.

The Wall street panic of 1901 shows the result of fraudulent stock manipulation and gambling, and the whole country narrowly escaped disastrous results from this fraudulent manipulation and gambling. It was all done by a few individuals.

The incipient panic of 1903 was started by Wall street gamblers, and the financial panic of last October was started in Wall street and was the collapse after a debauch in wild and excessive gambling, largely in the prices of stocks that were owned by an innocent public—stocks that were not bought and sold in good faith on the exchanges. Money was borrowed in large amounts for which there was no ample security. This money had been attracted from country banks in almost every State in the Union by offers by Wall street banks of attractive rates of interest on daily-balance deposits. The interest offered was a higher rate than could be paid by manufacturers, jobbers and merchants, or grain or cattle dealers who were doing a legitimate business for a fair profit.

I have no hesitation in saying that the panic was brought on by gambling with other people's money in the differences in prices of other people's property.

But I am asked if I would stop investment and speculation on the stock exchanges, which promote large enterprises and float the stocks and bonds of the great industrial and transportation concerns of the country. Not at all. I would help rather than hinder the investment and proper speculation in real stocks and real bonds and real grain and real cotton and real products of every sort that are sold in good faith and delivered in good faith, where the owner through his agent wants to sell and the buyer through his agent wants to invest.

I would protect honest investors and speculators in all these stocks, securities, and commodities from the gambling and the fraudulent manipulation in the prices of the stocks, bonds, grain, cotton, and other property of the country.

These gamblers never buy nor sell in good faith. I assert, without fear of contradiction by anyone, that over 90 per cent of the transactions on all the stock exchanges in Wall street or elsewhere in the country is a gamble on the differences in prices.

I assert here that in less than 10 per cent of the transactions on these exchanges that purport to be sales and purchases there is no real delivery in good faith by a seller to a buyer who wants to invest and become the owner of the property and secure the dividends or interest that it may earn. Actual delivery of the specific property is not made or intended to be made, and the alleged buyers do not want the stock they pretend to purchase as an investment.

Nothing is clearer than this. The transactions themselves clearly show it. Other things being equal, the stocks or bonds of a railroad company that had for a long time been paying a 5 per cent dividend would be more attractive as an investment than those of a company that was paying only 4 per cent dividend, and yet it often happens that the prices on the stock exchanges of the stocks of a company paying a 4 per cent dividend are far above those of a company paying 5 per cent or a 6 per cent dividend.

The betting on the differences in the prices accomplishes the same results upon the stock that pays the lower rate as could be accomplished upon the differences in prices of the stock that pays the higher rate, and that is the beginning and the end of the transaction.

The man, therefore, who defends the stock exchanges as now operated in and around Wall street and elsewhere in the country as places that only offer real investors an opportunity to buy has deceived himself, or is endeavoring to deceive the public. No man will find it easy to reconcile what is actually done on the exchanges with the claim that these exchanges are only intended as agencies to bring the sellers and buyers of the stocks, bonds, and commodities of the country together.

Why, Mr. Speaker, to the actual investor and to the man who speculates on his best judgment, the dividends paid by a concern would largely control him in the price he would pay for its stocks or bonds, and yet it is actually true that on the stock exchanges in Wall street and elsewhere in the country

the prices of stocks and bonds are not controlled by this standard of value.

On the 3d day of April, 1907, the Associated Press gave out this bit of news:

NEW YORK, April 3, 1907.

A market in which good news is good only until it gets out is not a very robust bull market. Just before the announcement of the increase in the Atchison dividend was made the stock sold at 94½. A few minutes later the price dropped to 94, and within half an hour it was fully a point down from the high morning and more than two points from the highest level touched in the rise on Tuesday.

But that is not all. The income of the railroads of the country gradually increased from \$875 to \$1,180 in a single year, and yet by a shrewd manipulation of railroad stocks, within this period the prices of railroad stocks were forced down or up to suit the demands of a gambling enterprise. What is actually done on the exchange denies that they are conducted solely for real investors or speculators where property is sold and delivered in good faith.

The influence of these gambling prices upon the business of the country can not be anything but bad.

There are 35 banks, 29 trust companies, 9 safe deposit companies, the general offices of 52 railroads, 46 fire and 18 life insurance companies, 6 express companies, 21 telegraph, 18 steamship, 42 coal, iron, steel, and copper companies, and more than 200 other large industrial and transportation corporations in the financial district that surrounds the stock exchanges in New York. Every one of these enterprises is keenly sensitive to and affected by the manipulations that go on on the exchanges.

Overspeculation, or speculations beyond the means or security of the speculators, fraudulent manipulation of railroad and industrial stocks, and the creation of corners in commodities are felt in all these enterprises, and through them in the whole country.

Within ten years we have had too many instances of what by common consent is called "gamblers' panics" in Wall street.

These panics have occurred when labor has been employed and industries have been active and commodities have been moving as never before in the history of the country.

A recent editorial in the New York World is so full of valuable information on this subject that I shall take the liberty of quoting from it. I take it that a New York paper would be fair with Wall street, the stock exchanges, and the banks of its city. It says:

"Nowhere on the earth does another such gambling institution exist as finds shelter in the New York Stock Exchange—an unincorporated, irresponsible institution. According to the statistics carefully compiled by James Creelman in Pearson's Magazine, there were sold in 1906 on the stock exchange 286,418,601 shares of stock of the par value of \$25,000,000,000, besides 665,000 thousand-dollar bonds; on the Consolidated Exchange 136,000,760 shares of stock, besides 21,569,178 shares of mining stock and 183,884,000 bushels of wheat. This does not include curb sales.

"These gambling transactions amount to over \$30,000,000,000—four times the value of the products of all the farms of the United States, half the value of all the land and buildings, one-third the census valuation of all the wealth of every kind in the country.

"Last year there were sold on the stock exchange 43,399,710 shares of Reading, fifteen times the total amount of Reading stock in existence. Of the Union Pacific, Harriman's road, there were sold 36,751,600 shares, twenty times as much as existed.

"Ninety-nine and one-half per cent of these transactions, according to Thomas W. Lawson, are nothing except bets that the price goes up or down. They are as much gambling as betting on a horse race or on the card that comes out of the faro box, or on the odd or even fall of the dice."

Mr. Speaker, this is gambling on a colossal scale. Carried on as it is, it takes the money of the country out of legitimate channels of trade, where interest rates are largely controlled by the sober business judgment of business men who do a fair business for a fair profit. They can not compete in the payment of interest rates with reckless gamblers, and banks that wince under the criticism that they are not conservative and careful with the money of their depositors take their chances with the gamblers too often, to the injury of the depositors and the country.

The panic of 1907, I say again, was brought on by the New York banks that cater to the stock gamblers, absorbing a large portion of the money of the country to be used by men engaged in reckless gambling, and willing to pay any rate of interest that is necessary to obtain the money.

In no other country than the United States are incorporated banks permitted to be a part of the machinery of stock gambling. In no other country are the methods of stock gamblers such as to require the constant use for that sole purpose of hundreds of millions of dollars of other people's money. In no other country is the National Treasury called upon to turn over the public revenues to banks that have gone to the brink of ruin by loaning their depositors' money to men who gamble with it. The Treasury responds to appeals of the banks for help to save the whole country from panic. In London, Paris, Berlin, Frankfurt, and Amsterdam gamblers in stock must use their own money and their own credit as if they were playing at Monte Carlo instead of on a stock exchange.

This difference in stock gambling accounts for the great fluctuations in the rates of interest in New York as compared with the stability of European financial centers. In New York call money may be 3 per cent one day and 50 per cent the next day, something unknown in Europe.

By bidding up the rate of interest higher than legitimate business can pay, stock gamblers are able to draw from productive industry its means for supplying pay rolls, for carrying on manufacturing, for distributing goods, and for moving the crops.

In Great Britain an increase of 1 per cent in the discount rate of the Bank of England is regarded as a serious fluctuation. For the Bank of France to alter its rate one-half of 1 per cent is a matter of international finance. For the Bank of Germany to charge a third of last week's highest rate in Wall street is done only after serious consultation with the Government, with capitalists, and with business interests.

Without banking facilities and credit productive industry would be limited to the use of real money as the method of exchange. Business would become largely barter, because 95 per cent of the business of the country is done with checks. All the gold and silver in the world would not suffice to sustain a cash basis. The total amount of money in the United States, including gold, silver, legal-tender greenbacks, and national-bank notes, is only \$3,000,000,000, while the exchanges of the New York Clearing House alone amounted in 1906 to \$103,754,100,091, or thirty times the amount of all the money in the United States.

Of this money the United States Treasury holds a little over a third to cover its gold and silver certificates, as a reserve against its legal-tender notes, for the redemption account of national-bank notes and as a cash balance. Another third is held by the banks and trust companies as a reserve on their deposits. That leaves less than \$1,000,000,000 for circulation.

The deposits of banks and trust companies other than private and national banks amount to \$8,000,000,000. The deposits of the 6,625 national banks of the United States, as reported on December 3, amount, in round figures, to \$5,000,000,000. All the money in the United States would not pay one-quarter of these deposits on demand.

To protect the depositors and to prevent the undue inflation of credit, the national banking law provides that banks "must retain a reserve of lawful money." Three cities—New York, Chicago, and St. Louis—are made central-reserve cities, where banks must keep on hand in cash 25 per cent of their deposits. Banks in twenty-eight other reserve cities must also keep 25 per cent reserve, but only one-half of this need be in cash in their vaults, the other half being allowed to be deposited in New York, Chicago, or St. Louis banks. In all other cities and towns the banks must maintain a reserve of 15 per cent, of which they need keep on hand only two-fifths, being allowed to deposit the other three-fifths in reserve banks.

This system drains the reserve money of the United States to Wall street. A commercial bank, charging merchants and manufacturers 6 per cent interest, can not afford to pay interest on deposits in competition with the Wall street banks, which can frequently get 20 to 50 per cent on the stock exchange for the use of their deposits. Thus these reserve moneys gravitate to the banks which can afford to pay high interest on them. This process of drawing the surplus savings of the country to Wall street was facilitated by the three great insurance companies—the Equitable, Mutual, and New York Life—which collected annually \$200,000,000 from their policyholders. This money they either invested in Wall street securities or deposited in Wall street banks, making their disbursements by New York drafts and keeping the cash here.

Wall street thus became a great funnel into which the savings of the people, instead of being available to the local manufacturer or the local storekeeper, were driven by higher rates of interest to the stock exchange.

The system of reserves directly invited this. If a national bank in Altoona or Columbus or Topeka deposited its money in

a Wall street bank, it not only received interest, but it was allowed to credit what the New York bank owed it to its legal reserve like real cash. But the debt of any country bank to a New York bank could not be credited to its legal reserve. A New York credit was legally cash and a country credit was not.

When the recent panic became acute in November the clearing-house banks reported deposits of over \$1,000,000,000. Of these deposits one-half were due to other banks. Of the loans, which slightly exceeded the deposits, over half were on stock exchange collateral. That is, the money collected from millions of depositors throughout the country by their local banks was used as the basis of Wall street credit and was the real money in the stock exchange game.

There are two general classes of loans. One is commercial paper—that is, discounts on bills of lading, on cotton, wheat, warehouse receipts, goods in manufacture, and the notes which retailers give their wholesalers and wholesalers give to their manufacturers. The other kind of loan is what Europe calls a finance bill and Wall street calls a collateral loan. It is a loan not on separable property, but on a piece of paper which represents an interest in indivisible property.

A share of railroad stock differs from a warehouse receipt for eggs, butter, cotton, or wheat, in that no holder of it can demand so many rails and ties or locomotives and cars. No holder of United States Steel stock can demand so many tons of steel rails or iron pigs; no holder of Standard Oil stock can demand so many barrels of kerosene. Neither can the holder of any corporate bond demand anything except payment of principal and interest when due, and bonds run for such long periods that their payment is an asset too slow to be realized on in an emergency.

This distinction is recognized in every other country. The Bank of France last November declined to make any advances on American finance bills, while expressing its willingness to loan all the money that their value would warrant on cotton, wheat, corn, and other tangible goods in shipment. The Bank of England months ago not only refused to discount American finance bills itself, but notified its customers that they must not do so. The Bank of Germany was forced several years ago to adopt the same policy.

In these countries the discounting of finance bills is left to private bankers, who use their own resources without involving general banking facilities, which are restricted to the use of commerce, manufacture, and other business.

Instead of the New York national banks following this wise policy of the great European banks by looking after their commercial customers rather than seeking for the higher rates of interest which stock gamblers pay, they have adopted the contrary policy. In ten years, from 1896 to 1906, the New York bank loans on stock-exchange collateral increased from \$162,361,654 to \$442,210,765. The gain in commercial loans was only two-fifths as much, \$151,795,029 to \$250,340,272.

During the panic weeks bank loans on collateral were actually increased. Banks had the alternative of carrying their stock-gambling customers or of such a stock-exchange crash as would imperil their own solvency. Therefore some of the banks stopped commercial discounts and cut down the credit of solvent merchants in order to use all their resources to protect their brokers' collateral. It will be recalled that interest rates ran up to 200 per cent one afternoon, and that only the \$25,000,000 which Mr. Morgan dumped at once into the stock exchange prevented the immediate failure of gamblers who had bet that stocks would go up.

In the first three weeks of the panic the New York clearing-house banks increased their total loans over \$100,000,000, yet at the same time they actually reduced their commercial loans.

THE MACHINERY OF GAMBLING.

The system of stock gambling in Wall street is different from that in any European country. Here every day the broker goes through the farce of legitimate purchase and sale. After one broker has bought and another sold, each makes a memorandum and the transaction is sent out through the ticker everywhere. Then each broker tabulates his transactions and sends to the stock-exchange clearing house a copy, with a check for the difference between his price and the closing price. The clearing house sends out notices to the brokers telling them who is to deliver, what shares of stocks, and to whom.

The next morning every broker who is to receive stocks sends to his bank and gets certified checks for the sums he is to pay. Part of the money he had already arranged for through the system of time and call loans on stock-exchange collateral. For the rest his bank allows him to overdraw his balance, commonly overcertifying therefor. Then before 2.15 p. m. every broker who is to deliver stocks sends around the certificates and receives these certified checks. After 2.15 p. m. and before the

banks close every broker in turn deposits the certified checks and the stocks which he has received in his bank to make good the overdraft the bank certified for him in the morning.

Without the banks' assistance this whole system would be destroyed and the stock gamblers in New York would have to gamble as do the stock gamblers in London, Paris, and Frankfurt, where this form of actual delivery in speculative transactions is not gone through with. Instead, there are fortnightly settlements, where the losers pay and the winners collect their winnings. Such a thing as a London stockbroker having the Bank of England or a Paris broker the Bank of France certify his check in advance and thus furnish the funds for him to gamble with is unheard of. The European stockbrokers gamble as do the London race-track bookmakers, who have their regular settlement day at Tattersalls.

On the London Stock Exchange settlements are made twice a month. On the Paris Bourse settlements are made once or twice a month. On the Frankfurt Bourse there are semimonthly settlements. On the Berlin Bourse there are settlements at times fixed by the Government regulation. If the parties desire to continue the gamble, a charge is made for an extension, but either party can quit the game and cash in at any time, just as in any other gambling house.

On the Continent these matters are regulated by the government, so that general industry will no more be interfered with by stock gambling than by gambling at cards or dice. The Prussian Government forbids the short selling of industrial stocks on the Berlin Bourse. Transactions on margins are forbidden except in certain cases between registered parties. Unless a man registers his name as a stock gambler he can refuse to pay his losses. Transactions in futures on agricultural products are prohibited. In Paris bourse agents are not allowed to operate on their own account. There is a tax on every order to buy or sell and on every completed transaction. The French system is analogous to the taxing, licensing, and regulation of ordinary gambling houses by the French Government.

The forms which the New York Stock Exchange go through to evade the New York gambling law are in vogue nowhere else.

The French and German Governments treat stock gambling somewhat as race-track gambling is now treated in New York State, where it is permitted in race-track inclosures and forbidden elsewhere. But these continental governments go further. They even decide in what stocks and bonds they will allow gambling.

During the Japanese-Russian war the French Government instructed the Parisian brokers that no one might sell or offer for sale Russian bonds without giving their serial number. This prevented short selling. In Germany similar measures have been taken.

As a result of this separation of stock gambling from the banking business of the country the great drop in Russian bonds, hundreds of millions of dollars of which are owned in France, caused hardly a ripple on the surface of French trade and manufacture. The great fall in the market prices of South African gold and diamond mine stocks at the time of the Boer war did not shut off discounts and banking facilities to English manufacturers, forwarders, and merchants.

What other countries have done in segregating and restricting stock gambling the United States also must do, remembering always that Wall street also performs a legitimate function in providing capital for great enterprises and in affording a market for the actual sale of securities.

The overcertification of checks is already a crime under the national banking law. Section 176 specifically prohibits the certification of any check "unless the person or company drawing the check has on deposit at the time such check is certified the amount of money equal to the amount certified in such check."

This of course prohibits certifying a check before 2.15 p. m. on the strength of deposits after 2.15 p. m. Its violation, however, is difficult to prove, and its evasion is easy by a broker putting in dummy notes at the time of certification.

It should be made both illegal and unprofitable to use bank deposits—other people's money—by loaning them to gamblers without the consent of the owner of the money.

It looks now that it would be wise to require every bank to keep its legal reserve in the form of legal-tender money in its own vaults, instead of as bank credits in Wall street. This would retain in the banks of the manufacturing and agricultural sections of the country the real money necessary for wages and for moving the crops.

Why not prohibit the payment of interest on demand deposits. A demand deposit is the correlative to a call loan, which is a Wall street gambling device. Commercial banks can not afford to pay interest on demand deposits. The stock-

exchange banks can and do. By prohibiting any bank from paying interest except on time deposits the Wall street banks will be made unable to divert accounts which properly belong to commercial banks.

But it is imperative to consider whether this gambling can not be entirely stopped. Certainly the State of New York can greatly restrict it by its power of taxation, which is the power to prohibit.

It is said a tax of one-half of 1 per cent on all the transactions appearing on the clearing-house sheets of the respective exchanges in New York would be a trifling imposition on legitimate purchases and sales, and yet would raise on the basis of last year's transactions an amount more than sufficient to pay all the expenses of the city of New York and of the State government and of rebuilding the Erie Canal.

This shows how large a per cent of the business done on the exchange is on a bet on the difference in prices, which is gambling. If it is important to stop betting on cards, roulette, and horse racing—and it is—how much more important is it that Governor Hughes should rid legitimate business of the contaminating evil of Wall street gambling.

The glamour of great fortunes suddenly made on the stock exchange and the grain pit makes the center of the financial district in New York and Chicago places of fascination. The fortunes lost there in a like time ought to make them places to fear. But aside from those who are drawn in by offers of sudden wealth and often lose, to their ruin, is the great public that is so often seriously injured by the wild speculation, the reckless gambling, and the fraudulent manipulations of prices that are perpetuated there, and it is in behalf of this public that I protest against abuses that involve the security and safety of real business and the peace and prosperity of the whole country.

Not legitimate speculation in the stocks and bonds, the meats, grain, and cotton of the country, but gambling in and fraudulent manipulation of the prices of these stocks and commodities throw the financial districts and the country into a condition of panic.

The Strength of Bryanism.

SPEECH

OF

HON. G. M. HITCHCOCK,
OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. HITCHCOCK said:

Mr. SPEAKER: Under the general leave to print given by this House several partisan attacks have been made upon Bryan and Bryanism. The evident purpose is to use them during the campaign under Congressional franks and it becomes proper to meet the issue.

That Mr. Bryan will be nominated for the Presidency by the Democratic convention is a foregone conclusion. This fact alone is conclusive evidence of his great popular strength. He is the candidate of the rank and file, chosen by popular acclamation in advance of the convention.

Other candidates in both parties are aided by the power of patronage, the support of great newspapers, and the influence of corporate wealth. These are against Bryan. There are no artificial means to promote his popularity. It is spontaneous and widespread. Democrats everywhere demand his nomination, except in the very few States where party bosses and corruption have throttled the popular voice. In the great national convention, however, these influences will be impotent and insignificant.

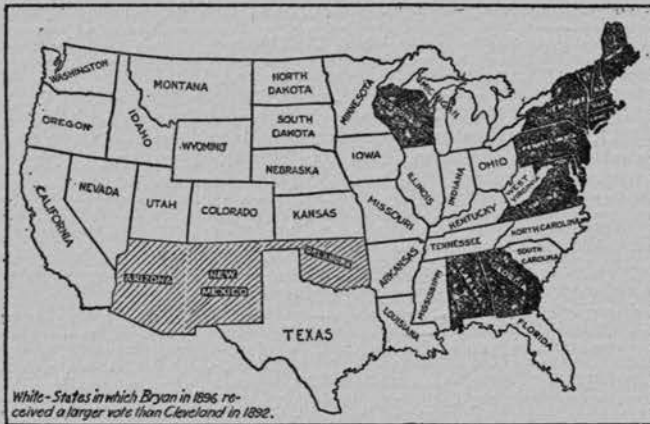

So I say Mr. Bryan is to receive his nomination direct from the Democratic millions, and this is the first proof of his strength as a candidate.

Now, let us look at other evidence.

Let us compare the popular strength of Bryan when he ran against McKinley in 1896 with the popular strength of Cleveland when he ran against Harrison four years earlier. Cleveland had the prestige that belongs to a man who has occupied the Presidential chair, and had back of him a loyal and united party. Bryan was new in national politics and suffered from the defection of many prominent Democrats who, like Cleveland, refused to accept the new leader. Nevertheless, Bryan, deserted by great leaders, great newspapers, and great business interests, polled more votes than any Democratic candidate ever

received before or since. He received practically a million votes more than Grover Cleveland had polled four years before.

The following map, published in the Omaha World-Herald last March, illustrates how overwhelming was Mr. Bryan's popular vote in 1896 compared with Cleveland's four years earlier:

Arizona, New Mexico, and Oklahoma were Territories, and are not counted or considered.

Thus we have another proof of Mr. Bryan's great popular strength by comparing it with the acknowledged strength of Grover Cleveland in 1892.

Moreover, in examining Mr. Bryan's vote it should be remembered that he received many votes outside his own party, and this is high proof of a candidate's strength. Generally the party is relied upon to carry the candidate. Mr. Bryan can always depend on a great following outside of his party. This enabled him to carry Republican States like Colorado, Nebraska, Idaho, Montana, and Washington. It also gave him in such debatable States as Ohio, Indiana, and Illinois more votes than any Democratic candidate has polled before or since.

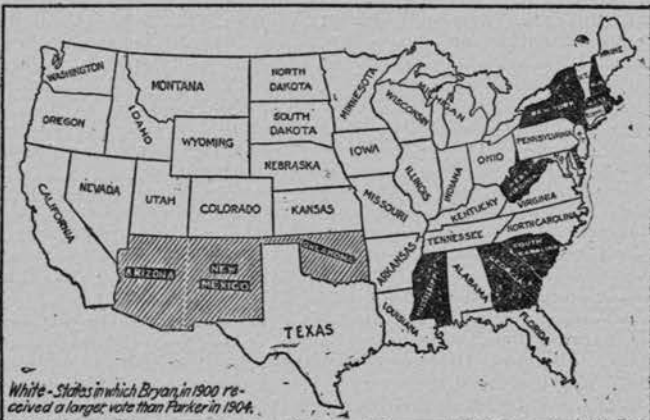

These remarkable results were obtained, although the Democratic campaign treasury was empty, while the Republican treasury held millions.

We have compared Bryan's popular vote of 1896 with the previous vote for Cleveland four years earlier, and noted Bryan's great strength.

Now, let us compare Bryan's vote of 1900 with the Democratic vote four years later, when Judge Parker ran. I have already in a speech in this House testified to Judge Parker's high character. He is a great lawyer, an eminent judge, and a citizen of the highest character and reputation. He received something over 5,000,000 votes. This was nearly a million and a half less than Bryan had received.

This does not reflect on Judge Parker personally, because his character, like Bryan's and Roosevelt's, is beyond all question. It simply proves that the ideas for which Bryan stands are the doctrines which the voters favor. It is not so much a proof of Parker's weakness as it is of Bryan's strength.

In order to exhibit this strength of Bryan I reproduce here another map taken from the Omaha World-Herald. It shows in white the States in which Bryan in 1900 polled more votes than Parker did four years later.

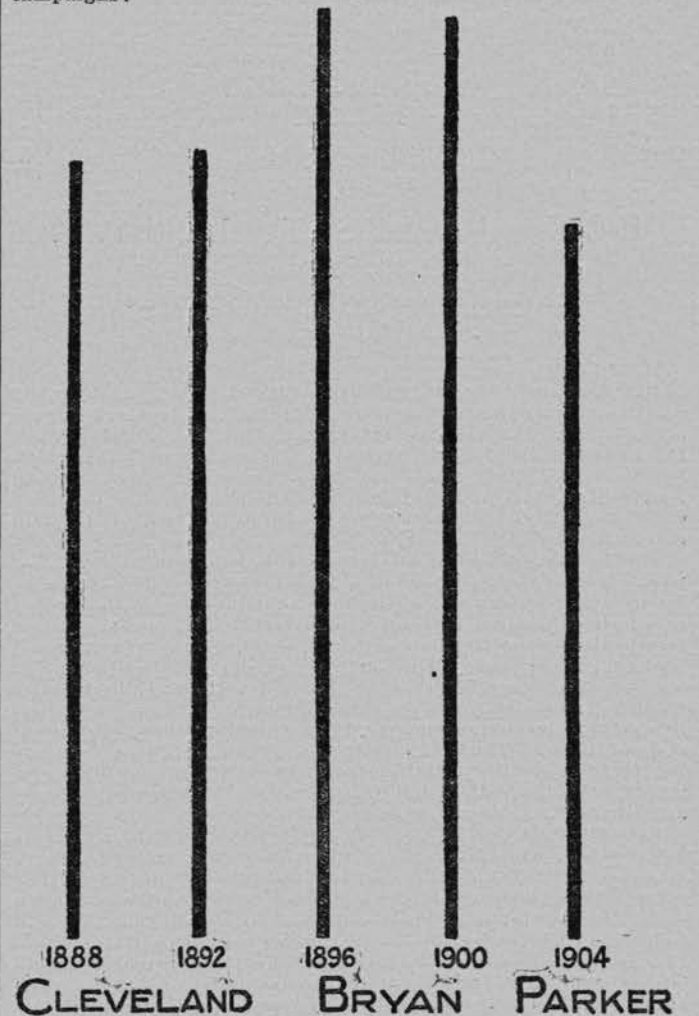

Arizona, New Mexico, and Oklahoma were Territories, and were not counted nor considered.

Bryan, in 1900, polled more votes in Illinois, Ohio, and Indiana than any other Democratic candidate before or since. Does that show strength or weakness?

In Ohio Bryan's vote exceeded Parker's 130,000, yet Bryan was running against Ohio's favorite son, McKinley.

Bryan polled a larger per cent of the New York vote than Judge Parker did four years later.

In order further to illustrate the great popular strength of Bryan, as compared with other Democratic candidates for President within recent years, I invite attention to this diagram, drawn in due proportion and illustrating the relative popular vote for Democratic candidates in the last five Presidential campaigns:

The figures upon which the above diagram is based are as follows:

Cleveland's vote:
 1888..... 5,536,242
 1892..... 5,552,351

Bryan's vote:
 1896..... 6,509,052
 1900..... 6,360,016

Parker's vote:
 1904..... 5,079,041

Bryanism is the strength of the Democratic party as these figures show. The party is more united on Bryan than ever before, as the overwhelming vote of the convention will show. This proves his strength within the party.

Outside the party his following is greater than ever. Not only has he those who were with him in 1896 and 1900, but he has a great following recruited by Roosevelt during the last few years. Hundreds of thousands of voters have been converted to Bryanism in the school of Roosevelt.

The President has maintained a Democratic kindergarten within the Republican lines, and hundreds of thousands of

Roosevelt Republicans are ready to graduate into the school of Bryan Democracy. They joined predatory wealth in fighting Bryan before, but they have entered upon a struggle against its domination this time. They constitute the great army of Bryan recruits in this campaign. To them also should be added the smaller but closely allied followers of La Follette. They can find no place within the Republican camp this year. Their leader has been ostracized and repudiated by the Republican organization. He has fought most desperately and brilliantly the currency bill, which was the leading Republican party measure, and they will in this campaign naturally join the great army of Bryan men recruited from Republican ranks.

It thus appears that within the party Bryan is far stronger than ever before, while outside the party he is assured a support far greater than any Democratic candidate has ever heretofore received.

The Merchant Marine.

SPEECH

OF

HON. JAMES T. LLOYD,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. LLOYD said:

Mr. SPEAKER: For sixty years while the Democratic party was responsible for the legislation of the country and for the administration of its laws, two-thirds of all the carrying trade to and from the United States was transported in American vessels under the protection of the American flag. During nearly fifty years of Republican rule the ocean traffic in American bottoms has decreased to less than 10 per cent of the total carriage.

This is one of the direct fruits of Republican policy. That party seems anxious now to extricate itself and declares in favor of the restoration of the merchant marine, but no proper scheme is presented to secure it. Every reasonable suggestion is rejected by the Republican party, because to accept it would be to, in some sense, abandon the teachings of the party. It may be safely asserted that never again will the United States have the ascendancy at sea unless there is a complete change in party policy or another party is called to direct the great ship of State. The Republican party can not avoid censure for this deplorable condition for when it came into power, wherever ships sailed and commerce was carried, the Stars and Stripes gladdened the seas and contested for supremacy.

In 1860 the value of the tonnage for the foreign trade was \$400,000,000, while 70 per cent of it was carried in American vessels. In 1907 the tonnage value for ocean transit from our ports was \$1,660,000,000, of which only 8½ per cent was carried under our own flag. Why is it that this unfortunate condition exists? A careful investigation will show that this situation is brought about because American ships are from 30 to 50 per cent more expensive to the owner than foreign-made ships, and that under our system they can not be built in competition with the ships of other countries because the materials entering into the construction are so much more costly here.

Mr. James C. Wallace, president of the American Ship Building Company, said, in his hearings before the Merchant Marine Commission of Congress on the 28th of June, 1904, that—

Recently one of our largest steel mills sold abroad 100,000 tons of steel plate. They delivered it, I understand, at Belfast, at \$24 a ton. That would practically mean, with ocean rates as they are, \$22 a ton at tide water. They are charging us to-day at Pittsburgh \$32 a ton. A differential of \$10 in a ship carrying 5,000 tons is \$50,000. That is the shipbuilder's profit.

And again, in reply to questions:

Representative GROSVENOR. I want to know who bought the steel you speak of.

Mr. WALLACE. The Harland & Wolff Company, Belfast.

Representative GROSVENOR. From whom did they buy it?

Mr. WALLACE. The United States Steel Corporation.

Representative GROSVENOR. Do you know where it was shipped from?

Mr. WALLACE. I do not. I presume from the Carnegie Steel Company. I do not know that, though, for a fact, as they have so many mills.

Representative GROSVENOR. And their present price to you is \$32?

Mr. WALLACE. Thirty-two dollars a ton, Pittsburgh.

Representative GROSVENOR. And that was laid down at Belfast at \$22?

Mr. WALLACE. Twenty-four dollars.

Senator GALLINGER, of New Hampshire, in writing the report of the Commission and in commenting on the conditions presented by Mr. Wallace, said:

Whatever may be said for the occasional sale abroad of surplus manufactures below the domestic price, this, manifestly, is a case for which the familiar defense is quite impossible. American shipbuilding is terribly depressed; it is essentially an unprotected industry in the foreign trade, and when American steel mills, long and amply protected, sell material to foreign shipyards at eight or ten dollars below the price asked from American yards, these steel mills simply heap an unjust and intolerable burden upon an interest now well-nigh prostrate.

A sense of fair play, or even cool business prudence, should make it manifest to the steel companies that they ought to do their utmost to encourage the struggling American shipyards.

Mr. George W. Dickie, superintendent of the Union Iron Works, the largest shipbuilding plant of the Pacific coast, stated to the same Commission in San Francisco that—

He was in a Scottish shipyard in 1900, when they were building a vessel almost exactly like one he was building in his yards, and he saw there materials unloaded from a ship from New York furnished by Carnegie & Co. at about \$13 a ton less than he was paying for the same material from the same mills.

Senator GALLINGER, again speaking for the Commission, says, in reference to Mr. Dickie's statement:

A large number of others testified to the same effect. It can be seen at once what an immense profit is given to the steel trust by the operation of law alone. A tariff which enables manufacturers to reap a bonus of from \$10 to \$15 a ton in addition to the legitimate profits is indefensible from any standpoint of honesty and fair dealing, and one of the first steps in the interest of shipbuilding in the United States ought to be to put at least all materials which enter into the construction of ships on the free list, no matter whether intended for the foreign or domestic trade.

Mr. Edward S. Cramp, of the Cramp Building Company, said, in similar hearings in May, 1904, that—

Foreign shipbuilders were then paying only about \$25 per ton for materials that cost the American shipbuilder \$40 per ton, a handicap against him of \$15 per ton.

This extraordinary difference in the cost of ships is brought about largely, in fact almost wholly, by the high tariff on the materials which enter into the construction of the ships. No excuse in morals or in fact can exist for so great protection to our manufacturers that they can reap a bonus of \$10 or \$15 per ton in addition to their legitimate profits.

The first step that should be taken to secure a merchant marine is to so change the law that only a reasonable profit can be obtained by our manufacturers and that the additional bonus which is now paid above such profits may inure to the benefit of our shipbuilders and place them, in this respect, on an equality with other countries.

If the party in power really desires to secure merchant vessels on the high seas, the American registry law might be so changed that the shipowner would be permitted to buy wherever he can buy the cheapest ship and then have the same protection of our flag as if he had bought the vessel in an American shipyard. To-day no man can fly the American flag on a ship not built in the United States. This change in the law would not seriously affect the shipbuilding industry in this country, if limited to ocean-going vessels, for they have scarcely any trade of this kind under the existing law. The benefit which would result would be in securing vessels for our trade, flying our flag, and this without serious injury to any American interests.

Another helpful policy would be to return to the system of discriminating duties which was enforced under Democratic rule, and which is now advocated by so many and so generally favored. This was the policy of the fathers of the Republic, under which our shipping interests were so marvelously developed in our early history. The Republican party will not inaugurate the system of discriminating duties in favor of goods carried in our vessels, because it would then reduce the protection that is now given to the American manufacturers. That party will not permit any change of law that would admit to American registry the ship built in foreign yards, although that ship may be built from materials purchased in the United States at least one-third cheaper than those materials could have been purchased by shipbuilders in this country.

The reason for this extraordinary position, absurd as it may appear, is the absolute devotion of the Republican party to the protected interests and their determination to in no way affect those interests. Nearly everything that goes into the construction of an American ship has upon it a protected duty, so that our shipbuilders have but little, if any, opportunity to buy elsewhere, but they must take their materials from the American manufacturer at the price he fixes for them. It is a surprising thing that the American people have so long upheld the policy which is so disastrous in its effects upon this important industry. A policy which protects the man who sells to the shipbuilder here and then permits him to sell 30 or 40 per cent

cheaper to the man with whom the shipbuilder must compete is certainly a ridiculous policy and ought to receive the condemnation of every American citizen who loves his flag and is interested in its supremacy, not only at home, but on the high seas as well.

One of the most curious provisions that is found in the Dingley tariff is one to the effect that if an American shipbuilder builds for foreign account or ownership and uses foreign materials in its construction, that such materials shall be admitted at the usual rate of duty, but that the amount of such duty shall afterwards be paid back by the Government. What excuse can be given by the person who wishes American ships to be restored to the seas for maintaining a law which gives the foreign shipowner so great an advantage over the American owner whose ships are constructed in the same yards? If the ship for foreign trade is to be exempt from American protection laws, why should not the American shipowner be likewise protected? But, so cautious was the Republican party about interfering with the steel trust and other great manufacturers who furnish the materials for the construction of the ships, that they made this rebate provision, which fully protects the American manufacturer and injures only the American who purchases the ship for American use. Such a system results beneficially to the trusts and in class legislation, for which there can be no reasonable excuse.

I submit herewith the following table, taken from the statistical abstract of 1907, which shows the exports carried by sea from the United States during different years, viz:

	In American vessels.	In foreign vessels.	Total.	Per cent in American vessels.
1850.....	\$99,615,041	\$52,283,679	\$151,998,720	65.4
1860.....	279,082,902	121,039,394	400,122,296	70.0
1870.....	199,732,324	329,786,978	529,519,302	37.7
1880.....	109,029,309	730,770,521	839,799,730	13.1
1890.....	77,502,138	747,376,644	824,878,782	9.4
1900.....	90,779,252	1,133,220,689	1,223,999,941	7.1
1906.....	153,859,076	1,396,270,084	1,550,129,160	9.9
1907.....	141,789,310	1,520,598,231	1,662,378,541	8.5

On House Bill 22256.

SPEECH

OF

HON. THETUS W. SIMS,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

On the bill (H. R. 22256) to make it unlawful for certain public officials to own capital stock or bonds in any public-service corporations doing business in the District of Columbia.

Mr. SIMS said:

Mr. SPEAKER: On the 29th day of May, 1908, I introduced the following bill (H. R. 22256):

A bill (H. R. 22256) to make it unlawful for certain public officials to own capital stock or bonds in any and all public-service corporations doing business in the District of Columbia.

Be it enacted, etc., That on and after the 4th day of March, 1909, it shall be unlawful for any Senator of the United States or Representative in Congress of the United States, or clerk or private secretary of any Senator or Representative, or the clerks to committees of the Senate and House of Representatives, or any officer of the Senate or House of Representatives, or any Commissioner of the District of Columbia, or other officer of the District of Columbia, whose salary or compensation is paid in whole or in part from the revenues of the District of Columbia or in whole or in part from the Treasury of the United States, or any clerk in any of the Departments of the Government of the United States not in the classified service, or any member of any commission created by the laws of the United States, receiving compensation in whole or in part from the Treasury of the United States, or the Secretary to the President of the United States; or assistant secretaries in any of the Departments of the Government of the United States, to own or control any of the capital stock or bonds of any of the public-service corporations doing business in the District of Columbia, including the various street-car or traction companies now operating their respective systems or parts of systems in the District of Columbia or that may be hereafter authorized to so operate their systems or parts of systems in the District of Columbia, also electric light and power companies, gas companies, telephone companies, and any and all other public-service corporations now authorized or that may hereafter be authorized to do business in the District of Columbia: *Provided*, That this provision shall not apply to persons owning or holding such stocks or bonds as guardian, administrator, trustee, or in any other fiduciary capacity.

SEC. 2. That all persons to whom this act applies, who violate any of the provisions of this act, shall be deemed guilty of a misdemeanor and shall be punished by a fine of not less than \$50 nor more than \$5,000, and shall be imprisoned not more than two years.

SEC. 3. That prosecutions for violation of any of the provisions of this act shall be on information or indictment in the name of the

United States, in the supreme court of the District of Columbia, by the Attorney-General of the United States or any of his assistants.

SEC. 4. That all laws or parts of laws in conflict with the provisions of this act are hereby repealed.

The bill was hurriedly drawn and may need amendment before same is reported to the House by the District Committee, should that committee make a favorable report.

In introducing this bill it has not been my purpose to call attention to any individual who may at this time own any of the capital stock or bonds of any of the corporations mentioned therein or to cause any embarrassment to anyone whomsoever. I have purposely made the limitation of time as to when the law shall become effective March 4, 1909, so as not to apply to any official whose term of office will expire by that time. I desire to say that I do not know of a single individual to whom the terms of this bill will apply that has ever used or attempted to use his influence to affect legislation applying to any of the corporations mentioned in this bill, and the object of this bill is not to be the basis of a dragnet investigation by the committee of charges of this kind.

But it is not necessary that officials in a position to wield great influence in legislation of this kind take an active, open part in either promoting or preventing it in order to make their influence felt. The knowledge that such persons have direct personal interest in this character of legislation will of itself have a greater influence than the open opposition or open espousal of others who may not be so situated. This bill, by its provisions, covers many classes of officials who are in a position to thus influence legislation, who may not own or control stocks or bonds of local public-service corporations. But the prohibition should cover all classes of persons who come within the reason of the proposed act.

Mr. Speaker, it is my contention that gentlemen in high position wield great influence in matters of this kind without any sort of active open exertion and, in fact, in spite of an open announcement upon their part that they decline to discuss such matters or to take any part in considering matters of legislation thus affecting their private interests.

Suppose that a Senator from my State should own stock in one of these public-service corporations, which fact was known to me. He might say to me in the most earnest and emphatic manner that I must not for a moment consider his private personal interests in determining my action in matters of legislation affecting his interests. In spite of such a declaration and in spite of any attempt that I might make to act in an entirely disinterested manner, I could not feel as free to act as if no such a condition confronted me.

I have never heard that it was ever proven that any Senator or Representative was influenced in the slightest degree in his vote or action in any matter of legislation affecting the railroads of the country by reason of having a free pass. Notwithstanding this fact we passed a law making it a crime to either give or accept a free pass. I am not one of those who believe in making every mere impropriety a crime. I think in general that all matters of propriety in Members of Congress may be left with safety to their constituents.

But the situation in the District of Columbia is not even similar to any other locality or city. We have no State government, no city government acting independently of the National Government as in the States, where those who make and execute the laws are responsible to the local electorate. It matters not how much property a man may own in the District of Columbia or what his educational attainments may be, he has no vote or voice in any local governmental matters. He must pay taxes, with no power to say how or for what purposes these taxes shall be used. All he can do is to petition Congress. He must take what Congress gives him, let it be good or bad. These conditions must be met and dealt with by the local corporations as well as by private individuals. Inasmuch as the property owners in the District are subject to all the restrictions and conditions, taxes and burdens that Congress may impose without appeal or recourse, is it any wonder that these local corporations should look with favor upon stock or bond ownership by Members of Congress or any other official or person who may have influence in Congress?

With them it is a matter of self-defense, or at least may be so considered. While the public-service corporations of the District have been highly favored, so far as legislation is concerned, they no doubt stand in constant dread of possible adverse legislation. Members of Congress are often elected upon issues of a strictly local character, and when they take their seats begin at once to experiment on the people of the District by introducing bills along the line of local sentiment. The District of Columbia seems to be regarded as the national legislative experiment station, on which all sorts of fads and fancies are to be tried out on a people who can not help themselves.

Such things keep the people who own corporate property in this District in a constant state of dread and apprehension and force them to seek protection in the only practical way left open to them, and that is by making it to the financial interest of those who have great weight and influence in securing or preventing legislation not to be indifferent and careless when such interests are threatened.

Whether well founded or not, there is a widespread belief among the poorer classes in this District that favoritism is shown in making street and park improvements. They firmly believe that in sections of the city where high officials own property expenditures for city improvements are much more lavish than in other parts of the city. I think that we should, so far as possible, remove all temptation to use our influence for private gain. That we should, so far as possible, remove all reasonable grounds on which to base charges that we are interested in legislation concerning the public-service corporations. Faith in the honesty and integrity of public officials is the keystone in the arch of our republican form of government.

I think we should not hesitate to pass any bill that will tend to strengthen public confidence in official purity and honesty of purpose, and to this end let others own and operate these public-service corporations in this District. I thus call the attention of the Members of this House and the country to the object and purpose of this bill, with no thought of causing embarrassment to any individual official, but with the hope—and for that purpose only—that this matter may receive cool and dispassionate consideration before the next session of Congress, and if in the judgment of the House this bill ought not to pass I shall be contented with having done what I felt to be a public duty.

Bureau of Immigration and Naturalization.

SPEECH

OF

HON. ADOLPH J. SABATH,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 29, 1908.

On the bill (H. R. 21052) to amend sections 11 and 13 of an act entitled "An act to establish a bureau of immigration and naturalization of aliens throughout the United States."

Mr. SABATH said:

Mr. SPEAKER: This bill as it originally passed the House was bad enough, but now it comes to us from the Senate in much worse form. It is a bill in the interest of a few court clerks of large cities, and an indirect step against thousands upon thousands of honest, industrious, and law-abiding people who have left their native country seeking a country of freedom and liberty, believing that the principles of democracy of equal rights to all were still alive in this Republic of ours. Last session you passed a law making it nearly impossible for thousands upon thousands of these honest and well-meaning foreigners to become citizens of this country by providing that no one can become citizens who are not able to read and speak the English language and by increasing the fees for naturalization papers from 50 cents to \$5. One-half of this \$5, however, was to be turned over to the immigration fund of the Government. This bill, however, provides that it is in the discretion of the Secretary of Commerce and Labor to permit clerks issuing these papers to have additional help, and gives him the power to allow them the entire amount by them collected over \$6,000 a year. This legislation would appear to be specially in interest of the clerks in large cities. And after this bill had been passed by this House repealing the clause which provided for turning over to the immigration fund one-half of the fees, it being done for the sole interest of these overworked and underpaid chief clerks (who make only \$10,000 to \$50,000 a year), the Senate amends it by increasing the naturalization fees from \$5 to \$10, or 100 per cent, inserting the clause that I, after a hard struggle, defeated in the House when the bill came up the first time.

Mr. Speaker, I hope that this House will not concur in all of the amendments, as I believe that the Government should not stoop so low as to try to make money out of a sacred matter like this. I understand that the motion of the gentleman from New York was to concur in Senate amendments numbered 1, 2, 3, 4, and 6, and disagree to Senate amendment No. 5. The

fifth amendment is the amendment that increases the fees of the clerks. As the vote "aye" is against the increasing of the fees, I vote "aye."

This question has been thoroughly thrashed over, and I am vain enough to believe that I have convinced the Committee on Immigration and Naturalization that it would be wrong to increase the already high fees. I have here with me the hearings and my statement before that committee, and I ask leave to insert in the RECORD certain portions from said hearings had on May 2:

NATURALIZATION.

THE COMMITTEE ON IMMIGRATION AND NATURALIZATION,
Saturday, May 2, 1908.

The committee this day met, Hon. BENJAMIN F. HOWELL in the chair.

Present: Representatives HAYES, MOORE of TEXAS, BURNETT, SABATH, FRENCH, BENNET of New York, WOOD, and O'CONNELL.

STATEMENT OF HON. ADOLPH J. SABATH, A MEMBER OF CONGRESS FROM THE STATE OF ILLINOIS.

Mr. SABATH. I have some gentlemen here from Chicago who are desirous to see our friend, the President, and I must ask to be excused, and ask that the consideration of bill H. R. 21052, which increases the fees of clerks for naturalization papers from \$5 to \$10, be deferred for a few more days.

Mr. HAYES. You do not want to fight this bill in the committee? You can fight it on the floor of the House.

Mr. SABATH. This is the place to fight it. I will not consume more than ten minutes, at most fifteen minutes.

Mr. HAYES. Did you not say about all you wanted to say the other day?

Mr. SABATH. No, sir; I want to express my views and my opinions, and also give such reasons as will convince you all, Mr. Chairman, not to report this bill.

I think it is an unfair, unjust, and unreasonable bill and calls for unjust, unfair, and unreasonable fees. We should not legislate for the purpose of trying to enrich the clerks of the respective courts at the expense of poor people who desire to become citizens of the United States, nor do we want to place ourselves in the position to say to the world that our Government desires to make profit out of naturalization.

Mr. HAYES. What do you say about this: That the clerks of the courts will not do the work for the fees?

Mr. SABATH. Where?

Mr. HAYES. They will not do it at any place.

The CHAIRMAN. The clerks of the courts in my district absolutely refuse to do it.

Mr. SABATH. Very likely the men who are making application are Democrats and the clerks are Republicans.

Mr. HAYES. Perhaps you are not familiar with the great amount of work required?

Mr. SABATH. I am, and would be pleased to do the work for one-half of what the clerks are receiving. They are receiving \$1 for the affidavit, \$2 for the certificate, and \$2 for the final certificate. I was under the impression that we in Chicago had about as keen a lot of gentlemen looking after the money as anywhere, and they never claimed that the fees are not high enough.

Mr. HAYES. We do not care anything about the clerks; that is not the point. We must look out for the men who are applying for citizenship and who are sometimes compelled to wait three or four days before they can get hearing on account of the crowded condition of the United States courts since the State courts will not take jurisdiction.

Mr. SABATH. Do not the courts instruct the clerks to do this work?

Mr. HAYES. No, sir; because the clerks can not get their money.

Mr. SABATH. There is a provision for \$5 fees.

Mr. HAYES. Only half of it goes to the clerk; the other half goes to the Bureau of Naturalization. They only get 50 cents for the first declaration and \$1 for the petition and the order.

Mr. SABATH. Is not that sufficient for making out the petition?

Mr. HAYES. No, sir; there is no use in discussing it.

Mr. SABATH. I am not here for the purpose of interfering with the people obtaining naturalization; I am here for the purpose of trying to make it easier for them. In our city the clerks do not receive any more than in yours, and there is no objection.

Mr. HAYES. But you must remember that the proceedings are now very much longer.

Mr. SABATH. And the charge is \$5 now, being ten times as much as formerly. Under the old law all these clerks were permitted to charge was 50 cents for the first and 50 cents for the second papers, or the final papers.

Mr. HAYES. But that is spread over a period of five years. If the thing had not been tried, if it had not been in operation for awhile, your contention might have some force; but it had been tried, and we know the consequence. We know that the clerks will not do the work, and we can not force them by a law of Congress, because we have no jurisdiction. On account of the congestion of the United States court we are going to make it possible for a man to get naturalized, or we are going to let him pay enough so that there will not be so much loss of time. Instead of being more expensive we are trying to make it less expensive.

Mr. SABATH. By increasing it 100 per cent?

Mr. HAYES. The way it is now he can not get naturalized at all, or if he gets the naturalization he has to go three or four times.

Mr. SABATH. Why do you not elect decent and respectable clerks down your way?

Mr. HAYES. We have not anything to do with that.

Mr. SABATH. Our clerks in Chicago will not refuse to do any work they are supposed to do even if the fees are not increased, which I am satisfied is not needed.

These clerks are getting a salary all the way from \$2,000 to \$7,000 a year and fees. They all have assistants. The clerks are paid by the respective counties and by the States themselves; these naturalization fees they are receiving are extra.

Mr. HAYES. You are entirely mistaken. In my State the clerk is paid \$8,000 a year, and he has to employ his own deputies, all of them, and when you put this additional work upon him he can not afford to

do it, because he has only \$2,500 or \$3,000 left after paying his expenses.

The CHAIRMAN. Two of these counties in my district will not have anything to do with the work. They would be glad to do it if they could make any money.

Mr. SABATH. I never read or ever heard where clerks of courts have lost any money on the work they were doing; at least I never heard where anyone ever resigned because he was losing money in his position; if they have, I am ignorant of such a fact.

Mr. HAYES. They are as keen after the money as anybody.

Mr. BURNETT. The applicant does not have to pay it all at one time.

Mr. HAYES. No; it is scattered over five years.

Mr. SABATH. It may be only two years.

Mr. BENNET. Yes; it may be only two years.

Mr. SABATH. If he has been here three years, he can declare his intention and wait two years.

Mr. HAYES. But it is scattered over quite a period of time. He pays \$2 under the proposal in this bill when he declares his intention, and \$1 of that goes to the clerk and \$1 to the Government.

Mr. SABATH. I have stated all I wish to state, and I am obliged to leave at this time. I am not going for the purpose of killing time or break the quorum, but there are several gentlemen here from Chicago that I am obliged to meet.

Mr. BENNET. I thought we set Saturday to suit your convenience?

Mr. SABATH. Yes; but, as I have stated, there are some friends of mine here who want to see our friend the President, and some others who want to see the Assistant Secretary of War, and as it would be impossible to see them this afternoon and they are obliged to leave to-day, so I am compelled to ask for this continuance, as I am obliged to leave.

Mr. Chairman, I am opposed to this bill, notwithstanding what Mr. HAYES says. I can not see it that way. I do not know why the clerks should object to issuing the certificate. We have no trouble and we do it in Chicago. How long does it take to make out such an application? Not more than ten minutes, and they get \$1.

Mr. HAYES. There is lots of work connected with it.

Mr. BENNET. The chief of the division says that the files of his office are filled with complaints on account of the delay in the work.

Mr. SABATH. That does not apply to Chicago, I know.

Mr. BENNET. The business there is increasing every month.

Mr. SABATH. It does not apply to Chicago. We are issuing the naturalization papers all the time.

Mr. BENNET. A former attorney-general of our State of New York was down here yesterday on some law business, and he told me that he had been trying to get his brother-in-law, who had been a British subject, naturalized for the last four months.

Mr. SABATH. That applies also at times to Chicago. Our clerks happen to be Republicans, and the moment they find out the man who is making the application is a Democrat they refuse to issue the certificate and cause delay.

Mr. BURNETT. Does that happen in the State courts?

Mr. SABATH. I mean the State courts, the county courts.

Mr. BENNET. That does not apply in New York.

Mr. SABATH. It does not apply in Chicago. We started an investigation and they were refused to issue the papers. It is not up to the courts to approve or disapprove and not for the clerks. They will say, "You can not be made a citizen anyway," and in that way they do drive them away if they do not like their appearance.

Mr. SABATH. I am only stating the real facts. I am not against the clerks making money, but the tendency has been to increase salaries and fees day after day, from month to month, and from year to year. Formerly the fees of the clerks were just about one-half as large as they are now, and they were able to get along. I admit that everything is higher under the present Administration. I recognize the fact that you Republicans will not do anything about the revision of the tariff, thereby permitting the trusts to charge the people double prices for everything. I know the people need more money to live on, but the right kind of people do not get the money.

Mr. HAYES. The officeholder is the poorest paid man in this country. Everybody else has been increased, but he has not.

Mr. SABATH. If you will look over the bills which are passed here and all through every State you will see that the salaries have been increased. The sundry civil appropriation bill, which is now before us, carries one hundred and five millions, where twenty years ago it amounted to twenty-two millions only, and this increase applies to all Departments.

Mr. HAYES. Very little of that is for salaries.

Mr. SABATH. It is five times as much as it was then. What else is it for?

Mr. HAYES. The salaries paid have not been increased since I have been here.

Mr. SABATH. Not of the minor officeholders or to laboring men, but it has been increased to men in higher positions, and of all of the officers.

Mr. BENNET. How did you vote the other day on the \$300,000 amendment?

Mr. SABATH. I voted against it, because I have not seen anybody resign because he was not getting enough money.

Mr. BENNET. I do not mean the customs bill; I mean the \$300,000 to enforce the provision of law in regard to railroad rebates.

Mr. SABATH. I voted for it. That was for the purpose of giving the Department a larger sum of money to investigate the thieving railroad companies. I am willing to spend not only \$300,000, but a million dollars to bring these railroad companies to terms. They have been holding up the public long enough, and the Government should bring them to terms.

Now, Mr. Chairman, you have no quorum, and I have these gentlemen here, and they are here for the purpose of trying to secure the passage of the Bates resolution. * * * They have come all the way from Chicago and represent about 3,000,000 of their people in this country, and I can not and will not disappoint them in their desire to see the President, and for that reason I ask postponement of action on this bill, there being no quorum present. Furthermore, you can easily wait a few days with this bill.

Mr. Chairman, I am now obliged to go, and hope you will adjourn and give me opportunity to be heard at some other time, but it would not surprise me if this committee would not do so. The only thing that would surprise me would be if you should report my bill, No. 147, which I expect to take up at the meeting next Tuesday. Gentlemen,

you should not be in such haste. We have already reported out more bills than any other committee.

Mr. HAYES. We did not report any that we did not think was right. Mr. SABATH. I myself have not agreed with all of them you did report, and I shall fight them on the floor of the House. And again I am obliged to call your attention to the fact that there is no quorum.

Mr. Speaker, I am of the opinion that, instead of obstructing and imposing harder conditions on these people who are trying to become citizens of the United States, we should encourage and assist them to become American citizens and accord them the kind of treatment we ourselves would expect if we were in their place.

And I am convinced that it would instill in their hearts still greater love for this their adopted country.

The adoption or passage of any law that has or would have a tendency to impose additional hardships and tasks on these people I am sure would be resented by not only those of our citizens whose parents were born abroad, but by all foreign-born citizens, and also by that still greater mass of liberal and fair-minded native-born Americans.

The Currency Bill.

SPEECH

OF

HON. JOHN S. WILLIAMS,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 27, 1908.

Mr. WILLIAMS said:

Mr. SPEAKER: Under leave to print, passed by Republicans desiring further time to explain, I insert the following two editorials from the New York Evening Post of May 26. The Post is not a Democratic paper:

BRYAN GETS TAFT'S REPLY—BOTH LEADING CANDIDATES ARE FOR PUBLICITY BILL—SECRETARY RESPONDS TO BRYAN'S TELEGRAM ASKING HIM TO JOIN IN REQUEST TO CONGRESS—MAKES PUBLIC LETTER TO SENATOR BURROWS—REPUBLICAN HOUSE LEADERS "PUT IN A HOLE."

WASHINGTON, May 26.

W. J. Bryan has sent the following telegram to Secretary Taft: "I beg to suggest that, as leading candidates in our respective parties, we join in asking Congress to pass a bill requiring publication of campaign contributions prior to election. If you think best, we can ask other candidates to unite with us in the request."

"W. J. BRYAN."

Mr. Taft came to the White House an hour before the time set for the Cabinet meeting this morning and was closeted with the President. Secretary Taft, upon his return to the War Department, gave out for publication his answer, as follows:

"Hon. WILLIAM J. BRYAN, Lincoln, Nebr.:

"Your telegram received. On April 30 last I sent the following telegram to Senator BURROWS, the chairman of the Committee on Privileges and Elections of the Senate:

"MY DEAR MR. BURROWS: I sincerely believe that it would greatly tend to the absence of corruption in politics if the expenditures for nomination and election of all candidates and all contributions received and expenditures made by political committees could be made public, both in respect to State and national politics. For that reason I am strongly in favor of the passage of the bill which is now pending in the Senate and the House bringing about this result so far as national politics are concerned. I mark this letter personal because I am anxious to avoid assuming an attitude in the campaign which is quite possible I shall never have the right to assume, but so far as my personal influence is concerned, I am anxious to give it for the passage of the bill."

"Very sincerely, yours,

WILLIAM H. TAFT."

"Since writing the above, in answer to inquiry, I have said publicly that I hoped such a bill would pass."

"W. H. TAFT."

The two telegrams of Bryan and Taft confront squarely the Republicans in Congress with the whole question of campaign contributions. Mr. Bryan is not modest, but he is truthful in describing himself and Taft as "leading candidates in our respective parties." It is a question of simple honesty and political morality which is presented to Mr. CANNON and his associates. Hitherto this winter they have evaded, clumsily but successfully, all such issues.

If the friends in Congress of the various candidates, other than Taft, have made up their minds that the Secretary of War will be nominated at Chicago, then, to help him in his campaign for election, they must pass such a publicity bill as he desires.

REPUBLICAN BOTCHING.

From a Republican view point, things have been botched and mismanaged here this winter just about as badly as they could be. The failure to pass a legitimate campaign publicity bill on the lines of the one drawn by Representative McCALL, of Massachusetts, in the light of to-day's happenings, is conceded to be the crowning blunder of the session.

It remains to be seen whether Mr. CANNON and his "organization," lagging, as usual, far in the rear of enlightened and aroused public sentiment, will take any action. If they do not, no doubt is entertained by some of the soundest and ablest minds in the Republican party that the effect will be marked at the November election.

PUTS HOUSE LEADERS IN THE HOLE.

Bryan's telegram has neatly put the Republican majority in the House in a deep hole. No cheaper, more bare-faced trick, no stupider piece of political dishonesty has come to light, in the whole winter's record of insincerities, than the action of the House Republicans with regard to a publicity bill. What they have done has been of a piece with their other veiled political activities.

Speaker CANNON and the other Republicans, who will be charged with the management of and collections of funds in the approaching campaign, do not want to enact a law providing for publicity of campaign expenses. They want to "fry the fat" out of protected manufacturers and other interests just as they have done in the past.

There is a strong sentiment among honest Republicans in the House and throughout the country for a campaign publicity bill. The Democrats would have voted solidly for the McCall bill, which had the approval of a House committee. Enough Republicans would have voted with the Democrats to pass the measure had they been allowed. The Crumpacker bill, with its provisions for reducing representation in the South, was brought before the House with the avowed intention of defeating any campaign publicity legislation. It was so stupid and so apparent a piece of trickery that it fooled nobody. There is no sentiment among the House Republicans to reduce the representation from the South. Those who voted for the bill knew that it would never come out of the Senate committee; or, if it did come out, would be defeated.

Neither Representative NORRIS, of Nebraska, who reported the McCall bill, nor its author was allowed to speak while the Crumpacker bill was under consideration. Mr. NORRIS was promised an opportunity to voice his objections to the Crumpacker bill, but when the time came leave to speak from the floor was not given to any Republican who was not willing to swallow the plan decided upon by the "House organization."

MOTIVES OF REPUBLICANS UNDERSTOOD.

The whole country understands the motives lying behind the bringing out of the Crumpacker bill, and this has made the trick a futile move. Realizing that this bill as it passed the House has absolutely no chance of passage, the Democrats have been seeking a way to bring squarely before the country the question of campaign contributions. Mr. Bryan's telegram and Mr. Taft's reply have done this.

It was reasoned here to-day, in advance of Mr. Taft's reply, that the Secretary of War could not do less than declare himself on the side of the best sentiment throughout the country. If the Republican lawmakers do not back up the stand of the man who apparently is to be their candidate, they "lose a political trick" to put it on no higher grounds. Even if the Republicans now take unwilling action, Bryan will have the popular advantage that comes from his move in forcing the legislation.

A CURRENCY BILL CLUB—PUBLIC BUILDINGS BILL HELD UP TO SECURE VOTES—COURSE TAKEN BY REPUBLICAN LEADERS TO FORCE EMERGENCY CURRENCY BILL THROUGH HOUSE SAVORS OF BRIBERY AND INTIMIDATION—HOUSE CONFEREES ENCOURAGED BY PROSPECT OF AGREEMENT.

WASHINGTON, May 26, 1908.

Apparently all sense of decency has been lost by those who are engaged in the effort to force upon an unwilling, reluctant, and divided Congress a measure which is still known, for want of a better term, as an "emergency currency" bill. It should be borne in mind by the financial and banking communities, as well as by investors and every other property holder, that the frantic desperation and strivings of those behind the present effort to revive the pending currency bills, is dictated by the most selfish political motives, rather than by any desire to improve our antiquated currency system. Anything more monstrous in its political immorality than the open threat to withhold action on the public buildings bill until an agreement has been reached on financial legislation has not been seen in Washington in many a day.

The threat is in substance a bribe to every Member of Congress who has an item for his district in this bill. Take, for example, the Indiana delegation. Every member of it but two has an item in this bill carrying an appropriation of \$75,000 for a building in his district. Is not this threat equivalent to saying to each of these Indiana Members: "It will be worth \$75,000 a piece to you in your district to help us get an agreement on currency legislation? If you do not aid us, you lose that much help in your campaign for reelection."

No doubt is entertained that Speaker CANNON carefully scrutinized and approved the following notification by Chairman BARTHOLOTT to Republican Members that he proposed to hold up the "pork bill" until a currency agreement was reached:

PUBLIC BUILDINGS BILL REPORT HELD UP.

"I served notice on the Speaker to-day that I would not call up the conference report on the public buildings bill until a satisfactory currency bill has been passed. The conferees on this bill have reached a final agreement, and their report has been adopted by the Senate. I told the Speaker that my constituents, especially Republicans, are urging on me with much vigor the absolute necessity of enacting, at this session, the emergency currency measure, and that I agreed with them, and I believe, with a majority of the thinking people of the country, that such legislation is necessary to restore confidence and guard against recurrence of panic conditions. The Speaker's reply was that no one could force him to present the conference report.

"The situation is this: The country is looking to the Republican party to pass an emergency currency bill. Congress has been in session six months, and has failed to agree on a currency measure. If we adjourn without doing anything more than creating a currency commission, it will be up to the Republican party to make embarrassing excuses if panic conditions recur this fall. Furthermore, a Presidential campaign approaches.

"I have the report of the conference on the public buildings bill in my pocket. I am going to keep it there until a satisfactory currency bill has been passed. The House and Senate conferees on currency are at the threshold of a tentative compromise. There is no reason why they should not agree, and why we should not enact their agreement into law. I for one am willing to stay here all summer, if it is necessary, to 'starve out' any recalcitrant group or faction."

ONLY POLITICAL REASONS GIVEN.

Washington doubled up with laughter at the suggestion that Mr. Bartholdt had "served notice on the Speaker." It will be noticed that Mr. Bartholdt, in his exceedingly frank and unashamed statement, makes no pretense of any other than political reasons for action on the currency bill. A good many people are asking if the Republican party

would not have to make what Mr. Bartholdt calls "embarrassing excuses" in the event a currency bill is "jammed through" by threats and without consideration or debate.

In their last desperate sortie to get an emergency currency law on the books Speaker CANNON and his associates have stripped the mask from their motive. The present conferences and effort at compromise will repay the closest scrutiny from all persons whose interests are affected by the rise and fall of material prosperity in this country.

MORE CONFERENCES TO-DAY.

Conferences last night between Senator ALDRICH and Representative VREELAND were followed this morning by other conferences. In turn, these were succeeded by a meeting of the Republican House conferees in the rooms of Speaker CANNON. After nearly two hours of discussion Representatives VREELAND, WEEKS, and BURTON went to the rooms of the Committee on Finance, where in a few minutes they were joined by Senators ALDRICH, HALE, and ALLISON.

Rumors of what is likely to be done were flying thick and fast through the corridors all day. The familiar query, "Is it hot enough for you?" pales into insignificance beside "When are we going to adjourn?" An answer to this question involves consideration of what action is to be taken on the currency question. As everybody wants to go away to-morrow or on Thursday, the currency issue looms larger than at any other time this session. While it has grown in importance in the Congressional mind, there has been a corresponding confusion as to what is to be done. Probably not more than two dozen Members of the House have a clear appreciation of the nature of the negotiations which are being conducted by the Senate and House leaders.

The Government Ownership of Railroads.

SPEECH

OF

HON. BURTON L. FRENCH,

OF IDAHO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

On the bill (H. R. 21871) to amend the national banking laws.

Mr. FRENCH said:

Mr. SPEAKER: When the great leader of the Democratic party set foot upon the American Continent, after completing his tour of the world nearly two years ago, he added the weight of his approval to the doctrine of the Government ownership of railroads in his notable address delivered in New York City. The idea has probably reached the point of more than mere theoretical discussion, for, as the leader of a great party which has made presidents, has shaped policies, and has written important pages of history, William Jennings Bryan, by virtue of his leadership and force of character, is doing much toward molding the sentiment of the American people. In view of the dignity that has been given to the question of Government ownership of our railways and the very serious manner in which it has been taken by many of our citizens, some of whom believe in it for economic reasons and others because they believe it will prove measurably satisfactory in comparison with what they assert is the helplessness of our present system, I desire to present a few ideas upon the subject which I have gathered from a somewhat careful examination of the question.

The proposition of government ownership may have place in a government monarchical in form. It certainly is not in harmony with a government whose administrative officers change with successive waves of popular sentiment. It certainly is not in harmony with a government whose conservatism is due to inaction resulting from the distribution of power rather than to the definite policy of a hereditary chief executive. The proposition concedes too much to the inertia of government and takes away too much from the virility of private enterprise. I have that confidence in the ultimate good judgment of the American people which impels me to believe that it will never waver from a fairly definite course, no matter how seductive may be the arguments brought forward in behalf of so portentous a change in our economic policies.

No proposition could be advanced, no scheme put into execution, that would mean a longer step toward that centralization which is foreign to the fundamental idea and doctrine of a democratic Government, such as the United States claims and aims to be. I know it is proclaimed quite frequently that this is not a democratic Republic in the real true meaning of the word "democratic;" that the people have far less voice in decreeing the policies of the Government than is popularly supposed to be the case; that the germ of federalism which, under the inspiration of ultraconservative spirits, found its way into the fundamental structure of our Government has thoroughly inoculated all our policies; that as a matter of fact England, although a monarchy, has a more democratic

form of government, because its legislative body is more directly responsive to the popular will and the ministries bend to the behests of the people, while ours are simply the creatures of the President.

I shall not stop to discuss the merits of these assertions, because such discussion would lead me too far afield; but I do not hesitate to say that the nationalization of railways would do more to bring about the kind of government which conservative leaders wanted to create—a strong, central government; a monarchy in fact, even though not in form—than anything else that could possibly be done along economic lines. A mere passing glance at surrounding conditions ought to convince anyone that this is not an exaggerated statement.

In spite of all civil-service regulations, the pressure exerted by the employees of the Government in the time of popular elections is no insignificant factor. Everybody knows that the army of postmasters, postal railway clerks, internal-revenue and customs employees constitutes an important agency in determining the fate of an election. It is no less a factor—perhaps even a greater one—in deciding the result of nominating conventions. The total number of Government employees—all subject to a greater or less degree to whatever pressure the Government at Washington chooses to exert upon them—may be stated approximately as 150,000. This figure may be 10,000 or 15,000 out of the way in either direction, but it will serve my purpose as an illustration. Let us suppose a man in the White House who would not hesitate to command this army of employees to do his bidding, and imagine, if you can, the effect this would have on a national election. But add to this the men employed by the railroads—in 1906 they numbered 1,521,355—and you are confronted with a condition truly appalling.

For some time past the nationalization of the telegraph has been advocated. The telegraph has been declared to be a logical adjunct of the postal service, being no more and no less than a means of correspondence carried on by electricity. The proposition has been combated on the ground that such a procedure would add too much to the already large number of postal employees. Now, if there is one thing more certain than another, it is that when you nationalize the railways you must also take over the telegraph. The total number of employees of the telegraph companies in the United States is about 30,000, not including railroad telegraph operators. So this would go to swell the host of Government employees under the government-ownership idea to somewhere near 1,800,000, for the number of railway employees in 1906 would need to be added an annual increase of about 100,000. You are not done, however. Should the Government take over the railroads, it would need also to take over the express companies; it would need to do that service, just as the German Government is doing it, and it would need to have the men to handle the work. There are no statistics readily available showing the number of employees of express companies in the United States, but I think I am keeping within bounds if I place the number at 100,000. Hence we would have the staggering total of nearly 2,000,000 employees directly under control of the Government. Taking the usual ratio of dependence we would have a grand total of 10,000,000 of people—more than 10 per cent of the present population of the United States—directly depending upon the disbursements of the Government. Can anyone imagine a more powerful lever in the determination of any issue involved in an election?

For myself, I can not believe that the people of the United States are ready to take upon their shoulders the political burden which such a change would impose upon them. It would give an entirely new complexion to all governmental endeavor. It is hardly possible to conceive of any legislative product that would not be affected by it to some extent, in some degree. While the form of democratic government might be preserved, the substance would vanish, for the power to ordain would be lodged, far more securely than it now is, right here in Washington. Think of the tremendous power put into the hands of an Administration by the dependency of 2,000,000 of men. You can not whistle this down the wind; you can not dismiss it with a smile or a wave of the hand. Not a theory, but a condition, would confront us then, and it would be a condition which would become more aggravated as time passed on. For, as the country would grow and railways increase, this army of employees would also grow.

Again, if the Government were to acquire possession of the railroads and employ this vast host of men, it would need to provide a pension list, not only for those who might be maimed—or the dependents of those killed—in the line of duty, but for the superannuated. Our people have long held out against a civil pension list, but it is coming just as surely as event succeeds event. And if there is one thing that would bring it about in

all branches of the Government service, it would be the nationalization of the railways. Public opinion would compel the pensioning of men injured for life in a wreck, or by shifting cars, or in any other manner connected with their work; it would gradually compel the pensioning of those who on account of the disabilities incident to old age or by reason of the hardships incurred in the service could no longer serve the State, and if the railroad man were pensioned, then why not the postal clerk injured in a wreck, or the telegraph lineman injured while building a telegraph line? If pension for age be granted to one, why not to all the others?

Mr. Speaker, it is folly for anyone advocating the nationalization of the railroads of the United States to point to anything that any European country has done in that line. There is more railroad mileage in the United States by 40,000 miles than there is in all the countries in Europe put together. It is too much like comparing a giant with a pigmy. If our Government were to acquire the railroads it would be compelled to increase this mileage, not only by building into territory not yet provided with railroad service, but it would have to double track the many lines now only single. It would have to increase the railroad personnel, because public opinion would not be satisfied with an inadequate service such as is now found only too frequently. If it be objected that in Australia the problem of government ownership of railways has been undertaken fearlessly, I answer that the experiment of state socialism in that British colony has not been productive of such results as to warrant the people of the United States in imitating it. Listen to what Prof. Hugo Richard Meyer has to say about this:

Australia's lesson for the United States is the visible helplessness of the politician, the absolute inability of the politician to safeguard and to foster the long-run interests of the country in a community of which every class and every section has become demoralized and debauched through an extension of the functions of the government carried so far that every class and every section of the community has come to regard the state, not as the common judge between man and man, but as the great source from which flow material blessings. Australia's lesson is that the politician in charge of the state never will be permitted to become a business man; that politics can never be made business, but that a great deal of "business" can be imported into politics, and that in a community in which the politicians are absolutely clean handed.

I propose to show later on just what government ownership of railways has done for Australia. It will serve as an example which we shall do well not to follow.

At this point I shall invite your attention to some statistics from the Interstate Commerce Commission's "Statistics of Railways in the United States" for 1906, to show what sort of financial burden the people of this country would have to assume in the event of the nationalization of railways:

Mileage on June 30, 1906.....	224, 363
Total number of employees, including general officers and clerks.....	1, 521, 355
Compensation paid employees (including amount estimated for Southern Pacific).....	\$928, 331, 770
Stock, common and preferred.....	6, 803, 760, 093
Funded debt.....	7, 766, 661, 385
Total.....	14, 570, 421, 478

In this connection it is also proper to show the amount of taxes paid by the railroad companies to the States and municipalities during the fiscal year 1906, and to call attention to the fact that the States would lose this large sum if the Government owned the railways:

Alabama.....	\$862, 635
Arkansas.....	909, 916
California.....	1, 962, 675
Colorado.....	1, 421, 536
Connecticut.....	1, 241, 680
Delaware.....	103, 763
Florida.....	583, 738
Georgia.....	973, 759
Idaho.....	379, 488
Illinois.....	5, 364, 330
Indiana.....	3, 225, 391
Iowa.....	2, 146, 279
Kansas.....	2, 710, 285
Kentucky.....	1, 096, 530
Louisiana.....	883, 220
Ohio.....	4, 686, 549
Oregon.....	357, 731
Pennsylvania.....	6, 982, 973
Rhode Island.....	235, 013
South Carolina.....	528, 359
South Dakota.....	338, 003
Tennessee.....	920, 766
Texas.....	1, 417, 765
Utah.....	549, 395
Vermont.....	170, 230
Maine.....	513, 324
Maryland.....	842, 232
Massachusetts.....	3, 505, 312
Michigan.....	4, 584, 723
Minnesota.....	3, 074, 306

Mississippi	\$702, 073
Missouri	1, 642, 000
Montana	784, 725
Nebraska	1, 389, 174
Nevada	312, 033
New Hampshire	411, 104
New Jersey	2, 323, 282
New York	5, 540, 836
North Carolina	685, 914
North Dakota	991, 307
Virginia	1, 276, 957
Washington	1, 164, 352
West Virginia	622, 736
Wisconsin	2, 707, 201
Wyoming	205, 445
Arizona	232, 563
District of Columbia	42, 473
Indian Territory	34, 638
New Mexico	369, 565
Oklahoma	591, 292
Total	74, 602, 171

Yes; but some say these taxes would be saved, they would be saved in freight and passenger rates, and therefore the people could afford to pay that much more taxes. Some one says it is simply a question of taking money out of one pocket and putting it into the other. With this I do not agree at all. I do not agree that we could save the \$74,602,171 in freight and passenger rates in the first place; and if we could save this amount, or any amount, it would not be so simple a proposition as taking money out of one pocket and putting it into the other. If the problem of taxation could be so nicely adjusted that everybody would pay taxes in proportion to his ability—no more and no less—then we might concede that if the railroads were relieved of the burden of taxation that is now theirs, the burden would be borne by all alike. But such is not the case. Taxes are not so nicely adjusted. Citizens of one State when compared with citizens of another State are not taxed equitably. Citizens of one county when compared with the citizens of another county within the same State are not taxed exactly alike. Aye, you can go further, citizens within the same county, neighbors living side by side, by reason of the frailties of human laws and human enforcement of laws, are called upon to bear unequal burdens. Hence I say that if the people saved in freight and passenger rates the entire amount of the railroad taxes, which I do not concede at all, the burden of paying the railroad tax would fall unequally upon our citizens.

Now, let me make an illustration that is based upon exact conditions. In 1907, in Lincoln County, Idaho, the railroads paid \$6,060.50 out of \$98,314.38. In other words, the railroads paid nearly two-thirds of all the taxes for all the purposes for which taxes were collected. Can you imagine under Government ownership of railroads such a condition of affairs as would enable the people of one county to save in freight and passenger rates two-thirds of their county taxes in a single year—\$63,060.50? If you can, I can not; all that I can see is a county groaning under a weight of taxes three times as heavy as they are to-day upon every individual and concern except railroads. Aye, maybe the burden would be too great; maybe roads could not be constructed, bridges could not be built, schools could not be maintained. Maybe, indeed, the county would find itself unable to bear the burden of county government, under the new order of things, should the Government own the railroads. This is an illustration that is based upon actual conditions as they are in a county in my own State. Similar conditions exist elsewhere, and such illustrations as this furnish conclusive evidence that in the readjustment of matters under Government ownership the burden would fall on the very ones, possibly, least able to bear the tax.

Now let us look at the income of our railways for 1906:

Gross earnings from operation	\$2, 325, 765, 167
Less operating expenses	1, 536, 877, 271
Income from operation	788, 887, 896
Income from other sources	256, 639, 591
Total income	1, 045, 527, 487
Total deductions from income	660, 341, 159
Net income	385, 186, 328
Total dividends	272, 851, 567
Surplus from operation	112, 334, 761

A little while ago I pointed out the present railroad valuation. This enormous sum—\$14,570,421,478—is held by the people of this country as an investment. If the Government take over all the railroads, it must reimburse holders of these stocks and bonds, and in order to do so it would have to refund the total of railway obligations by bond issue of its own; in other words, it would need to pay for the roads with its bonds. It would thus have to create a debt four times as large as was the national debt at the close of the civil war. If these bonds, issued to the amount above named, would bear interest at 3 per cent—and it will hardly be contended that they could be

floated at a lower rate—the annual interest charge would be \$437,112,644. Compared with this our present debt of \$900,000,000, with its annual interest charge of something over \$23,000,000, sinks into insignificance. The interest alone on the proposed debt would equal almost one-half the total of our present national indebtedness.

There is not the least doubt in the world that the cost of operating the railroads would be greatly increased if they were owned by the Government, and thus the net income item in the table which I have presented would be greatly reduced. A few years ago I had occasion to take up with the secretary of the Smithsonian Institution the publication of a valuable scientific book written by Prof. John M. Aldrich, of the University of Idaho, which book the Institution had approved for publication because of its great merit. There were two ways by which the Institution could publish the work—one by private contract and the other by having it published upon the Government press. The publication of the work was awarded to private contract, and I was advised that it would have cost over \$7,000 to have brought out a like edition of the work on the Government press, while it cost but \$3,800 to do the same work by private contract. During recent years, whenever the Navy Department has been authorized in the construction of battle ships to build them either in the Government navy-yards or by private contract, the latter course has been adopted in every instance. Why? Simply because the ships can be constructed cheaper by private contract than when the Government does the work.

The very ship that Admiral Evans selected as his flagship—the *Connecticut*—in the memorable voyage of the American fleet around Cape Horn and to our Pacific coast is a sister ship to the *Louisiana*. They are alike in very minute detail, yet it cost the Government over \$300,000 more to build the *Connecticut* than it did to build the *Louisiana*. The *Connecticut* was built in the Government navy-yard, while the *Louisiana* was built by private contract. The Government, as a rule, pays more for the same service than does the private employer, while at the same time employing more persons to do a similar amount of work. It is safe to say that the number would be vastly increased in a very short time in every department of the railway service. More than this, regardless of the earning capacity of a dollar, the Government could with greatest difficulty reduce wages temporarily if it were found they were too high, or, on the other hand, increase them if they were found too low. We certainly could not give over to one man or to a few men the power to fix wages, and the inertia of a legislative body in a matter of this kind is impossible to comprehend. Added to this is the great problem that would present itself of trying to adjust wages in the various sections of the country upon the basis of local demand within each section. To-day the Post-Office Department is face to face with that problem and finds itself embarrassed in its endeavor to procure help in many Western sections of our country, because, under a clumsy general law, it can not pay wages commensurate with the demands of other occupations.

In a very able article on "Government ownership of railroads" in the January, 1902, number of *Annals of the American Academy of Political and Social Science*, Hon. Martin A. Knapp, president of the Interstate Commerce Commission, discussing both sides of the question, says:

Given the same efficiency of management, the same energy and economy of administration, the same basis of wages and salaries as obtained under private ownership, and a considerably smaller charge than is now paid per unit of service would be sufficient for financial solvency. But this assumes a state of things not likely to exist if the railroads were operated as a Government function. Any expectation to the country is not warranted by knowledge of what has generally characterized the various branches of Government service. Public ownership would doubtless mean higher wages and shorter hours of employment, adding materially to the cost of maintenance and operation. Upon this point it is often remarked that enormous salaries are paid to railway presidents and other officials, and that outlays of this sort would be stopped because no similar scale of compensation would be paid to Government officials performing like duties. This argument, however, is rather specious and is used mainly by those who have made no calculation to see how small a figure it cuts in dollars and cents. Without having made the computation, I venture to say that if all railway salaries above \$5,000 a year were discontinued the saving would not be appreciable in the price of a railway ticket or the cost of moving a hundred pounds of freight.

On the same subject Mr. Simon Sterne, in a paper entitled "The Relation of the Railroads to the State," read before the Wharton School of the University of Pennsylvania, in November, 1895, had this to say:

The practical result to which I desire to call your attention and to which my experience and study have lead me, is that we are diverted from any true and useful purpose in listening to the suggestions of ultimate ownership of the railways by the State; that the example of other countries which commenced to acquire, or, in the early history of their development, acquired such ownership, is of no avail to us because we are called upon to deal with a thing too vast for government control, and particularly too vast for the control of a Government like that of the United States, with no permanent bureaucracy, and with the whole scheme of government antagonistic to the ownership

or direct exploitation of any such enterprise. * * * We must never forget, in dealing with the railway interests, that its prosperity is necessary not only because it is by far the largest bag in which the past earnings and savings of our whole community are invested, but because we require its further development.

And Hugh Richard Meyer, already referred to, says:

No government that has undertaken to make railway rates, either by assuming government ownership or by exercising a thoroughgoing control over the rates made by railway companies, has been able to make railway rates in such a way as to conserve and promote the public welfare, if the test be the making of two blades of grass to grow where one has been growing. Restraint of competition and of trade, with failure to develop the resources of soil and of climate, everywhere has been the result of rate making by public authority.

Thus far, Mr. Speaker, I have endeavored in the main to present the purely political aspects of the question of Government ownership of railroads in this country. I shall now address myself to the economic phases of the subject. Not but that even here some matters of political import will be found giving cause for grave consideration, for the tentacles of Government ownership of railways are all embracing. One of the most delicate functions of railroad management is the extension of lines. These extensions must be determined by a great variety of conditions. No hard-and-fast rule can be laid down for this feature of railway administration. General, as well as local, conditions enter as factors. The activities of competing systems, as well as those of the company contemplating an extension, have to be taken into consideration. The traffic likely to be derived from the section to be affected by a mooted extension and its relation to the cost of building and operating the new line are important items to be considered. Because of all these facts the extension of railroad lines in the United States has proceeded upon generally sane principles. It is true there have been exceptions to this rule. There have been instances of needless duplication of lines, nearly or actually parallel, and necessarily somebody has been the sufferer thereby, but on the whole the work has been undertaken with due regard to true economic considerations.

It may well be doubted if Government ownership would correct the mistakes that have been made in this respect. Indeed, it is morally certain that the Government, as owner of railways, would be forced to commit other errors far more grave. On the one hand, there would be the danger of too great conservatism with the consequent failure to supply growing sections of the country with needed facilities. On the other hand, there would be the still greater danger of construction determined by political and sectional demands based upon necessities largely imaginary or at best artificial. We can not be at all sure that the development of our railway systems by the Government would be guided by needful wisdom and be fairly balanced as between the demands of localities and justice to the taxpaying public. Far more reasonable is the presumption that political pressure would play its baneful part in this case as it has done in so many others. Anyone at all familiar with the amount of logrolling that has characterized appropriations, for instance for rivers and harbors, prior to the present patriotic spirit which governs the Committee on Rivers and Harbors, will have no difficulty in seeing in his mind's eye what would happen if demands were coming in from various sections of the country for new railroads. Just as in the days gone by appropriations were made for the "improvement" of creeks that were so dry in summer that it was said "money had to be paid for sprinklers to lay the dust," just so might we expect the construction of railroads to suit the towering ambition of some conscienceless politician who might need to make "solid" a doubtful district.

Of even greater importance is the question of railway rates. Here enters the problem of the adjustment of conflicting interests of rival producing centers. The difficulty is made clear by the experience of those countries in which the State is the owner of the railroads. In these countries, as I shall show, the invariable result has been to transfer from the domain of business to the domain of politics the question of trade rivalry and jealousy. Under government ownership these sectional conflicts have become so fierce that the railways had to be partially paralyzed in order to prevent them from developing new producing regions, new markets, and new distributing points. I quote from H. R. Meyer's extremely instructive work, *Government Regulation of Railroad Rates*:

Under government ownership of railways in Prussia, the most enlightened and the most independent bureaucratic Government the world has known—such has been the paralysis of the railways under Government-made rates that the grain, timber, and beet-sugar producers of eastern Germany, as well as the iron and steel manufacturers of the Ruhr district, have had to resuscitate river and canal transportation, which, under the régime of private ownership of the railways had promised in Germany to go the way of the stagecoach as it has done in the United States. The present-day Germany, with its agriculture, its manufactures, and its trade, rests upon the waterways, not upon the railways, which the régime of Government-made railway rates has reduced to the subordinate position of feeders to the river and canal boats.

In Russia there is the same paralysis of the railways through trade jealousies, with the resulting recourse to transportation by river. For example, upon the opening of the Siberian Railway, in 1896, the landed interests of western Russia protested that they must not be exposed to competition from the wheat raised upon the cheap lands of Siberia. They succeeded in compelling the Government to place prohibitive charges upon the carriage of Siberian wheat, so that it has been impossible adequately to develop the enormous Siberian wheat resources. Wheat is exported from Siberia only in years of serious crop failures in the countries which ordinarily supply western Europe.

In Australia under government ownership trade jealousy forces each colony to refuse to cooperate with its neighbors in the promotion of trade and industry. The most important colonies—Victoria and New South Wales—still maintain separate gauges; they raise materially the rates of freight sent from one colony to the other, and New South Wales refuses to connect its railway lines in southwestern New South Wales with the Victorian lines, lest trade be diverted from Sydney to Melbourne. Australia still stands where the United States stood before the civil war, when the legislature of New York ordered that the State-aided Erie railroad begin at a point 25 miles from New York, lest Jersey City be benefited by the building of the road, and the State of Pennsylvania refused the Baltimore and Ohio permission to build to Pittsburg, lest the trade of that city be diverted in part from Philadelphia to Baltimore.

We need not flatter ourselves, Mr. Speaker, that we shall escape like troubles if we embark upon the uncertain sea of government ownership of railroads. On the contrary, we shall experience them in far greater measure, because our territory is so very much vaster than that of any of the countries referred to and our railroad interests so much more extensive. Again, let me emphasize the fact that the railroad mileage of this country to-day is between 230,000 and 240,000 miles; that this is seven times larger than the mileage of either Germany or Russia, eight times larger than that of France, nine and a half times as large as that of Austria-Hungary, nearly eleven times as large as that of Great Britain—which country, by the way, has had the good sense to steer entirely clear of the ignis fatuus of Government ownership of railroads—and twenty-three times as large as that of Italy, where Government ownership has just begun.

In our day the best railroad men in the nation continually study the problem of freight rates on different products from and to different sections of the country. What would be the outcome if the Government were to become the owner of railroads in the United States and the dictator of all matters relating to the operation of them? Were this to be realized, perhaps some future director of railways of the United States—or whatever his official title might be—would say, as did Von Miquel, Prussian minister of finance for ten years:

The system of government ownership of the railways will break down unless it shall prove possible to find refuge from the jealousies and conflicts of local and sectional interests behind the stone wall of hard and fast railway rates which admits of no exercise of discretion.

If ever we have such a hard and fast system of rates, fixed as we now fix the price of a postage stamp, we shall have shackled effectively our entire transportation system and put our magnificent commerce into a strait-jacket through the same agencies that have brought about such a state of affairs in Germany. These agencies are aptly described in a paragraph which I shall insert here and which is taken from an article in the *Railway Age* of July 17, 1903:

The direction of affairs was taken (in 1879) out of the hands of the captains of finance and industry, who did not know all the factors entering into the problems they were trying to solve, but had the distinctive insight that often served them as well as actual knowledge. The direction of affairs was put into the hands of men who had no better actual knowledge and lacked the intuitive insight of the man of action in the field of trade, industry, and finance. The direction of affairs was put into the hands of men whose inborn qualities of mind had made them turn not to trade, industry, and finance, but to the law to diplomacy, to the civil service, to teaching in universities, and politics. These men, who were not subject to any control from the forces which they were trying to regulate, because they stood outside of the field of activity in which those forces play, substituted in place of the instinctive knowledge and the compromises of the man of affairs in trade, industry, and finance certain theories of natural equalities and natural rights taken from an imaginary body of natural law and a speculative science of ethics. For the compromises of the world of trade effected under the free play of the forces of trade they substituted the compromises of the world of politics, a world in which there is not a free play of the forces of trade and industry, but in which some of those forces are handicapped and others are favored. The result was not surprising. For local discriminations which had been the outcome of the free play of the forces of trade and industry Germany got local discriminations which are the outcome of the mechanical enforcement of wooden theories of railway rates, forced upon the trade and industry of 56,000,000 people by a body of men who may be described as having been, in turn, immature, overconfident, and complacently ignorant.

Before leaving finally the question of railway rates as regards both passenger and freight traffic, I want to point out the fallacy of the oft-repeated assertion that with government ownership rates would be cheaper than they now are. I have already shown that the expense for operating the railroads would be far greater than under private ownership. I have already shown the tremendous item of interest expense on the bonded indebtedness that would need to be met. With no conceivable way of increasing the productiveness of the railroads—

for business during most of the past ten years has been congested on the American lines—and with greatly increased operating expenses, there can be no possible way by which the freight and passenger rates could be reduced. Not only is this the conclusion to which we must come by viewing the situation from within, but it is the conclusion we must reach by instituting a comparison between the rates of our own country and rates of those countries where the railroad business is handled by the government. Rates in our country are often unreasonable. Rates in our country are often higher than they should be, and in making comparisons I shall endeavor to use figures which approximate the average. Commodities are said to be high or cheap in proportion to their relation to wages or the earning capacity of a man.

The same is true of passenger and freight rates. If the earning capacity of a man in one country is \$2 per day, he can better afford to pay 3 cents per mile for traveling than can the man in a country where he can earn \$1 per day afford to pay 2 cents per mile for the traveling he may need to do. Rates in any country, I repeat, are high or are low when compared with the rates in other countries, only as they are high or are low when compared also with the earning capacity of a man in those countries. In the United States the rates for passenger traffic are higher in the West than they are in the East. In the West rates are as high as 4 or 5 cents per mile in some instances, while in the East and in "through traffic" rates are so low that the average passenger rate for the United States is 2.03 cents per mile. In Germany the rates, for the most part, are divided into four classes. The cheapest passenger transportation is one-half cent per mile, the next is 1 cent, followed by classes where 2 cents and 3 cents are charged and better accommodations afforded. The great bulk of travel comes in the 1-cent class and the last figures I had on the subject showed the average rate per mile as 1.03 cents. This figure can not be far wrong. We now have the approximate average for the United States as 2.03 cents and the approximate average for Germany as 1.03 cents. Now, let us look at the earning capacity in these two great countries. I present some figures on average wages which will prove of interest:

Wages per day.

	Locomotive engineer.	Fireman.	Conductor.
United States.....	\$4.18	\$3.47	\$4.72
Germany.....	.95	.56	1.83

Wages per hour.

	Carpenters.	Bricklayers.	Plumbers.
United States.....	\$0.3819	\$0.5013	\$0.4984
Germany.....	.1301	.1328	.1148

Common laborers.

	Per hour.
United States.....	\$0.1675
Germany.....	.0797

In the Government navy-yard and torpedo factory at Friedrichsort, Germany, wages for all mechanics range from about 81 cents to about \$1.35 per day; monthly wages for higher classes of workmen from about \$22.06 to about \$35.32. This is about one-third of the wages paid by the Government of the United States for similar services. It must be taken into consideration, of course, that in many instances the German Government provides free housing; that medical attendance is free; that there are certain other economic perquisites; and, more important than all, a pension either when the employee is disabled by accident or disqualified by advancing age, or for his widow if he dies. It must be borne in mind, however, that a very considerable proportion of the necessities of life is essentially higher in Germany than in the United States. Aside from the incidentals which I have mentioned, the figures show that the earning capacity of a man in the United States is from two to more than five times as great as the earning capacity of a man in Germany. In other words, measured by that standard, the German railway rates do not compare favorably with the rates within our own country, where the Government does not own but seeks to regulate and control the railway business.

This same comparison will apply with much the same result to other countries of Europe. When the comparison is made with the German railroads on freight rates instead of passenger rates the German road is put to a still greater disadvantage, because the freight rates per ton-mile are in excess of the freight rates per ton-mile in our own country, and this notwithstanding the great difference in wages. The conclusion,

then, that I come to in my analysis is that under Government ownership our rates for passenger and freight traffic would not be reduced, but would be materially increased.

In the final consideration of all things affecting the State, Mr. Speaker, who is the greatest sufferer? The taxpayer, of course. What government ownership of railroads has done for him is shown in Australia where state socialism has had large sway for more than half a century. In this respect that country may be regarded as a pattern, with bright lights in some places and dark spots in others. In examining conditions in that antipodean land, we should bear in mind that its public officials are generally credited with being the very reverse of grafters. Now, what do we find there? First, that the State railroads have been a heavy burden to the taxpayer. In 1898 the annual sums by which the railroads in Victoria had failed to earn the interest which the government had been obliged to pay on the money borrowed for the purpose of building railroads had aggregated \$49,000,000, a sum equivalent to 25 per cent of the cost of building the roads.

In New South Wales the deficit had aggregated \$44,500,000, equivalent to 23 per cent of the cost of construction. In recent years the people of Victoria have had to raise by taxation from three millions and a half to four millions and a half annually, to pay the interest not earned by the State's various business ventures; the taxpayers of New South Wales had to pay about \$2,500,000 a year and those of South Australia have had to pay \$5 for every man, woman, and child. (Railway Age, vol. 36, p. 280.) Now, the people of these States of Australia were thus burdened, because not only had the investments made by the government been misdirected and proved unprofitable, but because the railroads had been mismanaged; in other words, the men having them in hand did not understand their business. If similar mistakes had been made in private enterprises the losses would have been borne jointly by borrower and lender, but when the State errs in a business venture the taxpayer pays the bill. Thus, in the crisis of 1892, the business corporations of Australia having, two years before, borrowed something like \$575,000,000 in Great Britain, many of them went into receivers' hands and emerged five years later with \$150,000,000 adjusted off, and the interest rate reduced from 5 to 6 per cent to 3½ per cent. On the other hand the colonies, which had borrowed for various enterprises \$1,075,000,000 at a fraction over 4 per cent, could not take advantage of the bankruptcy courts, and thus there was no relief for the taxpayer.

The Australian people had another burden to bear besides that of the taxpayer: they were mulcted as producers. In 1880 it cost as much to ship wheat a distance of 400 miles in New South Wales as it cost to ship wheat from Chicago to Liverpool. And in a time of great agricultural and business depression—from 1892 to 1900—when the farmers had poor crops and low prices, the state railways actually maintained rates on all agricultural products and raised the rates on all other freight from 5 to 10 per cent. Surely the American people must consider this question well and we must be certain before attempting government ownership that we can do better than our Australian brothers.

Mr. Speaker, I can not forbear to quote the words of an Australian statesman, because they foreshadow what would be our experience if our Government were to acquire the ownership of railways. Sir Henry Wrixon, formerly attorney-general of Victoria, said in a spirit of sorrow:

The many functions undertaken by the Australian government, and the large measure of assistance that they render to districts out of the general revenue, enfeeble the position of the representative and impair the public spirit of the constituencies. Each locality naturally seeks to get as much as it can, and for this purpose wants rather an agent to look after its interests than a statesman to take care of those of the country at large. The representative is harassed by a divided duty. This I take to be the greatest impediment to statesmanship in our ranks, and the more socialistic government becomes the greater is the danger that Burke's prophetic fear may be realized and "national representation degrade into a confused and scuffling bustle of local agencies."

Mr. Speaker, from 1867 to 1880, we in the United States passed through an experience similar to the Australian experience of 1890 to 1900. It was just after the close of our great war, when we had borrowed huge sums in Europe. It embraces the crash of 1873 and the financial and industrial regeneration from 1876 to 1880. The history of those years is the wonder of the world. Had Government ownership of railroads existed in this country at that time we probably would have been in the same condition as Australia, and would have continued to suffer from the consequences even to this day.

The question of state ownership of railroads—only one phase, but an important one, of state socialism—is so widely ramified in its bearing upon the numerous economic and political activities of the nation that it can not be exhausted, nor

perhaps even adequately presented in the limited amount of time at my disposal. But I can not forbear to point out another result sure to grow out of such ownership, than which nothing more deplorable could befall our people. I refer to the withdrawal of private effort from the field of public endeavor. It is this activity of the private individual that has made our nation the marvel of the nineteenth century; it is this activity that will set the United States still further forward in every branch of human enterprise, if it be not fettered or impeded by undue interference on the part of the State.

It is difficult to even conjecture where the elimination of these private agencies from our commercial and industrial life would lead us. Opportunity furnished inducement to action. Opportunity caused the pioneers to make the wilderness blossom as the rose. Opportunity gave the stimulus to invention, and this in its turn impelled to ever new exertion the industrial forces of the country by supplying them with new weapons with which to attack old problems and new ones as well. What but opportunity was it that led men like Huntington and his contemporaries to span a continent from ocean to ocean with iron strands of commerce? What but opportunity is it that has caused the United States to undertake the building of the Panama Canal? There is no field of our national economic life in which opportunity has not been one of the great determining factors. My judgment is that government ownership of railroads, followed as it would be by the nationalizing of the business of the telegraph and express companies, would do much to stifle American genius and discourage American thrift.

What will be the consequences if by State ownership we force these nonofficial energies to withdraw from the scene of action where they have achieved such surpassing and far-reaching results? Are we warranted in believing that our experience would differ greatly from that of Australia? Is it not reasonable to assume that in proportion to the large volume of the interests affected the consequences would be even more disastrous? We need no State ownership to cope with the problem of public transportation in its relation to the economic life of our people. We have proved ourselves perfectly able so far to deal with it, and the good sense of our people may be relied upon to eradicate any evil threatening the general weal that has until now escaped the searching processes of rational remedial legislation. There can be no doubt that the railway has far outgrown the fondest dream of its first inventor. The giant locomotive of to-day weighs more than the puny engine of the days gone by, combined with the entire load of freight it drew. From the common roadbed that was used by other vehicles the road for the railway now is separate and apart—a firm roadbed and a track of steel.

Our country to-day is covered by a vast network upon which gigantic locomotives like vast shuttles, says Emerson, move backward and forward weaving the great mesh of American commerce. And with this changed condition there must come a corresponding change in the manner in which the railroad is viewed by the State. In early days competition was the great determining factor in the regulation of rates of freight and passenger traffic. So long as competition can have full sway it is a fair arbiter. But as conditions change, so year by year railroad systems assume greater and still greater magnitude, competition becomes eliminated, and something else must step in to take the place of competition. If then I bar Government ownership of our railway system, what, you ask, do I propose? Why, Government regulation. I believe in business matters due recognition and encouragement should be given to private effort. I also believe that with industries that have grown so great that they have lost largely their private nature and have become at least quasi public in character and where competition in the control of those industries has been largely eliminated, then I believe that the power of the Government should take the place of competition to the end that justice may be done the great masses of our people who need the service of that industry.

The railroad systems of our country occupy that position to-day. They occupy valuable assets that only the State can give. They have power to order condemned the private property that may lie across their way. They seize upon the most natural roadway and acquire the advantage of the best passage over mountain systems and navigable streams. In return for these and other concessions which the people make our people should insist that the railways grant to them good service at fair rates; and, in the absence of competition, this can be done by appropriate legislation, supported by intelligent and vigorous administration of the law. The laws which we have enacted may not embrace all that is good. Our laws may be imperfect, but if

they are, experience will teach us their defects, and patriotic statesmanship will find the remedy.

Let us not try the false delusion of Government ownership. Let us not run after strange gods. Longfellow's lines are as true to-day as when they were written—

Sail on, O Ship of State!
Sail on, O Union, strong and great!
Humanity, with all its fears,
With all the hopes of future years,
Is hanging, breathless, on thy fate!

We have accomplished much. We have other worlds to conquer in the universe of action. God forbid that we do aught on which the generations that may come after us would have the right to pronounce a curse.

Asiatic Exclusion.

SPEECH

OF

HON. EVERIS A. HAYES,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 27, 1908.

On the bill (H. R. 21871) to amend the national banking laws.

Mr. HAYES said:

Mr. SPEAKER: Extraordinary efforts have been made to pass the bill under consideration on account of the need, existing largely, I think, in the minds of some Members of the House, of providing for the issuing of emergency currency in times of panic or threatened panic. It is highly proper that this very important subject should be considered and such provisions enacted into the law as in the opinion of Congress might help to save the country from the dire results of such a panic as visited us last fall. As important as this matter of emergency currency is, in my opinion it is not more important than several other measures pending before Congress. The first session of the Sixtieth Congress is rapidly drawing to a close, but it should not end until full consideration has been given to several most important questions.

The first of these questions and the one of which I wish now to speak is that of Asiatic exclusion. It is of the greatest importance to the people of the West, as it is to the whole country, that adequate measures should at once be taken to stop the influx of Japanese and other Asiatic immigrants constantly coming to the Pacific coast.

Early in the session I introduced a bill (H. R. 246) which embraces with a single exception all the recommendations of the Commissioner-General of Immigration on the subject of exclusion, yet thus far I have not been able to induce the Committee on Foreign Affairs to report it. The bill is as follows: A bill (H. R. 246) to regulate the coming into and the residence within the United States of Chinese, Japanese, Koreans, Tartars, Malays, Afghans, East Indians, Lascars, Hindoos, and other persons of the Mongolian or Asiatic race, and persons of Chinese, Japanese, Korean, Tartar, Malayan, Afghan, East Indian, Hindoo, or other Mongolian extraction, and for other purposes.

Be it enacted, etc., That all laws now in force prohibiting or regulating the coming of Chinese persons and persons of Chinese descent into the territory of the United States be, and the same are hereby, made to apply to Japanese, Koreans, Tartars, Malays, Afghans, East Indians, Lascars, Hindoos, and all other persons of the Mongolian or Asiatic race, and all persons of Chinese, Japanese, Korean, Tartar, Malayan, Afghan, East Indian, Lascar, Hindoo, or other Mongolian extraction, with the same force and effect as to Chinese persons and persons of Chinese descent; and that whenever in such laws mention is made of the officers, territory, or government of China, or of the officers of the United States in China, such mention shall be deemed in the case of Japanese, Korean, Tartar, Malay, Afghan, East Indian, Lascar, or Hindoo persons, or other persons of the Mongolian or Asiatic race, to be mention of the officers, territory, or government of Japan or Korea, or other country, as the case may be.

SEC. 2. That it shall be the duty of all Chinese, Japanese, Korean, Tartar, Malayan, Afghan, East Indian, Lascar, and Hindoo persons, and all other persons of the Mongolian or Asiatic race, other than those engaged as teachers, students, merchants, bankers, professional men, or visitors traveling for curiosity or pleasure in the United States, to apply to such officers of the United States as may be designated in their respective districts for that purpose by the Commissioner-General of Immigration and Naturalization, with the approval of the Secretary of the Department of Commerce and Labor, within one year after the taking effect of this act, for a certificate of residence; and any Chinese, Japanese, Korean, Tartar, Malayan, Afghan, East Indian, Lascar, or Hindoo person, or other person of the Mongolian or Asiatic race, unless he is a teacher, student, merchant, banker, professional man, or a visitor traveling for curiosity or pleasure, who, after the expiration of said one year, shall be found within the United States without such certificate of residence shall be deemed to be unlawfully within the United States and shall be taken into custody upon the warrant of the Secretary of Commerce and Labor, and unless it shall be satis-

factorily established that the failure of such person to procure a certificate of residence as herein required during the said period of one year, as herein provided, by reason of accident, sickness, or other unavoidable cause, shall be deported upon the warrant of the Secretary of Commerce and Labor to the country of which he is a citizen or subject, at the expense of the United States.

Should it appear that said Chinese, Japanese, Korean, Tartar, Malayan, Afghan, East Indian, Lascar, or Hindoo person, or other person of the Mongolian or Asiatic race, had procured a certificate and such certificate has been lost or destroyed, he may be granted a duplicate thereof, and upon receipt of such duplicate he may be discharged: *Provided*, That no Chinese, Japanese, Korean, Tartar, Malayan, Afghan, East Indian, Lascar, or Hindoo person, or other person of the Mongolian or Asiatic race, who has been convicted in any court of the States or Territories or of the United States or of the District of Columbia of a felony, shall be permitted to register under the provisions of this act.

Certificates of residence issued under the provisions of this act shall be so prepared, under regulations of the Secretary of Commerce and Labor, as to prevent counterfeiting, and shall contain such descriptions of the persons to whom issued as will readily identify the holders thereof, including photographs of such holders, both full face and profile, upon a portion of which photographs shall be superimposed the seal of the Department of Commerce and Labor.

SEC. 3. That no certificate of residence other than a duplicate of one satisfactorily proved to have been lost or destroyed shall be issued under the provisions of this act after the expiration of one year from the date of the taking effect of this act.

SEC. 4. That nothing in this act or in any other law of the United States shall be construed to hinder, prevent, or restrict teachers, students, merchants, bankers, members of the learned professions, and travelers for curiosity or pleasure, under the requirements now enforced or that may hereafter be enacted, from entering the United States subject to such regulations as to the method of entry as are or may be lawfully provided. It shall be unlawful for any Chinese, Japanese, Korean, Tartar, Malayan, Afghan, East Indian, Lascar, or Hindoo person, or any other person of the Mongolian or Asiatic race, who shall hereafter enter the United States under the authorization herein granted, to work for gain as a laborer, and any person violating the provisions of this section shall be deported in the manner provided in section 2 of this act.

SEC. 5. That the term "student," wherever used in this act and in other acts or laws pertaining to Chinese, Japanese, Korean, Tartar, Malayan, Afghan, East Indian, Lascar, Hindoo, or Mongolian immigration shall be held to mean a person coming to the United States for the exclusive purpose of pursuing any branch of liberal education, religious, scientific, mechanical, literary, or artistic, for information, or to become fitted for some profession or occupation, and not as a means of livelihood in the United States, and for whose support and maintenance in the United States and his transportation therefrom, provision has been made satisfactory to the Commissioner-General of Immigration and Naturalization.

SEC. 6. That every Chinese, Japanese, Korean, Tartar, Malayan, Afghan, East Indian, Lascar, or Hindoo person, or other person of Mongolian or Asiatic race, or of Chinese, Japanese, Korean, Tartar, Malayan, Afghan, East Indian, Lascar, or other Mongolian extraction, who shall seek permission to land in the United States upon the ground that he is entitled to land because he is a teacher, a student, a merchant, a banker, or a member of one of the learned professions, and that he intends to pursue such avocation if allowed to enter the United States, or that he is a traveler for curiosity or pleasure, shall produce a certificate showing the permission of the government of which he is a subject or domiciled resident, which certificate shall be in the English language, and shall show such permission, and that the officer by whom such permission is granted has been duly designated by the government which he represents for that purpose, which certificate shall be duly viséed by the diplomatic or consular officer of the United States at the port or place from which the person named in such certificate is about to depart, to which certificate shall be attached a statement from an official of the United States designated by the Commissioner-General of Immigration and Naturalization for that purpose in the manner provided in the next succeeding section of this act, which statement shall give in detail the information prescribed in section 6 of the act of July 5, 1884, entitled "An act to amend an act entitled 'An act to execute certain treaty stipulations relating to Chinese,' approved May 6, 1882."

To the last-mentioned statement shall be attached an affidavit by said officer of the Department of Commerce and Labor of the United States to the effect that he has made a careful and thorough examination, and believes, after such examination, that the particulars stated in said statement are true in every respect.

The aforementioned certificate of such foreign government official, the statement of the United States official, and the affidavit of such official shall be upon a single sheet of paper, and there shall be fixed permanently to such paper a photographic likeness of the person who is the holder of such certificate, and the seal of the officer before whom oath is made to the affidavit shall be impressed partly over the edge of said photographic likeness: *Provided*, That in those foreign countries, other than the country of their nativity, in which Chinese, Japanese, Koreans, Tartars, Malays, Afghans, East Indians, Lascars, Hindoos, or other Mongolians or Asiatics of the exempt classes reside, the certificate of permission prescribed in this section may be granted by any consular officer of the country of which the applicant is a subject located in such foreign country, or in the absence of any such consular officer, by any consular officer of the United States: *And provided further*, That in any foreign country to which no official of the Department of Commerce and Labor has been sent, as herein provided, the examination and statement required by this act to be issued by such official may be issued by any diplomatic or consular officer of the United States residing in such country.

The certificate and attached statement required by this section shall be *prima facie* evidence, subject to identification of the person therein referred to and to his admissibility under the various acts regulating immigration into the United States, of the right of the holder thereof to enter the United States. But this certificate and statement shall be subject to examination of the immigration officers within the United States and to cancellation by such officers if found to have been fraudulently or improperly issued, and all questions arising under the provisions of this act shall be subject to appeal and review under such regulations as the Secretary of Commerce and Labor shall prescribe.

SEC. 7. That the Commissioner-General of Immigration and Naturalization, with the approval of the Secretary of Commerce and Labor, is hereby authorized and directed to appoint the necessary officers of the Immigration Service to be attached to the consulates at such ports of

embarkation in foreign countries as he may designate to carry out the provisions of this act, to fix their compensation, to adopt regulations for their government, and prescribe rules in reference to the examination of applicants for admission to the United States, and the issuance and delivery of certificates thereto as herein provided.

SEC. 8. That the Commissioner-General of Immigration and Naturalization, with the approval of the Secretary of Commerce and Labor, be, and he is hereby, authorized and empowered to make and from time to time to change, alter, or amend such rules and regulations, not in conflict with the provisions of this act, as he may deem necessary, proper, and convenient to carry into effect the provisions of this act.

SEC. 9. That this act shall take effect ninety days after its passage.

Mr. Speaker, until comparatively recent times, large movements of population were always preceded by conquering armies or galleys filled with fighting men. The invaders entered into forcible possession of the land of the despoiled people, either driving out the latter completely, or bringing them under subjection to the conquerors. Thus the barbarians came to possess Rome, the Angles and Saxons England, and the Norsemen Normandy. Thus, too, the Moors overran Spain and Portugal, the Tartars southern Russia in the thirteenth and fourteenth centuries, and the Turks southeastern Europe in the fifteenth century. In these modern days, however, when steam has so multiplied the means of travel, and war has so largely been displaced by the arts of peace, great movements of population from one part of the world to another always begin with the humble and inoffensive immigrant, who comes to the alien land to labor on public works, to till the soil, or to work in shop, mill, or factory.

He is followed by more of his fellows, and finally by mechanics, merchants, professional men, and ministers of religion, all in a gradual but never-ending stream, until the immigrants come to outnumber the native occupiers of the country. Thus within the last sixty years the Irish have come to possess Boston and the Germans Milwaukee, and thus in the last thirty years the Japanese have taken Hawaii. In all these conquests, ancient and modern, great changes are wrought in the character and habits of the people and in their religion and institutions. This is no less true of the peaceful conquest of Boston and Milwaukee than of the warlike conquest of England by the Saxons and Angles; no less true of the capture of Hawaii by the Japs, than of the taking of Russia by the Tartars, or of southeastern Europe by the Turks.

It will probably be generally admitted that where the invaders and the invaded, the alien and the native, have been of the same general racial stock the effects of these changes of population have been generally good; they have strengthened the nations where they have occurred and have added to the development and progress of the world. On the other hand, when the two peoples thus brought into contact are racially wholly different, nearly all students of the subject agree that the effects upon the people directly affected and upon the world are wholly bad. There certainly can be no question that wherever Orientals have exerted any large influence upon European or Caucasian civilization the effect has always been wholly blighting and deplorable. In the thirteenth century southern Russia was well in the van of European civilization, and its people had made much progress in the art of republican government, several of its large cities—Novgorod among them—being important members of the Hanseatic League. The Tartar invasions came and in less than two centuries left Russia what that great Empire has since remained, the most backward of all the European nations except Turkey.

Southeastern Europe for centuries had led the world in learning and civilization when, in the fifteenth century, the Turkish invasion came. Since then the darkness of ignorance, superstition, and barbarism has enveloped the country about the Bosphorus, and oriental servility, deceit, licentiousness, cruelty, and political corruption have not only ruled Turkey, they have blighted every surrounding state touched and contaminated by it. It was not the manner of the coming into Europe of the Tartar or the Turk, but the orientalism they brought with them that has wrought such deplorable results. As certainly as the incursions of Asiatics have stopped the progress and civilization of Europe, so certainly will their presence in sufficiently large numbers prevent the growth of American institutions and ideals in Hawaii and destroy them in the Pacific coast States of the Union.

With these lessons of mediæval and recent history before them, what wonder that the people of the Pacific coast States view with the greatest apprehension the coming to them of any considerable number of Asiatics. In the early eighties the constantly increasing number of Chinese arriving on the Pacific coast caused such a hue and cry from all classes of the people there that the country was forced to notice the great danger that menaced the West from incursions of these Asiatic hordes, and the Chinese-exclusion acts were the result. But for these exclusion laws there is no doubt that a very large percentage,

if not a majority, of the population of the Pacific coast States would to-day be oriental. In the last few years the number of Japanese immigrants to the country west of the Rocky Mountains has been rapidly increasing, the number last year exceeding 40,000, and, as in the case of the Chinese twenty-five years ago, recently a large majority of the people of the Pacific coast have become alarmed and are demanding that something be done to save them from the danger of oriental contamination and ultimate submergence.

The State Department has for nearly two years been negotiating with Japan with the purpose of putting a stop by international agreement to the coming to this country of Japanese laborers, as yet apparently with little success. Before this matter has been settled a new Asiatic menace is already appearing on the Pacific slope in the shape of quite large numbers of Hindoo immigrants. All who know the character and habits of these people agree that they are not a desirable element to add to our population, aside from the fact that they belong to a totally alien race.

As the above brief outline of the history of the exclusion movement would indicate, it is not to the Chinese or the Japanese or the Hindoos as a nation or a race that the people of the Pacific coast object. The problem to them is not the Chinese or the Japanese or the Hindoo problem. It is the problem of oriental immigration; how to prevent the Asiatic hordes from gradually overwhelming them, at first taking the work from the American laborer, but finally coming to monopolize first one line of business and then another, and buying land and homes and eventually possessing the country. Already in some parts of California this process is well advanced. In several places the Japanese not only do nearly all the work, but they own or lease a majority of the farms and homes.

THE INDUSTRIAL ASPECT OF THE SUBJECT.

In discussing this subject appeals to selfish and commercial considerations are too much resorted to, and yet these considerations are important and should not be ignored. On the one hand the laboring man claims that when he comes in competition with Asiatic labor, which is the cheapest in the world, he finds his wages reduced, the opportunities for employment diminished and finally, if the competition becomes fierce enough, he is driven from the field entirely. All this is true. Accustomed in his native country to sleeping on a board in very small quarters, and to a meager diet, chiefly of crushed barley or rice, the Asiatic can live so cheaply that no white laborer can hope to compete with him in the cost of living, and most right-thinking men agree that it is not best that the white laborer should be forced or expected to compete with him in this regard. Besides, the Asiatic has usually no family to support and no children to educate. As a result of these conditions, whenever Asiatic laborers invade any field, they soon come to monopolize the farm and other common labor, and the white man is driven out entirely. This is the case in the fruit orchards of Vacaville, Cal., largely in the raisin vineyards of Fresno, and wholly so in the berry fields and apple orchards of Santa Cruz County and the seed farms of Santa Clara County. It is rapidly becoming true in the fruit orchards of the latter county, as well as other places in California. So disastrous to the white labor of California has this Asiatic competition become that within the past year soup houses have been opened in San Francisco, Los Angeles, Oakland, and other cities of California to feed the unemployed white laborer, and many of this class have left the country within the last few years and no new white farm or common laborers have been going there.

On the other hand, it is claimed by some employers of labor that oriental labor is absolutely necessary to the development, even to the existence, of our industries on the Pacific coast, and that only with this labor can they resist the despotic and unreasonable demands of the labor unions. None of this is true. Farm and common labor has never been excessively high on the Pacific coast, and as yet the Asiatic laborer there has not entered the mechanical trades to any extent. It is in these occupations that the high wages are paid, and of course as he is not fitted by having learned these trades to engage much in them, his presence has in no way affected the labor union situation. That he may come to affect the situation in the future is freely admitted.

If it were true that our Pacific coast industries can not be developed without oriental labor, it were better that they never should be developed than that our white laborers should be degraded or driven out by contact with Orientals. It is the stock argument of the selfish who wish to add to their profits by bringing in cheap labor that unless they can get it they can not keep on with their business. The American slave buyer of the last century satisfied his conscience and answered the ob-

jections of the opponents of the traffic in human flesh by the same kind of arguments. He loudly proclaimed that without the slave trade he could not procure his house servants and cultivate his cotton fields. We still have the race problem which his selfishness imported, the ultimate solution of which no man can see. And we shall import into the Pacific coast another and a worse race problem than the South has to solve unless the result is prevented by wise and patriotic legislation.

But it is not true that oriental labor is necessary for the development of the Pacific coast. Of course if the Oriental is allowed to go there freely, the white laborer, knowing that he can not compete with him, will not go there. It would be foolish to expect him to do so. But if you keep out the Oriental, there is no possible reason why white labor should not be as cheap and as plenty there as in any other place in the United States. The natural conditions for working out or in doors the year through are as nearly ideal on the Pacific coast as anywhere in the world. Keep out the Oriental and let the employer make the conditions of employment as favorable as in other parts of the country, and there will be no trouble about getting all the white labor that is needed. The writer, himself a large employer of labor in California, has never employed any oriental labor, and knows from his own experience that this is true.

THE PROBLEM FROM A RACIAL AND ETHNOLOGICAL STANDPOINT.

There is the very highest authority for asserting that "God hath made of one blood all the nations of the earth," and the same high authority tells us that it is a good and pleasant thing for brethren to dwell together in unity. The time may come in the development of the race when all men will look upon representatives of another race as brothers, and be able to live with them in peace and harmony. But that time is not yet. History presents not a single example of two peoples racially wholly different living together in peace unless they amalgamated or one became subject to the other. All thinking Americans who have studied the subject are agreed that amalgamation of the white and Asiatic races on the Pacific is unthinkable. What strength or grace of body or mind not already possessed by our people could these 'totally dissimilar races bring to us? The answer must be, "None." They are certainly much inferior to us physically, and there is the very highest authority for claiming that such assimilation would bring only evil. Herbert Spencer, the greatest biologist, living or dead, in his famous letter to Baron Kaneko Kentara, used these words:

To your remaining question respecting the intermarriage of foreigners and Japanese, which you say is "now very much agitated among our scholars and politicians," and which you say is "one of the most difficult problems," my reply is that, as rationally answered, there is no difficulty at all. *It should be positively forbidden.* It is not at root a question of social philosophy. It is at root a question of biology. There is abundant proof, alike furnished by the intermarriage of human races and by the interbreeding of animals, that when the varieties mingled diverge beyond a certain slight degree the result is inevitably a bad one in the long run. I have myself been in the habit of looking at the evidence bearing on this matter for many years past, and my conviction is based on numerous facts derived from numerous sources. This conviction I have within the last half hour verified, for I happened to be staying in the country with a gentleman who is well known and has had much experience respecting the interbreeding of cattle, and he has just, on inquiry, fully confirmed my belief that when, say, of the different varieties of sheep, there is an interbreeding of those which are widely unlike the result, especially in the second generation, is a bad one; there arises an incalculable mixture of traits and what may be called a "chaotic constitution." And the same thing happens among human beings: the Eurasians in India, the half-breed in America show this. The physiological basis of this experience appears to be that any one variety of creature in course of many generations acquires a certain constitutional adaptation to its peculiar form of life, and every other variety similarly acquires its own special adaption. The consequence is that if you mix the constitutions of too widely divergent varieties which have severally become adapted to widely divergent modes of life, you get a constitution which is adapted to the mode of life of neither—a constitution which will not work properly because it is not fitted for any set of conditions whatever. *By all means therefore peremptorily interdict marriages of Japanese with foreigners.*

I have for the reasons indicated entirely approved of the regulations which have been established in America for restraining Chinese immigration, and had I the power I would restrict them to the smallest possible amount, my reasons for this decision being that one of two things must happen. If the Chinese are allowed to settle extensively in America they must either, if they remain nonmixed, form a subjective race standing in the position, if not of slaves, yet of a class approaching slaves; or, if they mix, they must form a bad hybrid. In either case, supposing the immigration to be large, immense social mischief must arise and eventually social disorganization. The same thing would happen if there should be any considerable mixture of European or American races with the Japanese.

I also quote from another high authority—Pouchet. He says:

If we have endeavored to prove that the hybrids of distant races do not possess all the necessary conditions of animal life and of propagation, it would be easy to find numerous proofs in order to show that generally the intellectual conditions of hybrids are not much more satisfactory than their physical condition.

Doctor Tschudi says, in speaking of the Zambos (hybrids from the aborigines and negroes at Lima):

As men they are greatly inferior to the purer races, and as members of society they are the worst class of citizens. They alone furnish four-fifths of the criminals in the prisons of Lima.

Mr. E. G. Squier has made the same observation about the Sambos of Nicaragua. In his part of the country the union of Spaniards with these same Americans seem to have only produced degenerate men, who show no capacity whatsoever for perfection.

According to these scientific lights, then, there are already too many human mongrels in the world. Why should the United States consent to add to the stock by permitting a possible mixture of totally different races in the States on the Pacific slope?

And what shall we say of the possibility of the Asiatic on the Pacific coast, living in subjection to the Caucasian? The nature of some of the Asiatics—for example, the Japanese—renders this an impossibility. But if it were possible our experience with the race problem of the South ought to make every American shudder at the thought. If the negro population of the South numbered only 150,000 to-day, in the light of our experience what thinking American would welcome the coming from Africa of hundreds of thousands—of millions—of fresh immigrants until we have the race problem of the South of this day? Could history but turn back two hundred years what American would not make this part of it different from what it is? Why, then, should we not thrust aside every commercial consideration and insist that upon the people of the Pacific coast shall not be placed the burden of another race problem for them and their children to grapple with and try to solve? This can only be done by keeping the Asiatic laborers, whether Chinese, Japanese, Korean, or Hindoo, from coming to our shores. It is not necessary to give serious attention to the other classes of Asiatics. The laborer, being the base of the commercial structure, brings all the other elements with him. Exclude him and no large immigration is possible. Ten years ago, before the "Japanese question" became acute, this exclusion could have been accomplished much more easily than it can be to-day; to-day much more easily than ten years from to-day. "Now is the accepted time of the Lord; to-day is the day of salvation."

METHOD OF EXCLUSION.

Whether or not we shall exclude Asiatic immigrants from this country is in no sense an international question, but a purely domestic matter. Every nation in the world claims and exercises the right to determine what aliens shall be permitted to enter its borders and under what conditions they shall be allowed to come. We exercise this right whenever we reject and send back to the country whence they came the immigrants from Europe as Japan exercised it when a few months ago she deported some 300 Chinese laborers who had come into Japan to work for a contractor. To permit any foreign power, by agreement with such power or otherwise, to determine for us which of her subjects shall be allowed to enter our borders is opposed to the practice of every nation not too weak to assert its rights and is repugnant to every sense of national propriety and dignity. Besides, our experience in trying to exclude Japanese laborers by agreement with Japan ought by this time to have convinced us that any attempt to exclude oriental laborers by international treaty or agreement will prove wholly ineffectual. Two years ago our Government began negotiations with Japan to secure such exclusion. In February, 1907, it was understood that assurances had been given by Japan that she would issue no more passports to laborers to come to the mainland of the United States, and the President, being authorized under our immigration laws to do so, issued his Executive order that no Japanese laborers should be allowed to come from our island possessions to the mainland.

Notwithstanding this assurance of Japan, in 1907 more than 30,000 Japanese, practically all laborers, came directly from Japan to this country and all with passports. In addition, more than 10,000 more came over the borders from Mexico and Canada, many of them coming from Hawaii to those countries and thence to the United States, thus evading the President's Executive order above referred to. The largest number of Japanese coming to this country in any one year prior to 1907 was less than 20,000. It would seem, therefore, that the only effect of these international negotiations, the assurances of Japan and the President's Executive order, has been to more than double the immigration from Japan to this country.

Last fall much publicity was given to the fact that Japan had formulated new and rigorous regulations which were to prevent the immigration of her laborers to this country. The people of the Pacific coast, knowing the Oriental character, entertained suspicions that these new regulations were solely intended to prevent exclusion legislation at the present session of the United States Congress. That these suspicions were well

founded is proved by the fact that in spite of these regulations, in the month of January, 1908, 1,419 Japanese landed in this country with passports direct from Japan, and in the month of February, 1908, 1,232 Japanese with passports came. The figures for March and April, 1908, are 1,202 and 938, respectively. This takes no account of those Japanese who have come over the borders from Mexico and Canada, from which countries the incursions continue as they did last year.

While there has been a large falling off in the immigration from Japan thus far this year as compared with 1907, the proportionate falling off is not as great as in the immigration from European countries. All of which goes to show that if we desire to exclude oriental coolies—Chinese, Japanese, Korean, or Hindoo—the only effectual, dignified, and proper manner of doing it is by an exclusion statute which shall be enforced by our own officers instead of turning the constitutional lawmaking power of Congress over to the Japanese or any other government and trusting them to legislate for us upon this all-important subject of oriental immigration and relying upon their officers to execute laws or regulations the vigorous enforcement of which is manifestly not for the interest of these oriental countries.

The people of California have a deep-seated and abiding conviction that nothing short of an exclusion statute along the lines of the Chinese exclusion act will stop or even much check the tide of oriental immigration that has set in from Asia to our Pacific coast. In the absence of this statute they believe that this immigration will go on without much reference to business conditions in this country, and in comparatively few years the Pacific coast States, like Hawaii, will become little more than an oriental colony.

Naval Appropriation Bill.

SPEECH

OF

HON. WILLIAM E. HUMPHREY,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

On the bill (H. R. 20471) making appropriations for the naval service for the fiscal year ending June 30, 1909, and for other purposes.

Mr. HUMPHREY of Washington said:

Mr. SPEAKER: When the naval bill was under consideration I contended that the submarine boats that were intended for the Pacific Ocean should be built on that ocean. Since then I have given the matter further investigation. I am satisfied that if these vessels are not built on the Pacific they will never be taken there.

It is not a question of whether these vessels can be built more cheaply on the Atlantic Ocean than on the Pacific. The question is, Shall any of these vessels be used on the Pacific? Upon this question I shall insert in the RECORD a letter written by Mr. F. W. Hibbs, of Seattle, Wash., to the Secretary of the Navy. As I have heretofore stated to the House, Mr. Hibbs built the battle ship *Nebraska*, and is one of the foremost naval authorities on construction in the United States:

WASHINGTON, D. C., May 26, 1908.

The honorable the SECRETARY OF THE NAVY,
Navy Department, Washington, D. C.

SIR: On behalf of the Moran Company, shipbuilders of Seattle, Wash., I have the honor to request your careful consideration of the following representations, in connection with the award of available contracts for submarine torpedo boats.

The appropriation of the Sixtieth Congress for increase of the Navy, includes an item of eight submarine torpedo boats (total cost not to exceed \$3,500,000) and gives to the Secretary of the Navy entire authority as regards the expenditure thereof.

From the Secretary's report for 1907 and from the attitude of the Department as expressed in other public records, it has appeared to the Moran Company that contracts for six or seven of these vessels would very probably be made without delay; and it is their desire to bring to your attention considerations which, in their opinion, would strongly justify the award of that number of these contracts for construction upon the Pacific coast.

At the present time, out of a total of eighteen submarines, but two have been built upon the Pacific coast and stationed there. Not only is this a striking disparity, irrespective of the needs of the case, but the Pacific coast is also inadequately protected otherwise. The comparatively few harbors on that coast, increasing the importance of the protection of each from both invasion and blockade; the incompleteness and insufficiency of the land defenses, the time and cost involved in their development, and the peculiar difficulties in the way of the use of mines, are all conditions which demand immediate attention and which can best be met by the submarine torpedo boat as being at once expeditious, effective, and economical.

So far as Puget Sound is concerned, it is questionable whether it would ever be practicable to provide adequate defenses in any other

way. The soundings are deep, the rise and fall of the tide is great, the entrance is very wide, by-passages are numerous, fogs are frequent, and its waters wash a foreign shore; yet there are five important American cities, a navy-yard, dry docks, shipyards, and terminals from five transcontinental railroads, for the protection of which, to rely upon the land defenses now existing, or to expect to provide adequate defenses of that character within reasonable limits, would be hopeless.

It is not necessary to call attention to the urgent demand which has come from the people of the Pacific coast for immediate steps to improve these conditions by maintaining in their important seaports submarine torpedo boats in sufficient force to equal at least that already provided for the protection of the Atlantic coast; they are needed for the general defense of the country and are needed at once.

Practical considerations, however, tend to the belief that unless more of these vessels are built upon the Pacific coast they will never get there; the expense and risk of transporting them by sea will always constitute an obstacle except in case of emergency—and then it will be too late.

In a report of the Secretary of the Navy to the President of the Senate, in reply to an inquiry as to the cost of submarines for service on Puget Sound and at Grays Harbor, it was stated that these vessels could be most expeditiously constructed by having them built or assembled on Puget Sound.

The alternative of building them "knocked down" in the East, transporting them by rail, and finally assembling them in one of the Pacific coast yards involves so much extra cost and delay that it can not be brought into comparison with any other method; the extra cost alone would be double that due to constructing them on the Pacific coast.

To bring them around by sea under their own power in charge of a convoy, besides presenting many difficulties as to details, is seriously to be questioned on account of the great amount of wear and tear to their machinery, equipment, and apparatus, with the possibility of the injury and destruction of the same, and on account of the extreme and imprudent risk to both vessels and crews on so long a voyage.

It is admitted to be the only practicable method of transportation, one that would cost less and that would be attended with much less risk, to seal them up and tow them "dead;" and it is this method of transportation that has been considered in the following comparison.

FIRST, AS TO THE COST.

The increased cost of building these boats on the Pacific coast is estimated at about 12½ per cent for the average case, depending upon the number to be built at one time.

Other items, having to do with the special character of these vessels, their construction and tests (requiring expert supervision throughout) are concerned in the increased cost, over and above that due to labor and materials only.

The cost of towing from the Atlantic to the Pacific is necessarily an item of their initial cost, for the submarine is not a cruiser and will remain upon the Pacific; in other words, what has to be considered is the cost of the vessel delivered in the same condition and in the same place as if built there.

This item of transportation carefully estimated, and the principal figures of which have been authoritatively obtained, is as follows:

1. Preparation for the voyage, \$2,500.
- Machinery, fittings, and equipment "placed in ordinary."
- Loose equipment boxed.
- Docking and painting.
- Propellers and rudders removed.
- Fenders provided around stern frame, torpedo port, and elsewhere.
- Jury rudder fitted.
- Two jury signal masts with balls or shapes.
- Tanks and all piping cleared.
- Storage battery emptied.
- Preventer towing arrangement provided.
- Torpedoes and attachments removed.
- Vessel placed in best trim for towing.
2. Towing, \$25,000.
- The tug or vessel towing to have a steam-towing machine, electric plant, and wrecking pump.
3. Crew, wages, and subsistence, \$4,200.
- Experts and stand-by men only; tug's crew not included.
4. Miscellaneous small repairs and preservation en route, \$1,000.
- Not including damages that would be covered by insurance.
5. Port charges, pilotage, and incidentals, \$1,000.
6. Docking and painting after arrival, \$500.
- After such a voyage it would be necessary to dock the vessel for examination for possible injuries and to paint the hull all over outside for preservation. There would not be a corresponding item in the case of the boat built upon the Pacific coast.
7. Removal of special fittings, overhauling machinery, shipping rudders and propellers, installing equipment and torpedoes, \$1,500.
8. Refilling and testing cells of storage battery, \$2,000.
9. Returning crew to east coast, \$800.
10. Returning tug to east coast, \$12,500.
- It is not probable that business could be found for the tug on the way back to carry this item for either a mercantile or naval vessel.
- It may also be said in regard to the towing vessel that, although in a single case a Government vessel might be available at a suitable time bound for the Pacific on her regular duty, yet in the typical or average case considered here such a coincidence could not be properly assumed.
11. Insurance or valuation of risk, \$18,000.
- It is probable that no marine insurance company would care to assume the risk of these vessels on so long a tow; it is also probable that no Eastern contractor would undertake to deliver them on the Pacific coast; at the same time the risk exists, and has a value which should form an item of cost, as there is no corresponding item against the vessel built on the Pacific coast.
- The insurance on the tug has been included in the charges for her services, as the ordinary policy would not cover such a voyage.
- The total of these estimates is \$69,000, which is so far in excess of the increased cost of the boat built upon the Pacific coast that there is no comparison between the two; in fact the question of insurance or valuation of risk could be omitted altogether and still leave no ground for doubt.

SECOND, AS TO RISK.

An approximation to the value of the commercial risk has been made in the foregoing estimate, such as a contractor, for instance, would have to cover in case he was delivering a boat on the Pacific coast. As a matter of fact, however, the Government will not insure the boat, nor is its value to the Government represented by its cost, for it could not be replaced within a year; and while there may be no question that

it would be possible if necessary to get it around, it is not worth even assuming the risk of doing so, setting aside the question of cost, when it is possible to build the boat close to the locality in which it is to be stationed.

THIRD, AS TO DELAY.

Here again, in the case of a mercantile vessel, would be an item of loss upon which a definite value would have to be placed in completing the comparison, and while it is impossible to account for it in this way in this case, it is an important consideration.

Practically there is no reason why the Pacific coast yards should not complete these vessels in about the same time as the Eastern yards, and although there is no similar case to be mentioned in point, it would probably delay delivery about three months to make the voyage to the Pacific. Speed would not necessarily be the governing feature; the time waiting for a tug—which might amount to several months—the special preparation, the loss of time on the way, and the overhauling afterwards would all contribute to the delay and, in addition, there would be the probability of having to wait for a favorable time of the year or for favorable weather here and there in order to minimize the risk from other causes.

FOURTH, AS TO FACILITIES FOR REPAIRS.

In the case of vessels such as these, which would seldom be called upon for service far distant from their base, there is a distinct advantage in having them built in proximity thereto, on account of the facility with which repairs can be made or injured parts duplicated if necessary; and above all on account of the familiarity with the work, and the tools and patterns used in the original construction.

The loss of at least a month and possibly of two months or even more, as frequently happens, to secure duplicate parts from the East might be of the utmost importance, and is particularly liable to occur with such vessels, which, though themselves standardized, call for special methods of work, a special class of workmanship, and special tools and materials.

Very respectfully,

FRANK W. HIBBS.

Immigration Laws of the United States.

SPEECH

OF

HON. W. S. HAMMOND,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. HAMMOND said:

Mr. SPEAKER: During the present session of Congress there has been some discussion of the immigration laws of the United States and of the character of the immigrants coming here. It is undoubtedly true that some of these immigrants have failed to appreciate the virtues of our free institutions and our republican form of government, and sometimes we are led to doubt the wisdom of opening our doors to the people of other lands because a few of them seem unwilling to obey our laws and cultivate the spirit of true Americanism; but, on the other hand, great numbers of them come here to make America their home and to take up the duties and responsibilities of American citizens with the purpose of discharging those duties and responsibilities as good citizens should discharge them. Many of the illustrious men of our country, who have done much to help us solve our great social and civic problems, were immigrants or the sons of immigrants.

The governor of the State of Minnesota is the son of Swedish immigrants, who settled in the great Northwest and made a home there, and under the leave to print I desire to place in the RECORD the words spoken by this self-made man at the dedication of the Minnesota monument on Shiloh battlefield, with the hope that his patriotic address, as well as his pure life and splendid character, may serve as an inspiration to those who come from over the seas to live in our midst and to help make stronger and better our American citizenship:

ADDRESS OF GOVERNOR JOHN A. JOHNSON, DEDICATING THE MINNESOTA MONUMENT ON SHILOH BATTLEFIELD, FRIDAY, APRIL 10, 1908.

Representing the people of the Commonwealth of Minnesota, we are assembled on one of the historic battlefields of the civil war to pay our tribute of respect and affection to the memory of the sons of Minnesota who here yielded up their lives that this might continue to be a united nation. Their sacrifice was not for personal gain, but was in response to duty, and a contribution to the civilization of the age, and for the purpose of perpetuating the institution of human liberty.

I appreciate that nothing which I can say will add to or detract from the glory of their achievement, which in itself is an enduring monument to the patriotism and the heroism of the American soldier. Their sacrifice, however, was not different from that which has been made throughout all of the ages by those lovers of liberty who believed in a government which might give to all the people the right to life, liberty, and property. The love of liberty was not born in this country of ours; it was cradled along the Danube and about the shores of the Baltic, even when Rome had reached the limit of her imperial grandeur. Increasing in intensity with the passing of the centuries, it found its highest expression in the older countries in the great English charter of civil rights, which forever guaranteed to the people of that land immunity from the despotism of those who claimed to rule by virtue of Divine right. From the beginning of civilization man has ever struggled against the despotic power of the strong, and has never hesitated to mix his blood with the soil of his land when by this

offering he might leave to his posterity and those dear to him a legacy of freedom; and while the immediate result has not always been the triumph of the right, none of the great battles of history could have been fought unless there had been upon one side or the other those who were willing to sacrifice their own lives for the common good and for the permanent establishment of those principles of liberty which men have ever cherished.

One hundred and thirty-two years ago the great contest of humanity was transferred from the Old World to the New, and here, because of the isolation of this country, because of the high character of the men who espoused the cause of liberty, and because of the signal victory achieved by them in that struggle, an opportunity was afforded to crystallize into written law the aspirations of the patriots of all the ages. The men who built the foundations of this Government were those who had submitted to the supreme test of patriotism, for those who inspired the Constitution of the United States were the same who had pledged their lives, their properties, and their sacred honor to the cause of independence.

THE AMERICAN SCHEME OF GOVERNMENT.

The scheme of government devised by our forefathers was adopted after most mature deliberation and after the fullest investigation, and only when they were satisfied that in the distribution of the powers of government the rights of the people would be respected. It was founded upon the theory that the right exists in the people to make, alter, and modify their form of government, and to this end the several States in Constitutional Convention agreed upon and adopted a Constitution which was the foundation upon which this Nation rests. But, as Washington said, "The Constitution which at any time exists, till changed by an explicit and authentic act of the whole people, is sacredly obligatory upon all. The further heritage of the power and right of a people to establish a government presupposes the duty of every individual to obey the established government."

The original sovereign States, which, through their representatives in 1787, united to form a Federal Government for certain specified purposes, were careful to have those powers which were delegated to it expressed in the Constitution then agreed upon.

While the primary object of a written constitution is to define governmental powers and to limit governmental departments, the overwhelming necessity for such an instrument is to prevent insidious encroachments upon the rights of the individual citizen, both from those in office and from those who by reason of their wealth and power have an influence far greater than that possessed by the average citizen. And so the Constitution of the United States was regarded by its framers as an instrument of the most sacred import, an alteration of which could only be made by the people themselves, in whom all ultimate power is vested, and then only after the fullest discussion and widest publicity.

Under the beneficent Government so established the Nation has prospered and the people are happy. One great cloud came upon the Nation in the form of an awful civil war, in which two sections of the country were in conflict with each other. The heroes who rest here gave their lives that this Nation might be maintained as it came from our forefathers. On another battlefield of that war Abraham Lincoln said: "It is for us, the living, rather, to be dedicated to the unfinished work they have thus far so nobly carried on. It is rather for us to be here dedicated to the great task remaining before us; that from these honored dead we take increased devotion for that cause for which they here gave the last full measure of devotion; that we highly resolve that these dead shall not have died in vain; that the Nation shall, under God, have a new birth of freedom, and that the Government of the people, by the people, for the people shall not perish from the earth."

DEMOCRACY V. BUREAUCRACY.

Shall we not to-day consecrate ourselves for the further perpetuation of the principles of American liberty and a constitutional form of government purchased at the cost of the blood of patriots? In this hour when there seems to be a disposition to depart from the established forms, when there seems to be a desire upon the part of those in authority to abide in a central bureaucracy rather than in a representative democracy, it becomes you and me to protest against any departure whatsoever from the Government which came to us from the Constitutional Convention of 1787 and those amendments which have been made to it by the specific will of the people.

Our concern is not of the past, nor wholly with the present, but much with the future. If the destiny of the Republic is in the hands of the American of to-day, then it becomes him to be guided and governed only by patriotic impulse and the desire to do that which will most largely contribute to the permanency of republican institutions. Advancing our civilization so that we will not, by recognizing the false claims of selfish interests and forgetting the American maxim that our object should be to attain the greatest good for the greatest number, incur the penalty which other peoples have paid, rather let us hold ever in mind that those who framed our Government believed in the equality of the people and that the chief aim of government is to maintain that equality.

Under our system of government the Nation has reached a material development hitherto unknown. The people have prospered beyond the dreams of those who lived a century ago. But with the development of the country and changes in economic conditions, and particularly with the growth of great private corporations, performing many of the functions of government, has come the necessity for the exercise of strict government control and a rigid enforcement of all the laws enacted to restrain the rich and powerful from encroaching upon the natural and legal rights of the poor and weak.

The marvelous foresight of the fathers of this country in framing the Constitution of the United States is shown by the fact that in spite of all the changes which have occurred in industrial and economic conditions, in spite of the unexpected expansion of the country, the Constitution has been found sufficiently flexible to meet every emergency which has arisen. Let us remember this, for the danger of to-day is that the American people may be lulled into a false security, and, yielding to the demands of selfish interests, permit the breaking down of constitutional provisions, under which the American people have attained this wonderful degree of material prosperity and have yet maintained the individual liberty of the citizen.

The constitution of the ancient Republic of Rome, which for five hundred years had recognized the voice of the people as supreme, was expanded by executive interpretation and contracted by executive administration until Rome had so completely outgrown its democratic conditions as to become only a tragedy and a tradition. Let us implore the aid of Him on high to preserve us from the errors which ruined Rome, by the avoidance of which America may travel on to that destiny and realize that fulfillment which will be the inspiration of right-thinking men of all the ages yet to come.

Our Government is divided into three separate and distinct coordinate branches—the legislative, the executive, and the judicial. Danger will surely come to this Republic when any of these departments of government attempt in the slightest degree to usurp the functions of the other. And while now and then it may be that a court of the land, in construing the Constitution, may nullify a section of it, I have the faith to feel that the people of the country will rise above the fallibility of judicial tribunals and assert and preserve their own rights. Our duty is not to unjustly criticize the executive, the legislature, or the judiciary. Our duty is to recognize the majesty of the law when enacted by the legislature, to abide by and with the honest executive administration of the laws when so enacted, and to respect, even though wrong, the opinions of the courts of the land, because when respect for these institutions are gone, then the very framework of our Government is bound to crumble and decay. But thus having given our acquiescence to the voice of authority, if in the opinion of the people the action taken is one which should not be exercised by that particular department, it is our inalienable right to so further limit its powers as to prevent the recurrence of the error.

A DANGEROUS DOCTRINE.

Very recently there has come from the highest judicial tribunal in the land a decision of vital interest and concern to the American people, because it has established a principle, as stated by one member of the court, which "would work a radical change in our governmental system and would inaugurate a new era in the American judicial system and in the relations of the national and State governments. It would enable the subordinate Federal courts to supervise and control the official action of the States, as though they were dependencies or provinces. It would place the States of the Union in a condition of inferiority never dreamed of when the Constitution was adopted or when the eleventh amendment was made a part of the supreme law of the land." If this is the result of this decision, it is, to my mind, one of the unhappy incidents in the history of our Republic, because the very theory of our Government is based upon the right of the States to control absolutely their own domestic affairs.

If, then, our whole system of government is changed, have we not only retarded the progress of the Republic, but have we not gone back a century toward a centralized form of government which is not to the advantage of the people? What this Government needs is not more power. What it needs to-day is to so distribute the privileges under the Government that all citizens will have equal opportunity. America has been called the land of opportunity. But American opportunity should not mean a granting of special privileges to any class, but should afford all alike the means for culture, education, prosperity, and contentment.

SAFEGUARD HOME RULE.

For nearly a century and a half America has presented to the world the spectacle of a happy, prosperous, and intelligent people, maintaining a pure democracy founded upon their supreme will. The hall-mark of a democracy is that the powers of government are close to the people. Throughout the world, wherever democracy is advancing, its progress is marked by a greater measure of self-government to each community. Will the American people turn to the setting rather than the rising sun? Shall we now, because some laws are found irksome by a class and interfere with their selfish aims, commence to deprive our sovereign States of that measure of home rule which until now they have seen fit to reserve to themselves? I can not believe it. Upon the contrary, I believe that the limitations upon State and Federal governments, the nice balancing of the powers of each, and of the different departments in each, which have been so efficacious in the past, will be maintained in their full vigor in the future.

Therefore, discharging all of our responsibilities as citizens of a country, refusing to surrender our rights of citizenship in any degree, let us so live that the heroism exemplified on this and other American battlefields may not be simply a tradition, and the national wisdom of our forefathers a mere legend, but that through us and those to come America will reach her full destiny in the permanent establishment of a perfect Union, which shall be not for to-day nor for to-morrow, but forever, and be so established that it will be for all of the people, and that their Government shall not perish.

Legislation for the Relief of the Tobacco Growers of the Country.

SPEECH

OF

HON. WILLIAM PRESTON KIMBALL,
OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. KIMBALL said:

Mr. SPEAKER: I voted against the resolution offered the other day by the gentleman from New York [Mr. PAYNE] giving Members general leave to print in the RECORD for five days after adjournment. I do not believe the CONGRESSIONAL RECORD should be used for any such purpose, and I am sure that it was not the original intention that it should be so used. But the resolution having been adopted and the leave given, I see no reason why I should not, like the other Members, avail myself of the privilege.

The tobacco growers of Kentucky are greatly interested in the removal of the internal-revenue tax of 6 cents per pound on manufactured tobacco, and in being allowed to stem and twist tobacco grown by them and of selling it to the consumer direct without being required to pay any revenue tax. I desire

to append some correspondence on that subject, which, of course, I have obtained permission to publish:

LEXINGTON, KY., September 25, 1907.

HON. WILLIAM LOEB,
Secretary to the President, Oyster Bay, N. Y.

DEAR SIR: I inclose you a letter to the President, and a brief in the form of a letter from Hon. W. C. McChord, in relation to the modification of the internal-revenue laws in regard to the tax upon manufactured tobacco, together with a request to the President to call the attention of Congress to it in his next annual message.

You will confer a great favor on the tobacco growers of Kentucky if you will call the President's attention to the same.

Very respectfully,

W. P. KIMBALL,
Congressman Seventh District of Kentucky.

REPLY OF SECRETARY LOEB.

THE WHITE HOUSE,
Washington, D. C., September 26, 1907.

MY DEAR MR. KIMBALL: Your letter of the 25th instant and inclosures in relation to the modification of the internal-revenue laws in regard to the tax upon manufactured tobacco have been received, and the President will go over the matter with the Secretary of the Treasury.

Very truly, yours,

WM. LOEB, JR.,
Secretary to the President.

HON. W. P. KIMBALL, M. C.,
Lexington, Ky.

LETTER TO THE PRESIDENT.

LEXINGTON, KY., September 25, 1907.

TO THE PRESIDENT:

On behalf of the tobacco growers of Kentucky, and especially those of the Seventh Congressional District, I beg leave to submit for your consideration a letter written me by Hon. W. C. McChord, of Springfield, Ky., an eminent lawyer, one of the framers of the present constitution of Kentucky and a grower of white burley tobacco, who has taken a leading part in the fight against the American Tobacco Company for better prices. The letter was written at my request in order to serve as a brief in support of the contention of the tobacco growers that the internal-revenue laws should be so amended as to permit the grower to stem and twist his tobacco (without mixing any foreign substance therewith and without the use of any machinery whatever) without being required to pay the manufacturers' tax of 6 cents per pound upon the same. And in this view of the matter I respectfully request your perusal of it.

It was the intent of the white burley growers of Kentucky to send a delegation to Washington and request an audience with Your Excellency, and request you to recommend this modification of the law in your next annual message. But realizing how heavily the pressure of the public business weighs upon you, and your numerous engagements, it was decided that this matter should be presented to your consideration in the form I have adopted.

The relief they seek will be of great value to them, and will not, in my opinion, greatly impair the public revenue. Permit me to urge upon you the request of the tobacco growers of Kentucky to take cognizance of their troubles and to respectfully ask your good offices with Congress in their behalf.

Very respectfully,

W. P. KIMBALL.

Letter of Hon. W. C. McChord, of Springfield, Ky.

SPRINGFIELD, KY., September 17, 1907.

HON. W. P. KIMBALL,
Member of Congress, Lexington, Ky.

DEAR MR. KIMBALL: Your esteemed letter of the 11th instant, requesting me to give you my opinion of the merits of House bill No. 14972, entitled "An act for the relief of tobacco growers," and now pending before the Senate of the United States, was received by me several days ago, but other engagements prevented me from giving you a prompt reply.

A bill, as I understand it, in substantially the same form, passed the House in April, 1904, by practically a unanimous vote, and again passed the House in the same way March 6, 1906, and these two bills have since that time been quietly sleeping in the Ways and Means Committee in the Senate. What that means you lawmakers are familiar with.

I assume that Congress recognizes that the growers of tobacco need relief from oppression of some kind. The first question, then, is, What is the oppression these loyal citizens of the United States are laboring under and from which they need relief? And what has brought about the conditions which public policy demands that Congress or the courts shall relieve them from? An answer to these questions as my premises will, I think, enable me to make my conclusions understood more readily.

It is a well-known fact among those familiar with tobacco that in order to handle tobacco in small quantities or sell it to the consumer in its raw or unmanufactured condition it is necessary to stem and twist it. When Mr. Yerkes, Commissioner of Internal Revenue, was asked what would be the loss in revenue to the Government if the pending bill should be passed, his answer was that it would be comparatively small, because he knew it was impracticable to sell loose or unstemmed and untwisted tobacco except to manufacturers in large quantities, and that the benefits to the tobacco growers by the passage of the pending bill would in effect amount to nothing.

Prior to the enactment of the laws now governing the sale of unmanufactured tobacco, and the construction given them by the revenue officers, growers of tobacco were allowed to stem and twist the tobacco grown by them, without being deemed by the law as manufacturers and without being liable to tax of 6 cents per pound on the tobacco that might be stemmed and twisted by them. In other words, they were allowed to prepare the tobacco grown by them for market, so that it could be purchased by the consumer or others who desired to do so, as they did and now do with their wheat, corn, hay, or hogs, or any other commodity raised by them on their farms. Then the price of tobacco was regulated by supply and demand and as fixed by legitimate competition. The price under these conditions was from 15 to 30 cents per pound. Before the passage of the laws now in force there was a large demand throughout the United States, particularly in Southern

States, for this twisted or unmanufactured tobacco, which was purchased by the consumer in competition with the manufacturers.

Under the present law, which was enacted, I think, in 1896 or 1898, the growers are prohibited from stemming or twisting the tobacco grown by them unless they pay a tax of 6 per cent per pound to the Government as manufacturers. Because of complicated provisions of the law governing the manufacture of tobacco, and for other reasons, it is impracticable for growers to comply with it. The effect of the law is to deprive the growers of the right to sell the product of their labor to anyone other than those engaged in the manufacture of tobacco as a business. Thus the law drove out of the market the consumers, the purchasers of a large amount of unmanufactured tobacco, and left the manufacturers as the only purchasers. With the consumer, the strongest competitor of the manufacturer in the purchase of the raw material, thus driven out of the market by law, there was at the time of the enactment of the law strong competition in the purchase of raw tobacco among the then many different manufacturers. Under these conditions the growers of tobacco could live, and did not need or call for the relief which Congress is now graciously proffering to extend to them.

In 1899 the present managers of the American Tobacco Company saw the effect of the law, which, as I have shown you, destroyed the principal competitor with the manufacturers in the purchase of the raw tobacco, and conceived the idea that with a consolidation of a majority of the manufacturers under one management all competition in the purchase of such tobacco could be entirely eliminated, thus placing in the consolidated concern the power to fix the price of unmanufactured tobacco at whatever price it saw proper, so that the greatest amount of salaries and dividends could be made for the promoters of the scheme. The result was the tobacco trust, the history of which concern is a part of the history of this country, and with which we are all familiar. I need not refer to it here. Suffice it to say that this concern has, with the aid of the laws enacted by the Congress of the United States, fixed the price of tobacco in the hands of the growers at enough above the cost of production to induce the growers to raise just enough tobacco to subserve its demands.

If Congress will so amend the law as to allow the growers of tobacco to stem and twist the tobacco grown by them, so that it may be sold to the consumer, without paying tax as a manufacturer, so that a market can be opened for the sale of tobacco in its raw condition independent of the manufacturer, the trust will be deprived of its power to oppress the people, as legitimate supply and demand will regulate and control the price of tobacco, which is all the people would or ought to demand.

But recurring to the question propounded in your letter as to my opinion of the merits of the pending bill before Congress as a measure that will secure "relief of tobacco growers," as set out in the caption of the bill, I unhesitatingly say it will be absolutely worthless toward accomplishing the relief proposed, for the reason, as I have stated, tobacco can not be handled or sold to anyone other than the manufacturers in large quantities, unless it be stemmed and twisted. It has been contended by the trust, with its accustomed solicitude for the welfare of the Government, that if the growers should be allowed to stem, twist, and sell their tobacco without paying the manufacturer's tax of 6 cents per pound, the Government would lose a large amount of revenue.

It is urged by the growers with much plausibility that this assertion is not correct, for the reason that the growers would prefer not to stem or twist their tobacco, but would prefer to sell it in the hand if they could get a fair price for it; and if the growers had the right to stem or twist it the trust would increase the price for the tobacco, in the leaf to a fair and remunerative price to the growers, and therefore they would not undertake the labor of stemming and twisting it. The result would be that the quantity of tobacco that would be sold in the twist would be small and the amount of loss to the Government would be inconsiderable.

But suppose one-half the revenue on tobacco would be lost to the Government under a system that would allow the people to realize a fairer profit for their labor and the investment in the tobacco-raising business. We assert as an economic proposition that the Government has no right to maintain any system which renders its citizens slaves to the tobacco trust for the sake of collecting a few million dollars in taxes on tobacco.

If the Government will repeal the laws which enable the trust to maintain its monopoly, as I have indicated, the people will take care of their own affairs and deprive the tobacco trust of its power. But the power of the trust, fostered by unjust laws of Congress, places the tobacco growers in a precarious position, which they are endeavoring to overcome by united cooperation and through organization, which have had beneficial effects on the price of tobacco. But whether the unequal contest will be the means of securing permanent success is a question for the future to determine.

The pending suits to annul the charter of the trust may appear to be laudable efforts on the part of the Government to restore legitimate competition and trade in tobacco, yet the tobacco people look upon such proceedings without hope of any beneficial results, and they humbly petition those who are vested with authority to urge and secure the repeal of the laws, which are in restraint of trade, as I have indicated, and leave the market of the world open to tobacco growers and allow them to sell to the purchasers who will pay the best price for the product of their hard toil, whether it be the consumer, speculator, or manufacturer, when the price of tobacco will be regulated by supply and demand.

Very respectfully,

W. C. McCHORD.

I also append a bill introduced by me at this session of Congress, which if enacted into a law would destroy the tobacco trust and place the traffic in that article upon a legitimate basis:

A bill (H. R. 16504) regulating the transportation by interstate-commerce carriers of manufactured tobacco, cigars, and snuff.

Be it enacted etc., That from and after the passage of this act it shall be unlawful for any carrier of interstate-commerce to transport or accept for transportation the product or output, or any part thereof, of any manufactory of tobacco, cigars, or snuff which is owned, controlled, or operated by any person, firm, corporation, or association of persons who have formed themselves into or are in any way interested in any trust, combination, or agreement between themselves, or with any person or persons to restrain the trade in, or create a monopoly of, or fix the buying and selling price of the raw material used in the manufacture of tobacco, cigars, and snuff, or the manufactured article of the same, or who since the passage of this act in the conduct of

said business have violated any of the provisions of an act of Congress approved February 4, 1887, entitled "An act to protect trade and commerce against unlawful restraint and monopoly," or any other law of the United States enacted for the same purpose.

Sec. 2. That it shall be unlawful for any carrier of interstate commerce to accept for transportation any of the product or output of any manufactory of tobacco, cigars, or snuff until the president, secretary, or general manager of the corporation or association of persons operating the same, or, if operated by an individual, the individual himself, shall have filed with said carrier, and with the United States district attorney for the district wherein said manufactory is located, an affidavit to the effect that the owners, controllers, or operators of said manufactory have not, since the passage of this act, violated any of the provisions of an act of Congress of February 4, 1887, entitled "An act to protect trade and commerce against unlawful restraint and monopoly," or any other law of the United States enacted for a similar purpose, and that the owners, controllers, and operators of said manufactory have not formed themselves into, and are not in any way interested in, any trust, combination, or agreement between themselves or any other person or persons to restrain the trade in, or to create a monopoly of, or to fix the buying and selling price of the raw material used in the manufacture of tobacco, cigars, and snuff, or the manufactured article of the same.

Sec. 3. That it shall be the duty of the Department of Justice to prescribe the form of the affidavit required to be filed with the carrier and the district attorney by section 2 of this act. After the first affidavit has been filed, a like affidavit shall be filed on or before July 1 and on or before December 31 of each year with the carrier to which said manufactory offers its product or output for transportation and the district attorney of the district wherein said factory is located, setting forth that since the filing of the last affidavit the owners, controllers, or operators of said manufactory have not been guilty of any of the acts denounced by section 1 of this act.

Sec. 4. That any officer or agent or employee of a carrier of interstate commerce who is a party to any violation of this act, and any person who is required by the provisions of this act to file the affidavit hereinbefore described, and who shall fail to do so, and whoever knowingly shall make any false statement in any affidavit required to be filed by this act shall be punished for such offense by a fine of not less than \$2,000 and not more than \$10,000, or be imprisoned for not less than one year, or by both said fine and imprisonment, at the discretion of the court.

Vreeland Currency Bill.

SPEECH

OF

HON. GEORGE K. FAVROT,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1903.

Mr. FAVROT said:

Mr. SPEAKER: It seems to me that the event more menacing to our continued existence as a government of the people, by the people, and for the people, bigger with potential disaster than any which has ever threatened our national life, was our acquisition of the Philippine Islands. While their seizure may be defended as an incident of a war, their retention is without justification and without reason. They are of no use, of no advantage to us, either in peace or in war. After ten years of possession, ten years of exploitation, our commerce with them is insignificant. The value of our exports to these islands barely balances the expenditure made necessary by their government. Our exports to them in 1907 were \$5,664,254, while the cost of our Philippine military establishment alone was \$5,200,000. And so far from developing, from increasing, that commerce has actually declined. It is estimated that the Philippines have cost us to date about \$400,000,000. What return have we or can we expect for this vast expenditure? What great works of public improvement, of internal development, could be accomplished with this amount. And, besides, these islands have cost us about 5,000 lives, the lives of 5,000 young and vigorous men. And, Mr. Speaker, leaving aside all sentimental considerations, these young men in their capacity for production of wealth, in their ability to assist in the development and the betterment of our country, would, in the short span of their lives, be worth to this nation tenfold more than will the Philippines if we hold them until the sun grows cold.

I have heard it argued that we should retain them because of their strategic importance. Of what strategic value to us are these islands? They are certainly not needed for the defense of our coasts, and on the Asiatic mainland we have no territory to defend, no interests to protect. I can imagine no war in which this country can rightfully engage in which these islands can serve as a naval base. The possession by a foreign power of these islands 7,000 miles away would not menace us. With them Japan would be no closer to us than she is now, and every first-class power possesses territory nearer to our coasts than are the Philippines. In the event of war the only rôle which they could and would play would be that of American territory which it would be necessary to protect. As they are of no advantage to us as a naval base, as they are

of no advantage to us commercially, of what use, of what benefit are they to us? Why this fearful expense? Why do we pour out in floods the people's money for the maintenance of their government when appropriations for praiseworthy projects—projects which would make for the benefit and prosperity of our entire country, projects which are needful for her proper development—are denied on the plea of economy? Why do we cut loose from our moorings, violate our Constitution and the spirit of our Government and of our institutions in order to keep them and to govern them?

It will of course be said that the advocacy of the disposal of the Philippine Islands is unpatriotic. Is it unpatriotic to advocate ridding ourselves of an incubus? Is it unpatriotic to advocate ridding ourselves of territory which can be of no use to us either in peace or in war, and which we can not govern without violating the fundamental principles of our Government and the genius of our institutions? It can not be charged that Napoleon was unmindful of the welfare and the glory of France. Yet amid his dreams of conquest, of glory, and of splendid empire, realizing, as a statesman should, that Louisiana contributed nothing to the welfare or the glory of France, was a drain upon her resources, and was difficult of defense; that France would be best unhampered and untrammelled by these distant possessions, leaving his mighty genius free for the solution of the great problems which beset him and for the development and consummation of his splendid plans for the reconstruction and regeneration of France, of Europe, and of society, acting as a patriot should, he rid himself of the incubus. And Louisiana was a vast and virgin territory, a territory possessing every soil and every clime, fit for settlement and colonization by the European races; a territory of boundless resources, capable of limitless development, where might live and thrive a white population more numerous than that of France; a territory which bid fair to become and has become an empire larger, wealthier, and greater than that which crumbled at his fall. And his was an imperial despotism, which could rule distant colonies without strain and without jar.

Mr. Speaker, there can be no reason, no excuse, for our retention of the Philippines but an overpowering, unreasoning lust for land—that fatal passion which has brought about the downfall of every empire known to history. Does history teach us nothing? Must its warning go unheeded? Time was when the world was ruled from the seven hills of Rome; but with the growth of the Empire, the rugged republican virtues which had made her mistress of the world declined. To republican zeal succeeded imperial lassitude. The very splendor of her empire served but to conceal, to gild, her internal corruption and decay, and soon this mighty fabric crumbled. And what has been the fate of all other colonial nations? Following close upon the discovery of new worlds, Portugal, tempted by dreams of gold and by the alluring prospect of a trade of fabulous value, embarked upon a career of colonial expansion, and soon her possessions fronted every sea. But what to-day is Portugal? Holland, tempted by the rich trade of the East, had, too, her day of colonial grandeur, but what now is Holland? Spain, fresh from her successful struggle with the Moor, burning with zeal, with ardor, and with youthful vigor, tempted by the gold of the Aztecs and the Incas, entered upon her policy of colonial conquest. Yet, notwithstanding the vast treasure wrung from her possessions, what is Spain to-day? It has been but a short time in the life of nations since the Spanish power overshadowed the world, since a great part of Europe; almost all of this hemisphere; of North, South, and Central America; of the Indies, both East and West, acknowledged the sovereignty of the Spanish King.

Yet where to-day is that Empire on which the sun never sets; an Empire vaster than that of Rome; an Empire more extensive than any known to history? Neglecting her home affairs, her internal development, her brains, and her energies devoted to conquest and the exploitation of distant colonies, her decay was rapid and is now complete.

What madness drives us headlong on this road to ruin? The colonial nations of Europe did not acquire territory solely for love of possession; did not embark upon the fatal policy of colonial expansion simply to extend their domain; to expand their boundaries. In every instance they were driven to it by love of gold; by dreams of fabulous riches. England's colonial policy may be cited as a success. But the British Empire is still young. It was a few years before the birth of this Republic that Wolfe died victorious upon the Heights of Abraham, and Canada was added to the British domain. It was at the same time that Clive, upon the ruins of the old Mogul Empire, laid the foundation of English supremacy in the East; and the undreamed-of riches, the hoarded accumulation of centuries of oriental civilization, and the monopoly of the trade

in the costly products of the East, of more value still, led her to the gradual absorption of all India.

And England's colonial policy, her predatory policy of territorial seizure, revolves around and is because of her possession of India. Before the building of the Suez Canal she seized the Cape of Good Hope for a place of rest and refuge on the way to India. And it was only when lured by deposits of diamonds and of gold, the richest known to man, that she advanced into the interior, even in her advance ruthlessly destroying the liberties of a free and a Christian people. And Gibraltar, Malta, Egypt, with its command of the Suez Canal, Aden and Ceylon simply guard the road to India. Australia and Canada are not exceptions to this rule. The possession of Australia by another power would have threatened India, and no attempt was made to settle or develop this great island continent—it was used solely as a penal settlement—until the discovery of gold. And Canada is, too, a station on the other road to India. With Canada, with Hongkong and Singapore, her command of the road to India from the east is almost as complete as her control of that from the west. And with the exception of India and of the stations just large enough in area to hold a fortress her colonial possessions are settled and inhabited by her own sons. They permit her to divert the overflow of her congested population to a new world and still keep them under the British flag.

They open to her sons opportunities which they do not and can not have at home; they give them the opportunity to grow and to thrive in and with a new land without expatriation, and to all intents and purposes these colonies are as self-governing, as independent, and as free as we are. The tie which binds them to the Empire is simply and purely one of sentiment. They are tied with a silken thread. Their government presents no difficulties, vexes her with no problems, because they govern themselves. Their possession, their control, entails no drain upon her resources; no inroads upon her treasury, for they are self-supporting and capable of self-defense.

Of course India, tropical in its climate, unfit for the habitation of men of our race, already fully populated with an oriental people, as are the Philippines, is an exception to the rule. But her rule of India has not been a success. There she sits upon a volcano. But even if it were a success, our institutions would not admit of such government. Our republican principles, our high ideals, would not permit such despotism, such cruel oppression of a people. No people of European race, no matter what their form of government, no matter what their experience, have ever succeeded in the government of the Orient. We of the West, we of the Caucasian race, can not fathom the mysteries of the oriental mind. The difference between us is not superficial, not the mere result of environment, but is radical and fundamental. Our ways are not their ways; our standards are not their standards; our morals are not their morals; our right is not their right; our thoughts, our mental processes, can never be theirs nor theirs ours.

And, Mr. Speaker, if we hold these people until all record, all knowledge of the events of this age and of this century shall have been lost in the dim vistas of the past, until the date of our acquisition of these islands shall have become prehistoric, the gulf that separates the East from the West will be still unbridged. Are we to succeed where all others have failed? Are we to achieve the impossible, to surmount the barrier which the Almighty in His infinite wisdom has from the beginning placed between us? Great as is our confidence, great as is our conceit, we can not hope it. Every colonial power has been led into its error by some reason, impelled by some great temptation. But we have embarked upon a policy which has caused the downfall of every empire known to history. And tempted by what? These islands offer no hope of trade, of riches, of treasure, to lure us to our ruin. Their possession gives us no such present advantage as should blind us to the future. Situated in the Tropics, they are unsuited for the habitation of the white man. There the white man can not live and thrive. Fully populated, they offer no opportunity to our sons; and if they did, we have no congestion, no overflow of population. With millions of unoccupied and untillable acres, with boundless resources, the utilization of which has hardly begun, with countless opportunities yet unseized, this country needs the brain and the brawn of all her sons. Our best thought, our best effort will hardly suffice for the solution of those problems which loom large before us, which grow more threatening day by day, which menace the very life of this Republic. Our very prosperity, our very wealth, has brought with it grave problems, difficult of solution. We must soon determine whether the great wealth yearly produced by this country shall flow into the pockets of the people, the earners, the producers, or whether it shall flow into the already swollen coffers of a few financial despots.

That question must be determined soon and determined rightly, or the sacrifices and the struggles of our fathers to create and upbuild a government of the people, by the people, and for the people will have been in vain.

More than seventy years ago De Tocqueville wrote, in effect, that when this country became thickly settled and had produced great wealth, and if because of it unequal distribution there had grown up two classes—one of the very rich and the other of the very poor—that inevitably each would seek to control this Government in its own interest. All signs indicate that his prophecy will soon be proven true. And it will require our most unselfish patriotism and our wisest statesmanship to steer the ship of state safely between the rock of plutocracy upon the one hand and that of mobocracy upon the other. We have no time, no thought, no effort to waste upon the solution of the problem of the government of an alien people 7,000 miles away.

The acquisition of territory upon this continent, our continental expansion, may be cited as a parallel. There is no analogy. The territory acquired during Democratic administration was contiguous territory, forming with our original domain a compact whole. It was virgin territory which could be settled by our own sons; by men of our own race and of our own blood, who were trained to self-government and to reverence our institutions; who were imbued with our ideals. And it was intended that this territory should form American States, coequal with the other States of this Union, their inhabitants possessing every right and every privilege of American citizens. No part of that territory was acquired without reason. In every instance such acquisition was essential to our growth, our development, our national expansion.

Early in our history the hardy sons of this Republic crossed the Alleghenies and settled that fertile section now called the "Middle West." And the only practicable outlet for the growing commerce of that region—its natural highway to the sea and to market—was the Mississippi River. And the safety of that commerce and the development of this section of our country imperatively required control of the port at that river's mouth. And in order to acquire that port it became necessary to take with it all Louisiana.

And the acquisition of the Floridas was not without reason. After the acquisition of Louisiana Spain still held West Florida, fronting upon the Mississippi between the river Iberville and the thirty-first degree of latitude—a barrier between the American possessions to the north and to the south—and there commanding the Mississippi and menacing that unrestricted control of its navigation so much desired. So important was our possession of this territory that, about 1810, Jefferson wrote to Madison, then President, that as soon as war with England became inevitable to seize it; that if he did not the English would, and thereby separate our Western country. And soon after Madison, taking advantage of a successful revolt of its inhabitants and asserting a well-founded claim that this was originally part of Louisiana, took possession; and in a few years the peninsula of Florida, commanding the water route between the Mississippi and our Atlantic seaboard—then by far the cheapest and most practicable route for the commerce between our East and our West—was acquired by treaty.

Texas, first achieving her independence, inhabited and governed by men of our own race, by native sons of our land, by men of the highest type of American manhood, voluntarily sought admission to our Union, and the acquisition of California and of the other territory acquired from Mexico as an incident of the war resulting from our defense of Texas's right to join us, removed the barrier between us and the Pacific.

It will be seen that there was good and sufficient reason for every acquisition of territory under Democratic administration. But what reason can we have for holding the Philippines?

But our colonial policy has accomplished one thing. It has served to expose the inconsistency, the hypocrisy of the Republican party. By means of its system of preferential tariffs it has upbuilt and fostered a despotism of dollars. It has created that most intolerant and intolerable of all aristocracies—an aristocracy of money, an aristocracy more wantonly and ruthlessly indifferent to the interests of the country and to the well-being of the great masses of our people than was that aristocracy the oppressions of which brought about that mighty revolution during which France was drenched in blood. And this they have done and are doing under the specious plea that they desire to protect the American laboring man from the competition of the pauper labor of Europe. Yet the result under Republican administration of the retention of the Philippines will be to place the American cane-sugar grower, the American beet-sugar grower, and the American tobacco grower—agriculturists of that class who are the bone and the

sinew of this Republic—in direct competition with the 30-cents-a-day, half-savage pauper labor of Asia.

And in your government of these colonies you recognize that a people untrained, not yet arrived at a certain stage of civilization, are unfit for self-government. You recognize that an inferior can not govern a superior race. You debar the masses of the people of these islands from all share in the government of their own land, deeming them unfit. And yet the Filipino is far more advanced, has been far longer in contact with our Western civilization, is far further removed from savagery than is the negro. Yet you secure as best you can to the handful of white men in these islands, to the handful of traders and adventurers, temporary sojourners in a strange land, for the protection of their paltry interests, those blessings of honest and of stable government which you would not permit the people of a section of your own country, men of your own race and your own blood, to secure for themselves for the protection of their homes, their firesides, their very civilization. You give to these distant islands that protection, that security, those safeguards against misgovernment and anarchy, against the misrule of the ignorant, the irresponsible, and the corrupt which you forbid, and would now if you could forbid, sovereign States of this Union to give to themselves.

Mr. Speaker, the blackest pages of American history are those which record the infamies of reconstruction. Great as was the damage done to the South by the war, great as was the desolation wrought by fire and by sword during the four years of that, the bitterest struggle known to man, it was insignificant when compared with the damage and the desolation suffered during the era of negro carpetbag government. Never before in the world's history were a conquered people placed under the domination of an inferior race and kept there by men of their own race. The attempt was to place the negro, not upon an equality with the white man, but above the white man. And not because the Republican party loved the negro, but because it wanted his vote. For this they crushed the South under a government of semibarbaric ignorance and brazen corruption. For this, actuated solely by lust for power, they impoverished and desolated the South, regardless of the fact that the poverty or prosperity of one section of our country affects the prosperity of the whole; heedless of every tie of race, of every tie of blood and of kindred; unmindful of our common origin, our common history, our common traditions—unmindful of the joint struggles of the North and the South—their common successes in the achievement of American independence and the upbuilding of this Republic, they desolated a land that should have been respected by every American because of the deeds and the services to this nation of her illustrious sons. Why, this Union was in greater part the conception of Southern intellect. The declaration of its independence was the work of a Southern statesman. The armies which achieved that independence were led by a Southern soldier. They desolated a land which should have been hallowed as the home of Patrick Henry, whose voice was the first raised for freedom; as the home of Washington and of Jefferson, of Madison and Monroe, of Jackson and of Taylor, aye, even of him who did more than all others—more than Hamilton himself—to form this Government in accordance with their Hamiltonian plan—John Marshall—and of the greatest exponent of their cherished policy of protection—Henry Clay.

Great, Mr. Speaker, was the South's share in the glory of that flag. Why, sir, there is not a star upon its blue field that has not been made brighter by Southern heroism upon countless fields; there is not a red mark upon it that has not been made deeper, richer, and redder by Southern blood; there is not a white line upon it that has not been made whiter, purer, and holier by Southern honor and Southern integrity in high official place.

But since the overthrow of these radical republican governments, the progress, the development, of the South has been unparalleled in history. No longer does she lie crushed and prostrate, bound Prometheus-like, with the vultures of reconstruction tearing at her vitals; but she stands erect, every nerve and every fiber throbbing and quivering with life and with energy, facing the future confident of her destiny. Nowhere has Nature been more bounteous with all her gifts, more prodigal of her blessings. With her boundless resources, with every advantage of soil and of climate, with her vast deposits of mineral wealth, with her fields and her forests, she has no fear of the future. But for the full fruition of her hopes, to achieve her destiny, she must have peace and good government. She must be let alone. Let her alone, and the time is not far distant when south of the Potomac will be produced the greater part of this nation's wealth. Let her alone, and soon she will be able, from the storehouse of her products, to feed and clothe the teeming millions of the world and still from her surplus

minister to their luxuries. Let her alone, and soon she can build a temple grander than that of Solomon; inlay its walls with woods more precious than the cedars of Lebanon; drape them with fabrics finer than the Tyrian ever saw, and lay upon its altar every food and every drink known to the hungry of the earth. But she must be let alone; she must be permitted unhampered, unimpeded, to work out her own destiny.

All should realize that men living far removed from contact with the great body of the negro race, with no knowledge of conditions, are less competent to solve our great problem than are we, who were born amidst it; who have it with us during every waking hour; we to whom its solution is of vital moment. All must realize that the South can, the South must, and the South will solve her own problems, and solve them in her own way. Would it not seem that this startling contrast between the Republican policy toward the South and its policy toward these islands—in its treatment of the negro and its treatment of the Filipino—is due to the knowledge that the negro would always be an asset, a faithful follower of the Republican party, while the Filipino probably would not.

It will be said that we can not get rid of these islands. That is, indeed, a compliment to our colonial policy—a startling commentary upon the wisdom of our acquisition of these islands—that we have spent \$400,000,000 and sacrificed thousands of American lives to secure and to keep what nobody else would have! But is it true that we can not rid ourselves of them? Is there any basis in fact for that statement? Are we to believe that Spain, which parted with them with such reluctance, would not have them back?

Are we to believe that Japan, which covets them, and, best of all, can understand and govern them; Japan, ambitious to extend her Asiatic domain, whose population is so congested that she feels the need of expansion, and whose sons can settle and develop them, would not have them? Are we to believe that France and Germany, which hunger for possessions in the East, would not have them? Have we ever shown a willingness to dispose of them? Until we do, let us not say we can not get rid of them. If nobody will have them; if they are so bound to us that they can not be separated, why, let me ask, do we expend immense sums for fortifications, the purpose of which are to prevent somebody from taking them. We can and should rid ourselves of them. Rid ourselves of these islands which are a burden to us, which we can not govern, and the possession of which is fraught with danger to our institutions.

The Call of the People for Good Roads.

SPEECH

OF

HON. WILLIAM SULZER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 29, 1908.

Mr. SULZER said:

Mr. SPEAKER: In the closing hours of this session of Congress I rise for the purpose of saying a few final words in favor of good roads. The proposition for good road building is a live question, and will continue to be a matter of much concern to all the people of the country until it is settled and settled right. I take a deep and an abiding interest in the matter and have given it considerable study. In the last Congress I introduced a bill for Government aid to good road building, and I reintroduced the same bill in this Congress. I have appealed again and again for action, but all in vain. It is in the pigeonholes of the Committee on Agriculture, and I can not get it reported. I believe my bill will go far to solve the problem of good road building, and I send it to the Clerk's desk and ask to have it read in my time, so that it may be printed in the RECORD as a part of my remarks.

The Clerk read as follows:

A bill (H. R. 16627) to promote the construction of good roads and the efficiency of the postal service in the States and Territories of the United States.

Be it enacted, etc., That upon the application of the proper authorities representing any State or Territory of the United States, the Secretary of the Treasury shall loan to such State or Territory for the construction or improvement of post-roads within such State or Territory and outside the limits of any city or incorporated village the actual cost of such construction or improvement: *Provided*, That the construction or improvement of said post-roads shall be under the general supervision of the Post-Office Department and according to specifications approved by it, and the Postmaster-General is hereby authorized and directed to make all needful rules and regulations relating

thereto: *Provided further*, That one twenty-fifth part of all money received from the United States Government under the provisions of this act shall be each year returned to the Treasury of the United States by the State or Territory receiving the same until the whole amount received by such State or Territory shall have been returned.

SEC. 2. That no interest shall be charged upon money loaned under the provisions of this act when returned to the Treasury is promptly made as provided for by this act, but a 5 per cent per annum interest charge shall be added to all deferred payments. And the Secretary of the Treasury is hereby authorized and directed to make all necessary arrangements with the States and Territories with respect to said loan.

SEC. 3. That the President is directed to cause to be laid before Congress, as soon as convenience will permit after the commencement of each session, a statement of all proceedings under this act.

SEC. 4. That this act shall take effect immediately.

Mr. SULZER. Mr. Speaker, the bill speaks for itself, and is a simple, comprehensive, and constitutional measure for Government aid in good-road building. It is the first proposition of its kind that has ever been introduced in Congress, and if it became a law it would promote the general welfare, not take one dollar in its last analysis out of the Federal Treasury, and yet it would aid the State that can not now afford to appropriate the money. They money loaned the States would all be returned to the Government, and in twenty-five years we would have the best roads in the world. We loan money to the national banks, then why not to the States to build good roads that will directly or indirectly benefit all the people? To-day there is deposited by the Government the sum of \$200,000,000 of the people's money in the national banks, not drawing a dollar's interest, and benefiting no one except the stockholders of the national banks. If some of this money were loaned the States to build good roads, as contemplated in my bill, it would give employment to thousands and thousands of honest workmen now idle, promote prosperity, and ere long secure for all the people splendid national highways.

Good roads, sir, are the arteries of the industrial life of a great and powerful people. In a Government such as ours all sorts and conditions of men and women are more or less absolutely dependent upon the best and speediest means of communication and transportation. If you say good roads will only help the farmers, I deny it. The farmers who produce the necessities of life are less dependent than the millions and millions of people who live in our cities and towns. The most superficial investigation of this subject will clearly prove that good roads are just as important to the consumers, if not more so, than they are to the producers of the country.

The burdens of life fall hardest on the farmer. The least the Government can do for him is to help him get decent highways. I am with the farmers in this fight for good roads. I am with the rural districts of our land in their struggle for better transportation facilities, and in Congress or out of Congress I shall do all in my power to hasten the consummation they desire—the ability to go and come along decent roads without exhausting the time and the effort and the utility of man and beast. I know farm life. My boyhood days were spent on a farm doing farm work. I know the farmer's joys and sorrows—his trials and his troubles, and I know that we owe much to the farmers and producers of our country—much that we can never repay. Whatever will aid them will benefit the people in every community.

Mr. Speaker, the National Good Roads Congress will hold two conventions this year, one in Chicago on June 15, and the other in Denver on July 6, and they give evidence of being largely attended and doing much good. I now send to the Clerk's desk and ask to have read in my time the call for these conventions, largely signed by governors of our States, mayors of our cities, and distinguished and representative men in all walks of life from all parts of our country.

The Clerk read as follows:

CALL FOR THE FIRST NATIONAL GOOD-ROADS CONGRESS, CHICAGO, JUNE 15, 1908; DENVER, JULY 6, 1908.

Recognizing a well-nigh universal sentiment in favor of better public highways and believing that a general discussion of this great problem from every point of view will prove timely and effective, the undersigned join in urging all interested to attend the meetings of the National Good Roads Congress at Chicago, June 15, 1908, and Denver, July 6, 1908, that the results of its deliberations may be presented for the consideration of the coming national conventions, all legislative bodies, and the public generally.

Mr. SULZER. Mr. Speaker, this call has been signed by over 500 prominent citizens of Chicago and other cities, and the governors of Alabama, Arkansas, California, Connecticut, Delaware, Florida, Georgia, Idaho, Indiana, Kansas, Louisiana, Maryland, Michigan, Minnesota, Mississippi, Missouri, Montana, New Jersey, New Mexico, New York, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Utah, Virginia, Washington, West Virginia, Wisconsin, Wyoming; and the mayors of the following ninety American cities: Akron, Ohio; Albuquerque, N. Mex.; Auburn, Me.; Aurora, Ill.; Atchison, Kans.; Beaver Falls, Pa.; Baltimore, Md.; Baton Rouge, La.; Belleville, Ill.; Boise, Idaho;

Bowling Green, Ky.; Cairo, Ill.; Cambridge, Ohio; Chillicothe, Ohio; Cincinnati, Ohio; Cleveland, Ohio; Colorado Springs, Colo.; Columbus, Ga.; Columbus, Ohio; Concord, N. H.; Cripple Creek, Colo.; Danville, Pa.; Dayton, Ohio; Duluth, Minn.; Easton, Pa.; East St. Louis, Ill.; East Liverpool, Ohio; Elkhart, Ind.; Fort Scott, Kans.; Gloversville, N. Y.; Grand Rapids, Mich.; Hackensack, N. J.; Hamilton, Ohio; Harrisburg, Pa.; Hartford, Conn.; Hot Springs, Ark.; Hudson, N. Y.; Indianapolis, Ind.; Jacksonville, Fla.; Joliet, Ill.; Jamestown, N. Y.; Kansas City, Kans.; Laramie, Wyo.; Lexington, Ky.; Lincoln, Nebr.; Little Rock, Ark.; Louisville, Ky.; Memphis, Tenn.; Milwaukee, Wis.; Mobile, Ala.; Moline, Ill.; New Orleans, La.; New York, N. Y.; Ogden, Utah; Oklahoma, Okla.; Omaha, Nebr.; Paris, Tex.; Pasadena, Cal.; Paterson, N. J.; Peru, Ind.; Pittsburg, Kans.; Pittsburg, Pa.; Port Jervis, N. Y.; Portland, Me.; Richmond, Va.; Rochester, N. Y.; San Francisco, Cal.; Savannah, Ga.; Scranton, Pa.; Selma, Ala.; Shenandoah, Pa.; Sherman, Tex.; Shreveport, La.; South Bend, Ind.; Springfield, Ill.; St. Louis, Mo.; St. Paul, Minn.; Toledo, Ohio; Troy, N. Y.; Vicksburg, Miss.; Watertown, N. Y.; Watertown, Wis.; Waukegan, Ill.; Wilkinsburg, Pa.; Wilmington, Del.; Yonkers, N. Y.; Denison and Fort Worth, Tex.; Mankato, Minn.; Emporia and Leavenworth, Kans.; Kalamazoo, Mich.; Kewanee, Ill.; Macon, Ga.; Portsmouth, Va.; Hammond, Ind.; Hazelton, Pa.; Watertown, Worcester, and Springfield, Mass.

Mr. Speaker, that call speaks for itself and needs no further comment from me. However, I now send to the Clerk's desk and ask to have read as a part of my remarks the constitution and by-laws of the National Good Roads Congress.

The Clerk read as follows:

CONSTITUTION AND BY-LAWS OF THE NATIONAL GOOD ROADS CONGRESS.

ARTICLE 1. The name of this organization shall be The National Good Roads Congress.

ART. 2. Its object shall be to associate all interested in a national movement for good roads.

ART. 3. Its management shall be vested in a board of nine directors, who are to be elected annually on April 12, at the offices of the congress in Chicago.

ART. 4. As provided in its certificate of incorporation, issued by the secretary of state of Illinois under date of May 23, 1908, the following persons are the directors to control and manage the congress for the first year of its corporate existence, viz: Arthur C. Jackson, president; H. H. Gross, secretary; Martin Dodge, treasurer; Frank G. Soule, F. C. Donald, J. C. Bartholf, N. J. Bachelder, George A. Pearre, William Sulzer.

ART. 5. Its location shall be in the city of Chicago, but such other offices may be maintained for promoting the objects of the congress as the board of directors may determine.

ART. 6. A membership fee of \$2 shall be paid annually in advance, to the order of the National Good Roads Congress, by all who become members of the congress, other than as honorary and life members. Upon acceptance of honorary membership in the congress the President and Vice-President of the United States shall be honorary presidents; the Secretary of Agriculture and the governors of all the States and Territories, honorary vice-presidents; Members of Congress, presidents of educational institutions, mayors of cities, and editors of all regular publications, honorary members. Upon becoming members of the congress the director of public roads, State highway commissioners, and presidents of good roads organizations shall be vice-presidents; and the secretaries of all good roads organizations assistant secretaries of the congress. Individuals, firms, companies, corporations, or organizations, acceptable to the board of directors, may become life members upon payment of \$100; contributing members upon the annual payment of \$10 or more; sustaining members, upon the annual payment of \$100 or more. All classes of members may vote upon all questions at all meetings of the congress. Fifteen members shall constitute a quorum at any meeting. Special meetings may be called by the president at any time and place.

ART. 7. All Federal, State, county, town, and city officials, and officers of all good roads, agricultural, automobile, transportation, industrial, commercial, educational, religious, or other organizations, who are members of the congress, shall constitute the national advisory board; and all such members in each State or Territory, a State or Territorial board; and in like manner county, town, and city boards may be formed.

ART. 8. The board of directors shall aggressively promote the objects of the congress by every means in its power. The president shall preside at all meetings of the congress and board of directors, sign all certificates of membership, and all warrants for the disbursement of the funds of the congress, name all committees not otherwise provided for, and be ex-officio chairman of the same. The secretary and assistants shall make and keep on file at the offices of the congress an accurate record of all members, meetings, and transactions of the congress and board of directors. The treasurer shall be the custodian of the funds of the congress. He shall issue receipts for all money received and make disbursements only for accounts properly vouchered and by warrants signed by the president. He shall give bond for the faithful discharge of his duties in such amount as the board of directors may determine. Vacancies in the board of directors shall be filled by the board until the next ensuing annual meeting. A meeting of the board may be called at any time by the president. The president, secretary, and treasurer shall each submit written reports to the congress at its annual meeting, covering the transactions of their respective offices.

ART. 9. These by-laws may be amended at any annual meeting of the congress or at any adjourned session thereof by a three-fourths vote.

Mr. SULZER. Mr. Speaker, the best thought of the land favors the project of good road building. I have not the time to read much of the favorable data in my possession, but I want to read an extract from the address of President Roosevelt at

the National Good Roads Association Convention at St. Louis. He said:

Merely from the standpoint of historical analogy we should have a right to ask that this people which has tamed a continent, which has built up a country with a continent for its base, which boasts itself with truth as the mightiest Republic that the world has ever seen, which we firmly believe will in the century now opening rise to a position of headship and leadership such as no other nation has ever yet attained—merely from historical analogy, I say, we should have a right to demand that such a nation build good roads. Much more have we a right to demand it from the practical standpoint. The difference between the semibarbarism of the middle ages and the civilization which succeeded it was the difference between poor and good means of communication. And we, to whom space is less of an obstacle than ever before in the history of any nation; we who have spanned a continent, who have thrust our border westward in the course of a century and a quarter until it has gone from the Atlantic over the Alleghenies, down into the valley of the Mississippi, across the great plains over the Rockies to where the Golden Gate lets through the long-heaving waters of the Pacific, and finally to Alaska and the arctic regions; to the islands of the Orient, the tropic isles of the sea; we, who take so little account of mere space, must see to it that the best means of nullifying the existence of space are at our command. A few years ago it was a matter, I am tempted to say, of national humiliation that there should be so little attention paid to our roads; that there should be the willingness not merely to refrain from making good roads, but to let the roads that were in existence become worse, and I can not too heartily congratulate our people upon the existence of a body such as this. In our American life it would be hard to overestimate the amount of good that has been accomplished by associations of individuals who have gathered together to work for a common object which was to be of benefit to the community as a whole. And among all the excellent objects for which men and women combine to work to-day there are few, indeed, who have a better right to command the energies of those engaged in the movement and the hearty sympathy and support of those outside than this movement in which you are engaged.

And now, sir, let me read a brief sentence or two from the eloquent address of Hon. William J. Bryan on the same occasion. Said Colonel Bryan:

I have become exceedingly interested in this subject. * * * The expenditure of money for the permanent improvement of the common roads can be defended, first, as a matter of justice to the people who live in the country; second, as a matter of advantage to the people who do not live in the country; and third, on the ground that the welfare of the nation demands that the comforts of country life shall, as far as possible, keep pace with the comforts of city life.

It is a well-known fact, or a fact easily ascertained, that the people in the country, while paying their full share of the Federal taxes, receive, as a rule, only the general benefits of government; while the people in the cities have, in addition to the protection of the Government, the advantages arising from the expenditure of public moneys in their midst. The farmer not only pays his share of the taxes, but more than his share; yet very little of what he pays gets back to him. * * * The farmer has nothing that escapes taxation. The improvement of the country roads can be justified also on the ground that the farmer, the first and most important producer of wealth, ought to be in position to hold his crop and market it at the most favorable opportunity, whereas at present he is virtually under compulsion to sell it as soon as it is matured, because the roads may become impassable at any time during the fall, winter, or spring. The farmer has a right to insist upon roads that will enable him to go to town, church, schoolhouse, and to the homes of his neighbors, as occasion may require; and with extension of the rural delivery he has an additional need for good roads in order that he may be kept in communication with the outside world.

And in this connection I want to read a most interesting editorial from the Chicago Tribune of May 23, 1908. It is as follows:

WORKING FOR GOOD ROADS.

There are other improvements demanded in the United States besides reclamation, forestation, and other methods for conserving natural resources. Prominent men have been discussing these subjects in recent days with many surprising and alarming statements. But the advocates of better highways continue to insist that the greatest need of the country to-day is good roads.

The first national good-roads congress is to meet in Chicago June 15 and in Denver July 6. This division of the time is due to the presence of the two nominating conventions of the leading political parties. The call for the meeting has been signed by thirty-two governors, fifty mayors, and many officials of granges, good-roads associations, farmers' leagues, and labor organizations, as well as by prominent citizens from different parts of the country.

The arguments for better highways are well known. The interest in the movement grows steadily as population increases. It is not a special idea for the benefit of any particular class. Its practical bearing is illustrated by data gathered by the Illinois highway commission as to the effect of road and weather conditions upon highway traffic.

Observations were made at seventy-two well-distributed points in the State. The actual number of vehicles passing on given days was recorded. It was found that travel over hard roads was fairly uniform, while that upon earth roads was subject to widest variations. For example, on an earth road leading into Springfield sixty-five vehicles were counted each day during four days of March. Over the same road in June and July the daily average was 389. On corresponding days a hard road leading into Peoria showed 166 vehicles in March and 153 for June and July.

Observations taken at Champaign, Decatur, Sullivan, Effingham, Elgin, and Centralia showed the same conditions. Where the earth road was watched the figures varied widely between early spring and mid-summer. Where there was a hard road the travel was much more regular and uniform, the summer months showing no marked increase over the spring, and in some instances not reaching the record for the earlier parts of the year.

The investigations in Illinois repeated elsewhere would show the same results. Good roads help the rural mail carrier, help the farmer, help the railroads in handling produce, help the markets, help the city merchants, help the individual citizen who must have country supplies. No more important subject appeals for popular favor and support than this. In an age of internal improvement the need of better highways should be urged in the strongest possible way.

And that gallant military hero, Gen. Nelson A. Miles, speaking on the subject of good roads and national greatness, at the National Good Roads Association Convention, said:

I know of no one element of civilization in our country that has been more neglected than the improvement of our roads, yet this is the element that marks the line between barbarism and civilization in any country. The founders of our Government strongly advocated the necessity of opening up and improving the means of internal communication. The immortal Washington retired from the pomp and circumstance of glorious war to occupy the honorable position of a sovereign citizen, and while conducting the affairs of his plantation was president of a transportation company. The author of the Declaration of Independence, the founder of one of our great universities and the eminent statesman who gave to us this vast empire west of the Mississippi, was right when he said in a letter addressed to Humboldt:

"It is more remunerative, splendid, and noble for the people to spend money on canals and roads that will build and promote social intercourse and commercial facilities than to expend it on armies and navies." He was right again when he said, in a letter to James Ross: "I experience great satisfaction in seeing my country proceed to facilitate intercommunication of several parts by opening rivers, canals, and roads. How much more rational is this disposition of public money than that of waging war."

How true are the words of immortal Jefferson regarding the disposition of public money. We appropriate millions and millions of dollars every year for war—not a dollar for peace. We spend millions and millions of dollars annually for the improvement of our rivers, and not a dollar for the improvement of our roads. We have neglected this important work too long. It is all to our shame. Let us begin; let us follow in the footsteps of the builders of the Republic, and commence now to do something to improve our national roadways.

Mr. Speaker, these testimonials speak volumes in favor of good road building and are in harmony with the policies of the fathers of the Republic, who wisely recognized the importance of this question. Washington and Jefferson advocated good roads and projected the construction of a great highway from the Capital to the Mississippi Valley. The farseeing statesmen of the early days of our national existence championed and passed measures to better the means of transportation. They knew that of all human agencies the one which has done most for humanity and civilization has been the building of good roads—the abridgment of distance in the facility of communication. They realized the necessity of good roads—how important they were to the country, to its growth and its development, and to mankind, morally, physically, intellectually, and industrially, removing national and provincial antipathies and binding together all the branches of the great human family.

The farsighted wisdom of Julius Caesar built from the imperial exchequer the magnificent roads that led in all directions to eternal Rome. The great Napoleon—Caesar like—built the roads of France that center in Paris from the general funds of the Government, and these French roads have done more than any other single agency to encourage the thrift and increase the industry and insure the contentment of the people of France. Caesar and Napoleon were the great road builders of ancient and modern times, and their foresight and their judgment demonstrated the beneficent results that follow, as the night the day, the construction of good governmental highways.

Sir, the people of the country know the importance of good road building. They are familiar with the truths of history. They know the past. They realize that often the difference between good roads and bad roads is the difference between profit and loss. Good roads have a money value far beyond our ordinary conception. Bad roads constitute our greatest drawback to internal development and material progress. Good roads mean prosperous farmers; bad roads mean abandoned farms, sparsely settled country districts, and congested populated cities, where the poor are destined to become poorer. Good roads mean more cultivated farms and cheaper food products for the toilers in the towns; bad roads mean poor transportation, lack of communication, high prices for the necessities of life, the loss of untold millions, and idle workmen seeking employment. Good roads will help those who cultivate the soil and feed the multitude, and whatever aids the producers of our country will increase our wealth and our greatness and benefit all the people of the land. We can not destroy our farms without general decay and final deterioration. They are to-day the heart of our national life and the chief source of our material greatness. Tear down every edifice in our towns and labor will rebuild them, but abandon the farms and our cities will crumble away and disappear forever.

Mr. Speaker, let me say again, in closing, that I am now, always have been, and always will be a friend of good road building. It means progress and prosperity, a benefit to the people who live in the cities, an advantage to the people who live in the country, and it will help every section of our vast domain. Good roads, like good streets, make habitation along them more desirable; they enhance the value of farm lands, facilitate transportation, and add untold wealth to the producers and consumers of the country; they are the milestones marking the advance of civilization; they economize

time and labor and money; they save wear and tear and worry and waste; they beautify the country, bring it in touch with the city, and aid the social and religious and educational and industrial progress of the people; they make better homes and happier hearthside; they are the avenues of trade, the highways of commerce, the mail routes of information, and the agencies of speedy communication; they mean the economical transportation of marketable products—the maximum burden at the minimum cost; they are the ligaments that bind the country together in thrift and industry and intelligence and patriotism; they promote social intercourse, prevent intellectual stagnation, and increase the happiness and the prosperity of our producing masses; they contribute to the glory of the country, give employment to our idle workmen, distribute the necessities of life—the products of the fields and the forests and the factories—encourage energy and husbandry, inculcate love for our scenic wonders, and make mankind better and greater and grander—and finally they have made the glory of the nations of the past, and will add to our greater glory and make us all that we hope to be, the most beneficent power that ever blessed progressive humanity.

International Trade and Our Merchant Marine—The Question of Maritime Supremacy and Trade Primacy Is Not a Partisan Question, but Our Opponents Seem So to Regard It.

SPEECH

OF

HON. J. SLOAT FASSETT,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. FASSETT said:

Mr. SPEAKER: However gentlemen may differ in other respects, there is no room for an honest difference of opinion among patriotic Americans as to the desirability of restoring our merchant marine to its former position of importance upon the high seas. Its languishing and dying condition has been a matter of regret and humiliation for fifty years, and yet Congress has taken no effective steps to enable American mariners to meet their deep-sea rivals successfully in the contest for carrying our own goods into the markets of the world. Ninety per cent of the markets of the world are to-day accessible only by water. The great international contests of modern times are not concerned with armored navies and 13-inch guns, but they have to do with trade, with commerce, with the interchange of products of industry, and the weapons used are skill and thrift, labor, tariffs, and subventions and subsidies. The universal cry from every civilized nation is trade and ever more trade, markets and ever more markets, as the power to produce overtakes by leaps and bounds, with the application of steam and electricity, the power to consume and the rivalry for access to the markets and the possession of the markets of the world intensifies. It not only intensifies in energy and aggressiveness, but it intensifies in necessity and utility. Adequate markets for the consumption of our surplus products are indispensable, for they have to do with the welfare of our laboring people, our manufacturers, and our merchants. They touch the prosperity of the farm and of the workshop, as well as of the countinghouse.

The situation is such that we can not any longer afford to ignore it. The body of our merchant marine lies prostrate and bleeding before us. The situation is too serious to be ignored in the interest of a mere academic attitude of mind. It is a question of national protection, of national security, and of the universal welfare of all classes and of all interests among all our people and not of a construction of the Constitution.

It is of twofold significance. First, we should have the carrying capacity, giving us access to the markets of the world for the purpose of commercial profit; second, we should have a navy and a body of seamen in constant readiness to assist our armored ships in case of conflict for the purpose of national security.

The growth of this country during recent years in almost every direction, and in almost every department, has been stupendous and amazing; it has reached proportions so ample as to be practically beyond comprehension; expressed in terms of dollars and of tons the figures actually bewilder us. In a comparatively few years we have quadrupled the number of farms, increased the quantity of their output and their value

more than sevenfold. The output of our manufacturing establishments alone exceeds annually the value of all the exports of all the exporting nations of the world, ourselves included, by more than one thousand millions of dollars.

Our production of minerals equals the output of our factories; our railroads have increased so tremendously that if put in one single line they would reach to the moon; our telegraph wires have increased by hundreds of thousands of miles; our telephone wires have reached an equal distance; our interstate commerce reaches proportions far in excess of all the exports and imports of all the exporting and importing nations in the world, ourselves included. For the past seven years we have grown richer at the rate of \$8,000,000 each day, holidays and Sundays included.

The great prosperity which has blessed this country has been for no single class, but has reached to the poorest paid toiler in the most crowded cities of the land. Our people constitute \$6,000,000 of the best housed, best fed, best clothed people in the entire world, whose children have the amplest opportunity and the broadest outlook of any of the children in the whole round circle of this earth. We live on a higher plane of physical comfort; we pay the highest wages in the world, and the output in any line of human endeavor is higher in this country for individual workmen than anywhere else in the world. Almost all of our multiform enterprises are protected by a system of tariff laws so adjusted as to overcome the natural disadvantages against which otherwise we would be compelled to struggle, such as the lower plane of living and the lower wages of labor prevailing in other countries of the world. We protect the farmer and the artisan; we protect the mechanic and the manufacturer; we protect the output of the North, the East, the South, and the West, and under the stimulus of this protection the creative energies of the American people have surprised and bewildered the world.

But there is one industry—one calling, not less noble than scores of others thus carefully protected—which seems to have been systematically neglected, if not wholly despised, and that is the carrying of our own goods to the markets of our neighbors. Ninety per cent of the people of this world who are possible customers of ours must be reached by means of the deep sea. We furnish 14 per cent of the export trade of the world—we carry less than 1 per cent of it. We pay \$210,000,000 each year for freight and passenger service on the deep seas, of which ships bearing the American flag receive less than 10 per cent. In 1810 we carried 90 per cent of our foreign trade; in 1860, with 1,200,000 tonnage of registered vessels, we carried 65 per cent of our foreign trade; in this year of grace we have only nine sea-going steam-propelled vessels carrying our goods on the Atlantic, with a tonnage less than 90,000, and on the Pacific only seven steam-propelled vessels, with less than 50,000 tons.

One of the great problems confronting the manufacturers of the United States is how to extend profitably our trade in the yet undeveloped markets of the world.

No missionary is so efficient in the real development of trade as a proper means of transportation and communication.

What would we think of the sagacity of John Wanamaker if he hired Siegel & Cooper to deliver his goods for him? But that is just precisely what we are doing in the great markets of the world. Not a single ship carrying the American flag sails to South American seaports south of the Caribbean Sea, and only four small steamers there. We are the best customers of South America. We buy 30 per cent of what Brazil sells, and we sell Brazil less than 13 per cent of what she buys. We sell China 10 per cent of what she buys. We sell Africa less than 11 per cent of what she buys. We sell all South America less than 5 per cent of what she buys. Our best customers by sea are England and Germany and Japan, but England and Germany and Japan carry the goods. The markets where we must go for future growth, the so-called "undeveloped markets," are the markets whither we are sending no American vessels. The reasons for this condition of affairs are not far to seek. If two ships of equal capacity and equal intelligence in direction and administration leave a port, that ship will obtain the business which can render the same service for the least money, and the ship can render equal service for the least money which costs the least to build and the least to maintain and operate, and if two ships cost the same to build and the same to maintain and operate, then that ship can carry trade the cheapest which receives the most artificial assistance in the way of government subsidy or government retainer. The ships of the United States have to meet a handicap at each one of these three necessary steps. It costs more to build ships in the United States because it costs more to pay every man who labors on any part of the vessels of the

United States, and it costs more to pay every man because our system of tariff has lifted up the whole plane of living and the entire wage scale to a point it has not reached in any other country in the world. We are committed to the policy of protection. Our entire industrial, commercial, and social system are tuned up to it, and the American people will never consent to abandon it.

It costs from 25 per cent to 40 per cent more to build an American ship and equip it than in any other country. If it costs \$400,000 to build a ship in America, it would cost \$300,000 to build the same ship in England. It would cost 5 per cent, or \$20,000, to borrow the money in America and 3 per cent, or \$9,000, to borrow the money in England, and there you have a handicap of \$11,000 a year, which must be overcome before the American boat can meet the English boat on even terms. It will cost each boat 5 per cent for depreciation. It will cost each boat 6 per cent for insurance; but for the ordinary repairs it will cost the English ship 2½ per cent, while it will cost the American ship 3½ per cent, and there is a handicap of \$4,000 more before the American ship can meet the English ship on equal terms.

It will cost 25 per cent more to feed the crew of an American ship than to feed the crew of an English ship. It costs from 25 per cent to 50 per cent more to pay the crew of an American ship than it does the crew of an English ship, and these two additional handicaps must be met and overcome before the two ships can compete on an equality of terms. If by greater ingenuity or the application of better machinery, or by the willingness of the American sailors to live on a lower plane than their brothers who work on the land, it would be possible to equalize these differences, there still remains the handicap of subsidies. All of our opponents and all of our commercial rivals subsidize; little Japan subsidizes over \$4,000,000 a year, and she is driving us off the Pacific. Germany subsidizes by giving over \$5,000,000 a year in cash and by giving rebates and favorable differentials on freights carried on government railroads to be exported on German ships. She subsidizes sufficiently to give the German vessels an advantage over their competitors. The Hamburg-American and the North German Lloyd lines have themselves, in the last eighteen years, increased more than two millions of tonnage in registered deep-sea vessels. One line of boats alone, the German-Hamburg-American, has paid in ten years \$51,000,000 in dividends, an average rate of over 7 per cent—126 per cent of their invested capital. This is a significant contrast to our own dwindling merchant fleet. France subsidizes \$9,000,000 a year.

England subsidizes not less than \$7,000,000 a year, and always she subsidizes when necessary to meet the competition of her rivals. Recently she presented to the Cunard Company two of the most superb steamships in the world—750 feet long, costing \$6,500,000 each. These boats were bestowed upon the Cunard people upon terms which substantially amounted to a gift; the Cunard Company has only to make an income over operating expenses. This is competition that no individual or corporation can successfully meet and overcome. The *Lusitania* and the *Mauretania*, 40,000 tons each, able to carry each 10,000 soldiers, fully equipped and armed, are living off our commerce. If either of them could be lifted on end, it would tower 250 feet higher than the Washington Monument—living off our commerce in times of peace, to utterly destroy us in times of war, together with our commerce! These two boats alone can carry as many men and munitions of war as all of our Atlantic merchant vessels combined.

The most prejudiced mind must admit that this is an unnatural and an unhealthy condition of things, and the intelligent observer realizes at a glance that it is an entirely unnecessary condition of things; it is not necessary for us, who have succeeded in every single direction to which we have turned our attention, to be whipped by all the world, including the newest comers into the family of nations, on the high seas; our people have proven time and again their masterfulness and their natural superiority at sea.

This condition of things has come from our indifference and from our squeamishness, but as that great Secretary of State, Thomas F. Bayard, so well said, "When foreign nations do not hesitate to pour wealth into the laps of our trade rivals, the time has come for us to cease to be squeamish."

Even as I speak we may get the news that Japan has purchased the Pacific Mail and taken five of our steamers off of the Pacific. The great prizes of the future in trade are to come from deep-sea trade. We may feel indifferent, because just now, in spite of the tremendous activities of all our great enterprises everywhere, our capacity to consume has outstripped our capacity to produce, but this can not long endure. In the new South during the last ten years there has been an increase of 680 per

cent in manufactures and in eighteen years an increase in the manufacture of textiles of 1,000 per cent, and even at that we are only manufacturing less than 5,000,000 of the 13,000,000 bales of cotton we produce annually.

In Pittsburgh and its environments is originated in iron and steel and their allied products a greater tonnage than originate in similar lines in all Germany or England. It has been found in the last five years almost impossible to get enough either raw material or finished products to feed the hungry maw of the expanding and extending American people. Nevertheless, the producing capacity is overtaking the consuming capacity, and when it is overtaken, what then? Either we must shut our factories and turn out our employees or we must open up markets and dispose of our goods elsewhere on the face of the earth. We must imperatively then get our share of the undeveloped markets of the world.

It will then become a question of commercial life and health and of national safety, and no longer a theme for academic discussion. Under such circumstances as these we should no longer be content to trust to our trade rivals, who are running neck and neck with us, to obtain these very same undeveloped markets of the world, to carry our goods. We could not afford to take the risk; we could not afford to handicap ourselves in the slightest degree. People of our ingenuity, of our shrewdness, of our ability should concentrate and bend the necessary effort to open up and hold these outlying markets for the relief of our home manufacturers. Our rivals are subsidizing against us to the extent of \$30,000,000 per year. To equalize and overcome that rivalry and deadly stimulus it has never yet been estimated we would require over \$9,000,000 or \$10,000,000 per year. But even though it required \$50,000,000 per year to overcome and meet these subsidies against us we could well afford to do it.

You will remember there are two great American questions put to every proposition:

First. Is it right?

Second. Will it pay?

Both questions being answered in the affirmative, there usually is no further hesitation, and we embark upon the enterprise. Let me call your attention to the figures in the case. It will pay to subsidize even to the extent of \$50,000,000 per year, provided that by so doing we can secure all we now pay to our rivals for carrying our own goods. We now pay a total of say \$210,000,000 a year for ocean freight and passengers. Of this, not to exceed 10 per cent is paid to American bottoms. Ten per cent is equal to \$21,000,000, so that our rivals receive \$189,000,000 of our own good money to build up and sustain their heavily subsidized merchant navies, rivaling us in times of peace and threatening us in times of war. Now, then, if a reversal of our present policy by an outlay of \$50,000,000 would result in a reversal of present conditions, giving us the 90 per cent of the traffic and leaving the 10 per cent to our rivals, we should bring into American possession a clean advance over what we now receive of \$68,000,000, or \$118,000,000 per year over and above the \$50,000,000 subsidy, and the energizing influence of this money would flow into American instead of rival channels.

But there is another aspect besides the commercial aspect which should give serious concern to all patriotic citizens, and that is this—even though it may be, and doubtless is true, that American capitalists can now and do own and maintain and conduct at a profit ships under foreign flags, and thus are even now securing a part of their earning power to the advantage of this country—we are confronted with the startling consideration that ships thus owned and controlled are manned by foreign crews, are operated under foreign flags, under the direction of foreign officers, and afford, therefore, no recruiting reserve for the American Navy in times of war.

We have expended \$300,000,000 upon our Navy; we have a splendid Navy, superbly officered and superbly manned, magnificently equipped—a Navy that can meet any other navy on equal terms; a Navy that would give an account of itself under any circumstances—but we were unable to send that Navy to the Pacific without hiring from our rivals ships for colliers and incidental services. When we had the Spanish war we were unable to get American ships to do the work, and this was right at home. When we wanted to send our Navy to the Pacific, we had to get four ships from Norway and twenty-four from England—the lowest American bid for carrying coal was \$8 per ton, and the foreign bid was \$5.85.

If, by any mischance or freak of fate, war were to be declared this moment between us and any other naval power, these twenty-eight ships which we have hired would become contraband of war and would be under obligations to incur either the risk of capture or make for the nearest neutral port. Our fleet, crippled for the want of coal, could go no farther than the steaming radius of the battle ships.

If such should come—which God forbid—and we were faced with the necessities of war, and if our Navy and our Army should undertake to meet ideal conditions and strike the swiftest possible blow with the greatest possible force, at the greatest possible distance from home, we should find ourselves utterly unable to meet conditions. We could not embark a single Army division of 20,000 men, fully armed and fully equipped and prepared at any point, either on the Atlantic or Pacific coast. We could not supply the auxiliary transports and hospital ships and other necessary ships for the Navy alone, to say nothing of supplying ships to carry and provide for troops. We should be reduced, in spite of our glorious Navy, to the ridiculous and dangerous, if not the fatal, absurdity of operating our fleet within sight of shore and waiting to receive the attack of the enemy at the enemy's own pleasure and in the enemy's own good way.

If we were to undertake to build for the nation's ownership an adequate supply of the right kind of ships and auxiliaries for the complete auxiliary Navy, and a complete fleet to move not less than two Army divisions at any given moment, the initial cost to the Government would be not less than \$200,000,000, but the outlay of \$200,000,000 would mean an annual fixed charge of 3 per cent for interest; 5 per cent for maintenance—for iron ships only last twenty years—6 per cent for insurance; 3½ per cent for repairs; not less than 6 per cent for salaries and labor; 6 per cent for food, and 6 per cent for fuel, or a grand total expenditure of \$71,000,000 in the way of fixed charges. If this were done, and the American people would meet such an outlay to maintain our national honor, we would have the difficulties and friction contingent upon finding the men and officers, and of controlling and disciplining them, and there would be the increased expense for mere operation, for so large a body of ships and men could not be kept in absolute stagnation in times of peace. They would have to be constantly occupied to keep them in proper condition for immediate response in times of peril.

To build and maintain and man all the extra ships needed to make the Navy useful to its best degree, and the Army valuable at the most essential point, would thus be the most expensive possible way to meet an end so desirable and so essential. Whereas, by a patriotic, intelligent and farsighted policy of proper distribution of subsidies, which is pursued by every one of our trade and naval rivals, we could build up, as once before we had, a peerless merchant marine which would carry our flag into every sea and our ships into every port, and be developing our foreign trade in times of peace and training men and officers for our protection in times of war.

But, it may be objected, we can not dip into the Treasury for individual or private purposes. I reply, this would be dipping our hands into the National Treasury for the highest possible public interest; for our safety in times of war and for our welfare in times of peace. We can meet the world in competition on equal terms. But for years there has ceased to be natural competition on the open seas. We have handicapped ourselves by the high cost of production resulting from our high protective tariff, and our rivals have handicapped us further by their unstinted subsidies to their merchant navies.

If mere cheapness be our cry, then why not open our coastwise trade? Norwegian vessels can do the work, German vessels can do the work, Japanese vessels can do the work, 40 per cent cheaper than our coastwise vessels do now. They would do it with cheaper built ships, built by cheaper paid men, living on cheaper food, but they would do it and we would see our coastwise trade, which now employs over 6,000,000 tons, collapse more suddenly and more completely than our foreign trade has done. And, also, we should see collapse every American shipyard, save those only which we subsidized in the way of vastly profitable contracts in building battle ships. By thus protecting our coastwise trade we are to that very extent encouraging individuals and corporations contrary to the teachings of the strict constructionists.

The Democratic opposition so solidly made to giving subsidies either in the way of return for carrying the mails or as a reward for carrying tonnage seem to be based, if one can judge from the arguments which have been presented in this Chamber upon the other side, upon the idea that it is improper to make direct appropriations for such a purpose; that in so doing in some way we give an improper advantage to some individual or corporation. Gentlemen forget that it is impossible to benefit everybody without giving a benefit to somebody. We have been for many years in the habit of appropriating for the general welfare by means of gifts and subsidies and encouragements and protection to special interests. Even the most broadly conceived measure for the most universal benefits must work out

its results by application to certain special localities and to certain special interests and to certain individual enterprises.

We gave cheerfully for years a subsidy to the Southern Railway Company of nearly \$165,000 annually to benefit all the people by special acceleration and improvement of the mail facilities through the few States traversed by the Southern Railway Company. For every 7 cents the United States pays out for transporting through the mails newspapers and second-class periodicals it receives in return but 1 cent, and for every million dollars it receives from this source it pays out seven millions. This is in the interest of the distribution of intelligence. Whether one is inclined to quarrel with it or not to quarrel with it, it is a subsidy, and it is a subsidy of a special interest, the first beneficiary being the individuals who own the newspapers and the second-class periodicals. Ultimately there is undoubtedly a benefit wide enough to justify the continued expenditure.

We have not hesitated to provide millions for the irrigation of arid lands. The general benefit of this is indisputable, but the same principle is involved. Only recently this House appropriated from the Public Treasury \$250,000 for the benefit of sufferers from a cyclone that swept through a part of the Southern States. The Democratic Representatives from those same States oppose a ship subsidy, and oppose it on the ground that it appropriates public money to individuals, but they do not hesitate to appropriate this quarter of a million dollars to the people whose homes and buildings were burned down and who were made penniless by a catastrophe beyond their control. It was a meritorious outlay, no doubt, but it could not be defended on any grounds which would not equally include a subsidy to American shipping.

We have not hesitated to give billions of dollars' worth of bonds and lands to railroads to secure better trade facilities between the States inside continental lines; we have not hesitated to give billions of dollars' worth of land to individual citizens, in order that they might build homes, rear families, and make expanding home markets for manufacturers to sell goods to and the railroads to carry freights to and from.

We have not hesitated to spend \$300,000,000 for a Panama Canal. Since 1888 we have appropriated nearly \$300,000,000 to improve our rivers and harbors. We have not hesitated to appropriate for 40 and 50 foot channels in some favorite harbors, and we have not a single American ship to go through the Panama Canal for foreign trade when built, nor a single ship of any kind requiring 40 or 50 foot channels in any harbor.

We have done everything, everywhere, for every kind of trade and every kind of industry and every kind of manufacturing except shipbuilding enterprises for the high seas. We have generously built up a navy of fighting ships of sufficient strength to protect us upon the high seas, and we have absolutely almost nothing on the high seas to protect, and will soon lose what we have. We have sixteen battle ships, going now to Pacific waters, and with them are attending convoys, and our deep-sea-going steamships in all the world on both oceans are just sixteen, of which only seven are on the Pacific.

What are the remedies? The remedies proposed are:

First, Free ships, by which is meant that we shall have the privilege of buying ships in the markets of the world and registering them under the American flag. That would bring us at once to an even keel with our competitors, so far as the first cost is concerned. The objection would be that it would be just so much business taken away from our own shipyards. It must be remembered that already we allow the importation of all materials to be used in the construction of a ship, free of duty, with one limitation, which seems to be a serious objection, that the ship forfeits its right to engage in a coastwise trade at any time for more than two months.

The next remedy suggested is differential duties, or rebate on duties on all goods imported in American bottoms. There are two objections to this:

First, That fully half of the goods we import are on the free list and could not receive any differential duty.

Second, We have many treaties with our different trade rivals, absolutely guaranteeing that their goods shall be received on equal terms with our own, and to violate these treaties might lead to war.

The next proposition is just the converse—that we should pay a bounty on outgoing goods in American bottoms. The objection to this is that we have the same number of treaties which guarantees that no such differentiation shall take place.

The third remedy is that of giving direct subsidies based on service, either in the way of carrying mails or freights, or making certain speed. This method is pursued by all of our rivals. In addition to direct subsidies some of them give encouragement in the way of retainers or rebates. England, for instance, pays

an annual retainer to over 32,000 seamen and pays a handsome bonus for mail contracts.

In addition to direct subsidies, Germany pays in the way of rebates on the state railroads on freight charges on goods to be exported in German bottoms.

Japan subsidizes in more ways than one, and the significant proposition is that *they all subsidize enough*.

The objection raised against direct subsidies is purely academic, and whatever force it has applies only to subsidies made with a view to commercial expansion. It must fall to the ground when brought to bear on the proposition of national defense. We pay \$146,000,000 a year in pensions on account of wars that have been and for the encouragement to volunteers in wars that may be.

We expend \$125,000,000 every year to take care of our Navy; we expend \$90,000,000 a year to take care of our Army; we expend \$25,000,000 a year for fortifications, and \$10,000,000 or \$15,000,000 a year to maintain light-houses and other similar services.

We begrudge nothing for the national defenses in this way which appeals to us directly, but in order to make valuable the outlay which we have already incurred, and in order to utilize in time of peril the defenses we have already provided, we must have a merchant navy. We have neglected altogether too long; we have not only neglected, but it almost seems that we have been inspired to assist our rivals. We pay \$700,000 per year to American vessels for carrying the mails to Europe; last year we paid almost as much to foreign vessels, and this year we will be paying \$600,000 to foreign steamboats for carrying our mails. When we turn to the other side of the account and see if our few struggling steamships have received encouragement from their trade rivals, we discover a situation in decided contrast to our own generous courtesy.

If two ships are leaving New York at the same time we send our mail by the fastest ship, whether American, English, or German. In return we get not one dollar in payment for bringing home the foreign mail. A letter over there may wait a week unless the individual correspondent puts the name of the ship by which it is to travel on the envelope. They simply will not send outgoing mail by American steamers, even if, as sometimes happens, they make the quickest time. It has been known that our ships in a year received \$10,000 for bringing home foreign mail, but usually it is less than \$2,000. We seem rather to enjoy being imposed upon and discriminated against by our rivals, and patiently turn one cheek and then the other to their stinging slaps. We submit to being handicapped and destroyed at sea as pleasantly as though it were a huge joke, but when that strenuous time shall come, when our gifted manufacturers have filled up the home markets to overflowing, and we shall consume less than we produce, then there will be attention given to the demands of a situation that will be intolerable, and then we will hasten to undo the wrong of the last five decades and will adopt a policy equally enlightened with that of our opponents, and we shall wonder what insanity possessed us that we deliberately manacled ourselves in the great race for commercial supremacy.

I would be glad to have every ship we sail built in American yards, by American labor, receiving American wages, but if to bring the reluctant into line it is necessary to permit the purchase of cheap ships, built abroad by cheap labor, the vast interests beyond that would make me reasonably content to have the ships bought where they could be bought the cheapest, because of the grave consequences which would ensue if suddenly there should be war between any two first-class nations. Do our merchants forget what happened when England conducted a little war down in Africa? Do they remember how freight rates went up and their goods were shut out from foreign markets? What would happen to the 9,000,000 bales of cotton and the millions of bushels of wheat and corn if Germany and England, or England and Japan, or Japan and the United States should go to war to-morrow? They would be burning corn in Iowa, wheat in Nebraska, and cotton in New Orleans, and what would become of the hundreds of millions of dollars' worth of manufactured articles we now sell abroad? We would have the goods, but no means to get them to market.

While we have been going swiftly down hill in the amount of tonnage engaged in foreign trade, our trade rivals have been growing at a tremendous rate, and largely at our own expense. In a few years the merchant marine of Japan has grown to over 2,000,000 of tons; England, to over 16,000,000 of tons; Germany has increased to over 2,000,000 tons in ten years, and France has grown with great rapidity. We alone have lost ground and have to-day less than 90,000 tons in the Atlantic,

and 50,000 tons in the Pacific, and even this is in a languishing condition.

It is not that we are not able to do work cheaply where once we get a fair foothold, for our railway rates all through this great country and the rates for the transportation of freight on the Great Lakes are the cheapest in the known world. We have recently enacted, very properly, the so-called Hepburn bill, which takes away from the transportation companies the right to fix rates at their own pleasure, even to meet an emergency. Our trade rivals are not handicapped by any such rules or restrictions, and English merchants and Japanese merchants and German merchants by fixing rates at sea practically control them on land, and a new element of danger thus confronts Americans interested in deep-sea transportation.

One of the most interesting and serious problems confronting us to-day, serious in its far-reaching importance to every national interest, is the problem of reviving our merchant marine, and reestablishing our ancient supremacy on the seas. The great prizes of the future are to be won from the waters, not from the lands. We have no alternative but that of subsidy. There is nothing else just as good. Our political well-being and our social integrity and health are all wrapped up in developing a merchant navy large enough to carry all of our goods to all the open and opening markets of the world in times of peace, and strong enough, in cooperation with our Army and Navy, to protect our coasts, as well as our commerce, in times of war. This can be done, as matters are at present, only by putting up our subsidies, or putting down our wages and reducing our scale of living, but the scale of living will not go backward; that is too dear a price to pay. Our trade rivals subsidize and flourish. We are living on a high plane, and our commerce is perishing. We can not and will not reduce the comforts in the lives and homes of our American working people, either at sea or on land, so we must come squarely to the line and give aid, and give it quickly, and give it abundantly in the form of adequate subsidies for services rendered and to be rendered. We must give it not because it will be of advantage to individuals here and there, but in spite of that fact; not because it will increase the revenues of corporations engaged in deep-sea commerce, but in spite of that fact. We must give it in this way, because it is necessary for the well-being of all our citizens; because it enables us in times of peace to obtain security in times of war; we must do it to insure the best interests of our future; we must do it because it will pay to do it and because it is right to do it. We must subsidize because it is the only way; because we must be prepared to meet the call of our manifest destiny; because we can not shirk the burden put upon us by circumstances, and we must do it quickly—before our ships are all gone, and before our sailors have all disappeared. It is not a question of pride; it is not a question of pleasure; between failure and success, we must choose success; between humiliation and victory, we must choose victory. We must choose to meet our rivals as gloriously on the seas as we have ever met them on the land. To maintain our merchant victories by land we must arrange for merchant victories at sea.

The Negroes of Ohio Will Abide by the Action of the Republican National Convention and Will Support the Republican Party in November.

SPEECH

OF

HON. HENRY T. BANNON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. BANNON said:

Mr. SPEAKER: During the course of some remarks made in this House on March 14, I took issue with the gentleman from Illinois [Mr. RAINEY] upon his prediction that the negroes in Ohio would vote the Democratic ticket in November, and that Ohio would go Democratic, and upon that occasion I said:

The gentleman from Illinois [Mr. RAINEY] in a speech in this House the other day, said the negroes in Ohio would vote the Democratic ticket next November and that Ohio would go Democratic. He fails to give the Ohio negro credit for any intelligence. Ohio negroes know what Democratic hard times are just as well as the white people do. They don't want a Democratic Administration any more than we do. They are no better prepared for it than we are, and they would suffer from it just as much, if not more, than we would. The gentleman from Illinois also asked what would become of the Republican party without the negro vote. I ask him what would become of the Democratic

party if the negro were allowed everywhere in America to exercise his constitutional right to vote? I will tell you what would become of the Democratic party. The Socialists, Populists, or Prohibitionists would cast more votes than it would.

Those remarks prompted Walter S. Thomas, of Columbus, Ohio, to write a letter to the gentleman from Illinois in which he ventured the assertion that Ohio would go Democratic in November, because the negro voters of that State would not support either Taft or Roosevelt. The letter head of the Thomas letter discloses the fact that he is the chairman of the Ohio Afro-American League. The gentleman from Illinois thereupon presented this letter to the House and it was read in the House and made part of the RECORD on April 11. I had expected that such a deliverance might be followed by others and that Thomas would put his typewriter to working and send us other letters from other members of his league. But such has not been the case. After patiently waiting for six weeks not a single additional letter has appeared, so I assume that Thomas is the only Ohio negro who has definitely made up his mind not to support the Republican party. If there are others we certainly would have heard from them. Now, I don't think much of negroes who write Democratic letters to Democratic Congressmen. It is too much like giving aid and comfort to the enemy. It is too much like carrying ammunition into a hostile camp. I do not believe Thomas represents the rank and file of his race in Ohio. I have received some letters from them myself. To show you that Thomas has not faithfully represented the attitude of his people, I will now read a letter I received from William H. Buckner, who is the secretary of the Grand Lodge of Ohio Masons:

COLUMBUS, OHIO, March 30, 1908.

HON. HARRY BANNON, M. C.,
Washington, D. C.

MY DEAR SIR: As a lifelong citizen of Ohio, and a voter of the Republican party since 1864, I wish to thank you for your truthful and manly reply to Representative RAINEY (Democrat) of Illinois, when he said that 95 of every 100 colored voters of Ohio would vote the Democratic ticket next November, should Secretary William H. Taft be the Chicago nominee of the Republican party. Such an assertion as that is an insult to the majority of colored voters of this State, and we are happy to know that we have a Representative in Congress who is manly enough to refute such twaddle as the above assertion.

We understand that a certain defunct colored politician of this city, who claims to be president of a mythical organization, called the Afro-American League of Ohio, has written a letter of thanks to Mr. RAINEY for his wild and unsupported statement, in which he reiterates what the honorable gentleman from Illinois has said on this subject, and claims that the so-called league represents the larger portion of colored voters of Ohio. First of all, this league only exists on paper, and does not represent the very smallest portion of our people. The worthy gentleman who announces himself as president is too well known in Ohio for me to add any more testimony as to his ability and well-known fame as a "hot-air artist."

Unfortunately, we have a few colored men in Ohio who would "sell their birthright for a mess of pottage," of which coterie this gentleman stands in the front rank.

You can depend upon it that the larger portion of the colored voters of Ohio will do, act, and vote as they have always done, and that is for the success of the grand old Republican party.

Again thanking you, I am, sir,
Very respectfully,

WM. H. BUCKNER.

Also, I have a letter from H. B. Alexander. He is a representative Ohio negro and is the secretary of Robert H. Jeffrey, who is the vice-president of one of the most extensive manufacturing plants in Ohio and was, until recently, mayor of the city of Columbus. Mr. Alexander says:

COLUMBUS, OHIO, U. S. A., March 30, 1908.

HON. HENRY T. BANNON,
Member National House of Representatives, Washington, D. C.

DEAR SIR: I beg to thank you most respectfully for your prompt refutation of the assertions and insinuations made by Mr. RAINEY on the floor of the House as given in the newspaper reports of recent date, which assertions and insinuations were to the effect that 95 per cent of the colored voters in Ohio would not support the Republican ticket at the coming national election in the event of the nomination of Mr. Wm. H. Taft.

The statement made by Mr. RAINEY was evidently based upon false information, undoubtedly furnished him by some disgruntled colored Republican.

I want to say for myself as a colored citizen, voter and taxpayer of Franklin County, Ohio—and I am confident that I voice the sentiments of hundreds of my personal acquaintances in this community—that I intend to support the Republican ticket at the coming election, irrespective of who leads it, whether he be Taft, Roosevelt, FORAKER, FAIRBANKS, CANNON, KNOX, or in fact any man that the national convention sees fit to nominate.

Whatever may be the factional differences during the preliminary campaign prior to the nomination, or whatever may be the objection to this or to that candidate, the success of the Republican party and the perpetuity of Republican principles regarding the negro, is the paramount issue with every thinking colored voter, not only in Ohio but in every State in the Union where the right of franchise is granted and exercised by him; his progress, his happiness, in fact, his life depends upon it. Recent proposed legislation in the House, and more recent occurrences in the streets of Washington, prove to us what we may expect under a national Democratic administration.

I will admit, however, that there are a few colored Republicans here and there, who have fallen from political grace, who will prob-

ably be able to raise their heads from the mire long enough to say "Hurrah for Bryan."

Again thanking you for your defense of the intelligence of the Ohio colored voters and thanking you in advance for any stand you may take in the future looking to the protection of the rights of, and justice to, my race, I am,

Most respectfully, yours,

H. B. ALEXANDER.

J. J. Lee, formerly a member of the city council of the city of Columbus and a man of good character and excellent reputation, writes—

COLUMBUS, OHIO, March 28, 1908.

HON. HENRY T. BANNON,
House of Representatives, Washington, D. C.

DEAR SIR: I have read in the public press with great satisfaction extracts from a speech delivered by you in the House of Representatives on the 14th of this month. I was particularly pleased with what you said concerning the attitude and purpose of the colored man of Ohio with reference to voting the Republican ticket next November.

I desire, as a colored man, to express heartily and emphatically my approval of what you said in that particular. The colored Republican of Ohio is as loyal to his party as the white Republican of Ohio. He supports and has supported that party from principle and conviction because he knows and believes that Republican success and Republican administration, State and national, means prosperity and progress for him.

There is, of course, always a discussion of candidates before the nomination and there may be a difference of opinion as to the proper choice, but when the ticket is selected and election time comes the colored voter of Ohio will be found next fall as always, supporting solidly and unitedly the party that has demonstrated itself to be his friend.

There are in Ohio a few cheap politicians who are seeking for their own self-interest to create a contrary impression. A few of these men have organized themselves into what they call the Ohio Afro-American League. The character of this organization can not be more clearly demonstrated than by the personal record of its chairman. If the people of the country and of Ohio knew Walter S. Thomas as well as the citizens of Columbus do, no attention would be paid to anything he might say or do. He is thoroughly discredited, has an itching palm and does not control his own vote, for he lacks even sufficient political integrity to "stay bought."

I have taken the liberty to write you thus freely and frankly, although a stranger to you, because it arouses my indignation to see the attempt that is being made to misrepresent the attitude of my race on the eve of a great national contest.

Very truly, yours,

J. J. LEE.

Here is a letter from C. H. Hughes, commander of the George Steele Post, G. A. R., of Columbus, Ohio. Hughes, I might add, was the messenger of Hon. George K. Nash while the latter was governor of Ohio.

COLUMBUS, OHIO, March, 1908.

HON. HENRY T. BANNON, M. C.,
Washington, D. C.

HONORED SIR: Pardon me for taking the liberty of thus addressing you, which I am sure you will when I say that I am particularly interested in the stand you took with reference to the colored vote of Ohio on the national issues of the present campaign. When you say that the colored vote of Ohio will be loyal to the Republican ticket this fall you state what will certainly be the true situation. This I know from personal observation by coming in contact with representative colored men and being a colored man myself. I know that we have some colored men in Ohio who would try and make you believe that the colored vote in Ohio can not be relied upon this fall, but such is not the case. The colored man knows just as well to-day as he did forty years ago that his political friend is the Republican party, and as voters we are not going to take any backward steps. In the primary skirmish we all have our individual choice, but after the smoke clears away we are ready to fall in line against our common enemy, the national Democratic party. I hope you will pardon me for taking up your valuable time with these lines, but it is only done to show my appreciation for your valuable services.

Respectfully, yours,

C. H. HUGHES.

Isaac N. Stroud, a prominent colored citizen of Ohio, has this to say:

COLUMBUS, OHIO, March 31, 1908.

HON. HENRY T. BANNON,
House of Representatives, Washington, D. C.

DEAR SIR: On behalf of many colored Republicans of Ohio, and myself, I take this method to thank you for the able and truthful manner in which you refuted the false charges and statement made by Representative RAINEY, a Democrat from Illinois, in relation to the attitude of the colored voters of this State toward Secretary William H. Taft in the coming Presidential election.

The gentleman from Illinois has said that if Mr. Taft is the Republican nominee that 95 per cent of the colored vote will be cast for the Democratic ticket. * * * He certainly is not posted as to the intelligence and good sense of the bulk of our people. We would inform the misguided gentleman that the negro of Ohio is always loyal to the party that discourages the disfranchisement of his race and is always against the Jim Crow law and other indignities, and that is the grand old Republican party.

We have in our city a political jackal who don't seem to realize that his days of usefulness are long since passed in this community. I am sorry to say that he is a colored man. This "beat" is now posing as the president of a so-called Afro-American League, and we are told has written a letter to his Democratic friend and brother (RAINEY) in which he indorses all the wild statements made by him.

The Afro-American League is a myth, and is only a device manufactured by this worthy to obtain money without working for it. We would thank the Democratic party or the Devil if they would take this "windbag" into their camp and keep him there.

You can rely upon it that the bulk of the colored voters will loyally support Secretary Taft for President, and why shouldn't they? Again thanking you, I am, sir,

Very respectfully,

ISAAC N. STROUD.

George Johnson, a representative Ohio negro, also writes me this letter:

COLUMBUS, OHIO, March 30, 1908.
HON. HENRY T. BANNON,
House of Representatives, Washington, D. C.

DEAR SIR: I have read in the public press with great satisfaction extracts from a speech delivered by you in the House of Representatives on the 14th of this month. I was particularly pleased with what you said concerning the attitude and purpose of the colored man of Ohio with reference to voting the Republican ticket next November. I desire, as a colored man, to express heartily and emphatically my approval of what you said in that particular. The colored Republican of Ohio is as loyal to his party as the white Republican of Ohio. He supports and has supported that party from principle and conviction because he knows and believes that Republican success and Republican administration, State and national, means prosperity and progress for him.

We know why these differences of opinions is being discussed. This great disturbance is caused probably by the Brownsville affair of which has been settled by the President of the United States, whether it was a mistake of the President or not we are not discussing that matter at this time. We have no distaste against the author, Hon. J. B. FORAKER, which is not the question at this time with the colored men of Columbus.

When the convention convenes we are here ready to abide by the decision of the delegates. We have a few cheap politicians in Columbus that has taken this plan for a gain for themselves, not for the interest of the people—in order to try to make a living without work. This has been the theme of these few politicians for some years.

The influence of these men is worthless in the city of Columbus where they are better known. Now they pretend to be the leaders of the Afro-American League, which the better class of the negro race in the city of Columbus do not recognize as good citizens.

Walter Thomas is the leader in this particular. He has held up every man in Columbus for his own benefit so far as he could, now he wants to get as much as he can from the Democrats that live out of his own State.

I have taken the liberty to write you thus freely and frankly, although a stranger to you, because it arouses by indignation to see the attempt that is being made to misrepresent the attitude of my race on the eve of a great national contest.

Respectfully, yours,

GEORGE JOHNSON.

Edward T. Wells, a deputy clerk in the office of the clerk of courts of Franklin County, Ohio, has this to say:

COLUMBUS, OHIO, March 22, 1908.

HON. HENRY T. BANNON,
House of Representatives, Washington, D. C.

DEAR SIR: I desire to stamp my approval upon the sentiment expressed by you in your address delivered in the House of Representatives on the 14th day of this month, respecting the intelligent and loyal support the colored vote has always given to the principles of the Republican party, and I want to assure you that you are entirely right when you say, "that in our action at the polls this fall, there will be no exceptions to the rule."

The respectable and respected colored voter of Ohio appreciates very much what you have said in that particular, and are just as enthusiastic in condemning the false-hearted practices which are being indulged in by a few self-constituted leaders; wholly irresponsible and representing nothing, not even their own votes, who are for personal benefit endeavoring to falsify the situation.

Respectfully, yours,

EDWARD T. WELLS.

F. D. Taylor, who is a prominent minister in the African Methodist Church, also does not agree with Thomas, for he says:

COLUMBUS, OHIO, March 30, 1908.

HON. HENRY T. BANNON,
House of Representatives, Washington, D. C.

DEAR SIR: I have heard to my regret that it has been said by some enemy of the race that the colored voters anticipate supporting the Democratic ticket in the next national campaign this fall.

I say, from personal knowledge, it is untrue. I am in a position where I come in touch with my people every day, and can vouch for the true state of affairs. I can say that—not only the Republicans of Ohio, who have vowed to stand by the good old party, but the Republicans of the United States, where they are allowed to vote.

You can rest assured, Mr. BANNON, that the colored voters are with you and yours and our friends for the good old party that has done so much for us and also for this country every since it has been in power. I was with you when you ran for Representative, and I did all I could with my friends at Portsmouth and Ironton for your election, as I was pastor of the A. M. E. Church at Ironton at that time.

I remember when you made that grand speech at Memorial hall, and said "If you were elected that you would do all you could for the boys." We stood by you then and saw that you got elected, and we will stand by you and the party forever.

I am, sincerely, yours,

F. D. TAYLOR.

N. T. Gant, a resident of Columbus and a representative negro, evidently believes Thomas does not represent the true sentiment of the Ohio negroes, for he says:

COLUMBUS, OHIO, March 30, 1908.

HON. H. T. BANNON, Washington, D. C.

DEAR SIR: I write to express my appreciation of the statement you made in your speech on the 14th inst. in answer to Representative RAINEY, of Illinois, that "ninety-five per cent of the negroes of Ohio would bolt the ticket in the event of Secretary Taft's nomination." This information does not emanate from representative colored Republicans or the rank and file of the voters, but from designing politicians whose sole aim is to subvert a selfish purpose.

As a member of the race, I feel very keenly the injustice of such gross misrepresentation on the part of the gentleman who made the statement, as well as the people, who no doubt misinformed him. I have tried to find out as far as possible the true sentiment in this matter and feel assured the negro voters of this State will do their

full duty on the 8th of November and stand by the nominee of the Chicago Convention.

Again thanking you for your timely remarks and protest against an injustice to the race, I am,

Respectfully, yours,

N. T. GANT.

These letters all come from men who understand political affairs, not in Washington, but among the people; not where the talking is done, but where the voting is done. Their judgment of actual conditions is better than that of the gentleman from Illinois.

I can not conceive how any Republican, and especially how any negro, can indorse the speech of the gentleman from Illinois. In the course of his remarks he said:

The Democratic party is the white man's party in this country—in the North as well as in the South. [Applause on the Democratic side.] We have been able to make it a white man's party in the past, and we do not care how long it remains a white man's party.

Here we have a Northern Democrat in Congress proclaiming to the country that his party is the white man's party—not only in the South, but in the North. He serves notice on the negro voters of the North that the Democrats do not want their votes. Well, they wouldn't get them anyhow. The Ohio negroes have always remained true to the Republican party in every national and State election in Ohio, and they will be loyal this year. Differences may exist concerning the affair at Brownsville. In that matter the negroes have had the benefit of the active support of one of the most aggressive, courageous Republicans in this country. They have had the benefit of one of the greatest legal minds that America has produced. He has fought a brave fight and he is still in the midst of it. During his struggle for many months every Democrat on the Senate Committee on Military Affairs and every Democrat in the United States Senate has bitterly opposed him. In that contest the only Members of Congress on the side of the discharged battalion are Republicans. Every Democrat is actively against the reinstatement of the colored troops. The only champion the negroes of this country have ever had are Republicans, and because on one issue out of the many some Republicans may not have agreed affords no reason why the negroes of Ohio should refuse to support their party. There are a great many negroes in my district and in my home city. I personally know nearly all of them. They are an intelligent, progressive, industrious people. I think I know how they feel about this matter. They believe in the principles of the Republican party. They will abide by the action of the Republican national convention, and they will support the Republican party in November.

The Faith of the Fathers.

SPEECH

OF

HON. BENJAMIN G. HUMPHREYS,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. HUMPHREYS of Mississippi said:

Mr. SPEAKER: Under the general leave which was granted a few days ago, I print the following address which was delivered by me before the Alumni Association of the University of Mississippi June 4, 1907:

"MR. PRESIDENT AND FELLOW-MEMBERS OF THE ALUMNI ASSOCIATION: It has occurred to me that no more appropriate subject could be selected for an address upon this happy occasion than the "Faith of the Fathers." In the long list of the immortals whose patriotism, whose farsighted statesmanship, whose sacrifices, brought forth this Republic or guided its destiny through the shifting scenes of its formative period there stands preeminent the name of the great Mississippian. For this reason alone I could with perfect propriety present for your attention and contemplation the principles of civic liberty to which his life was dedicated and to which he bore unwavering fidelity alike upon the battlefield, in the Senate, in the white house of the Confederacy, in the shameful shackles at Fortress Monroe, and in the purple twilight of a ripe old age beneath the spreading live oaks of Beauvoir.

"Here, too, in the halls of our alma mater the orator, the scholar, the statesman, and, above all, the patriot Lamar taught the law class how the Constitution was made and all the eventful story of its life. Here, also, in the first days of its history taught the erudite, the versatile Albert Taylor Bledsoe, whose book, *Is Davis a Traitor*, has not and never can be answered.

So, Mr. President, inspired by the thoughts suggested by these great names—

"The choice and master spirits of the age,

"I have deemed it appropriate to call to your attention some of the principles which they labored so earnestly to perpetuate.

"It was natural, it was inevitable, after the Constitution had been ordained and established that two schools of radically different interpretation should appear. It could not be doubted that the restless spirit of Hamilton, with his lack of faith in the stability of all popular governments, and the watchful genius of Jefferson, the apostle of Democracy, would endeavor on the one hand to limit and restrict, and on the other to amplify and extend the power and scope of the Federal authority.

"It has been given to few people in their struggles for independence to be blessed with the leadership of a Washington, and so it came in natural sequence when the more perfect Union had been formed that all eyes turned to him to direct the course of the young Republic through the stumbling days of its swaddling clothes. Washington was reputed a Federalist and through the magic of that great name the Federalists held the reins of government for the first twelve years of our national life. Jefferson always referred to the election which brought him to the Presidency as the revolution of 1800. From that date the executive and the legislative departments were in control of the disciples of Jefferson, but the Supreme Court was presided over and dominated by a Federalist—I mean dominated by the persuasive force of his matchless logic—and so it came to pass that although the Federalist party had perished utterly never to appear again upon the stage of active politics, the Supreme Court under the dominance of Marshall, was slowly, but certainly, shaping the Government to the mold of Federalist opinions. The strict constructionists were lashed into fury when Marshall held that Congress had power—implied from powers specifically delegated—to charter a national bank, and they believed that the Constitution had been stretched to the point of rupture by this latitudinarian construction. What a far call it is from the doctrine announced in that great case to the popular theory of Federal power to-day. Jefferson and his followers were shocked at what he termed the usurpation of the judiciary, and he announced that the continued prevalence of the doctrine of consolidation would call for reformation or revolution. Those of us who to-day insist upon the limitation to Federal power set down by the great Federalist Marshall, against whom Jefferson complained most bitterly, are smiled at as strict constructionists and reminded that the thoughts of men have broadened with the process of the suns.

"Mr. President, the men who build this Republic were no novices. They were architects trained in the school of relentless necessity. Scions of a race that had known oppression and had destroyed it; learned in all the lore that had sifted through the ages in which men had fought against the foes of liberty, inspired by the spirit of Langton and Fitz-Walter who wrought so well for all posterity upon that glorious day at Runnymede, they brought to their task a knowledge of state building and the science of freedom surpassed only by their patriotism. When they fashioned the Constitution they were mindful of the world-wide, world-old story of man's love of power and proneness to abuse it, and so they laid the foundation of the Republic, not in confidence, but in jealousy, believing that confidence is everywhere the parent of despotism. With this thought then uppermost in their minds they provided separate depositories for that power which must be exercised in all organized governments, delegating to the Federal Government such powers only as were necessary and proper to the discharge of the purely Federal function, and reserving to the several States the regulation of that mass of legislation of purely local concern which we usually designate the 'police power.' Fearful, however, lest in that liability to err which is common to all flesh they had left some obscure peg upon which by some refinement of sophistry constructions might be hung to amplify the Federal power, they deliberately and immediately, in a spirit of abundant caution and to make assurance doubly sure, provided in unequivocal English that 'the powers not delegated to the United States by the Constitution nor prohibited by it to the States are reserved to the States, respectively, or to the people.' Such, then, were the conditions under which the dual Government was framed, such was the corner stone upon which the whole fabric was builded, and for more than a hundred years the Constitution, in spite of sinful, senseless amendment, has endured. From a federation of 3,000,000 souls we have come to be a nation of eighty millions, and in all the vicissitudes of change which marked that evolution the wisdom of the fathers has been made more manifest.

"Mr. President, are we losing faith in the capacity of the States to perform the functions reserved to them by the fathers?

"Inspection laws, quarantine laws, health laws of every description," says Marshall, "form a portion of that immense mass of legislation which embraces everything within the territory of a State not surrendered to the General Government. No direct general power over these subjects is granted to Congress, and consequently they remain subject to State legislation."

"So spoke the great Federalist nearly a century ago, yet to-day the leaders of both parties are stumbling over each other in their precipitate rush to the Central Government to unload upon it every right which the fathers reserved to the States and which the States have refused or neglected to exercise.

"The most popular man is he who marches under the banner bearing the perilous motto, 'On to Washington.' National quarantine laws to preserve the public health, national pure-food laws to protect the public stomach, national insurance laws to punish the public felons, and national divorce laws to promote the public morals, all in the exercise of the police power so jealously reserved to the States; all to be turned over to the Federal Government because the States have failed to exercise the powers so clearly theirs under the Constitution. If there are evils springing from the marvelous development of our times, if there are agencies among the industrial activities of our people which have outgrown the power of the States to cope with, and it is desirable to surrender still further power to the Federal Government, the method by amendment is clearly pointed out by the Constitution. Yet in a speech delivered a year ago, the Chief Executive of this great nation announced the startling doctrine 'that we need' (not by the orderly method pointed out by the Constitution but) 'through executive action, through legislation, and through judicial interpretation and construction of law, to increase the power of the Federal Government.'

"Following the bad lead of his chief, the Hon. Elihu Root, our most capable and distinguished Secretary of State, in an address delivered before the Pennsylvania Society in New York last winter, announced a doctrine even more revolutionary than the preaching of the President. Said he:

"It is useless for the advocates of States rights to inveigh against the supremacy of the constitutional laws of the United States or against the extension of national authority in the fields of necessary control where the States themselves fail in the performance of their duties. The instinct for self-government among the people of the United States is too strong to permit them long to respect anyone's right to exercise power which he fails to exercise."

"And so it shall come to pass that instead of a Government of limited and enumerated powers, instead of a Government under a Constitution which 'We, the people of the United States, have ordained and established,' we are to see ushered in this new evangel, this doctrine of a government by instinct.

"The government control which they deem just and necessary," continues the Secretary, "they will have. It may be that such control would better be exercised in particular instances by the government of the States, but the people will have the control they need either from the States or from the National Government, and if the States fail to furnish it in due measure sooner or later constructions of the Constitution will be found to vest the power where it will be exercised, in the National Government."

"No reply of mine to the suggestions of these two eminent statesmen can be half so fitting as to quote the immortal words of Washington's Farewell Address:

"It is important that, likewise, the habits of thinking in a free country should inspire caution in those entrusted with its administration to confine themselves within their respective constitutional spheres, avoiding in the exercise of the powers of one department to encroach upon another. The spirit of encroachment tends to consolidate the powers of all the departments in one, and thus to create, whatever the form of government, a real despotism."

"If in the opinion of the people the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way which the Constitution designates. But let there be no change by usurpation; for though this in one instance may be the instrument of good, it is the customary weapon by which free governments are destroyed."

"Mr. President, I do not know just what the Secretary meant when he says constructions will be found, but I do know that

no more subtle method could be pursued to change the form of our Government, and when that comes, as come of course it will, some sad, though let us hope, far distant day, it will be by the Supreme Court finding constructions to uphold the constitutionality of first one and then another popular measure which the legislative department of the Government has been clamored into writing upon the statute books.

"There is much room for comfort, however, in the thought that the Supreme Court has not always found constructions to placate popular clamor.

"There was never a time when it was more earnestly desired that constructions should be found to amplify the Federal power than when the greatest of all our jurists sat in judgment at the trial of Aaron Burr. By killing Hamilton, Burr had aroused the fiery hatred of the Federalists to a pitch unknown save when whetted by religious fanaticism. Accused, on the other hand, by Jefferson of treason against his country, there was hurled at his devoted head the untimely maledictions of the Republicans. From all the corners of the earth there arose one universal cry, 'Crucify him, crucify him!' But when that battle of the giants ended, a battle indeed of brilliant intellects and splendid wits, the great Chief Justice, the chief sinner among the broad constructionists, nevertheless, meting out justice by due process of law, found no construction to uphold the theory of 'constructive presence,' and Burr was peremptorily discharged. When the great Taney, a worthy successor to the illustrious Marshall, was called upon to render the opinion in the case of Dred Scott, who had demanded his freedom under the terms of the Missouri compromise, the peace of the Nation was at stake, yet despite the execration of a maddened world no construction was found to extend the Federal power beyond the limits set by the Constitution.

"Mr. President, I understand fully that the war is over. I appreciate the full import of the great epochal fact that it was General Lee and not General Grant who surrendered at Appomattox, but while the Constitution received a frightful shock during those sad years of blood, let us also remember that it was not destroyed. While the clash of resounding arms was still fresh in the minds of men and the echo of the last rebel yell had scarcely faded from the valley; while Jefferson Davis, a vicarious sufferer, lay shackled in Fortress Monroe awaiting his trial on a charge of treason, and while the frantic Nation, mad with rage, was rending the overburdened air with imprecations against the accursed doctrine of States rights, the Supreme Court, in December, 1865, declared:

"The National Government possesses no powers but such as have been delegated to it. The States have all but such as they have surrendered."

"Are we losing that spirit of jealousy which demanded that the right of local self-government should be nominated in the bond when the Convention met to form the more perfect union? Are we so dazzled by the prospect of national greatness that we are ready to surrender the sovereignty of the State and embrace the doctrine of a centralized government? If not, then let the wide world know it. Once the Federal power is admitted it never recedes. No knight ever wore more worthily the motto 'Nulla vestigia retrorsum' than does the United States Marshall. If Congress has power to establish quarantine, it has power to forbid quarantine. If Congress can prescribe the age limit of factory hands, it can prescribe the number of hours that shall constitute a day's labor on the farm. If the Federal Government can pass a uniform divorce law, it can also regulate the institution of marriage. If Federal power can force Japanese into the white schools of California, it can admit negroes into the University of Mississippi. The day the States surrender the police power to the Federal Government or yield the point that it is exclusive with the States, that day the spirit that prevailed at Yorktown has perished.

"Mr. President, this new doctrine which I have referred to is not the idle prating of some shallow demagogue. These are the deliberate words of two of the foremost men of all the world. Theodore Roosevelt and Elihu Root stand second to none in high-purposed endeavor, in patriotism, in civic righteousness; wherefore their pregnant words are all the more portentous. It matters not how fascinating the personality of the hero who is to destroy the common enemy, the day we yield to his blandishments and let down the constitutional barriers that keep the Federal authority out, and arm the National Government with police power—be the purpose ever so high—that day will mark the decline of State institutions and the government at Jackson will thenceforth sink into innocuous desuetude.

"Seldom in the history of the world has a statesman brought to bear a higher patriotic purpose than Cicero turned against Catiline for conspiring to overthrow the Republic; but when he had those conspirators executed without that due process of law which the Roman constitution guaranteed, he struck a blow

at Roman liberty more death dealing than Catiline had ever power to inflict. It is not a question of high purpose. We have it on good authority that there is a country much spoken of in Holy Writ that is actually paved with good intentions. Brutus was high purposed. Set honor in one eye and death in the other, and we have his word for it that he would look on both indifferently.

"This was the noblest Roman of them all.
All the conspirators, save only he,
Did that they did in envy of great Caesar;
He, only, in a generous honest thought
Of common good to all, made one of them.
His life was gentle; and the elements
So mix'd in him that Nature might stand up
And say to all the world, 'This was a man.'"

"And yet the most pathetic fact of that great drama is Brutus's utter ignorance of his real environment. When he descended the rostrum amid the shouts and plaudits of the people and left Antony to speak in Caesar's funeral 'by his leave,' he was firm, aye serenely firm, in the conviction that—

"Many ages hence
So oft as this our lofty scene is acted over,
So often shall the knot of us be called
The men that gave our country liberty."

"Yet had he had ears to hear, there was at that big moment ringing about his head the very funeral dirge of Roman liberty:

"Live Brutus, live, live.
Bring him with triumph home unto his house.
Give him a statue with his ancestors.
Let him be Caesar!"

"The cry was not 'Live liberty,' not 'Live the Republic,' not 'Live freedom.' Alas the very spirit of liberty was dead. He had stricken the tyrant with his bloody sword, but he could not breathe into the nostrils of that Roman mob the spirit of civil liberty which had been permitted to die from sheer neglect, and so they turn from one tyrant to another—

"Caesar is dead; let Brutus be our Caesar."

"God grant, Mr. President, that we may not neglect the faith of the fathers; that the Constitution may still be our creed; that the spirit of jealousy that inspired the fathers when they wrote it may long continue the breath to our nostrils; that love of the Constitution may yet abide with us; that the Federal Government may grow in its power to do good under the Constitution, but mindful always that 'the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people.'"

Waterways Commission.

SPEECH

OF

HON. CLARENCE C. GILHAMS,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. GILHAMS said:

Mr. SPEAKER: I desire in this way, through the columns of the CONGRESSIONAL RECORD, to reach all the Members of the House on the subject of canals, as well as many more that may be able to obtain it through further distribution.

Waterways has now become a national and very general subject of investigation and discussion.

Everywhere throughout the nation we are looking forward to a completely developed system of internal waterways, the great purpose of which is to assist in the more satisfactory distribution of products, and at the same time greatly reduce the cost of transportation and assist in freight-rate regulation. The early development of our rivers and canals has been greatly retarded through the construction of railways, they having a decided advantage in the way of going anywhere they desired, along with the advance of the pioneer. Water will not run up hill, but railways could, and for that reason, as well as for speed, they have for many years retarded the early construction and systematic development of our internal waterways. But to-day the whole country has united in an earnest and somewhat organized effort to bring about as rapidly as possible a complete system of inland waterways, which will not only do away with the terrible congestion of traffic, but bring about economy of distribution and the best conservation of our natural resources. Railway corporations should look with favor upon the construction of waterways, for it has been accepted as an axiom in France and Germany that canals increase the traffic

of all railroads, and especially those that parallel the canals, and also increase the profits of railways by virtue of the fact that the canals carry the lowest grades of freight and leave nothing but the lighter grade for the railways to carry.

In a statement made by George E. Bartol, president of the Philadelphia Bourse, he says:

The improvements of the river Main were completed in 1886. There was an independent railway on each bank of the river, and they had opposed the improvements, but the railway traffic increased 38 per cent in 1887 and 58 per cent in 1888, and the railroads joined with the river interests in requesting a further deepening of the waterways. Within ten years the traffic of the river had increased more than tenfold—from 150,000 tons to 1,700,000 tons.

The traffic of the railroads in the same time increased about 100 per cent—from 930,000 tons to 1,639,229 tons—because factories had been established along the river and in Frankfort, as they were able to get their raw material at a low figure.

It had proven a favorable place for establishing factories, and much of the products of the factories went out by rail. The railroads found that water competition increased their business by creating new business, and that the railroads earned a great deal more money than they ever did before.

The above quotation is given as a concrete illustration of just how it works; that can not be gotten away from, and I am told this is not a single case, but the same is true all over Germany and throughout France. I can see no reason why we would not have the same results here in our own country to-day if our waterways were developed.

Manufacturers always want to locate and know where they can get all raw materials out of which their products are made for the least possible expense, and how they can best ship their products; as a rule the manufactured product will want to be shipped by the railways, while the heavy low-grade raw material will come in by water.

The greatest factor in the rapid construction of railways has been the fact that they will run uphill and anywhere, but it has become a well-known fact among railroad men that freight can be moved on an average more rapidly by water on canals or rivers.

Mr. James J. Hill, in an interview, stated the average movement of a freight car per day to be about 25 miles. On a ship canal from Lake Michigan to Lake Erie by way of Fort Wayne the lowest estimate on movement of boats is from 4 to 5 miles per hour. One can readily see from these estimates that freight would move on an average 100 miles per day on the Michigan, Erie and Fort Wayne Canal, if constructed.

The cost of construction of railways to-day is something to be seriously considered from two standpoints that seem to me to be of paramount importance. First, from the standpoint of economy of construction as to cost; second, as to the saving and economizing of our national resources. This to-day is becoming the most serious and dangerous question that confronts the American people.

I desire to include as a part of my remarks a portion of an address of Mr. P. A. Randall, of Fort Wayne, before the Committee on Railways and Canals in behalf of the Michigan and Erie Canal on House concurrent resolution No. 18:

If there is anything Congress should do it is to help this country to a better transportation system. Unless it can be done pretty soon we will have a complete paralysis of all the commercial business in this country.

I believe that statistics show that railroad transportation has been increasing at the rate of 100 per cent every ten years for the last fifty years. Statistics also show that the means of doing this transportation business has kept pace with the growth of the business until the last decade. For the last decade, however, it is shown that the business has increased 126 per cent, while the means of doing the business has increased a little less than 22 per cent. Is there any reason for you gentlemen to believe that within the next ten years it will show any greater increase than it has in the last ten years? Is there any reason to believe that the means of doing that business will increase as much as it has during the last ten years?

Now, I think I know something about this question. I have been in business where I have had to have shipping done, and I know how we have handled that by reason of the insufficient means of doing business. You know it by hearsay, if you do not know it by actual experience.

You know that there has been great suffering all over this country. You know that in the Northwest people have been frozen to death because they could not get coal, and they have burned fences from around their property to keep themselves from freezing. The grain and the fruit have rotted on the roadside because farmers did not get cars and locomotives to make the shippings.

The National Association of Rivers and Harbors has asked for \$150,000,000 for the purpose of supplying this deficiency. The losses have been \$50,000,000 worth per year.

I want to speak of this favorite location in which we are at Fort Wayne with railroads and terminals. This is a division point where we have been unable to get cars and have to wait for weeks and months to get cars to ship a carload of lumber.

Mr. James J. Hill says—and I believe that he ought to be pretty good authority—that it will require seven and one-half billions of dollars to put the railroads in condition to do the business of this country for the next five years. He did not hazard to guess on what it would be for five years longer.

The capitalization and bonded indebtedness of all these roads of the country is now \$15,000,000,000. Will you tell me where you are going to get seven and one-half billions of dollars to put into railroad con-

struction and railroad building for the next five years? It can not be done. You are not going to get so much money for locomotives and railroad construction and terminals in the next five or ten years as you did in the last ten years. I want to ask you gentlemen if we are going to be hampered by this sort of thing in this country?

I understand that Congress is going to appropriate 70 per cent of the revenues of the Government for the purposes of past wars and wars to come. *The wars of the future are not going to be fought by gunboats and battle ships and by shrapnel. The wars to come are going to be commercial wars, and we have got to be prepared to enter into that conflict.*

"Why," some of us say, "we are a great nation." We have got our heads swelled and we are blustering about to show what a "bully boy" we are. We are trying to show what a goody-goody kind of people we are. We are building the Panama Canal; and I state here that if we build this canal which is in the proposition before you 21 feet deep it would be worth one hundred times more to this country than would the Panama Canal.

Gentlemen, we must have some relief. How are we going to get it? We have immense and magnificent streams. We have the finest opportunities of making canals of any country in the world.

Mr. HARDY. How do they compare with those of France? Mr. RANDALL. They are much better. France has spent, since 1814, \$750,000,000 for canals; and I understand that this Government, since its birth, has spent less than \$500,000,000 for canals and harbor improvement.

Mr. HARDY. Do you know what proportion of the trade of France is carried on by the waterways or canals?

Mr. RANDALL. No, sir; I do not, but I do know that you can load a barge in any part of France and take it to any other part of France. Mr. HARDY. It can be taken clear across France.

Mr. RANDALL. Yes, sir; in any direction. I know that we have let all of our canals and rivers go without any improvements whatsoever.

Gentlemen, there is another feature about which I want to speak, and I think it is insurmountable on the part of the railroads. I believe that the railroads have gone to their limit in the matter of handling heavy, bulky freight. I believe that the great difficulty with the railroads to-day is the want of terminals. The railroads can build the tracks, can get the locomotives, and can probably get cars, but how in heaven's name are they going to get terminals on which to handle their cars? In the town in which I live we have railroad yards. A few years ago they said it would be sufficient for fifty years to come, and yet I have been six weeks in getting a car out of that yard. I never get a car in less than six weeks' time.

Mr. BURTON. Was that a car for loading or was it a car that you were receiving?

Mr. RANDALL. I mean that the freight remained in the yard for six weeks. Why? The railroad cars stand as a heavy dead weight upon the tracks. You have to move a whole train of cars to get out two or three that you may want. That is the situation. I was told that a gentleman had shipped from Grand Rapids, Mich., a carload of freight. He had hoped to find it, and finally he went to Grand Rapids, 115 miles away, and walked the whole distance. He finally came to Fort Wayne and found it in the yards there.

Last summer I got 5 carloads of goods from Petoskey, Mich., a distance of 360 miles away. I wanted the material to put into some houses that I was building. I started to work after I had ordered the lumber. I found that I could not get the lumber, and I went to a local dealer and bought the lumber, and I had the house built and the family living in it before I received that order of lumber. It took four weeks to get the cars with which to ship it, and I was four weeks in getting it. That is 360 miles on a direct line from Grand Rapids to Fort Wayne.

The CHAIRMAN. Are the railroads laboring to cure that state of affairs?

Mr. RANDALL. The railroads are doing the best they can. The trouble is with the terminals. I read an article in the paper last fall which gave an idea of the time it takes to load a vessel. A vessel was loaded at Superior, Wis., with 10,000 tons of cargo in ninety minutes. That was two hours and twenty minutes from the time it came into the harbor until it steamed out on its return trip with its 10,000 tons of freight, and the harbor master told me that they would unload that in Toledo in six hours. Do you know the size of that cargo? That cargo would have filled 400 cars, and those cars would have made, with 40 cars to the train, 10 trains, and these 10 trains with the locomotives would have made a string of trains solidly together a distance of 5 miles in length.

Now, if you had undertaken to load that same cargo into those cars and allowing ten minutes to a car, it would have taken four thousand minutes to have loaded that cargo into cars. That is six hundred minutes, counting ten hours to a working day. It would have taken seven days to have loaded that cargo into railroad cars. It would have taken the same time to have unloaded it. Now, that is the situation.

The railroad men themselves are thoroughly frightened at the question of terminals. We have marveled why the Pennsylvania Railroad went under the river to get into the city of New York with its tunnels, and yet I saw a statement in the paper the other day by a writer who was speaking of this question, and he said that the cost of that tunnel work under the river was only about one-tenth of what it would have cost on the surface in New York City.

There are in the city of Chicago 800 miles of main tracks, and there are 1,400 miles of auxiliary tracks. The appraised value of the real estate on the main line is \$144,000 per mile. The main and the auxiliary tracks in Chicago have cost at the present price over \$600,000,000, and yet if they had to duplicate that trackage to-day it would cost ten times that.

In talking the other day to a gentleman who is high in railway circles about the possibility of the railroads getting the money to handle the traffic of the country, he said: "The question that is now troubling the railroads more than any other is the question of terminals." He referred to the right of way and tracks in Chicago, and then said to me that "the Chicago and Milwaukee Railroad Company have had a jury sitting for six months trying to figure out an additional right of way through the city." He also told me that the Chicago and Northwestern road had recently made purchases in Chicago, not in the business district, but on the north of the river, and the prices they had paid figured the right of way at over \$6,000,000 a mile, and he said that if the railroads entering Chicago had to duplicate the right of way, which they will some time have to do, it would cost them at least ten times what their present property is worth.

The CHAIRMAN. The property that the Northwestern is acquiring is for a new passenger station?

Mr. RANDALL. Yes, sir. There is 80 feet square that they paid \$50,000 for and 2,800 square feet that they paid \$365,000 for. That may be too high a price to put upon the right of way for terminals, but I talked with a gentleman some time ago who told me that he was a member of a syndicate that was thinking about building a line of road from New York to Chicago, and he said after a year's investigation they found that the right of way in New York alone for their terminals would cost \$150,000 a mile for the entire road, and that without putting any money into the construction of the road at all.

Mr. BURTON. Do you mean \$150,000 for the length of the road from New York to Chicago?

Mr. RANDALL. Yes, sir; from New York to Chicago, the length of the road.

The CHAIRMAN. I remember seeing a statement that it would cost more to acquire the terminals in New York than to build the road from New York to Chicago.

Mr. RANDALL. This gentleman told me it figured \$150,000 a mile for the entire road, and he told me that he was a member of that syndicate and that the syndicate was dropped. He told me further that the only thing this country could do was to go to the waterways; that he believed the question of terminals was such that the railways were out of date.

I do not want to enlarge upon those matters. I simply want to say that it seems to me it is a condition that confronts us; it is not a theory. The railroads have shown in the last three years of prosperity that they could not do the business of the country, and each year of prosperity will put them still further "out of the running." What, then, are we to do? We have, as I said before, the finest opportunities of any country in the world to make waterways by the improvement of our rivers and by the making of canals, and are we now going to say we will not do it? I do not believe that Congress can do a thing that will please the people better and that will do more good for the country than to make appropriations for the survey of every stream that people ask to have surveyed in order to put them in the position where they will know what they ought to do when the time comes to do it. It looks to me as though we ought to make haste in the matter. It looks to me as though a calamity is confronting us, and I say this as a man who has had a great deal to do with transportation and knows of the difficulties that we are laboring under.

I have brought in a part of the foregoing speech for the purpose of showing the enormous cost for the construction of railroads at this day and age, so that we can get a clearer vision of the necessity of an early beginning in the development of a system of waterways in America, and more especially in the United States.

Common coal cars cost from \$1,000 to \$1,100 per car, or about \$50 to \$55 per ton for carrying capacity, while barges can be constructed for the carrying of coal, or all heavy or bulky commodities, at a cost from \$8 to \$12 per ton, and in many cases barges are built for coal shipment at \$2 per ton.

With such a wide difference in the cost of tonnage-carrying capacity and a system of waterways open to all for competition in the carrying trade, it is no difficult task to see a great economical saving to the general public.

The people of the United States are to-day face to face with the greatest business problem that has ever presented itself for consideration and final solution. Upon a wise and economical solution, which means the greatest conservation of our natural resources, and by the acquisition by the Government through the development of our waterways vast rights in water power, which will be converted into electrical power, which may become a source of the greatest revenue for the further exploiting and development of our national affairs.

This power, if at once secured by the Government by an early beginning of our canal development, would be of such enormous quantity (and saved to the people instead of falling into the hands of private corporations to be exploited) that the revenues from this source alone would supply all necessities for running our governmental affairs and completely canalizing our whole country.

I am particularly interested in the construction of a ship canal from Lake Michigan to Lake Erie by way of Fort Wayne, thus connecting Chicago with Toledo and shortening the route by 400 miles, or 800 miles in a round trip. The distance from Chicago to Toledo would be about one-third what it is to-day.

In order to give you the comparative distance that the saving of this 400 miles makes I will quote from the language of Frank B. Taylor, of Fort Wayne, Ind., in a recent address before the Committee on Railways and Canals:

This extra 400 miles is 43 miles farther than from Chicago to Cleveland by rail; nearly as far as from Baltimore to Boston and lacks only 42 miles of being as far as from New York to Buffalo by the New York Central Railroad. This much distance would be saved every trip. Not until a shorter route is made available will east-and-west long-haul rates come down to bed-rock value, which they ought to reach and which the people are entitled to have. To much stress can not be laid upon the fact that even after the Erie Canal is completed every ship and barge that sails from Chicago to New York by way of the Straits of Mackinac will have to travel about 400 miles farther than it would if a deep waterway were built from Chicago to Toledo across northern Indiana and Ohio. And further, in going back to Chicago every returning ship will have to repeat the same 400 miles detour through the northern straits. In short, every boat plying between Chicago or any point west of Chicago and Toledo or any point east of Toledo will have to travel 800 miles farther than necessary in every round trip until the proposed Michigan and Erie Canal is built. This is 37 miles farther than from Fort Wayne to New York

by the Pennsylvania Railroad, or exactly as far as from Chicago to Baltimore. This distance of 800 miles would be saved on every round trip. Indeed, every ship that travels the northern route to-day has to make this long detour, and every ship in the past has had to do it. The value of the coal alone that has been consumed in traveling this extra 400 miles is probably more than enough to build the canal, to say nothing of the insurance premiums and losses paid and the value of the lives and property lost in wrecks that would have been avoided.

Between Chicago and New York the saving of distance by the proposed canal amounts to two-sevenths or a little more than one-quarter of the whole distance; between Chicago and Buffalo it is nearly one-half; between Chicago and Cleveland or Detroit more than one-half, and between Chicago and Toledo nearly two-thirds. Can there be any doubt of the value of this canal, if its construction is feasible and within bearable limits of expense?

This great shortening of distance means the saving of time, the very material economizing in the saving of fuel, the lowering of insurance on both vessels and cargoes, and necessarily the lowering of freight rates.

It is stated by experts that the modern canal of 15 feet depth has a carrying capacity of fifteen double-tracked railways of equal length of the canal.

If you will stop to figure the expense of construction of railroads to enable us to obtain sufficient transportation facilities as compared with canals of the above dimensions, it will be found at \$75,000 per mile of railway building that it would cost thirty times \$75,000, or \$2,250,000, for each mile of railway tracks and their equipment, or about \$500,000,000 to parallel this canal and furnish the same amount of transportation facilities, and it would then depend wholly for its revenue on its freightage, while the canal would derive large dividends from water and electrical power, which has been already estimated at many millions of dollars annually.

In a speech at Moline, Ill., last October by Mr. H. H. Harrison, of Stillwater, Minn., in speaking of the new Hennepin Canal to Chicago, he said:

It should not stop there, but should continue on eastward, through Fort Wayne, and then follow the Maumee River to Lake Erie, and then by a little effort by this Government we would have a deep waterway to the Atlantic Ocean. Europe is the country that demands the most of our products and merchandise, and this is the short route to Europe from the very center of our continent.

And right here I want to quote from the speech of Mr. P. A. Randall, made before the Railways and Canal Committee:

I want to say just a word in reference to this canal. This is not a local affair, as the chairman seems to think. It is not to be built simply to accommodate northern Indiana, southern Michigan, and a part of Ohio. This canal, if built, will be of national importance. Mind you, the Canadians are warm rivals on this subject of canals. They have a 34-foot waterway from the ocean to Montreal, and ocean vessels are constantly coming there. When the Georgian Bay is made 21 feet deep, as it will be within the next two or three years, a vessel going from Chicago will not pass down through Lake Huron and down Lake Erie to go to New York, even if the Erie Canal is made a 21-foot canal, because it will be as near to Montreal from Chicago through this Georgian Bay canal as it will be to Buffalo, and when they are at Buffalo they are 436 miles yet from tide water at New York.

Not only that, but when they are at Montreal they are 340 miles nearer Liverpool than New York is. In other words, with a ship canal from Buffalo to New York through the Erie Canal and with the Georgian Bay canal made, vessels starting from Chicago will be 770 miles nearer to Liverpool by going by the way of Montreal than they will by the way of Buffalo, swinging around this circle and up through Lake Erie. The only way you can cut off that distance, the only way you can equalize the distance between New York and Chicago with that from Montreal to Chicago, is to make the 400 miles cut-off we are proposing by this canal.

Railway transportation companies have argued for some time, when not able to furnish cars, that if cars were not delayed an unreasonable length of time before loading or unloading, they would be able to furnish cars more readily, and in order to get relief from this seemingly unnecessary delay demurrage laws have been passed by many States, but have not been found to give satisfactory relief. In support of this statement I desire to quote from the speech of Mr. C. S. Bash before the Committee on Railways and Canals, which is as follows:

Before going into this question I want to say to you why this question of demurrage and reciprocal demurrage has been taken up, and why they have appointed the strongest committee they could get to ask people to take an interest in this, with a view of getting relief. The grain dealers, the hay dealers, all manner of merchandising dealers in the United States, have been suffering, and suffering greatly, for the past three years. We have jumped to this manner of getting relief and then to that; we have tried this expedient and that, and yet we have not found relief, and all we get from the railroad companies when we go to them is: "We simply can not give you the accommodations, gentlemen; you must look elsewhere for relief." They have admitted, plainly and pointedly, every time we have gone to them that they have not the equipment to give us relief, nor the motive power, nor the terminals, so that now the question comes plainly to you to solve it right here. The only thing to do is to give us deep waterway canals that we may get this relief, and, in my humble opinion, it is the only way in which this can be had.

In order to give the railroads more equipment and to make them better able to take care of their traffic, they have been, for the past three or five years, exacting all kinds of arbitrary, unjust, discriminatory tactics, which has driven the business men of this country fairly to desperation. The consequence is they have besieged every legislature asking them to pass laws for reciprocal demurrage, making railroad companies pay back at the same rate for failure to carry these goods as they charge the public for failure to load them in time when cars were

furnished. What has been the result? The railroad companies have laid down. In our little State of Indiana they say, "For God's sake stop; we have had enough; we can not afford to pay you at the same rate for these delays on our part, so we want to quit that kind of a game." They have fallen out among themselves and within the last few days they have abolished their demurrage agents at Fort Wayne—the Nickel Plate Company and others—saying they would not have anything more to do with the damnable thing; that it is an outrage. They take a shipper, a man who is gathering the goods up to ship, and then mulch him with damages for failure to load and unload promptly. Perhaps a shipper has stock in storage for days and weeks, a month, to go from Fort Wayne to Chicago, a straight line. We have had goods lie in the yards six, eight, ten, and fourteen days. These statements are not myths, they are truths, but the railroad companies are powerless to give relief. They are doing their utmost, there is no question about it.

Let us look just a moment at what they have done, and understand we do not come here as an enemy of the railroads, but to help them. Only a few days ago in Chicago one of the greatest freight agents there stated to Mr. Harris, "We are with you in this campaign. Do everything you can to get that canal from Lake Michigan to Lake Erie."

Now, while the railroad companies are totally unable to give relief in the way of cars and better transportation facilities, yet they cut the freight rates $4\frac{1}{2}$ cents per hundred pounds on all grains and through products from Chicago eastward, from the rate that is made from any point through Indiana, Michigan, or Illinois, where it goes direct.

They give this advantage in Chicago in order to take the freight from the waterways or lakes, and they give a further discount of 2 cents per hundred on all commodities where it goes for export.

Ninety-five per cent of our commerce is internal, and why should we give up all these privileges to foster and help a little export trade and then have the internal rates (where not on water ports) raised on all our internal commerce?

The difference in railway freight from points near Chicago to New York, in the report of Engineer Symons on Oswego and Hudson Canal, page 69, on a bushel of wheat is about 5 cents per bushel.

There is so much can be said in behalf of the great benefits to be derived from the construction of this canal and canals generally, but it is impossible to do it without going to too great length, but for further information as to the benefits to be obtained I desire to call your attention to the report of the Committee on Railways and Canals (H. R. 1760), first session of the Sixtieth Congress, on House concurrent resolution No. 18, as follows:

The Committee on Railways and Canals, to whom was referred the resolution (H. C. Res. No. 18) to authorize a survey for a ship canal from Lake Erie to Lake Michigan by the way of Fort Wayne, reports the same back with amendments and recommends that the resolution as amended do pass.

The first amendment is to authorize the Secretary of War to make an examination and survey of other proposed routes for a ship canal connecting Lake Erie and Lake Michigan.

H. R. 17417 and H. R. 4065, introduced by Representative FORNES, provide for surveys for a canal from the most available westerly point of Lake Erie to Lake Michigan, at or near Benton Harbor, and while the committee is of the opinion that a route via Fort Wayne will probably be preferable on account of the lower summit level, and the additional opportunity for water supply, yet it believed the Congress ought to be fully advised as to the most feasible and practicable route connecting those two lakes.

It is also proposed to have a report made upon the possibility of conserving the flood waters of this section, and also the possibility of developing water power and the benefits to be derived therefrom to the public generally.

One hundred thousand dollars, or so much thereof as may be necessary, is appropriated for the purpose of meeting the expenses incident to this survey.

A canal from Chicago to Toledo either by way of Fort Wayne or across the State of Michigan would open a waterway which is certain to control freight rates between Chicago and Buffalo. It would occupy a territory that is populated by one-fourth of the people of the United States, and would be a connecting link by shortening the waterway from Chicago to Toledo 400 miles, thereby making the distance by water from Chicago to New York City the same as that by rail. This proposed canal parallels the great trunk lines from Chicago eastward to Toledo, thence by water to Buffalo, making it a perfect regulator of traffic rates.

By means of this connection it would make it possible for the building or construction of a canal system through the States of Ohio and Indiana, leading from the Ohio River to Indianapolis, Fort Wayne, Chicago, and Toledo, thereby completing a system of waterways upon whose banks will be given a new impetus for the erection of large factories and a great diversity of enterprises, making it possible to get the raw materials along this waterway for the purpose of manufacture at the lowest possible cost. It will mean a complete revival of new business enterprises all over the States of Ohio, Indiana, and southern Michigan, and a vast amount of accumulating tonnage for transportation.

The stone quarries of southern Indiana will be greatly benefited by this cheapening of transportation to the large cities that will be located on these canal ways. Coal will be shipped from southern Indiana and from Virginia, West Virginia, and Ohio which to-day either goes by rail or by some round-about water course. When this system of waterways is opened it will be freighting large quantities of cement, lumber, timber, iron, fertilizers, grain, provisions, coke, iron ore, and building material of every description.

The marvelous productive resources of Ohio, Indiana, Illinois, southern Michigan, Wisconsin, and the States of the Middle West will be wonderfully enhanced through its construction. All kinds of heavy

freight and bulky material will be shipped by these water routes, consisting of bridge material, I. B. steel building material, stone, telephone poles, brick, lime, hay, and many other articles. In fact, this canal will be constructed in a line in which the transportation from east to west is the largest and will continue to be the largest of any location in the United States, which means hundreds of millions of tons of transportation.

The traffic that will be built up along the lines of this system of canals will be so great that it will more than pay for the construction of the canal, and in addition will carry the millions of tons of commerce between the East and West that will constantly increase with the development of business enterprises and increased population. This will be one of the great means through which the country may be able to so reduce its transportation rates that it would be possible for American products to meet the competition of foreign products in foreign countries.

To-day 26,000,000 people, more than one-fourth the population of our country, would be directly benefited by the construction of this canal. Fifty years from now this same area, consisting of 753,000 square miles, at the present rate of increase, will contain 100,000,000 people.

The construction of this canal will secure to the Government 40,000 horsepower, estimated by Lyman E. Cooley to be worth, developed into electrical power, \$16,000,000. These figures are based upon the constant water supply at the lowest point of the year. This power could be doubled in the same area by the construction of reservoirs at but little cost. The construction of this canal will make it possible to transport commodities in vessels whose average tonnage will cost \$8 per ton capacity, while to-day upon the open lakes transportation is carried in vessels costing from \$60 to \$75 per ton capacity. Hence it is readily seen that barge traffic on canals will be taken for less money than on the open lakes. This system of canals will enable coal to be distributed all over the States of Ohio and Indiana at the lowest possible transportation figure, thus directly benefiting the consumer of this large area millions of dollars.

This canal will be called upon for the transportation of most of the corn grown in this country, as the territory contiguous comprises practically all of the corn territory of the United States. This same territory produces a greater amount of cattle, hogs, and horses than any other region of equal size in the world, the surplus of which must be transported eastward to markets, which adds millions of tons of traffic. By this canal the coal fields of Illinois, Indiana, Ohio, Virginia, West Virginia, and Pennsylvania are placed in direct communication by water with the principal cities of these several States, thus saving millions of dollars in transportation to the consumers.

It is estimated that the cost of construction would be \$100,000,000. Basing the feasibility of its construction upon a basis of 3 per cent interest it would be found that the interest would be \$3,000,000 annually. The value of electrical power alone, as estimated by Lyman E. Cooley, would more than five times pay the interest. Its construction means the greatest possible conservation of the natural resources of our country and would be a prominent and everlasting source of revenue to the Government as well as a regulator of railroad traffic, and materially assist in the more rapid advancement of our national wealth and increased prosperity.

It would increase the length of the season of transportation by water between Chicago and Buffalo a period of six weeks each year, thereby adding one-fifth in time to the period of transportation as now exists, which in itself would mean hundreds of thousands of dollars to the annual traffic.

The saving in the consumption of fuel has been estimated by able engineers to be in the ratio of 10 to 1 between Chicago and Toledo, as compared by the present rate through the straits of Mackinaw. The saving of 400 miles in distance from Chicago to Toledo is equal to the distance from Chicago to Cleveland by rail, nearly as far as Baltimore to Boston, and only lacks 42 miles of being as far as it is from New York to Buffalo by rail. The distance from Chicago to Toledo would be practically one-third of this distance to-day, and the distance saved in the round trip from Chicago to Toledo would be equal to the distance from Chicago to Baltimore. It can be stated that it is an economizer of time, an economizer of 800 miles in distance in every round trip from Chicago to Toledo and all points east; an economizer of fuel consumed; on losses of vessels, in the saving of its cargo, and the low rates of insurance, all meaning a vast cheapening of transportation.

This canal can be constructed and put in operation for less money than the terminals can be secured for the construction of a new railroad connecting Chicago with Toledo and Buffalo. Hence it is self-evident that the wonderfully increased cost of railroad construction is bound to retard its building and hamper transportation and show the growing necessity of the early development of our waterways. The wonderfully increased cost of terminals for railroads must of necessity retard the construction of railroads for more efficient transportation, and if built this enormously added value makes cheapened transportation an absolute impossibility, and the sooner our waterways are developed the earlier will we be ready to compete in the world's competition for outside markets. Delay in their development means the loss of millions upon millions of added value to our national wealth.

In the last decade our business has increased 126 per cent, while the means of transporting this business has increased a little less than 22 per cent. With these conditions of enormous expense of terminals in railroad construction, which means practically prohibition, our only resource for a cheapened transportation is the early development of our waterways.

The lake cargo tonnage shipped from the port of Chicago during 1907 was 2,845,716 tons.

The cargo tonnage received on the lake for that year was 8,564,754 tons, making a total of 11,410,470 tons traffic for the city of Chicago by water.

Net tons of flour over trunk-line movement from Chicago eastward for 1907	594,292
Provisions, 1907	1,176,266
Grain, 1907	2,853,209

Total tonnage for 1907	4,263,767
------------------------	-----------

The total combined shipments of tonnage eastward from Chicago by both rail and water for 1907 was 16,034,237.

This does not include coal shipments or live-stock shipments, which amount to hundreds of thousands of tons, all of which traffic will be

more than doubled in another decade, thus showing the wonderful increased necessity of the early construction of this canal.

Total shipment of coal by the ports for 1907 for the city of Milwaukee by water..... 3,330,102
For Chicago..... 432,492

Total..... 3,762,594

nearly 4,000,000 tons of coal, a great portion of which would come through the Michigan and Erie Canal and Miami and Erie Canal of Ohio, if this canal were constructed. The difference in the freight rates on coal from Fort Wayne, South Bend, Elkhart, and all northern Indiana would be about \$1.70 per ton that would be saved to the consumers of this fuel. On this basis, taking the shipment of coal to Milwaukee, and comparing her population with the population of northern Indiana, it would mean that the people of northern Indiana would consume three times as much coal as was used in Milwaukee, about 10,000,000 tons, and the saving to the people, as consumers, by reduction of freight of \$1.70 per ton, an amount equal to \$17,000,000, which would amount to more than five times the payment of the interest on the construction of the canal.

To ship coal by rail from the mines to Buffalo costs \$1.50 per ton. It is shipped from there by water to Chicago, Milwaukee, Duluth, and other lake ports for 30 cents per ton. The same coal shipped from Buffalo to Fort Wayne, or any other region inland within reasonable distance from Fort Wayne, costs \$1.80 per ton, or a total cost from the mines to Fort Wayne and vicinity of \$3.50 per ton, making the cost to the consumers of this large inland area more than \$1.50 per ton extra, which means in the end an expenditure of millions of dollars that would be saved by the construction of these waterways.

This canal would directly affect the States of Minnesota, South Dakota, North Dakota, Nebraska, Iowa, Illinois, Indiana, Ohio, Kansas, and Missouri. These are corn and wheat States, principally corn, and a better perfected mode of transportation means millions of dollars to the producers every year as well as millions of dollars savings to the consumers. These States constitute the principal corn-producing area of the world. They produce more than 50 per cent of the world's production of corn, and the State of Indiana alone, through which the principal part of this canal passes, produced last year more corn than was produced in the Argentine Republic, Indiana producing 168,000,000 bushels and Argentina 67,000,000 bushels. If by the construction of a series of canals in Indiana and Ohio the freight on corn alone was reduced 1 cent per bushel, it would be a saving of \$2,000,000, nearly enough to pay the annual interest on the cost of construction of the canal, and as this corn area, which would be directly affected, has a production of nearly 2,500,000,000 bushels, it would mean an annual saving to this territory to both producer and consumer of \$25,000,000.

The raising of this great amount of grain, and the live stock that will naturally follow, will make it absolutely a future center of commerce and of the culture and wealth of the United States. The area that will be directly affected by the canal contains 220,000,000 of the 414,000,000 acres of cultivated land in the United States; in other words, over one-half the land cultivated lies in this territory. Of the \$18,500,000,000 of improvements upon the land in the United States, these States own \$9,500,000,000 of it, almost three-fifths of the whole. These great central States produce more than one-half the annual products of our country, and all is bound to be greatly affected by the question of transportation in the near future. These central States produce 49,000,000 of the 61,000,000 tons of hay produced in the entire United States; four-fifths of our entire tonnage is produced in these twelve central States.

You can readily see what it means on the question of transportation of hay, which is a bulk product and must be handled by the cheapest method of transportation. These same States produce 441,000,000 of the 668,000,000 bushels of wheat grown in this country, and when you take this into consideration, the immense tonnage to be removed through this area, that far the largest portion of wheat in this area is shipped from the farms, and that it is all moved by railroads, and must be moved, you can readily see the importance of waterway transportation. If it should change the cost of the shipment of wheat from Chicago to the seaports 1 cent per bushel, it would mean a saving to these States of over \$4,000,000 annually, or one and one-half times the interest on the investment in the construction of the canal.

The construction of the Miami and Erie Canal, arising from land grants, commenced in 1825 and completed in 1845, plainly shows the effects of a canal upon the surrounding and immediate territory, for the reason that this canal passes through fifteen counties of the State of Ohio, and to-day owns 45 per cent of the manufacturing interests of the whole State. It means that canals build up and diversify industries and add tonnage for transportation along the lines of their construction.

In summing up and recapitulating, the amount estimated to be saved to the general public in the immediate vicinity of this canal, if constructed, would be as follows:

Upon the saving of freight on the shipment of corn, annually.....	\$25,000,000
Upon the saving of freight to the consumer of coal in the vicinity of northern Indiana, northwestern Ohio, and southern Michigan.....	17,000,000
Upon the acquiring of vested rights on by-products through water power secured by the construction of this canal, as figured by Lyman E. Cooley.....	16,000,000
Upon the saving of freight upon the production of corn in Indiana alone of 1 cent per bushel.....	2,000,000
Total.....	60,000,000

Besides, the annual income from the sale of water power obtained through this construction would more than pay the interest on the construction.

The progress made by the Canadians in developing their waterways has been a marked factor in the development of Canada, particularly in their grain export trade, and if the northern section of the United States is to hold its own in the export trade and in the domestic trade as well it will be necessary to take such steps through the building of waterways in the United States as will enable freight to be carried at as low a rate as can be secured from Canadian waterways. If such a work as the Chicago and Erie Canal were completed, it would be of vast help in developing territory in northern Indiana, Ohio, and southern Michigan, and enlarge the markets for their products in the Eastern States as well as bring them in closer touch with the importing countries of Europe.

This report sets out quite clearly many of the benefits that will be derived by the building of this canal; and besides the

economy in shipment, I believe if we construct a system of canals wherever feasible, it would be the greatest leveler of values between common carriers that could be devised. It means to put every watered-stock railroad on its intrinsic value. They can water it as many times as they please; they may have watered it as many times as they could, but we will squeeze the water out of it and place every railroad corporation on its real intrinsic value as to freight earnings. It will save the trouble of a great warfare on railroads in trying to establish true and just freight competition.

We all know, if we pause to think, that the producers and passengers pay the bills, for in the last analysis the producer pays all. He pays the iron bill, the real estate bill, the coal bill, and as long as you permit it to exist he pays for the water in the stock. Is it business economy to continue to pay much more for transportation privileges than proper business care can prevent? Is it wise to continue an enormous building of railways for transportation purposes when they can only last for a comparatively few years until they must be renewed at an enormously increased expense and vast waste or cost of natural resources, or to pay much less for a more effective and permanent method which is open for general competition? It is for the people to decide, and when their decision is made manifest it will be answered.

In response to the appeal of the President for the conservation of our national resources I can conceive of no one place that so much can be done for the betterment of our condition as a nation and at the same time add in a most substantial way millions of dollars to the account of our internal revenues as the development of our canals. And above all these great benefits, the fact that the valuable by-products of water power and electrical power are developed and saved to the nation are a never-ending source of revenue, for the sole relief of the whole body politic is in itself enough to induce the Congress to lose no time in the early acquisition of all available canal projects that the people's most valuable inheritance may be saved. Next to the wealth of our land, the development of our waterways will prove the greatest and most economical agency in the world's evolution.

Will we sit idly and permit these great blessings to slip away from the people, or will we act at once and secure to the nation its rightful inheritance, and thereby add to the nation's wealth?

The Regulation of Laundries.

SPEECH

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

On the bill (H. R. 22239) to regulate the conduct of the laundry business in the District of Columbia.

Mr. MOORE of Pennsylvania said:

Mr. SPEAKER: Availing myself of leave to print, I submit a few remarks pertaining to H. R. 22239, for the regulation of laundries in the District of Columbia. This bill, introduced by me a few days ago, has been widely commented upon by the newspaper press in various sections of the country. The purpose of the bill is to place upon the Commissioners of the District of Columbia responsibility for the inspection of public laundries employing five or more hands and using machinery for the cleansing of clothes. It does not apply to individual washerwomen or hand worker who do laundering, except as they are already obliged to pay a license fee of \$10 per annum. The bill proposes that there shall be an inspection of all public laundries under the direction of the Commissioners of the District at least three times a year. It imposes a license fee of \$50 per annum upon all public laundries using machinery and employing more than five hands, and forbids the issuance of a license to any concern which uses deleterious acids or destructive machinery in cleansing garments intrusted to it by the public. Any attempt to conduct a public laundry without a license is made punishable by a fine not exceeding \$100.

In view of the reform which this bill proposes I do not see any good reason why it should not pass. Apart from the good-natured railery that follows any movement so directly affecting domestic economy as does this, there is a strong feeling abroad—and if I mistake not it enters into most households—that some check should be put upon the methods employed by some of the unscrupulously rapid and destructive agencies now employed in public laundries. To most men who are accus-

tomed to neatness in their attire the loss of a collar button is proverbially provoking. For this, perhaps, the laundryman is not to blame; but what may be said of that harrowing circumstance which finds the man possessed of a collar button bereft of the buttonhole in his shirt? If men, called upon to perform their daily avocations, and desiring to possess themselves of the smile of optimism, are to put forth the best there is in them, either in business or debate, pray how may it be done with the collar band of a newly laundered shirt sawing remorselessly upon a blistered neck or with the consciousness that the yoke of a collar has slipped the button and is making a disgraceful exhibition of its owner? The humorous side of the situation presents a rich and varied field of inquiry and of recollection. But the purpose of the bill has no other significance than that it is desired to compel those who take the property of the public into their laundries to treat it decently and return it in good order. Why should not this be done? Laying aside the aggravation which comes to men and women alike as the result of their nerve-racking laundry experiences, why should not the proprietors of these establishments give the same careful attention to their work as is required in other lines?

Why should they be permitted to wantonly destroy property that is placed in their keeping? We protect the customer of the grocer against the sale of adulterated food products; we require restaurants, employment agencies, and other establishments where public service is extended to comply with certain standards and abide by certain rules of decency; we hold in check a hundred businesses and occupations that might run riot and that doubtless would permit the unscrupulous to take advantage of the unwary if regulations were not in force. If, therefore, a housewife who has difficulty enough in keeping expenses within the income of the husband finds it necessary to send table linen, bedding, or wearing apparel to a public laundry, why should it be put instantly, as it were, into the "jaws of death" and so macerated as to be unfit for further use? We talk of the increased cost of living. We have been raising the salaries of Government employees—not sufficiently, to be sure, to satisfy the demand, but we have been raising them, nevertheless—because it is a known fact that men can not live and support families to-day upon the wage of a quarter of a century ago. We expect our Government officials to present a proper appearance in the matter of their wearing apparel; we require certain things of them; we would not permit them to remain at their desks unkempt and greasy; and by the same token we have obliged them to follow the general trend toward the laundry. They must patronize the laundry. They must send their shirts, collars, cuffs, and other wearing apparel. For all these things they pay good prices.

These enter into the necessities which have involved an increase in the cost of living. The average Government clerk can not afford to buy a new outfit to-day and have it destroyed by acids or by reckless laundry machinery to-morrow. The laundryman does not have to use acids and destructive machinery. It is said some of them use lime for bleaching. Here, at once, is a process of disintegration. Is this a fair method of treating the customer, who is ignorant of the treatment to which his property is subjected, and who accepts it back from the laundryman believing it has been washed in the regular way? Tell the launderer—and I am referring only to those who indulge in unfair practices—tell the unfair launderer that he can not use certain methods, that he must comply with the regulations which require good service or he can not be licensed to do business. Is there anything in this proposition which an honest laundryman need fear? Is there any reason why all laundrymen should not give the service for which they are paid? Is there any reason why those who are greedy for business should besmirch the fair laundryman and yet charge the public for a destructive service?

I am aware that we make many laws that confuse the people, and I fear sometimes we make too many laws for the smooth and ready conduct of business. We ought not to discourage enterprise, nor put unnecessary obstacles in the way of men who are willing to invest capital and give employment to labor. On the other hand, we should encourage all such men and protect them from the shirk and the grafter. But in justice to the responsible business man who is doing a correct business, we should not hesitate to hold in check those who are doing an irregular business.

I present this brief statement at this time in order that the situation may be fairly understood when the bill which I have presented to regulate the laundries of the District comes before the next session of Congress. The great mass of people in the District, I am thoroughly convinced, most heartily approve the suggestions contained in the bill; and when Congress comes to fairly consider it, I hope it will give full credence to the underlying basis of good faith which inspires it.

Federal Usurpations of Power by the Republican Party and Its Prototypes.

SPEECH

OF

HON. JOHN S. WILLIAMS,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. WILLIAMS said:

Mr. SPEAKER: Under the general leave to print granted by the House, I desire to insert the following, being in the main an address recently delivered by me to the American Academy of Social and Political Science at Philadelphia on the subject of "Federal usurpations of power:"

"As far as I can read, or have ever read, all governments, whether free or not, which have existed and fallen have fallen by the growth of the weight of political machinery. There has come a time in their histories when government and its machinery was the first consideration and man and his individuality the second. It is well always to keep in mind the fact that while government is necessary and ought to be made good, it is yet after all a necessary evil, growing out of the vices of human nature. It is a means to an end, which end is an equal opportunity for the happiness and freedom and development of the individual man and woman, and is never an end in itself.

"This idea was carried further in the formation of our Federal Government than in that of any other government, according to my mind. In a certain sense, indeed, the Federal Government is not the government of "these United States" at all, but is a piece of central political machinery organized to hold together in union the several governments of the several United States and to protect them by union from mutual aggression and from aggression by foreign powers.

"Federal usurpation of power is not of recent growth. It was a necessary concomitant of the rule of the old Federalists, the prototypes of the present Republican party. Hamilton and the men of his way of thinking, delegates to the Constitutional Convention, strained every nerve to procure a stronger, or, as they would have said, a more stable government than that which was, as a matter of fact, reported to the people for adoption in the original Constitution. Though defeated in the Convention in many of their essential purposes it was but natural that when the Constitution was submitted to the peoples of the respective States they should have become strenuous advocates for its ratification, because, though giving birth to a government not as strong nor as centralized as they desired, it still inaugurated one very much more to their liking than the old confederation. They soon found that the objections to its adoption were not based on its being too weak a bond of union, but were precisely the contrary. They therefore necessarily based their advocacy upon a plea to the people that it did not interfere with the real rights and sovereignty within their spheres of the States; that the States still would have such rights as were not delegated expressly or by proper implication, and in their advocacy they emphasized how little authority and power, comparatively, the new Federal Government would have. Notwithstanding this plea, the discontent with the Constitution as it came from the hands of its framers was so great, upon the ground that it did not sufficiently safeguard the inalienable and natural rights of the individual and the reserved rights of the States, that it was adopted only upon the understanding that the first ten amendments, further safeguarding these individual and State rights, would be added to it. They were immediately added after the adoption of the original instrument.

"If you will dispassionately take up our fundamental law and study it, without the first ten amendments, you will see that it would have launched into existence the least democratic of all governments now existing amongst English-speaking peoples. As originally framed there was no express guaranty of freedom of the press, freedom of speech, freedom of assembly, trial by jury, or habeas corpus. In fact, most of the muniments that had been secured by war and legislation to the race before it crossed the Atlantic were unprotected, whether these muniments had been embodied in the habeas corpus act, in the bill of rights, or in some other instrument.

"George Washington was not really a member of any political party. He had the unfounded idea that government with free institutions could be carried on without parties, and deplored their existence as factional. At the beginning of his Administration this idea was his guide. Later on, after Jefferson had

retired from the Cabinet and Hamilton became unrestrained adviser, the Administration did take on a somewhat Federalistic hue.

"When John Adams came in, with the real Federalists in supreme power and full control, then the note of Federal usurpation of power began to assert itself.

"The alien and sedition laws were an illustration on the legislative and executive side of the Government. When Adams was retired he left the bench in control of Federalist judges, the greatest, most ingenious, as well, perhaps, as the most sincere of them all, being John Marshall. The Dartmouth College case, which is, in my opinion, the Iliad of all our woes, in so far as our inability properly to control corporations is concerned and in so far as judicial construction has brought about Federal usurpation, naturally followed. The decision giving the right to the Federal Government to establish and maintain a national bank, for which no authority could be found in the organic instrument, except by fiction of law, was another result of a Federal judge attempting to construe into the instrument something offered in the Convention to be inserted and the granting of which had expressly been refused.

"Every governmental abuse is based upon some plea or pretext and the usurpation of power by government is generally based upon 'necessity,' the tyrant's plea. This real or fancied necessity generally grows out of war. This has been especially true with regard to legislative and executive usurpations by our Federal Government. Real or fancied war necessities are and ever will remain the chief pretexts for Federal usurpation. Amidst the universal plaudits which he has received and deserved, there are few people left ungracious enough to give sufficient emphasis to the part which Abraham Lincoln and his Cabinet had in changing the spirit, if not the form, of the American Government. The doctrine of 'war powers' came into being, and after war had passed and peace had come the usurpations following from the exercise of the so-called 'war powers' furnished precedence for their continuance and for other usurpations like them. As has always been said *inter arma leges silent*; there are undoubtedly certain powers which have been recognized to belong to all governments with forces operating during war in the field and in the enemy's country beyond those which are conceded to the same governments at peace and at home.

"During the war between the States the Executive first asserted and Congress afterwards attempted to confer upon the Executive the right to suspend habeas corpus, not only in the territory which was within the boundaries of the Confederacy, but in the States which had remained in the Union. Things went so far that the writ of habeas corpus was suspended on the order of a lieutenant-general, acting under general authority conferred by proclamation of the President.

"The Secretary of War and the Secretary of State, on bare orders, based upon no affidavit even, much less indictment, arrested and confined citizens of the loyal States and spirited them off to prison. Federal marshals and police did the same thing. All this, too, prior to the act of March 3, 1863, whereby Congress attempted to confer the power and the right to suspend the writ of habeas corpus, a power vested by the Constitution, according to all judicial construction, in Congress alone. Under a proclamation of the President, amongst the classes to be thus treated were described those who 'magnified the resources of the enemy' and those 'inflaming party spirit among ourselves.' It seems almost incredible now that men could have been taken out of their beds at night and carried away to prison, without even affidavits, by ignorant marshals, who determined for themselves the questions whether or not those seized and imprisoned were guilty of disloyalty, especially when disloyalty was defined in such vague terms as 'magnifying the resources of the enemy,' 'underrating our own,' or 'inflaming party spirit amongst ourselves.'

"Fortunately for the future of our republican institutions, in December, 1866, in the case of *ex-parte Milligan* (4 Wallace) the Supreme Court pronounced these proclamations of the President unconstitutional and the act of Congress so, except in so far as it was in its provisions 'confined to the locality of actual war' and not elsewhere, and to places 'where courts are not open.'

"There are those who believe that the branch of the Government most guilty in the field of Federal usurpation is the judiciary. This is not true. Upon the whole, the courts have been a bulwark of protection for the natural rights of the individual and for the reserved rights of the States. Judicial usurpations which have been successfully accomplished have not been a tithe of those which have been unsuccessfully attempted by the Federal Legislature or the Federal Executive. The Ku Klux act, which would have carried the Federal authority into every

man's home within the States in the enforcement of ordinary criminal law; the civil rights act, which usurped to the General Government nearly all of the police powers of a State and the control of the social affairs of the citizen, are illustrations of attempted Federal usurpations set aside by the courts.

"During the period immediately after the war between the States Congress fought most viciously against the courts, frequently attempting by acts of Congress, and sometimes successfully, to prevent appeals to the Supreme Court of the United States. A book might be written, and a very interesting one, too, upon usurpations flowing out of the civil war and out of the supposed necessities of a reconstruction of the Southern States.

"Some of the usurpations that owe their real existence to the civil war still remain to plague us; for example, the legal-tender case. The Constitution deprived the States of a power which was inherent in their sovereignty, but which had been found to be greatly abused—to emit letters of credit and issue paper currency. Hamilton himself contended that not only was this power not granted to the Federal Government, but that in spirit it was actually prohibited to it. Nobody ever did, or does now, doubt the right of the Government to issue a note as evidence of indebtedness when it has not the money wherewith to pay. But nobody up to the civil war had ever, for one moment, dreamed that the Government had a right to levy a forced loan upon the people by making its notes a legal tender for the payment of debt. This legacy, however, is not justly attributable to the judiciary, but to the President and the Senate. You are familiar with the manner in which this result was arrived at. After a first decision by the court declaring the legal-tender act unconstitutional, the addition of a new judge to the number on the bench and the appointment of another new judge to fill a vacancy, meantime caused by death on the old bench, accomplished a reversal.

"It requires no imagination, but a plain survey of the field only, to realize what an immense capitalistic and centralizing influence the judicial construction into the Constitution of this power which was never granted—the power to make of Government notes a legal tender to take the place of gold and silver—has vested in the Federal Government.

"John Marshall, in the case of *McCullough* against Maryland, had early in the history of the country upheld the power of the Federal Government to charter a national bank of issue, although a proposition in the Constitutional Convention to confer such power had been expressly offered and expressly voted down. The opinion in the case upheld the bank as a 'fiscal agency' of the Government, and as such it was declared that it could not be taxed by a State, because such a power of taxation would carry with it to one sovereignty the power to destroy the fiscal agencies of another. And yet, long afterwards, when the law to establish the present national banking system, in order to strengthen the credit of the Government and to increase the price of its bonds, carried a provision to tax State bank issues 10 per cent, it being admitted that this tax was levied not for the purpose of revenue, but for the purpose of stamping State bank issues out of existence, the court cavalierly flung aside its former doctrine that one sovereignty could not tax out of existence the fiscal agencies or chartered instrumentalities of another, and held, in substance, by sustaining the constitutionality of the 10 per cent tax, that it could. The power to 'issue "money" directly to the people' in the shape of legal-tender Treasury notes, and the power to confine the function of bank-note issuance to national banks and to monopolize its regulation have together given to the Federal Government that power and influence over *finance and business* which make other usurpations, whenever all three branches of the Federal Government are desirous of making them, irresistible by the States or by the people thereof.

"The early assertion by Congress of the power to levy import duties not simply as taxes for raising revenue, but for the admitted purpose of hothousing into prosperity at the common expense such industries as, in the opinion of Congress, it is for the common interest and the general welfare to hothouse, has given a whip handle, if not a mastery, over the *manufacturing* interests of the country to the Federal Government. The control of finance and of manufactures thus usurped, together with the immense powers actually vested by the Constitution itself in the Federal Government, under the treaty-making clause and under the interstate-commerce clause, constitute our Government of to-day a Government stronger than any that Hamilton and his compeers ever dared attempt to inaugurate in the Constitutional Convention—stronger than Marshall even ever dreamed of construing or wanted to construe into existence.

"This is true even when you consider alone the *real* power of Congress under the interstate-commerce clause when exercised *honestly* and genuinely for the sole constitutional purpose of the

regulation of interstate commerce. When you consider the cases where this power has been abused as a means to accomplish ends not contemplated by it, this conclusion is stronger.

"What has been actually accomplished, however, by legislation regulating, or pretending to regulate, interstate commerce is nothing compared to what is proposed. A brilliant young Senator from Indiana proposes to control child labor within the States, through the interstate-commerce clause, by denying to products manufactured within a State interstate transportation when produced by child labor, though employed in accordance with the laws of the State of their manufacture. If Congress have power to do this, it has also power to say that no products shall be carried in interstate commerce if produced where labor is employed for longer than eight hours a day. If it have the right to do either, it has an equal right to say that no man or woman shall travel upon an interstate passenger ticket who has been divorced according to State divorce laws which do not meet with the approbation of Congress.

"Early in the history of the country the story is told that the House of Representatives sent to the Senate a bill to regulate and work certain copper mines, and Mr. Jefferson, in his playful but philosophical manner, said that their method of deriving from the Constitution their power was about this: Congress has a right to provide for the common defense; ships are necessary for the common defense; copper is necessary to finish ships; mines are necessary to be worked in order to get copper, and, therefore, Congress has a right to work copper mines within the States; and added that anybody who had ever followed the reasoning in 'the house that Jack built' could readily understand and would be convinced by the argument.

"By parity of Indiana Senatorial reasoning Congress might enact a force bill under the interstate-commerce clause, basing it upon the right of Congress to say what should or should not enter into interstate commerce as freight or as passengers. It might, therefore, say that any man elected to Congress unless elected in accordance with a certain law passed by Congress, should not be permitted to travel in interstate commerce, and therefore should not be permitted to leave his State and come to Washington to take his seat as a Representative. I know, of course, that the *reductio ad absurdum* is not the safest of arguments, but it sometimes makes things ridiculously clear.

"Add to all this power over finance, banking, commerce, manufactures, the immense spread of the activities of the Department of Agriculture. It is furnishing seed to the farmers, it has established a stock farm in one of the States for the purpose of breeding "a standard national horse," and the right is about being asserted of entering into a State, with or without its consent, to construct roads not only between the States, but *within the States*. With their construction will come the assertion of the right to control, if not to police them.

"The undoubted right of Congress to so regulate interstate commerce as to stop the spread of disease by it, from State to State, amongst men, animals, or plants, is as yet being driven only to its utmost, but will finally be driven beyond its utmost, legitimate application. That the operations of the great Department of Agriculture are beneficent there can be no doubt. The few millions appropriated each year for that Department accomplish more good than ten times as many millions appropriated for some other purposes.

"But it does not follow that, because a given work is wise and beneficent the Federal Government has the right, or even by amendment to the Constitution should have the right, to do it, nor does it follow that because the Federal Government does beneficently carry it on, that it could not have been carried on quite as beneficently by the States, if the Federal Government had stayed out of the business. In connection with agriculture, for example, I for one believe that if the Federal Government had never undertaken to do anything at all with it the general condition of agriculture in the country would yet have been quite as good as it is, perhaps better, because then the States would have established magnificent agricultural departments, with experimental stations, training schools, and all that; would have vied with one another, from New York to California, in doing the work, each actuated by the motive of excelling others in the prosperity to be brought about by improving the basic art—agriculture. Those taught to lean upon others for support forget how to lean upon their own backbones.

"The Department wants the Federal Government to go further yet and to inaugurate and maintain in the States technical, agricultural, and manual training schools, with what measure of Federal control it has not thus far seen fit to indicate.

"Take, as the next illustration, the gradual assumption of power to the Federal Government in connection with works of irrigation. That Congress has a right to irrigate the public

lands so as to make them valuable and so that the proceeds of their sale may inure to the interest of all the people there can be no doubt. Growing out of this right Congress has taken hold of the work of irrigation everywhere, on private lands as well as on public domain. It has added to that the kindred subject of drainage, because, undoubtedly, if Congress have power to put water on lands outside of the public domain, it has an equal power to take water off of lands outside of the public domain. The departmental work does not seem to have received even a momentary check from the decision of the Supreme Court in the great case of Kansas against Colorado, in 206 U. S., where the court says, after examining in detail all the enumerated grants of power to Congress, that 'no one of them, by implication, refers to reclamation of arid lands.'

"In some cases where Congress has usurped power and where the courts have subsequently set aside the acts of Congress as unconstitutional the wrongs perpetrated under the acts have been perpetuated. Retaining in the Federal Treasury the money received under the 'captured and abandoned property act' is an instance in point. After the general amnesty proclamation of the President, it became evident that the money lying in the Treasury from the sale of 'captured and abandoned property' would have to be restored to the Southern people who had owned it. A rider on an appropriation bill of July 12, 1870, undertook to annul, and Congress, by refusing to appropriate the money out of the Treasury, practically has annulled the subsequent decision of the court to this effect. Millions of dollars are now lying in the Treasury accumulated there under this act of Congress, which the court subsequently held to be a special fund to be repaid to the owners of the property. There is no way of getting it out, however, because, as the court properly says, it requires an act of Congress to appropriate money once covered into the Treasury out of it again. Here is a case where Federal legislation has been adjudged invalid and unconstitutional, and yet where the people injured by the usurpation have suffered the effect of it until they died and where their heirs or assignees are suffering yet. The money in the Treasury derived from the cotton tax, and still kept there, is another instance almost in point.

"I have referred to the war between the States as a source of much Federal usurpation. The Spanish-American war might be referred to in the same connection. The Constitution of the United States provides for the separation of the judicial, executive, and legislative functions. In the Panama Zone the Executive alone has been and is exercising not only executive, but legislative functions. When a resolution was introduced into Congress, and passed by it, asking 'under what authority of law' the President was doing this, the answer came that it was under the authority of certain acts of Congress, their dates being recited, and under authority of a treaty with the so-called 'Republic of Panama,' as if either an act of Congress or a treaty could confer upon the Executive the right to exercise judicial or legislative powers, in the teeth of an express constitutional prohibition of their consolidation.

"Our experiment with schemes of crown colonialism in the Philippines now, and for a while in Porto Rico, was so stupendously alien to the spirit of all our institutions as to be at once horrible and amusing. Department law clerks sent out as pro-consuls are learning in the Philippines and in Cuba to-day lessons which will return to vex the Republic at home. You need not expect that what is learned there will be forgotten here. In Rome the Emperor was first a field officer in Gaul or Asia or in other conquered territory. Then there came the exercise of powers as Emperor in Rome itself. Marius and Sulla as well as Julius Cæsar were virtually emperors long before Augustus Cæsar had founded what we now call the 'Roman Empire.'

"Peace is important to all peoples. I sometimes think that two-thirds of the energies of all the statesmanship in the world might be profitably employed in the maintenance of peace throughout the world. But if important to other peoples, it is doubly so to us with our peculiar dual government, the balance of which is so nicely adjusted and so vital and which is always shaken by the sequelæ of war. We never know beforehand what these sequelæ are going to be. You hear much of 'the horrors of war.' The greatest of all these horrors is the murder of free institutions, and especially of local self-government, the only possible field for development of individual manhood.

"The spirit of absolutism necessary to crown colonialism will be found to be contagious. Accustomed to it in all its spirit in our daily administration of colonial affairs, the public will gradually become accustomed to the insidious introduction of its features at home. No free government can successfully control alien and unassimilable peoples, except by the violation of the fundamental principles of free government itself. Our

forefathers recognized this when they placed the Indian tribes on the footing of foreigners, to be dealt with by treaty.

"The mailed fist, well exercised to its task, is dangerous, ultimately, to liberty of citizens much more than it is even to subject peoples. The system will some day drag down England herself by the exhaustion of her sons and her revenues in maintaining her hold upon India. The inauguration by us of the system in the Philippine Islands, unless once we have the good sense to put the people of the archipelago upon their own feet, teach them to stand alone, and leave them standing afterwards, will have the same effect for us in the long run. It is even now furnishing the excuse of great armaments, naval and military, and the Philippines constitute to-day the one point of unnecessary and unnatural contact out of which great wars may, if not must, ensue.

"These Federal usurpations are going on not only through the Executive and the legislative, but, insidiously, gradually, unmarked, by bureaucratic operation, through the administrative rulings of the Government. Charles I lost his head and James II his throne because of executive and administrative suspensions of acts of parliament. The American people have become so accustomed to the suspension of laws by mere nonenforcement by the Executive, or some obscure bureaucrat under the Executive, that you perhaps could not excite real alarm in the minds of five men by a full recital of them all. The Executive sits in judgment every day on the wisdom of statutes.

"Mr. Shaw while Secretary of the Treasury took money already covered into the Treasury, and under the guise of depositing it virtually loaned it to such banks as he chose without interest. This notwithstanding Article I, section 9, clause 7, of the Constitution, which says: 'No money shall be drawn from the Treasury but in consequence of appropriations made by law.'

"The same Secretary of the Treasury quietly construed the disjunctive 'or' in a law passed by Congress to have the meaning of the conjunctive 'and,' so that when Congress had by law said that those receiving deposits of public money—not deposits of money already covered into the Treasury, remember—but deposits of money collected from internal revenues and not yet covered into the Treasury—should deposit as security United States bonds 'and' other bonds, that it meant 'or' other bonds. Upon this he quietly issued a ukase to the effect that he would receive such securities as 'complied with the savings-bank laws of New York and Massachusetts,' and would dispense with the deposit of United States bonds altogether, in his discretion. The discussions in Congress at the time that the law under whose alleged authority he acted was passed show the reasons for the original act. People forget now that there was a time when United States bonds were not at par. It was wise, therefore, upon the part of Congress to provide originally that the Secretary of the Treasury might require other security as *additional* to that of national bonds in order that the security might always be equal in par value to the money loaned. I need not dwell upon the total torturing of the original meaning by the Secretary's decision. Secretary Cortelyou ruled later on that, under the provisions of a law permitting the issuance of Treasury certificates 'when necessary to meet public expenditures,' he was enabled to issue these certificates to get money in order to help the banks by free loans in a panic.

"An administrative board of the United States, engaged in the business apparently of seeing to it that due 'protection' is rendered to 'American industries,' and finding that there was no tariff on frog legs, which were being imported into our territory to the detriment of the great American industry of bull-frog raising, gravely ruled that they were taxable under the clause which put an import duty upon dressed poultry.

"What has been accomplished in the way of Federal usurpation by the National Legislature and Executive and either set aside by judicial authority or left to stand and stay to plague us yet does not constitute a title of what we are to expect if some recent utterances by great and popular men are to be taken at their face value.

"The President in his Harrisburg speech, delivered in the month of October, 1906, says: 'In some cases this governmental action must be exercised by the States. In others it has become increasingly evident that no sufficient State action is possible, and that we need through *Executive action*, through *legislation*, and through *judicial interpretation and construction*, to increase the power of the Federal Government. If we fail thus to increase it we show our impotency.'

"Mark the language. 'We need'—that is the old familiar 'tyrant's plea—necessity.' To do what? To 'increase' the 'power of the Federal Government.' The very verb 'increase' is the President's word and is a confession that the Federal Government does not now possess the powers desired to be an-

nexed—a confession, therefore, of deliberately contemplated usurpation. And to increase power how? Not by amending the Constitution, even though we had to amend the amendatory clause in order to make the work of amendment easier, but 'by Executive action,' and 'by legislation,' both of them necessarily, if there be an 'increase' of power, violative of the constitutional limitations upon 'Executive action,' and upon Federal legislation. It can not be too often repeated that this is true, or else the word 'increase' would not have needed to be used. And third, and more insidiously still, by express executive injunction there should be and must be 'increase' by 'judicial interpretation and construction.' By the Soul of all Insidious Revolution! Mark the quoted words well in your memories!

"Secretary Root, in his New York speech in December, 1906, evidently following up a deliberately laid scheme and purposely supplementing the President's speech in Harrisburg in October of that year, uses this language: 'Sooner or later constructions will be found to vest power where it will be exercised, in the National Government.' Secretary Root is a lawyer. He knows what the verb 'vest' means. His language is to 'vest power.' 'Vest' means to give—to deposit a new power, not to apply an existing one to new conditions. His ground and excuse and reason for 'vesting' it is that it must be 'placed' where it will be 'exercised.' The necessary inference is that it is *now* vested or placed in the States and that they ought to be *divested* of it, *because* they do not 'exercise' it. His method of 'vesting' power again is, like the President's method of 'increasing' it, not by amendment to the Constitution, whereby the people themselves can redistribute the powers, which are theirs, and which they originally distributed between our dual sovereignties, but by 'constructions' which are to be 'found.' 'Found' by whom? By the very men who are to exercise the powers construed into being by being 'found.'

"An American citizen does not take an oath of allegiance to any government. His oath of allegiance is to the Constitution. Every officer who serves the Federal Government, from the President down, whether he be Cabinet officer, judge, Senator, or Representative, takes this oath. It is now proposed that the Executive officers of the Federal Government shall 'vest' power in themselves 'by construction,' to be 'found,' and that they shall 'increase' their power 'through Executive action.' Think of it! And yet in all this broad land no hint or suggestion of impeachment!

"This method of amending the Constitution does not require a two-thirds majority in each House nor three-fourths of the States in confirmation of it. It is easy. It requires nothing but momentary forgetfulness of an oath registered in the chance of God. It is not dangerous. It may, perhaps, even be applauded, if the thing sought to be done be popular with the populace.

"What is more, the President proposes to 'make good'—a phrase he is fond of. I have not time to refer to all the circumstantial evidence in support of this statement, but run over in your minds recent history—Root's part in it in the Philippines; the acts of our proconsular agents; the present condition of things in the Canal Zone, and the frequent chidings by the President of the Federal judges where they do not decide to suit him, showing a purpose of bending and warping the personnel of the Supreme and other Federal courts to an incorporation of his policies, where unconstitutional, by 'judicial construction,' as a part of the authority of the Federal Government. No lawyer not entertaining an opinion favorable to these policies can go upon the bench unless he succeeds in fooling the President or unless the President fools himself as to his legal opinions. Daniel Webster was right when he said that 'the judicial power can not stand for a long time against the Executive power.' The present President has already during his tenure of office appointed one-third of the Supreme Court and over one-half of the subordinate Federal judges.

"Judges on the district and circuit bench, although they hold their offices 'during good behavior,' feel ambition like other men and would like to fill vacancies upon the Supreme Bench, as they arise. They can pursue no course better calculated to bring about that result than to let it be known by their decisions as subordinate judges that they share the President's opinions, and among others, perhaps chiefly, his opinion of the rightfulness of 'increasing' Federal power 'by construction.'

"The difficulty of amending the Constitution is the excuse at heart for most Federal usurpations, this with and even more than, the alleged 'inaction of the States.' It was well that at the beginning the practice of amendment should have been made extremely difficult. The thing was to put the Government upon its feet and 'teach it to march,' as the French say; to stop experiments with the framework until the people had become

accustomed to it. We have reached the point now where there are many amendments that ought to be made to the organic law; first, because they are highly beneficial in themselves; secondly, because we want to do away with this excuse and pretext of usurping power 'in order to do good.' It has been said that the Federal Constitution can not be amended except as the result of some great cataclysm, or foreign or civil war. It is true that it is very difficult, indeed, to amend it—so difficult as to be, under ordinary circumstances, almost impossible. If you have a system which is too difficult of legitimate change, you therefore invite illegitimate change—or usurpation.

"Changes by amendment. The first clause in the Constitution that ought to be amended is the amendatory clause itself. Amending the Constitution ought to be difficult, but not so difficult as it is now. It would seem that to require a majority of 10 per cent over one-half in each House, voting for two successive Congresses to submit an amendment, would be a requirement sufficiently difficult in the initiative. This would require at present 51 Senators and 215 Congressmen, and as that vote would be required in two successive Congresses, the scheme would give the people time to think between the two Congresses and an opportunity to pass upon the proposed amendments tentatively when they came to elect the Members of first Congress after the one proposing the amendment. If to this were added that the proposed amendment should not become a part of the fundamental law unless it shall be ratified both by a majority of the people and by a majority of the States, the practice of amendment would not be rendered so easy as to lead to many propositions of amendment, and still would be made easy enough to encourage a hope upon the part of those who wish to preserve our institutions, that they need not be destroyed because of the very organic difficulty of changing them.

"It is not, however—note ye well—in this way that either President or Secretary proposes to go about the introduction of reforms or a redistribution of governmental powers. It is not proposed that it shall be done deliberately by amendment upon the initiative of the National Legislature and by the confirmation of the people in the States, but that powers are to be 'vested' in the Federal Government, and that Federal powers are to be 'increased' 'by constructions,' which are 'to be found;' and by 'Executive action' and 'by legislation' and by a judicial reading into the instrument of that which is confessed, by the very language used, not to have been written into it.

"There has been a recrudescence of Federalism here lately alarming in its proportions. We begin to hear a great deal once more about 'inherent powers,' about 'powers ordinarily exercised by sovereign nations,' and therefore, as it is claimed, to be exercised by the Federal Government and about affairs of 'national concernment.' This latter phrase would include murder, theft, divorce—almost everything pertaining to morals or health. The President talks about court decisions which have left 'vacancies,' 'blanks' between Federal and State powers, and wants these vacancies and blanks filled, occupied 'by Executive action,' 'by legislative action,' and 'by judicial construction.' How absurd! No decision of any court could possibly have ever left a blank or a vacancy between the powers to be exercised by the Federal Government and the powers to be exercised by the States. The moment the court decides that a given power is *not* one of those granted to the Federal Government, either expressly or by proper and honest implication, that moment the court has decided *e converso* that it is a power reserved to the States or to the people by virtue of the tenth amendment.

"Much has been written about what is meant by the phrase 'or to the people' in this amendment. In my mind it is clear; the powers not delegated are reserved either to the States or 'to the people' for redistribution, as they may choose, by amendment of the Constitution. Both State and Federal governments are their servants, not their masters. The people of the United States, acting within their respective States, have reserved the right of further distribution of governmental powers. Again, individuals have also certain natural and inalienable rights, to which reference is likewise made in the phrase. These are by nature 'reserved to the people,' as individuals, as rights not to be touched either by State or by Federal Government—by any governmental or political agency whatsoever. That man does not understand the nature of American institutions who thinks that arbitrary and unlimited power is vested anywhere under our system, even in a majority of the people themselves, acting through any government or of themselves. There are things which under our system a majority can not do, whether they are right in their opinion to be done or not; thus high was the sacredness of individuality held by our forefathers!

"I was talking a moment ago about the influence of the Executive over the judiciary—quoted Daniel Webster to the effect that the judiciary 'could not long stand against the influence of the Executive'—and yet the spirit of the time is such that it has been gravely proposed in a bill introduced in the House to make this influence still greater. That bill, introduced on January 4, 1907, provides that the President may, 'whenever in his judgment the public welfare will be promoted by the retirement of a judge,' retire him and appoint somebody else, 'with the advice and consent of the Senate,' who shall take his place in the exercise of judicial functions. This would give to the President and to the Senate of the United States absolute control over the judiciary.

"Our executive department has carried the Root doctrine into its dealings with Congress. Where Congress will not enact legislation that the Executive wants and loses patience about, some administrative department construes it to exist. This was the case in the graded-age-pension ukase, issued by the Commissioner of Pensions. A bill has been pending in Congress to accomplish the precise result; Congress would not pass it; the Executive, through the Commissioner of Pensions, amid popular applause, construed it into existence.

"When, later, it was proposed upon a general appropriation bill to insert a clause enacting into law the graded-pension system thus promulgated, the point of order was raised that the motion could not under the rule be entertained by the House when a 'general appropriation bill' was under consideration, because it was 'contrary to existing law.' In other words, that the amendment containing the very language of the ruling of the Commissioner of Pensions was confessedly a change of existing law. This point of order was sustained. Sustaining it was an admission of the fact that the Executive order had promulgated a new law—that a branch of the executive had legislated. If, on the contrary, the point of order had not been sustained, then the very fact of the adoption of the amendment would have been a confession of the fact that Congress needed to act in order to make lawful that which by Executive order had been promulgated.

"Again, a treaty with Santo Domingo was pending before the Senate of the United States which the Senate for a long time refused to confirm. The Executive, being determined to have its own way, Senate or no Senate, did, as a historical fact, for two years before the ratification of the treaty by the Senate, execute the terms of the treaty.

"Yet, again, the President at one time having a nomination of a certain South Carolina negro named Crum pending in the Senate, and the session having come to an end without action on it, and thereupon an extraordinary session having been called to begin at 12 o'clock on the very day upon which the former session expired, Secretary Root and the President between them construed into existence what they called 'a constructive recess'—that is, that between the beginning of 12 o'clock and the end of the same 12 o'clock on the same day there had been 'a constructive recess,' and that this being the case, the President had a right to reappoint this proposed appointee during this so-called 'recess.' He did reappoint him thus contrary to law, and the Senate was subsequently coerced or persuaded to confirm him.

"The logical inconsistency of public opinion in America was never better shown than with regard to this incident. The President's construction into existence of a 'constructive recess' for the purpose of saving his right of appointment aroused no indignation, although it was the act of one man. He had, however, set a precedent which soon found imitators. If there had been a recess, then Members of Congress were entitled to mileage for the recess or, rather, the new session following it. They therefore very logically, according to the precedent set by the Executive (although of course very wrongfully, but no more wrongfully than the President) voted themselves mileage for the 'recess.'

"A storm of disapprobation from the throats of the people and the columns of the newspapers swelled to heaven. The Senate voted the extra mileage out, and President, people, and all 'congratulated the country.' The man who imagined the iniquitous thing and acted upon it secured the result that he aimed at and was little, if at all, criticised. The very Senate that voted extra mileage out of the law upon the ground that there had been no constructive recess finally confirmed the appointee whom the President had hurled back at them upon the opposite theory that there had been a constructive recess.

"Franklin Pierce in a recent book, that ought to be taught in every school and college where civil government is taught, a book entitled 'Federal Usurpations,' from which I have drawn much for this speech, says: 'Social evolution progresses actually with the importance of the citizen over the State and de-

creases in the proportion of the importance of the State over the people.' All these propositions of adding to the powers of government by 'Executive action' and 'legislative action' and 'judicial construction' and 'constructions to be found' leave that great truth out of sight. I know of no people who have too little government. We do not want an America like Sparta, where the State was all and man was nothing. We want no Rome, even, where responsibility was so entirely devolved upon government that when government itself grew weak there was no initiative left among the people even to resist invasion—a herd of helpless sheep they were.

"Our weight of political machinery is increasing all the time. Not many years ago there were about 200 special agents—in other words, detectives and spies—in the employ of the Government. There are over 3,000 now, taking the places of ordinary Government officials, going up and down the land hunting up, by detective methods, violations of Federal statutes. A detective is like an expert in the medical profession. He generally finds what he is seeking. God never made a throat or a nose to suit a throat and nose expert; he never made a pair of eyes to suit an eye specialist. The Department of Justice uses a great many of these detectives. When you begin to inquire under what authority of law, it is difficult to procure an answer. That Department seems to borrow them from the Treasury Department. In other words, they are detailed from the Treasury Department to do work for the Department of Justice. The law appropriating for them in the Treasury Department appropriates for them for certain express purposes—chiefly for ferreting out and procuring punishment of counterfeiters and violators of the internal-revenue and customs laws. They are being used for a hundred other purposes—peonage is the immediate fad; public-land stealing was the fad a few months back. In so far as special agents are being used for the purpose of investigating trusts and bringing them to book, there is express authority of law independently.

"Judge George Gray well says in a recent speech that in Rome when a Dictator was appointed, his instructions were 'to take care that the State receive no harm.' This was a pretty broad authority. Mr. Bryce, the author of 'The American Commonwealth,' a book which has done much harm, seems to think from what he says that by a sort of construction or implication our Presidents, in times of acute peril may, or must, act on a like instruction. The present President does not seem to think that it is necessary to wait for a time of acute peril, but that the instruction is good 'for any old time.'

"When the New York constitutional convention adopted the Constitution of the United States, it adopted it with the proviso that there should be no extension of power 'by legal fiction.' This was to prevent usurpation of Federal power by construction. How far the power of legal fiction may carry a system of laws may be realized when it is remembered that from the twelve tables of ancient Rome there grew up by construction and legal fiction the *corpus juris civilis*, and that from a lot of old customs there grew up by court precedents the great body of our 'common law,' or *lex non scripta*. The only restraints that we have upon Executive usurpation is judicial constraint and impeachment, and the only restraint on judicial usurpation is the power of impeachment by the House of Representatives before the Senate acting as a grand court of impeachment. It requires two-thirds of the Senators to convict, and the sole penalty is deprivation of office.

"The process is surely difficult enough at best and the penalty light enough. The Swayne impeachment case, however, shows to what extent we have gone in limiting that power. Federal judges are chosen, to use the words of the Constitution, 'during good behavior.' It would seem that their independence is sufficiently protected by this tenure and by the difficulty of obtaining a verdict of two-thirds of the Senate. But if we are to learn any lessons from the Swayne case at all, the phrase 'during good behavior' has been construed to mean 'during life,' except when the judge has violated the express provisions of some penal statute. The power of impeachment was given to protect the people from 'high crimes' against themselves perpetrated by their servants. They are necessarily indefinable and intended to be so. What higher crime can there be than treason? What greater treason than treason to the Constitution, our sole sovereign, to whom alone we swear allegiance? What greater treason to it than the terrible attempt by a judge to destroy the integrity of the organic law by construction, with deliberate intent to make law, or to increase Federal power? Yet our President and his chief Secretary encourage this very form of treason—insidious and horrible, and there neither is nor can be any penal statute against it.

"Do not misunderstand me. There is a difference between these latest-day propositions and the application of an undoubt-

edly granted power to a new condition; which is all right. If the Federal Government has been granted, expressly or by fair and honest implication, power over a given subject-matter, no change of phase in that subject-matter can balk the application of the power. The power over interstate commerce, for example, could not be limited because human invention had brought into existence steam railways as instrumentalities of commerce.

"But it remains true that in construing the organic law the guide of the judge lies in the old maxim, '*Ita lex scripta*.' Nor is it necessary to enter into the formerly mooted question as to whether this construction should be narrow or broad, strict or liberal. What we want is an *honest and sincere* construction of the real words and the real intent and the real purpose, 'naught extenuating nor aught setting down in malice.' Otherwise construers of law become makers of law and judges and administrators become legislators!

"I am one of those who believe that infinite damage was done by the study and popularity of the Hon. James Bryce's book, 'The American Commonwealth.' It is almost impossible for an Englishman to understand our system, based upon the underlying theory of a written constitution. The constitution in Great Britain is avowedly a thing of construction, of evolution, of growth by judicial construction, of growth by changing opinion. Parliament has unlimited power, subject to certain fundamental natural rights of the individual, which, broadly stated, are 'the inherent rights of a freeborn Englishman.' Mr. Bryce, therefore, in dwelling with apparent pleasure upon the fact that the Constitution of the United States might be amended by judicial construction (*changed*, now mark you, not developed) was acting very naturally for one of his nationality, environment, and training. He could not appreciate the horror in the mind of a real American—really in love with the institutions of his own country—of the very thing which he dwells upon with a tolerant, if not a favorable, eye.

"I shall not say much more, however, about judicial usurpation, because there has not been as much of usurpation by that branch of the Government, either attempted or consummated, as by the other two. Upon the whole, our judiciary has rather preserved the Constitution from popular passion and impulse, from party spirit and sectional hate, and in proportion as Congress and the Executive grow wilder, it sets aside from year to year a larger and larger proportion of their acts. During the entire period before the civil war it had set aside only two or three general acts. Just how many multiples of that number have been declared unconstitutional since I can not now say, but we have grown accustomed to the Supreme Court's checking up Congress and the President every now and then, and the prayer of every good American is that it may do so 'more and more unto the perfect day.'

"Yet even the judiciary has made some apparently queer decisions lately. In *Mankichi's* case, which came up from Hawaii, there had been no indictment nor any unanimous verdict of twelve men—in our constitutional sense a jury verdict—against the prisoner, and yet the Supreme Court affirmed the case upon the ground that the laws of Hawaii, when annexed to the United States, had not required an indictment and had made provision for a jury that did not find a verdict by unanimity, but by majority. Upon what principle the court arrogated to itself the right to say just which fundamental constitutional principles should go with the Constitution to Hawaii simultaneously with annexation, and which of those fundamental notions should remain behind—to go later or not at all—presents a curious study.

"The gradual growth of injunctions in Federal courts constitutes the chief thing to complain of in connection with that branch of our Government. Originally the equitable right of injunction was issued only when the law remedy was inadequate because of damages immediate and irreparable, and it did not apply to crimes. In *Lennon's* case (166 U. S.), however, men were actually enjoined from refusing to haul cars of a railroad and from leaving the employ of the railroad, while under the charge of a receiver appointed by a Federal court, on the ground that their quitting the employment 'crippled the railroad's operation,' and I believe, if I remember correctly, also upon the ground that it interfered with interstate commerce. This injunction was issued in spite of the thirteenth amendment, which forbids 'involuntary servitude except from crime.'

"If everything that can be construed to be an interference with interstate commerce is to be taken as a just ground for an injunction, then a man who shoots another riding on an interstate ticket from Philadelphia to New Orleans would, as far as I can see, subject himself to Federal judge-made penalties, instead of being simply tried by a jury for murder, according to the laws of the State of the place where he committed the murder. Even when United States penal statutes exist, where a man

can be arrested upon affidavit and rendered harmless, the Federal courts still issue injunctions.

"The assertion of the power to inflict penalties for indirect contempt—constructive contempts, contempts committed out of the view of the court—punishments which carry deprivation of liberty and deprivation of property without a jury trial is another abuse.

"These things encourage a spirit of anarchy.

"Every man, if possible, ought to have a trial by jury.

"Injunctions are issued on *ex parte* hearing, on mere affidavits without notice even to the defendant, and on reference of questions of fact to one referee. Upon such evidence as that, and such findings of fact as that, before any real trial, the enforcement of State laws, passed deliberately by State legislatures and approved solemnly by State executives, are enjoined. The plea generally is that the State law is 'confiscatory.' Of course, when upon a hearing properly had, after due notice to both sides, and a proper investigation of the facts, State legislation is found to be really confiscatory, it must be set aside by permanent injunction, as conflicting with the Constitution of the United States. But that is not the question here; the question is whether the temporary restraining order issued *ex parte* upon mere affidavits and so-called ascertainment of fact by a master in chancery, very little acquainted with the subject-matter and very little able to judge of it, should prevail to annul a State statute.

"Let us notice a tendency to usurp Federal power under the treaty clause. Calhoun says that treaties are the supreme law of the land 'provided such regulations' (in treaties) 'are not inconsistent with the Constitution.' I quote Calhoun, because he went further than almost anybody in maintaining the 'plenary power of the Federal Government to regulate our intercourse with foreign powers.'

"If the treaty attempt to treat concerning some subject-matter the regulation of which is not delegated to any branch whatsoever of the Federal Government, then that treaty is 'inconsistent with the Constitution,' as being inconsistent with the purpose for which the Federal Government was formed. If it attempt to treat of some subject-matter the regulation of which is delegated to any branch of the Federal Government, I care not which branch, I admit the 'plenary power of the Federal Government' thereby exercised. That the treaty can give an alien equal rights with the citizen, even within a State, concerning a subject-matter that the Federal Government would otherwise not control I do not doubt, but that it can give him superior privileges to a citizen I deny. If by treaty with Japan, for example, California can be forced to admit Japanese, or by treaty with China it can be forced to admit Chinese, to the same schools with white children, then by treaty with Haiti or Santo Domingo negroes from those islands could be admitted to the same schools with white children in Mississippi, let us say, where native-born negroes, citizens of the United States, can not attend white schools.

"The President in a Massachusetts speech is quoted as saying: 'States rights ought to be preserved when they mean the people's rights, but not when they mean the people's wrongs.'

"In God's name, who is to say what are the people's rights and what are the people's wrongs? If I undertook to answer the question, I should say: 'The people themselves.' And then, if I were asked further how they were to say it, or have said it, how they were to draw the line, or have drawn it, how they were to prescribe the people's rights and prescribe the people's wrongs, I would say in the fundamental organic law, the Constitution of the United States and in the constitutions of the several States, which are the *prescribing voice of the people themselves*, saying both to the Federal Government as contradistinguished from the State governments: 'Within these boundaries thou must travel,' and saying to the State governments, the *residuum* of governmental authority: 'Thus far and thus far only in the United States shall any governmental authority over man ever go.'

"We are running mad. The latest proposition is to have a law for Federal registration of automobiles, on the ground that automobiles do sometimes cross State lines.

"It is proposed by the President to charter and by Mr. Bryan to license corporations chartered by the States before they can enter into interstate business.

"The President's latest astounding proposition is to leave a branch of the executive government to distinguish between 'good trusts' and 'bad trusts,' marking out one for a license to do business and another for extirpation. What a campaign-contribution breeder that would be! How the combinations and trusts—the present substantive law being cunningly retained in the plan—would run over one another in contributing to the campaign funds of whichever party happened to be

in power, in order to bias the executive department of that party in finding them 'good' and not 'bad!'

"I have referred once before to administrative or bureaucratic usurpations of Federal power as being most dangerous of all, because most insidious and least seen by the average citizen. I wish that some of you, who have time to do it, would study the case, referred to by Franklin Pierce, of Juy Toy, a Chinaman (reported in 198 U. S.), who was born in the United States, went to China on a visit, and came back; was sentenced to deportation as an alien by the Immigration Commission, and whose sentence was affirmed by the Secretary of the Treasury. In some way the poor devil managed to communicate with a lawyer and to avail himself of habeas corpus proceedings.

"The referee found Toy's statement that he was born in America to be true. The case finally got to the Supreme Court. That court decided that the question of fact as to whether he was or was not a native-born citizen of the United States had been decided by an administrative tribunal authorized to try it and that that finding was final and conclusive; in other words, that it made no difference whether, as a matter of fact, Toy was a natural-born citizen or an alien, he was banished, and that was all there was to it!

"It is not alone in connection with this case that the courts have held that they could not take cognizance of the conclusions reached by executive and administrative tribunals and that no appeal to any court would lie, but in other matters as well.

"For example, the power at present reposed in the Post-Office Department when issuing fraud orders, although it has not as yet been as seriously abused as it may be, is a power out of which the destruction of the entire principle of the freedom of the press may flow, especially when dealing through it with dangerous and unpopular classes. The Department may tomorrow, if it choose, cut off the New York Times or the North American Review or Collier's Weekly from the right to be transmitted through the mails, under a fraud order. If it chose to do so, there would be no appeal to any court. It could furthermore, if it chose, refuse by a fraud order to permit any mail to be delivered to either of them or to me or to you. It could do this upon the report of detectives in the Department, and perhaps the first we would know of it would be from missing our mail. Moreover, upon complaint and inquiry as to the exact point in which we had offended, the Department might furthermore return the answer that it was not 'practicable to make reply' to our inquiry.

"Franklin Pierce, at any rate, quotes a case in the book to which I have referred, where certain printed matter was excluded from the mail on the ground of 'obscenity.' The Department was written to to specify in what respect and how and where there was anything obscene in the printed matter, and it is quoted to have replied that it was 'not practicable' to answer the inquiry.

"It is not to the purpose to reply that the Department *would* not do what I have supposed. That it *might* is a sufficient danger to human liberty.

"In the case of South Carolina against the United States (199 U. S.) the Supreme Court says of our Constitution—which, I repeat, is the only sovereign in America—except the people themselves acting in a prescribed way while exercising the power to amend and change it—the Supreme Court says of that Constitution, that it 'speaks not only in the same way, but with the same meaning and intent with which it spoke, when it came from the hands of its framers and was voted on and adopted by the people.'

"That phrase ought to be memorized by every schoolboy who is studying 'civil government' in every public school. Whatever the British constitution may be—unwritten, not exactly definable—the American Constitution is an instrument of written, prescribed, fixed sentences, phrases, and words, that do not dance about kaleidoscopically upon the printed page, and bear different meanings to-day and to-morrow, but mean just what they meant when they were uttered, although to-day, of course, they may be applied to very many conditions and instrumentalities that did not exist then. 'Whenever an end aimed at is constitutional then all proper means to that end are also constitutional.'

"The great Federalist judge himself, John Marshall, uttered those words. The converse to that is not true, to wit, that whenever a certain *means* is constitutional, therefore the *legislative end* aimed at is constitutional. Congress has a right, for example, to regulate interstate commerce; but if the end aimed at be not in verity the regulation of interstate commerce, but be the regulation of child labor, or manufacturing, or education, or the suppression of ordinary crimes within a State, and the inter-

state-commerce clause of the Constitution be resorted to merely as a means to the accomplishment of one of these latter ends—which end is in itself unconstitutional—then the thing sought to be done is exactly the opposite of that which John Marshall said could be constitutionally done.

"One of the features most precious in our dual system of government consists in the very fact that there are so many State governments, in so many different climates, with so many different sorts of population, so many different systems of agriculture, such diversities of pursuits and occupation, of heredity and environment, that they enable our laws through the instrumentalities of the State legislatures to be adapted to the needs of the communities. Thus the States become great experimental fields. South Carolina can experiment with a dispensary law. If damage ensue, it is limited to South Carolina.

"The people of the balance of the States can watch it without harm and learn lessons; find out if it is to be imitated or if it is to be avoided. If Oklahoma wants to make an experiment of governmental guaranty of bank deposits, the balance of the Union can watch the experiment with interest and with profit; without loss no matter how it turns out. If Oregon wishes to try the experiment of *initiative* and *referendum*, the same observation is applicable. All of us can watch the experiment of woman's suffrage in Colorado and some day imitate it or else learn to avoid it. And so with infinite diversity of surroundings and influence, with emulation existing between localities, the Federal Government does not need to experiment. In other lands experiments, if harmful, are not national hurts.

"The very maxim, '*E pluribus unum*,' is a Federal maxim. We must preserve not only the 'one,' but we must preserve, with equal care and jealousy, the integrity of the 'many' governments which constitute our system—an 'indissoluble union of indestructible States'—a 'Republic of lesser republics.'

"May God grant that Jefferson prove right and Macaulay prove wrong, and that this constitutional, democratic, representative, Federal Republic of ours prove not a failure, as it assuredly must prove, if individual self-government based on the 'self-denying ordinance of a majority'—the Constitution—denying absolutism to themselves even, and if local self-government or home rule based on the reserved rights of the States be lost sight of by us or by our children.

"Remember these words of George Washington:

"This Government, the offspring of our own choice, uninfluenced and unawed, adopted upon full investigation and mature deliberation, completely free in its principles, in the distribution of its powers uniting security with energy, and containing within itself a provision for its own amendment, has a just claim to your confidence and your support.

"The basis of our political system is the right of the people to make and to alter their constitutions of government. But the constitution which at any time exists, till changed by an explicit and authentic act of the whole people, is sacredly obligatory upon all."

Spell "Nation" with a capital N, and spell "State" with a capital S, but, above all, spell "Individual" with a capital I, just twice as large. Be jealous of all government and of all increase of the weight of governmental machinery.

Labor and Its Demands Ignored by a Republican Congress.

SPEECH

OF

HON. MADISON R. SMITH,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. SMITH of Missouri said:

Mr. SPEAKER: I had not expected to have anything further to say relative to labor legislation, as I have spoken on this subject and its related questions as often as three times during this session, and I would not say anything further now, were it not for the rank deception that has been practiced upon the working people of the country during this session by the majority party. Congress, as it is now run—and you will not forget that it is run by the Republican party—is, in many respects, a great, big humbug; as Thomas Carlyle would say, a "huge simulacrum." Its real self is a hidden secret and only known in fact to those who have been initiated into its Egyptian mysteries by several years' service. Still, an adolescent can find out something, especially if he knows anything at all about that great, unfathomable well—human nature. The tentacles of this monster of power are rooted in the committees, and there watered and tended with the greatest of care and partisan art. As the

committees are now constituted, they are a growth, and while Speaker CANNON is blamed by the unthinking public for all the shortcomings and wickedness of these committees, the blame ought not all be heaped upon him, for he is but a truculent, yet pliant, figurehead of the great privileges and protected interests of the nation. True, he is, in some respects, quite able. He is alert, wise, calculating, daring, and domineering, and when he makes up his mind to have a thing done, he goes straight to it without wavering and with the accuracy of gravity.

He is, however, aided by all the enginery of the old, battle-scarred, begrimed, golden-crested god of gold—Mammon. Out on the walls of Babylon are his sentinels, and when the battle is scented from afar, his minions by the tens of thousands fly with the news over the country to Washington by wire, telephone, and by letter, and all they lay at the feet of their hoary-headed potentate, the Speaker; sometimes abjectly and sometimes arrogantly, circumstances determining their attitude. A council of the inner circle may be called, or it may not. Here, and by the help of this unmeasured and immeasurable power, the committees are made. Not a man goes on a committee whose credentials have not been examined, with the best information obtainable, by experts, and, after being weighed in the golden balances and found trustworthy to the cause of Mammon—that is, the sacredness of property and vested rights—he is placed on the committee, and this method is pursued until a beastly majority is secured for the premeditated purpose. But if he is found untrustworthy to the cause, he is set aside and labeled for other use and finally will be placed where he will be as harmless as a dove.

COMMITTEES WONDERFULLY MADE.

These committees are wonderfully made. They are the finished product of the politician's art, seeking to protect the business of his friends who have always helped him to be elected to Congress and who are under contract to continue to help. The inspiring idea of reciprocity pervades the whole selfish work. Yes; these committees are "fearfully and wonderfully made." They are the highest product in the field of political machinations for the good of the dear, infatuated dollar. In these committees are the roots of this great and mighty legislative organization, in high-sounding phrase named "the American Congress," hooded and garbed by a membership of nearly 400 honorable and able men, who come principally from the legal profession, but in part from all the walks of life. Yet the majority of them are puppets, no less volens, of this able, potent, militant, selfish, cowardly, unpatriotic, and yet arrogant organization. In its toils they are irrevocably, but severally, bound, like Prometheus to the rocks.

The American Congress is the highest legislative body in the world and, as Mammon bossed and run to-day, has but two purposes in view—to conduct the Government in the interest of the Republican party and its rich contributors and to forever perpetuate itself in power. The materialistic spirit of the cohesion of plunder has the majority party completely within its grasp. Militarism is rampant, and, if the party remains in power, to what length it will go in that direction no one can tell, and it would beggar prophecy to try to tell. The reason of this is that its leaders are wholly under the influence of monopoly and its allies, who are now and have been for years engaged in exploiting the resources of the country for more property for use in high carnival at the feet of the Belshazzars of extravagance and profligacy.

One billion dollars and more are appropriated at this session of Congress to meet the reckless expenditures of the Government, and not one dollar or an hour's time has been honestly used to alleviate in the least the hard condition of the working people of this country. Nothing is appropriated to improve the great waterways of the country, the work on which would give employment to thousands now out of employment. No money for roads and water highways, but \$200,000,000 for the Army and Navy. Two hundred millions to fight the Japs and keep in industrial subjection the working class. It is not pretended by the most harebrained war fanatic that any other nation is preparing to invade our country or is scheming to put us in some awkward military position, where we would be compelled to fight or sacrifice our national valor and honor. Oh, such a crass hypocrisy or inane self-devotion! Which or both? Either is unpatriotic enough to make the angels weep and ought to be condemned by the country with an avalanche of votes.

MONEY AND THE MILITARY SPIRIT.

The sword has betimes been drawn in the cause of liberty, but more often as the defender of the dollar. Mammon and Mars are coexistent; to abolish the one abolishes the other; to set up one for worship sets up the other for worship. Their bloody business has ever been to set the world by the ears, father against son and brother against brother, and to organize a cruel,

selfish, and wealth-ridden society. To them the brotherhood of man is but a roseate dream and the love principle, which the Man of Gallilee blazoned on every page of the New Scriptures, a silly joke. Such a Utopia they quickly drown in the blast of the war trumpet, the clang of the saber, and the roar of the navy guns.

May I not ask what has become of the church, with its billions of capital and millions of adherents, and the programme announced for it two thousand years ago on the shores of Lake Tiberias in these then and yet revolutionary words:

The spirit of the Lord is upon me, because He hath anointed me to preach the gospel to the poor, He hath sent me to heal the brokenhearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord.

I quote the above as the programme of social freedom and as a word of warning to those who are covering the waters of the sea for discipleship and yet overlook the application of the truth in these words from the Master. They are revolutionary, but true nevertheless. And has not the church emblazoned this programme on its banners with a good deal of pride and sometimes parade, and it never tires of talking of "love, the greatest thing in the world." May I not inquire, in view of this noble claim, how it can be silent when the greatest Christian nation of all the world is spending money like water and burdening the people with debt to arm and equip itself for war on land and sea for the shedding of blood—your brother's blood? What becomes of that revolutionary spiritual principle and claim, "the brotherhood of man and the fatherhood of God," which we hear every Sunday preached with so much unction? It would seem that the church would rise up en masse and proclaim at least its dissatisfaction at such a course of fostering and promoting of the military spirit by these immense appropriations of money, and they are rapidly increasing from year to year. There has been appropriated \$1,000,000,000 or more since Mr. Roosevelt became President.

THE DICK MILITIA BILL.

On the night of May 26, between the hours of 10 and 11 o'clock, the Senate Dick bill, under the Republican party whip and spur, was rushed through and passed with but twenty minutes on a side for discussion, and that notwithstanding it appropriated \$2,000,000 to arm and equip a standing army in our very midst of over 100,000 soldiers. The bill provides that—

On and after January 21, 1910, the organization, armament, and discipline of the organized militia of the several States and Territories and the District of Columbia shall be the same as that which is now or may hereafter be prescribed for the Regular Army of the United States, subject in time of peace to such general exceptions as may be authorized by the Secretary of War: *Provided*, That in peace and war each organized division of militia may have one inspector of small-arms practice, with the rank of lieutenant-colonel; each organized brigade of militia one inspector of small-arms practice, with the rank of major; each regiment of infantry or cavalry of organized militia one assistant inspector of small-arms practice with the rank of captain, and each separate or unassigned battalion of infantry or engineers or squadron of cavalry of organized militia one assistant inspector of small-arms practice with the rank of first lieutenant.

This army is under the direction of the President, and, of course, can be used in conjunction with the Regular Army anywhere, within or without the United States, and, more to the point, can be used particularly for the purpose of enabling the President to execute the laws of the country, and to that end he may issue orders through the governors of the respective States and Territories to such officers of the militia as he may think proper. So, after January, 1910, a standing army shall be organized among the people of 100,000 or more men, and the whole nation of able-bodied male citizens between 18 and 45 years of age are created as a reserve militia, and \$2,000,000 shall be appropriated annually to maintain this standing army of 100,000 for the purpose of keeping peace.

If the working people of this country fail to realize the object of this law and of the army it is intended to raise they are more stupid than I take them to be, and if they do not hold the Republican party responsible for such legislation, then I shall lose faith in their opposition to the use of soldiery against them during industrial disturbances and conflicts, as well as in their contention that the Army is being enlarged and kept active against them in times of strikes and labor wars. I do not hesitate to state, Mr. Speaker, as my deliberate opinion that much of this agitation for the enlargement of the Regular Army and militia is for the purpose of being ready to forcibly suppress labor outbreaks and strikes, which are sure to come in the near future, growing out of the clash between the capitalistic employer and his employees.

The recent Federal court decisions which have been so disastrous to all propaganda in behalf of bettering the conditions of the working classes and so embarrassing to them in their practical efforts for shorter hours, better wages, and safer appli-

ances, and for conditions with which and under which to work, have made the capitalistic classes generally more arrogant, confident, and determined.

CAMPAIGN AGAINST LABOR.

The campaign against organized labor is to be waged relentlessly to a finish. Trades unions, as an active and militant agency for raising of wages and forcing of better conditions, are to be met by the National Association of Manufacturers at every point and resisted by every means and method at their command. Those selfish exploiters well understand that the working classes are awakening to their real condition, that they are rapidly becoming, as the sociologist would say, class conscious, and are coming to appreciate the fact that they have been exploited of the real value of their labor through all the ages. And the employers further know that this great body of working men and women, huge and awful in the sight of God and man, is questioning things and looking into them, and presents a countenance of restless determination that will change affairs mightily unless checked.

The employers want to postpone the day of judgment, and nothing will be left undone to postpone it that brains, money, political power, and dissimulation can do. The courts, which the ruling and property classes have made, have been interpreting the law, made by the same class, from their thrones of power and have been declaring the law under the Constitution on the rights of capital and labor, and in every case labor has lost and capital has won. I am not belaboring the courts or censuring the judges, but am simply stating the facts.

Mr. Speaker, I say here, in the presence of this House, and I want it to be sounded from one end of this nation to the other, that labor is not getting its due, if equality and justice should be the rule. I mean real justice, that kind of justice that should be apportioned between brother and brother. And, as the laws seem not to be constructed on that basis, it would be well for the country to see to it that they shall be, as early as possible, made and bottomed on that basis.

Do not charge me with speaking against the courts, for I have heretofore on the floor of this House said that they may give labor, or the working people, all that they can upon precedent and the law technically administered. However, I believe, if I were a judge sitting as a chancellor, I would mold my opinions by conditions and facts in harmony with the rights of man and not so much for the protection of the sacred rights of property. For if property, which is soulless, is sacred, how much more sacred is the welfare of your brother, who has a soul with possibilities for eternity? And every lawyer knows that it is the boast of equity judges that equity is universal enough and sufficiently particular to do complete justice and equity according to the facts, however complicated and novel they may be, and equity acts in personam and not in rem, and hence the rights of the man should be paramount to the rights of another man's property.

THE WORK OF THE COURTS.

In order to specifically call the attention of this House to what has been done by the courts of recent date, I refer to the following opinions:

The Buck Stove and Range Company v. American Federation of Labor (35 Wash. Law. Rep., 797).

Dietrich Loewe v. Lawler et al., United States Supreme Court (148 Fed. Rep., 924).

Howard, administratrix, v. Illinois Central Railway, United States Supreme Court, January 6, 1908.

Adair v. United States, United States Supreme Court, January 27, 1908.

Hitchman Coal and Coke Company v. John Mitchell et al., known as the "Dayton case."

These opinions seem to have been a culmination of what the courts had been intimating for some time by dicta in restraint of labor unions when conducting boycotts and strikes. I shall not undertake an analysis of these opinions, but will call attention particularly to what is known as the "Hatters' case," wherein the court held that a boycott, organized and directed by the American Federation of Labor, to prevent interstate trade in hats by the Danbury Hat Company, was within the provisions of the Sherman antitrust law, on the ground that such a boycott operated as a restraint upon interstate commerce. This decision, in effect, held that a trades union is a trust, or an illegal combination of labor unions, amounting to a conspiracy under the Sherman antitrust statute. A trust is usually defined as being a combination of corporations organized for the purpose of getting control of the production and distribution of manufactured products of some kind, the ultimate object of which is to control the profits arising out of an unrestricted and monopolistic trade in the product to be controlled. How it can be maintained that the voluntary associa-

tion of working men and women, affiliated into unions for their mutual benefit and assistance, can be placed on the same footing with a trust organized for the purpose of securing profits without competition to me is not clear. In fact, I do not believe that both rest upon the same principle.

The power and right to labor is not a commodity and never has been so recognized by economists. How, then, can the right and power to labor be made the subject of trust legislation and be brought within the terms of the Sherman antitrust law, which is leveled against the interference with and restriction of interstate trade and commerce? How can there be a trust in something which does not exist, or which has not been produced? The power to produce belongs to the workingman and is inseparable from him and has no existence out of him. It is the very opposite to commodity, which has an independent existence and which has already been produced and in esse, and hence the subject of control by a person or an organization of persons under the law. To thus control the power to work, which belongs to living free, and independent human beings, in the same way in which you would control a commodity or a material product, would be to reduce the laborer to the common level of an article of commerce, which is inanimate, without life, feeling, hope, aspiration, and a soul, while the laborer is God-created, possessed of feelings, love, hope, pain, sorrow, and a soul of infinite possibilities, here and hereafter. In the very essence of things, labor unions can not be regarded as trusts, or unlawful combinations. Further, I have no time to discuss this great subject of value and importance.

DEATH OF THE WILSON BILL.

The Wilson bill, introduced by Representative WILSON of Pennsylvania, a very able and conservative friend of labor, of this body, notwithstanding the almost universal clamor of organized and unorganized labor for the enactment of this bill into a law, could obtain nothing more than a partial hearing, permitted for the very manifest purpose of delaying it and finally killing it. Bills have been introduced by various Members, one of them by myself, for the purpose of avoiding the recent opinions of the Federal court, which hold that where two or more persons agree and confederate together to do a certain thing or to perform a common purpose, however worthy it might be, yet if it in anyway interferes with the public welfare or injures indirectly any person or corporation in his or its property rights, it was unlawful, and that, too, notwithstanding the same thing or work could be done by any single person, acting alone and for himself, with perfect impunity. The English Parliament several years ago enacted a law for the purpose of preventing a combination of two or more persons acting together to do a certain lawful thing, although it might injure third persons, from being adjudged guilty of an unlawful conspiracy and from being punished or sued for damages. This country has no information that, since the passage of that law, the working people there have destroyed any property or disrupted the kingdom because permitted to exercise the right of free speech and the rights of freemen generally—that of protecting themselves against industrial tyranny and robbery.

May I not refer without censure to the many anti-injunction bills which have been introduced into this House by Republicans and Democrats alike, and after that the Majority party has had not less than two caucuses to secure a favorable report on an anti-injunction bill to regulate the issuance of injunctions against labor unions during industrial conflicts. As usual, the party was controlled by its masters, and refused, after much discussion and bitter debate, to report a bill favorably to restrict the unlimited powers of courts of equity in dealing with strikes and boycotts. And, further, this patriotic caucus refused to report a bill to prohibit the punishing by imprisonment of persons arrested for contempt charged with violating some oppressive court order. These un-American usurpations of the courts must be permitted to go unmolested in order to protect property and its divine rights, which the worker does not possess. The manufacturing interests throughout the country, and in fact corporations in general, upon receiving information, which they always get promptly, that a caucus had been called to consider this kind of legislation, flooded the Republican Members of Congress with telegrams and letters containing veiled threats against the party, provided it dared to pass an anti-injunction law or a law authorizing jury trials in cases of contempt or a law that interfered with the integrity of the Sherman antitrust law.

LABOR PRACTICALLY OUTLAWED.

The decisions of the courts to which I have referred are well known to the laboring people of this country, and so is the proposed legislation; and it is further well known that the working classes everywhere feel that they have been practically outlawed

and that our far-famed free American Government offers them but little or no protection in their rights as a class, and they are a class in society and under the law, and none but a pharisaical hypocrite will gainsay it. The only liberty which they have a right to enjoy is the liberty to work with dangerous machinery and in unsafe places and, if injured, to assume the risk therefor and go without damages, or the liberty to throw up their jobs and starve, or the liberty to work in sweat shops and loathsome tenement houses, or the liberty to work hours of inhuman length without rest or recreation, a kind of inane, academic liberty, as empty and worthless as a madman's dream.

In all seriousness, and in the name of labor and its God-given rights, I propound the question to the other side of this House, What party is to blame for labor's not securing the legislation for which it has been begging Congress for so long? Labor certainly can not deny but that Democrats, in the committees and in this House, have at all times placed themselves on record as favoring the legislation for which they have petitioned. I ask further, Why should labor charge that Democrats are insincere, as labor heretofore has seemed inclined to do, in view of their action at this session of Congress and their course held so long and consistently?

The Republican party has always shielded itself when cajoling labor in sounding phrases by preaching the beauties of high tariff and its consequences—high wages and a perpetual job. The recent industrial depression explodes this threadbare contention, for there are millions of men and women to-day out of employment, and those who have employment are the victims of reduced wages. What the Republican party wants to-day and has always wanted is free labor from every quarter of the globe and a high protective tariff on all articles manufactured by labor, and so far it has gotten what it wanted. How long, my labor friends, will you continue to vote the Republican ticket under these conditions and thus foster a political machine such as I have mentioned, of most perfect organization, the evolution of years of political effort, the object of which is to protect the rich and the monopolies of the country, to your injury and to my injury as consumers? Unless you break this machine into a thousand pieces at the ballot box, there is no hope for you. If you ever expect this legislation for which you have been so long clamoring, you must overthrow this juggernaut of power. Do you think you could make conditions any worse by trying the Democratic party and testing its sincerity, which you seem to have doubted for so many years? Methinks I hear your answer from a million throats from all over the country with a shout, "No!" The everlasting "No" that shall ring around the world.

There is no other party than the party of Jefferson and Jackson of sufficient strength and organization and with a well-defined policy to which you can go with the hope of aid and to your best interests. You can either continue to suffer—and if you do it willingly and willfully you ought not to complain—and strikes and boycotts for your rights ought to be abandoned and you should serve your masters without murmuring, or will you make a trial of those who have done what they could to help you, and bruted to the world that they love the divine rights of men more than the legal rights of property? What will you do? Will you continue to trust the hollow tariff argument—high tariff, high wages, and jobs perennial? I am not pleading for the Democratic party, but for your cause that has so long been disregarded.

SOME OF LABOR'S DEMANDS.

The American Federationist, published in Washington and ably edited by Samuel Gompers, said as part of its preface to resolutions on certain labor legislation that "Congressmen have been deluged and swamped with the mass of resolutions and personal letters which have poured in from their constituents demanding that the present session of Congress heed the demands of labor and enact the measures which it specifies." And the following is a copy of the letter accompanying the resolutions and the resolutions, which were sent to every Member of the Sixtieth Congress:

—, April —, 1903.

Hon. —, —,
Capitol, Washington, D. C.

DEAR SIR: At a largely attended meeting of your constituents, held at —, on April —, the inclosed resolutions were adopted and ordered sent to you, so that you may be properly and reliably advised as to the sentiments that prevail among a large proportion of people in this Congressional district on some very important economic and political questions, which, if not settled quickly and to the complete satisfaction of the participants in this meeting, further steps will be taken to make these questions the paramount political issue of 1903, and, for that matter, in all future political campaigns, until the evils herein complained of are adequately remedied. Our people hope for and count upon your support by voice and vote to enact at the present session of this Congress the legislation set forth in the inclosed resolutions.

Please advise the undersigned as to your position on the inclosed subject-matter at your earliest possible convenience. In addition to replying to the above, will you please present it, with the inclosed resolutions, to Congress as a petition, and oblige,

Yours, very truly,

April —, 1908.

Whereas we, the working people and their sympathizers of ————, in meeting assembled to consider the situation in which the toilers of our country find themselves by reason of recent court decisions and the failure of Congress to afford the necessary relief and for the purpose of taking such action to secure adequate Congressional legislation for the protection, restoration, and defense of the natural and inherent rights of our people; and

Whereas the recent decisions of the United States Supreme Court, especially the decision in what has become commonly known as the "Hatters' case," whereby the Sherman antitrust law was so construed as to deny and to injuriously affect the rights of the workers, and indeed all of our people, whether acting in their collective or individual capacity; and

Whereas the Supreme Court in this decision ignored the intent of Congress, which, while the Sherman antitrust act was under discussion, clearly showed by unanimous vote of the Senate that it was not intended to include the workers under the provisions of this act, and only omitted the direct statement because Congress and all public officials at that time were thoroughly convinced that the Sherman antitrust act would never be so construed as to apply to labor; and

Whereas the Supreme Court in its sweeping decision in the Hatters' case so construed the Sherman antitrust law as to make it apply to labor not only in one, but in many of the most important and fundamental respects, penalizing the right of bestowing or withholding patronage and thereby practically establishing a vested right in such patronage, providing threefold damages and fine and imprisonment as punishment; penalizing by fine and imprisonment the right of peaceful agreement with employers as to wages, hours, and other conditions of employment, stigmatizing this most laudable effort toward industrial peace and progress as "conspiracy;" and

Whereas the law as construed under this decision is so foreign to its original purpose that labor and all our people may well doubt if it can not be applied in directions not yet fully realized so as to check and penalize the exercise of almost all natural and fundamental rights of voluntary association and uplifting effort which all supposed was guaranteed to us by the Constitution of our country; and

Whereas not only the Hatters' decision calls for immediate Congressional action, but other recent Supreme Court decisions as well, notably those declaring the employers' liability law unconstitutional and that clause of the Erdman Act relating to discharge on account of membership in a labor union. In addition, the action of the courts by the abuse of injunctions, in denying the exercise of free press and free speech and other natural and inherent rights, have caused us to view with alarm, unrest, and dissatisfaction the existing state of affairs unless Congress shall promptly enact specific legislation which shall clearly so amend the Sherman antitrust act that its original intent shall be preserved and that it shall not apply, as it never was intended to apply, to labor, and such other legislation as set forth in these resolutions for the further restoration, definition, and protection of the rights and activities of the wage-workers and all our people in the exercise of their individual and organized activities for the uplift and progress of the people and the preservation of the original just and equitable intent of our free institutions; therefore be it

Resolved, That though protesting against the construction of the law by the decisions of the Supreme Court applying laws to the workers never intended by Congress for that purpose, we yet accept and obey them, thereby demonstrating incontestably our patriotism, our law-abiding purpose, and our faith in the institutions of our country, yet we must and do insist that Congress exercise its power and perform its plain duty, granting the relief and remedy from the injustice of which we complain; and be it further

Resolved, That we express our firm conviction that it lies within the power of the present Congress to enact such laws that the rights and liberties of the toilers shall be restored and safeguarded, and we solemnly aver that under no circumstances will the workers surrender their right to and their faith in their voluntary organizations, which have done so much to protect them from tyranny and rapacity and which have raised the American standard of life of the workers, their wives, and their little ones, and instilled the highest ideals of American manhood, character, intelligence, and independence among the toilers of our country; the organizations of labor which have proven themselves not only the great means whereby the material, moral, social, and political standard has been advanced, but have also shown themselves the greatest conservators of the public good and of the public peace; that we shall stand by our unions of labor and carry on our normal activities, whether as individuals or through our associated effort; and be it further

Resolved, That the working people and their friends in meeting assembled insist that the Congress of the United States cease its indifference or hostility and enact the legislation in these resolutions set forth, so that we may exercise our fullest, normal, natural, and industrial rights, and to attain them we will exercise our industrial and political power; and be it further

Resolved, That we call upon the Congress now in session to enact before adjournment the amendment to the Sherman antitrust law, known as the "Wilson bill" (H. R. 20584); and be it further

Resolved, That we call upon the present session of the present Congress to enact the Pearre bill (H. R. 94), to so define the injunction power and restrain its abuse that neither directly nor indirectly shall there be held to be any property or property right in the labor or labor power of any person; and be it further

Resolved, That we call upon Congress at this session to enact an adequate, just, and clearly defined general employers' liability law; and be it further

Resolved, That we call upon this session of Congress to enact labor's eight-hour bill for the extension of the present eight-hour law to all Government employees and to all employees engaged upon work done for the Government, whether by contractors or subcontractors; and be it further

Resolved, That we hereby declare our determination to hold each and every Representative and Senator strictly accountable upon his record upon these measures during the present session of the present Congress; and be it further

Resolved, That we stand unqualifiedly committed to the measures and the Congressional relief set forth in these preambles and resolutions and the grievances set forth in the protest to Congress published

in the CONGRESSIONAL RECORD, and the plan of campaign outlined in the "Address to Workers," prepared and presented by the great labor conference, held at Washington, D. C., under the auspices of the American Federation of Labor. And we pledge ourselves individually and collectively to the exercise of our fullest political and industrial activities now, and in the future, to the end that we may aid in the election of such candidates for President of the United States, Representatives or Senators in Congress, and such other executive, legislative, or judicial candidates for office as will safeguard and protect the common interests of the wage-workers, as well as the people of our common country; and be it finally

Resolved, That the toilers and their friends, fully aroused, will not be lulled into a fancied or false security by promises however plausible, protestations however masked by friendship, and that we call upon all our fellow-workers, our friends, sympathizers, and enlightened public citizens generally, without regard to party affiliations, to stand by our friends and elect them, oppose the indifferent and hostile to our cause and defeat them.

In this movement for our common protection we are moved by a high sense of duty and a profoundly conscientious purpose to serve not only the workers of our time, but all the people of our great country for their industrial, political, social, and moral progress and uplift.

RESOLUTIONS HAVE BEEN IGNORED.

These resolutions have been ignored and the workingmen of the country have been again spurned away, downhearted and empty, to meditate upon the vicissitudes and beauties of Republican rule.

I shall finish, gentlemen, with remarks by Mr. Gompers, when he was addressing the Judiciary Committee of the House on the Wilson bill to amend the Sherman antitrust law:

In conclusion, let me say that, in my judgment, speaking not only as president of the American Federation of Labor and as a representative of workmen, but as an American citizen, I believe firmly that there is no question before this Congress, possibly nothing equal in importance, to this question which can arise in a very long time. It ought to be deferred until some other time; it ought not to be postponed until a hereafter. The workmen of the country feel that they have been outraged, that their interests have been invaded. I could not interpret to you in words the feeling or reflect their sentiments or views, even if I should attempt to do so, and no matter what time I might take in so doing.

The men of labor of this country feel outraged, I repeat; they feel that they have been robbed; they feel that they have been shorn of the only protection that they have—their organization, the right to combine, the right to associate, the right to help each other, the right to help bear each other's responsibilities and burdens, the right to protect themselves from greed from the rapacious. For in truth we must bear this in mind. We have not any hesitancy in saying that the large majority of employers are fairly inclined, but it is equally to their protection as it is to the protection of the men who labor that we organize and have all the fullest rights of our normal activities as workmen and citizens in order that we may compel the man who is always nibbling at the wages of workmen, that we can protect the fair-minded employers from the nibbling, wage-cutting policy and niggardliness of the unfair and antagonistic employer.

In the interest of men of labor, the women of labor, of American manhood and womanhood and citizenship, I make this appeal to you gentlemen of the Judiciary Committee, that we can not wait much longer for relief; and if I judge the temper of the American workman accurately, and I think I do, they are going to hold to a strict accountability the men or parties whoever and whichever they may be who fail to fairly respond to this urgent appeal.

I believe that there will be an appeal by the laboring classes through the ballot box for justice at the fall elections, and the places that know you now on that side of the Chamber will know you no longer after next November. God grant it in behalf of our beloved country and humanity. [Applause on the Democratic side.]

Waterway Legislation Affecting Illinois; and Other Matters.

SPEECH

OF

HON. HENRY T. RAINEY,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. RAINEY said:

Mr. SPEAKER: Under the general leave to print recently granted I desire to submit the following remarks: I think speeches ought to be made on the floor of the House of Representatives, not inserted in the RECORD. I have had the reputation, I think, in this House of delivering my speeches in the House when in session. I voted against the resolution granting general leave to print, which carried the other day. In my judgment, the Congress of the United States ought to remain in session long enough to enable Members desiring to make speeches to deliver them in the House of Representatives. I am making this explanation in order that it may be perfectly clear that the remarks I now propose to submit were not delivered on the floor of the House, although I would have been very glad of the opportunity to have so delivered the following speech if it had been possible to do so.

THE LAKES TO THE GULF DEEP WATERWAY.

I have given much of my time in Congress to the development of this great project. Fortunately, I was elected to Congress when the subject was under consideration. I have made speeches in the greater portion of the large cities of the country, and I think my fellow-Members will testify that at every opportunity during my five years of service in the House I have spoken on the floor of the House and have appeared before the committees of the House, presenting this question to the very best of my ability.

At the invitation of Representative LORIMER, the leader of this movement in Congress and in the State of Illinois, I accompanied him two years ago last November in a little gasoline launch all the way from Lake Michigan out through the Illinois and Michigan Canal, down through the Illinois and Mississippi rivers to the Gulf of Mexico. In our journey we were joined by other Members of Congress whose districts reached the rivers, and who accompanied us sometimes for a considerable portion of the way. Representative LORIMER and myself made the entire 1,700-mile trip, occupying thirty days of time.

On the trip we organized the Lakes to the Gulf Deep Waterway Association, now the most important waterway association in the United States, and I think I may say that with the organization of this association commenced the real Lakes to the Gulf deep waterway movement in this country. During the fall following the organization of this association it held its first convention in the city of St. Louis—the largest river improvement convention ever held in the United States up to that time. Last fall the second meeting of the association was held, this time at Memphis. The President of the United States and eighteen governors of States were in attendance. Representative LORIMER and myself on that occasion retraced a part of our original trip over the rivers, and we went by water from St. Louis to Memphis, this time not in a gasoline launch, but in a great river steamboat—one of the boats which escorted the Government steamer and the Mississippi River steamers which carried the President of the United States and the eighteen governors of States down the Mississippi River from St. Louis to Memphis. The trip this time was not made by one solitary gasoline launch occupied by two people, but by a procession of great Ohio, Illinois, Missouri, and Mississippi River steamboats, 4 miles in length, stretching around the bends of the Mississippi River.

I made, so far as I am able to ascertain, the first Lakes to the Gulf "deep-waterway" speech ever made in Congress. It was my first speech after I became a Member of this body. I have made speeches on this subject at each of the great conventions, so far, held by the Lakes to the Gulf Deep Waterway Association, and my speeches made on those two occasions have been printed and are a part of the records of those two great conventions. I have also made speeches on this subject at the meetings of the Upper Mississippi River Improvement Association, which speeches are preserved as a part of the records of that association, and they have been printed.

On the trip made by Representative LORIMER and myself from Lake Michigan to the Gulf of Mexico, I made forty "deep-waterway" speeches. The trip was undertaken when the weather was cold and bad. It was not a pleasure trip by any means, but it accomplished the desired result.

Last March I made a trip to the Isthmus of Panama alone, avoiding all junketing parties and Congressional parties, and walked across the Isthmus of Panama. I made this trip in order to become fully advised as to the situation there.

The building of the deep waterway from the Lakes to the Gulf and the building of the Panama Canal are closely connected. When the Panama Canal is completed it will be another outlet for the Mississippi River, and the Mississippi River will have then its connection, not only with the Gulf of Mexico and the Atlantic Ocean, but directly with the Pacific Ocean. I undertake to say that there are not many men who have made the trip by daylight all the way over the 1,700 miles of canals and rivers from the Lakes to the Gulf, and who have also walked across the Isthmus of Panama along the route of the proposed canal.

I am aware of the fact that I have not as yet accomplished much, but my bitterest enemies ought at least to give me credit for doing the very best I could. I propose to keep up the fight for a deep waterway and to assist in the project until it becomes an accomplished fact.

The State of Illinois this year will vote upon the proposition to amend the constitution of that State so as to permit it to issue \$20,000,000 worth of bonds in aid of this project.

The Chicago sanitary district at a session of the legislature of the State of Illinois last summer appeared, by its representatives, asking permission and advocating a bill for the purpose of building a waterway through the water-power producing

section of the State of Illinois. The sanitary district proposed to do this in return for the revenues to be derived therefrom. This would have created only an extension of a few miles to the canal already constructed by the sanitary district; but the district would have absorbed all the revenue that could at any time in the future be developed by building this waterway. I appeared before the legislature and spoke for two days against the Chicago sanitary district proposition. If the proposition had carried, I do not think there would have been a deep waterway in the State of Illinois within the lifetime of any person now in being. The newspaper press gave me credit for defeating the proposition. A resolution was then adopted by the general assembly of Illinois, submitting to the voters of the State an amendment to the constitution permitting the State of Illinois to construct this extension of the Chicago ship canal and to issue bonds to the amount of \$20,000,000 to be paid out of the revenues derived from the sale of water power. The revenue derived from this source will, soon after the completion of the canal through the water-power section of Illinois, yield at least three or four million dollars per annum. It will not be long at this rate until the State of Illinois could, if it elected so to do, pay the entire expense of building a 14-foot waterway, with the miter sills of the locks 20 feet deep, all the way from the southern terminus of the Chicago ship canal through the State of Illinois to the Mississippi River at Grafton.

I have called attention to a part of the services I have rendered in this great enterprise, referring only to matters that can readily be verified. I think, under the circumstances, I have aided a little in accomplishing something in this direction. I have, at least, up to the present time, done the best I could.

Under the circumstances surrounding my connection with this matter, I was very much surprised on yesterday to have my attention called to an article sent out in plate form and printed in a number of papers in my Congressional district on the 27th and 28th of the present month. A portion of the article in question reads as follows:

DEEP WATERWAY.

I am not prepared to state what Mr. RAINEY has accomplished as a Member of Congress, other than the passage of a few private pension bills, which are allotted and apportioned to the Members in equal numbers. He has introduced many such bills, but has selected only a few for passage. I understand that he poses as a deep-waterway champion and claims some credit for the agitation of that subject. What has he done to aid that project? He has not secured a favorable report nor the passage of any bill on that line. He took an outing down the river. He also looked in upon the Panama Canal, and he is entitled to about as much credit for the one as for the other. Let me tell you the history of deep-waterway legislation in Congress. I do not intend that some one else shall rob me of my laurels or deprive me of my glory.

I introduced in the Fifty-sixth Congress a bill to remove the locks and dams in the Illinois River, because they increased the overflow of the valley land. I also introduced a bill providing for a survey of all that portion of the Illinois River and adjacent lands which was affected by the existence of the dams, and providing for an appropriation for that purpose, with a view not only of the removal of the dams, but securing data upon which to base legislation for a deep channel. These bills were considered in committee with the Lorimer bill, which provided for a survey of the entire course of the Illinois River. After numerous hearings the bills were favorably reported, providing an item in the general rivers and harbors bill for an appropriation of \$225,000 for the preliminary survey, and that report was subsequently adopted and became a law. It took three years to complete that survey, and the report of the chief engineer was presented to Congress during Mr. RAINEY's term, and I understand that he assumes the credit for what was done.

The fact is that all the legislation that has been enacted on the subject was reported out of committee in the Fifty-sixth Congress, and my bills were incorporated in the general river and harbors bill, as a result of which the survey was made and a report of the Chief Engineer of the War Department, recommending that a deep waterway was practical, at a cost of \$30,000,000, and the further results that the dams in the river, which have so increased and aggravated the overflow of the bottom lands, have been lowered 2 feet. Will Mr. RAINEY inform the public what he has accomplished in this direction? It is an easy matter to confuse the facts and give him credit for the fruits of legislation which of necessity were not reaped until three years after the legislation was enacted, but I apprehend that, when the public and those interested in deep-waterway legislation and the removal and lowering of the locks and dams shall be fully advised of the facts, as I intend they shall be, credit will be given where credit is due, and that the public will no longer be deceived by unjust claims and pretensions.

The above extract from the article in question is absolutely false in all its statements of facts. I undertake to say that it has seldom happened that a man has ventured to print an article which contains so many easily detected falsehoods. I have never claimed any credit for originating the deep-waterway project; I have only done the best I could to the extent of my ability to aid in the project. The project did not originate with any man now living. I have given to the subject a large amount of study, and I really think I know something about it.

The first official mention of this subject is contained in Document No. 250 of the Tenth Congress. This document was a report submitted by Robert Fulton in 1808 to Albert Gallatin, Secretary of the Treasury. It is a report as to waterways and canals, made April 4, 1808, in response to a Senate resolution dated the 2d day of March, 1807, in commenting upon the

original expensive "Red Sea and Mediterranean Canal," which was in use two thousand years ago and was filled up by the drifting sands of the desert and forgotten for hundreds of years.

Robert Fulton, in his report, says:

This canal (the old Red Sea and Mediterranean Canal) can not compare in importance with a series of canals connecting the waters of the Delaware, Susquehanna, Potomac, and Hudson with the Ohio, Mississippi, and the Great Western Lakes, and perhaps the South Sea.

I have carefully searched the records, and this is the first mention of the Lakes to the Gulf deep waterway.

In 1819 Maj. Stephen H. Long made a report dated at Washington, March 4, 1819, addressed to George Graham, esq., Acting Secretary of War. On the 28th day of December, 1819, it was read in the House of Representatives at the first session of the Sixteenth Congress and ordered to lie on the table; it is known as Executive Document No. 17 of that session. At that time Henry Clay was Speaker of the House of Representatives, and J. C. Calhoun was Secretary of War. This report contains some interesting matter on the subject of a deep waterway connecting the Great Lakes with the Illinois and Mississippi rivers.

At present the question as to whether or not the Des Plaines was ever considered to be navigable is an interesting question in the State of Illinois, and it will come up soon in a suit instituted by the State of Illinois to remove some dams at the mouth of the Des Plaines River. I call the attention of the law officers of Illinois to the extract from this report, which I propose now to put in the Record, which ought to be of valuable assistance in the attempt to establish the navigability of the Des Plaines River during the early history of the State of Illinois. Referring to that small section of the State lying between the Des Plaines River and Lake Michigan, this interesting report makes the following statement:

In the flat prairie above mentioned is a small lake, about 5 miles in length and from 6 to 30 or 40 yards in width, communicating both with the river Des Plaines and the Chicago River by means of a kind of canal, which has been made partly by the current of the water and partly by the French and Indians for the purpose of getting their boats across in that direction in time of high water. The distance from the river Des Plaines to Chicago River by this water course is about 9 miles, through the greater part of which there is more or less water, so that portage is seldom more than 3 miles in the driest season, but in a wet season boats pass and repass with facility between the two rivers.

Attached to the report of Maj. Stephen H. Long and made a part of the same document is a supplemental report signed by R. Graham and Joseph Phillips, from which it appears that the question of a Lakes to the Gulf deep waterway in 1819 had assumed definite shape. I insert from this supplemental report the following extracts:

A canal uniting the waters of the Illinois with those of Lake Michigan may be considered the first in importance of any in this quarter of the country and at the same time the construction of it would be attended with very little expense compared with the magnitude of the object. The water course, which is already open between the river Des Plaines and Chicago River, needs but little more excavation to render it sufficiently capacious for all purposes of a canal.

To render the Des Plaines and the Illinois navigable for small boats and flats requiring but a small draft of water nothing more is necessary than the construction of sluices in a few places where there are riffles of a sufficient width to admit the boats to pass through them.

To conclude, the route by the Chicago, as followed by the French since the discovery of Illinois, presents at one season of the year an uninterrupted water communication for boats of 6 or 8 tons burden between the Mississippi and the Michigan Lake; at another season, a portage of 2 miles; at another, a portage of 7 miles from the bend of the Plein to the arm of the lake, over which there is a well-beaten wagon road, and boats and their loads are hauled by oxen and vehicles kept for that purpose by the French settlers at Chicago.

It is interesting in this connection to know that J. C. Calhoun, who was then Secretary of War and whose name also appears signed to this document, afterwards presided in the city of Memphis, in the year 1846, at the first Great Lakes to the Gulf deep-waterway convention, which was held in 1846 and was attended by over 500 delegates. Between 1820 and 1830 occurred the legislation on this subject, both in the Congress and in the legislature of the State of Illinois, which I referred to at considerable length in speeches before the Illinois legislature last summer and which have now been printed and are a part of the debates of that session.

Under the circumstances above I think it can be said that no one now living has had much to do with originating the Lakes to the Gulf deep-waterway idea.

THE ABSOLUTE FALSITY OF THE STATEMENTS CONTAINED IN THE ATTACK ON ME.

I might mention at the outset that the foregoing article was prepared by William Elza Williams, a former Member of Congress. He served here in the Fifty-sixth Congress only.

A part of the deep-waterway project contemplates the removal of certain locks and dams in the Illinois River. Calling attention to the above statement of Mr. Williams, which I now here again quote:

I do not intend that some one else shall rob me of my laurels or deprive me of my glory. I introduced in the Fifty-sixth Congress a bill to remove the locks and dams in the Illinois River because they increased the overflow of the valley land. I also introduced a bill providing for the survey of all that portion of the Illinois River, etc.

I desire now to put in the Record the facts about the matter in order to show the absolute falsity of the above claims. Mr. Williams introduced no such bills. In order that the question may not resolve itself into a question of veracity between Mr. Williams and myself, I on yesterday addressed to the superintendent of documents of the House of Representatives the following letter:

COMMITTEE ON LABOR,
HOUSE OF REPRESENTATIVES OF THE UNITED STATES,
Washington, D. C., May 29, 1908.

SUPERINTENDENT OF DOCUMENTS,
Washington, D. C.

SIR: Please examine the records and files in your office and advise me whether any resolution was offered in the Fifty-sixth Congress by any Member of Congress for the removal of the locks and dams at Kampsville and La Grange in the Illinois River.

Please also advise me whether any bill was introduced in the Fifty-sixth Congress providing for a survey of any portion of the Illinois River with a view to removing the dams and securing data upon which to base legislation for a deep channel.

Did Hon. William Elza Williams, a Member of Congress from Illinois, introduce any resolution or bill having for its object any of the matters mentioned above?

Yours, truly,

HENRY T. RAINY.

In response to the above letter of inquiry I received to-day the following letter:

HOUSE OF REPRESENTATIVES UNITED STATES,
DOCUMENT ROOM,
Washington, May 30, 1908.

HON. H. T. RAINY,
House of Representatives, City.

DEAR SIR: I have carefully examined the records of this office on House bill No. 9998, introduced by Hon. W. E. Williams in the Fifty-sixth Congress, and find that nothing was done with it. This bill is a duplicate of House bill No. 9967, Fifty-sixth Congress, also introduced by Mr. Williams. No action was taken on either bill, and these were the only bills introduced by him on this subject.

I inclose copies of bills herewith.

Respectfully,

JOEL GRAYSON,
Special Clerk House Document Room.

The following is a copy of the bill (H. R. 9998) referred to in the above letter:

A bill (H. R. 9998) for the appointment of a commission to investigate the overflow and sanitary effects caused by the Kampsville Dam, on the Illinois River.

Be it enacted, etc., That the President be, and he is hereby, authorized to appoint a commission of three competent engineers, one of whom shall be a sanitary engineer, to make a thorough investigation of the overflow and sanitary effects caused or produced by the Kampsville Dam, on the Illinois River, to the bottom lands in the vicinity of and above said dam, and make a detailed report of such investigation to this House at as early a date as practicable, with all the information obtainable relative to the district affected by such overflow, the extent of the area affected thereby, the effect of such overflow upon the farming interests and health of the people residing in said district, together with a report as to the likelihood or probability of such overflow continuing or increasing to the detriment of the people and property of said district.

SEC. 2. That the sum of \$5,000 is hereby appropriated for the expenses of said investigation, including the personal service of said commission.

I do not reproduce the bill No. 9967, which I have in my possession, for the reason that it is an exact duplicate of the above bill. Both of these bills were referred to the Committee on Interstate and Foreign Commerce. Nothing was done under either of them. The above communication discloses absolutely the falsity of the above statement of Mr. Williams. Mr. Williams continues by saying that "after numerous hearings the bills were favorably reported providing an item in the general rivers and harbors bill for an appropriation of \$225,000 for the preliminary survey, and that report was subsequently adopted and became a law." He then goes on to say that it took three years to complete the survey to which he has referred.

As a matter of fact the deep-waterways survey which was reported was not authorized by anything contained in any river and harbor act or in any legislation passed by the Fifty-sixth Congress. The report of the survey in question is known as Document No. 263 of the first session of the Fifty-ninth Congress. Bearing in mind that Mr. Williams's term in Congress commenced March 4, 1899, and ended March 3, 1901, I here print the letter of the Secretary of War transmitting the above report and a part of the letter of the Chief of Engineers, both of which are printed on the first page of the report above referred to, and all of which show that the survey was author-

ized not by the Fifty-sixth Congress, but by the Fifty-seventh Congress:

LETTER OF THE SECRETARY OF WAR.

WAR DEPARTMENT,
Washington, December 18, 1905.

SIR: I have the honor to transmit herewith a letter from the Chief of Engineers, United States Army, dated December 12, 1905, together with copies of reports of the Mississippi River Commission and a board of engineers dated February 28 and August 26, 1905, respectively, of a survey, with plans and estimates of cost, for a navigable waterway 14 feet deep from Lockport, Ill., by way of Des Plaines and Illinois rivers, to the mouth of said Illinois River, and thence by way of the Mississippi River to St. Louis, Mo., and for a navigable waterway of 7 and 8 feet depth, respectively, from the head of navigation of Illinois River at La Salle, Ill., through said river to Ottawa, Ill., made in compliance with the provisions of the river and harbor act of June 13, 1902.

Very respectfully,

WM. H. TAFT,
Secretary of War.

The SPEAKER OF THE HOUSE OF REPRESENTATIVES.

LETTER OF THE CHIEF OF ENGINEERS.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, December 12, 1905.

SIR: The river and harbor act approved June 13, 1902, contained an item as follows:

"The sum of \$200,000, or so much thereof as may be necessary, is hereby appropriated for making such surveys, examinations, and investigations as may be required to determine the feasibility of, and to prepare and report plans and estimates of cost of, a navigable waterway 14 feet in depth from Lockport, Ill., by way of the Des Plaines and Illinois rivers, to the mouth of said Illinois River, and from the mouth of the Illinois River, by way of the Mississippi River, to St. Louis, Mo.: *Provided*, That \$25,000 of said sum, or so much thereof as may be necessary, may be expended by the Mississippi River Commission in making surveys, examinations, and investigations herein required from the mouth of the Illinois River to St. Louis: *Provided further*, That the Secretary of War shall appoint a board of three engineers to make the surveys, examinations, and investigations hereinbefore required from Lockport, Ill., through the Des Plaines River and Illinois River, to the mouth of said Illinois River, and that all such surveys, examinations, and investigations shall be made to determine the feasibility of, and to prepare and report plans and estimates of cost of, a navigable waterway 14 feet in depth from Lockport, Ill., to St. Louis, Mo. The said Mississippi River Commission shall make said report covering such proposed improvement from the mouth of the Illinois River to St. Louis, and the said board of engineers shall make such report from Lockport, Ill., to the mouth of the Illinois River: *And provided further*, That the said board of engineers shall also make such surveys, examinations, and investigations as may be required to determine the feasibility of, and to prepare a report and plans and estimates of cost of, a navigable waterway 7 feet in depth and of a navigable waterway 8 feet in depth from the head of navigation of the Illinois River at La Salle, Ill., through said Illinois River to Ottawa, Ill., and said board of engineers shall make such report of said navigable waterways of 7 and 8 feet, respectively, of said Illinois River from La Salle to Ottawa, Ill."

The above extracts are sufficient to show that the claims of Mr. Williams in this particular are also false. I undertake to say that the above bill (H. R. 9998), introduced by Mr. Williams, can not, by the most violent stretch of imagination, be construed as being a bill under which a deep-waterway survey could be authorized. There was, however, a resolution introduced in the Fifty-sixth Congress by Representative LORIMER providing for a deep-waterway survey. It was introduced on March 19, 1900, by him and referred to the Committee on Rivers and Harbors. It is a real deep-waterway resolution, and I herewith print the same for the purpose of showing that under no circumstances could H. R. 9998 be consolidated with it so as to form a basis for any deep-waterway survey:

Joint resolution (H. J. Res. 208) to provide for survey of the Illinois River.

Resolved, etc., That the board of three engineers appointed by the Secretary of War, in pursuance of a paragraph in "An act making appropriation for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes," approved March 3, 1899, to make a survey and estimates of cost of the improvement of the upper Illinois River and the lower Des Plaines River in Illinois, with a view to the extension of navigation from the Illinois River to Lake Michigan at or near the city of Chicago, is hereby authorized and required to report the estimates of cost for a channel 10 feet deep and for a channel 12 feet deep and for a channel 14 feet deep through said proposed route, and that the said estimates cover and include a proper connection at Lockport with the sanitary and ship canal which has been constructed by the sanitary district of Chicago. The said board of engineers is also further authorized and required to make a survey and estimate of cost for the improvement of the lower Illinois River from the end of said proposed route to the mouth of said river, for channels 10, 12, and 14 feet deep, respectively, and to report the estimates of cost thereof. Said surveys and estimates of cost shall be made in pursuance of the provisions contained in the act aforesaid, and the expense for making said reports required by this joint resolution shall be paid out of the appropriation of \$30,000 contained in the paragraph of the act aforesaid.

As a result of the Lorimer bill the following clause was incorporated in the river and harbor act of that year:

Upper Illinois River and Des Plaines River:

That the board of three engineers appointed by the Secretary of War, in pursuance of a paragraph in the river and harbor act approved March 3, 1899, to make a survey and estimates of cost of the improve-

ment of the upper Illinois River and the lower Des Plaines River, in Illinois, with a view to the extension of navigation from the Illinois River to Lake Michigan, at or near the city of Chicago, is hereby authorized to report the estimates of cost for a channel 10 feet deep, and for a channel 12 feet deep, and for a channel 14 feet deep through said proposed route, and that said estimates cover and include a proper connection at Lockport with the sanitary and ship canal which has been constructed by the sanitary district of Chicago. The said board of engineers is also further authorized to make a survey and estimate of cost for the improvement of the lower Illinois River, from the end of said proposed route to the mouth of said river, for channels, 10, 12, and 14 feet deep, respectively, and to report the estimates of costs thereof: *And provided further*, That surveys and estimates of cost shall be made in pursuance of the provisions contained in the act aforesaid, and especially in accordance with section 22 of said act: *And provided further*, That said surveys shall be commenced and the expenses of said surveys and reports shall be paid as follows: Any unexpended balance of the appropriation of \$30,000 not required for the completion of said survey already contained in said act shall be first applied and used, and no further expense shall be incurred for such estimates and surveys without the further direction of Congress, and the Secretary of War shall ascertain and report to Congress what amount of money shall be required to complete said surveys and estimates of costs. (U. S. Stat. L., vol. 31, p. 580, act of June 6, 1900.)

Credit for introducing the original deep-waterway bill in the House of Representatives belongs, however, to the Hon. W. H. Hinrichsen, a Member of the Fifty-fifth Congress, who introduced the following bill in the Fifty-fifth Congress, which was referred to the Committee on Interstate and Foreign Commerce:

Joint resolution (H. J. Res. 236) providing for a survey and estimates for a waterway from the controlling works of the Chicago Drainage Canal, near Lockport, Ill., to the mouth of the Illinois River.

Resolved, etc., That the Secretary of War be, and he is hereby, authorized and directed to cause a survey to be made and to submit the same, with plans and an estimate of the cost, for a waterway beginning at the controlling works of the Chicago Drainage Canal, near Lockport, in the State of Illinois, and running along the beds of the Des Plaines and Illinois rivers to the point where the latter flows into the Mississippi River, said waterway to provide for a minimum depth of water of 14 feet and a width of channel of not less than 300 feet through the earth sections and not less than 200 feet through the lock sections of said waterway.

The above bill, however, died on the Calendar, and nothing was done with it.

The original bill to remove the locks and dams in the Illinois River was also introduced in the Fifty-fifth Congress by the Hon. W. H. Hinrichsen, Representative from Illinois. The bill reads as follows:

A bill (H. R. 7265) authorizing the State of Illinois to remove certain dams from the Illinois River.

Be it enacted, etc., That the State of Illinois be authorized to remove from the Illinois River the two dams across said river located at the towns of La Grange and Kampsville, in the State of Illinois: *Provided*, That such removal shall be made without expense to the Government of the United States.

The above bill was referred to the Committee on Interstate and Foreign Commerce. Mr. Hinrichsen, with all his great ability and energy, although he was a member of that committee, was unable to get the bill reported, and the records of the committee shows that he worked hard in that matter.

The Hon. William Elza Williams succeeded Mr. Hinrichsen in this body, and although he had before him both of Mr. Hinrichsen's bills introduced on these subjects, he never took the trouble to reintroduce them.

The river and harbor act which was passed during Mr. Williams's term of service, and which contained the clause with reference to a survey, which I have inserted above, was considered at some length in the House of Representatives on May 17, 1900. The discussion with reference to the bill commences on page 5648 of the RECORD of the first session of the Fifty-sixth Congress. A large number of Members of Congress took part in the discussion, but the name of Mr. Williams does not appear in the RECORD.

He was not sufficiently interested in the subject to make even an inquiry about the bill. There was no roll call on the bill, but Mr. Williams was present in the House of Representatives on that day. His presence is evidenced by the fact that on that day he made some remarks, not on the subject of a deep waterway from the Lakes to the Gulf, but on the subject of Territorial government in far-off Alaska. His remarks on this subject commenced on page 5658 of the above volume. I think I have called attention to enough to show that the claims of Mr. Williams in this particular are absolutely without foundation.

THE LOWERING OF THE ILLINOIS RIVER DAMS.

In the extract which I have first inserted above, in disparaging my career in Congress Mr. Williams challenges me to show what I have accomplished in this direction. After showing that he did not accomplish anything and that he did not do what he claims he did in this particular, I accept his challenge most cheerfully, and will proceed to do so.

On the 19th day of November, 1903, I introduced the following joint resolution to remove from the Illinois River the Government dams at Kampsville and La Grange. The resolution

was referred to the Committee on Interstate and Foreign Commerce:

[H. J. Res. 43. Fifty-eighth Congress, first session. In the House of Representatives, November 19, 1903. Mr. RAINEY introduced the following joint resolution; which was referred to the Committee on Interstate and Foreign Commerce and ordered to be printed.]

Joint resolution to remove from the Illinois River the Government dams at Kampsville and La Grange.

Whereas a large amount of water is now admitted into the Illinois River from Lake Michigan through the Chicago drainage channel, rendering it possible to navigate said river without resorting to the slack-water system of navigation heretofore used in said river; and

Whereas the Government dams located at Kampsville and La Grange, Ill., in said river, now cause, on account of the increased volume of water in said river, great damage to many thousand acres of fertile land in the Illinois River Valley; and

Whereas said dams no longer serve a practical or useful purpose in said river: Therefore

Resolved, etc., That the Secretary of War is hereby instructed to proceed immediately to remove said dams from said river, and for this purpose the sum of \$25,000, or so much thereof as may be necessary, is hereby appropriated.

On the same day, and in order to obtain the necessary information upon which to base intelligent action, I introduced the following resolution:

House resolution 26.

Resolved, That the Secretary of War be requested to furnish the Congress with the following information:

First. How much water is now being admitted into the Illinois River per minute through the Chicago Drainage Channel?

Second. How much water will be admitted into the Illinois River when the Chicago River is widened and certain other channels now in process of construction from Lake Michigan are completed?

Third. How much has the water level in the Illinois River been raised by the introduction of water through the Chicago Drainage Channel? How much will it be raised when the full amount of water required by the Illinois drainage act is admitted into the Illinois River?

Fourth. Has the time not arrived when the slack-water system of navigation in the Illinois River ought to be abandoned, and the Government dams at Kampsville and La Grange removed?

Fifth. What will it cost to remove said dams?

Sixth. What will it cost per annum to maintain a 7-foot channel in the Illinois River from La Salle, Ill., to the Mississippi River when 300,000 cubic feet of water per minute is introduced into said river from Lake Michigan, if the dams in said river are removed?

After a number of hearings my resolution was reported out of the committee as House joint resolution 85, which I herewith print, as follows:

[H. J. Res. 85. Fifty-eighth Congress, second session. Report No. 1577. In the House of Representatives, January 22, 1904. Mr. RAINEY introduced the following joint resolution; which was referred to the Committee on Interstate and Foreign Commerce and ordered to be printed. March 11, 1904, reported with amendments, committed to the Committee of the Whole House on the state of the Union, and ordered to be printed.]

Joint resolution to lower the height of the Government dams in the Illinois River at Kampsville and Lagrange two feet.

Resolved, etc., That the Secretary of War is hereby authorized, in his discretion, with the concurrence of the Chief of Engineers, to permit the sanitary district of Chicago, at the expense of said corporation, to lower the height of the Government dams in the Illinois River at Kampsville and Lagrange, Ill., in accordance with such plans as he may prescribe and subject to such stipulations and conditions as, in his judgment, may be necessary to protect the interests of the United States.

The above resolution, as reported, was accompanied by the following report:

[House of Representatives, Report No. 1577, Fifty-eighth Congress, second session.]

LOWERING CERTAIN GOVERNMENT DAMS IN THE ILLINOIS RIVER.

Mr. MANN, from the Committee on Interstate and Foreign Commerce, submitted the following report to accompany H. J. Res. 85:

The Committee on Interstate and Foreign Commerce, to whom was referred House joint resolution 85, recommend that said resolution be amended as follows:

Strike out all after the enacting clause and insert the following: "That the Secretary of War is hereby authorized, in his discretion, to permit the sanitary district of Chicago, at the expense of said corporation, to lower the height of the Government dams in the Illinois River at Kampsville and Lagrange, Ill., in accordance with such plans as he may prescribe, and subject to such stipulations and conditions as in his judgment may be necessary to protect the interests of the United States."

Strike out the preamble.
Amend the title so as to read as follows:
"To authorize the lowering of the height of the Government dams in the Illinois River, at Kampsville and Lagrange."
And that said resolution as thus amended do pass. We attach hereto correspondence relating to the subject-matter of the resolution.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, February 13, 1904.

SIR: I have the honor to return herewith a letter, dated the 25th ultimo, from the Committee on Interstate and Foreign Commerce of the House of Representatives, inclosing for the views of the War Department thereon H. J. Res. 85, Fifty-eighth Congress, second session, "Joint resolution to lower the height of the Government dams in the Illinois River, at Kampsville and Lagrange, 2 feet."

The two dams mentioned in the bill were constructed by the United States to improve navigation on the Illinois River, and have made that river navigable at extreme low water. About the year 1900 the sanitary district of Chicago built what is known as the "Drainage Canal" across and through the divide between the Lake Michigan watershed and the Mississippi Valley watershed, and since the completion of this

work a large volume of water has been admitted into the Illinois River, adding at times to the navigable depth of the river. By admitting this water from Lake Michigan it is roughly estimated that the low-water level of the river at the Lagrange dam has been raised about 3 feet, and at the Kampsville dam about 2½ feet.

This raising of the water level, it is claimed, has caused the overflow of quite a large area of low lands, and, as a consequence, damage suits involving very large amounts have been entered against the sanitary district of Chicago. The object of the bill is to authorize the lowering of the dams so as to decrease the water level of the river, thus diminishing the amount of overflow and relieving the sanitary district of Chicago from the losses and expenses incident to the suits.

It is believed that these dams may be lowered to the extent proposed in the bill without serious injury to the interests of existing navigation, provided the work is done in accordance with proper plans and under suitable restrictions. As the conditions which call for this work, however, are due to the acts of the sanitary district of Chicago, and as the result of the said work would be entirely for the benefit of that corporation, I am of the opinion that the cost thereof should not be borne by the United States and that conditions should be introduced leaving it in the power of the War Department to insist upon suitable plans and suitable guaranties against any liabilities for operating the dams in their altered condition.

The sanitary district of Chicago has already applied to the Department for permission to lower these dams at its own expense, and, in my judgment, the only legislation necessary and desirable is such as will confer upon the Secretary of War authority to grant the permission requested. I accordingly recommend that the bill be amended so as to effect this object.

A copy of the bill amended as proposed is herewith and, as thus amended, I make no objection to its favorable consideration by Congress.

Very respectfully, your obedient servant,
A. MACKENZIE,
Brig. Gen., Chief of Engineers, United States Army.

HON. WILLIAM H. TAFT,
Secretary of War.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, February 18, 1904.

MY DEAR SIR: In reply to your letter of the 15th instant in regard to the Government dams in the Illinois River, I have the honor to inform you that the matter has recently been before this office in two forms—one an application from the sanitary district of Chicago for permission to lower the crests of the dams at its own expense; the other a resolution, introduced by Hon. Mr. RAINEY, appropriating \$10,000 for this work and directing the Secretary of War to carry it out.

As the work of building the dams was ordered by Congress it is my opinion that so material a change in the completed dams should receive Congressional sanction, particularly as a resolution to that effect has been introduced. For this reason it was considered best to recommend to the Secretary of War action by amendment to the resolution rather than by approval of the sanitary district's application.

My report on the resolution was sent to the Secretary of War on the 13th instant.

Very respectfully, your obedient servant,
A. MACKENZIE,
Brig. Gen., Chief of Engineers, U. S. Army.

HON. JAMES R. MANN,
House of Representatives.

CHICAGO, March 9, 1904.

DEAR FRIEND: There is now pending before the Interstate and Foreign Commerce Committee, of which you are a member, a resolution asking for the lowering of the two Government dams in the Illinois River, as recommended by the Government engineers.

The passage of this resolution would be a great relief to the sanitary district.

I have looked this proposition over very thoroughly and can fully recommend the measure and would like to have you give it your support.

Yours, very truly,
JOSEPH C. BRADEN,
Chairman Engineering Committee,
Sanitary District of Chicago.

HON. JAMES R. MANN, Washington, D. C.

On the 5th day of April, 1904, I succeeded in getting the resolution up at the second session of the Fifty-eighth Congress. The following is a copy of the record, to wit:

LOWERING THE HEIGHT OF GOVERNMENT DAMS IN THE ILLINOIS RIVER.

Mr. RAINEY. Mr. Speaker, I ask unanimous consent for the present consideration of House joint resolution 85.

(The Clerk here read House joint resolution 85.)

THE SPEAKER. Is there objection? [After a pause.] The Chair hears none.

Mr. RAINEY. Mr. Speaker, at the request of the gentleman from Ohio [Mr. BURTON] I desire to propose an additional amendment to the bill.

THE SPEAKER. The gentleman from Illinois offers the following amendment to the amendment of the committee, which the Clerk will report: Mr. RAINEY. I offer to amend by inserting in line 5, page 2, after the word "discretion," the words "with the concurrence of the Chief of Engineers."

The clerk read as follows:
"Line 5, page 2, after the word 'discretion,' insert 'with the concurrence of the Chief of Engineers.'"

The amendment to the amendment of the committee was agreed to.

The amendment of the committee as amended was agreed to.

The joint resolution as amended was ordered to be engrossed for a third reading; and being engrossed, it was accordingly read the third time.

THE SPEAKER. Without objection, the amendment to the preamble will be agreed to.

There was no objection.

The question was taken, and the joint resolution was passed.

On motion of Mr. RAINEY, a motion to reconsider the vote by which the bill was passed was laid on the table.

The title of the bill was amended so as to read: "Joint resolution to authorize the lowering of the height of the Government dams in the Illinois River at Kampsville and Lagrange."

The above resolution passed the Senate and was approved April 21, 1904, is now a law, and the following is a copy of it: Public resolution No. 26.—Joint resolution to authorize the lowering of the height of the Government dams in the Illinois River at Kampsville and Lagrange.

Resolved, etc., That the Secretary of War is hereby authorized, in his discretion, with the concurrence of the Chief of Engineers, to permit the sanitary district of Chicago, at the expense of said corporation, to lower the height of the Government dams in the Illinois River at Kampsville and Lagrange, Ill., in accordance with such plans as he may prescribe and subject to such stipulations and conditions as, in his judgment, may be necessary to protect the interests of the United States.

Approved, April 21, 1904.

Under the above law obtained by me the Government dams have been lowered 2 feet, and under the above law they may be taken out entirely if authorized by the Secretary of War. Legislation on that matter is now complete, and it is only necessary to get the authority of the Secretary of War to entirely remove both Government dams. I submit that I have met the challenge of the gentleman to show what I have done about the matter of lowering the dams since I have been in Congress. The above record proves itself and demonstrates that the author of the article I am answering is guilty of a falsehood.

DREDGING HAMBURG BAY.

I quote again from the article I am discussing. In an attempt to disparage my service in Congress Mr. Williams proceeds to say:

I secured the incorporation of an item in the rivers and harbors bill providing an appropriation of \$15,000 for the dredging of Hamburg Bay, etc.

This statement is absolutely false. No such appropriation ever appeared in any rivers and harbors bill. Upon this question yesterday I addressed to the Chief of Engineers of the War Department the following letter:

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., May 29, 1908.

CHIEF OF ENGINEERS,
War Department, Washington, D. C.:

SIR: Please advise me whether there was any legislation in the Fifty-sixth Congress providing for an appropriation of \$15,000 for the dredging of any portion of Hamburg Bay, Illinois.

Please advise me whether any dredging has been done in Hamburg Bay by virtue of any legislation adopted by the Fifty-sixth Congress.

Please advise me whether any law has carried an item of \$15,000 or any sum for the dredging of Hamburg Bay from the beginning of the Fifty-sixth Congress to date.

Very truly, yours,

HENRY T. RAINEX.

To the above letter I received the following answer, which ought of itself to be conclusive as to the matter.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, May 29, 1908.

Hon. HENRY T. RAINEX,
United States House of Representatives.

DEAR SIR: Replying to your inquiry of this date, I have to advise you that a somewhat hasty search of the records of this office discloses no specific sum of money ever appropriated for Hamburg Bay, Calhoun County, Ill., but that locality was referred to by name and made a possible participant in the distribution of the general appropriations for the Mississippi River in 1886, 1888, and 1902.

Very respectfully,

SAMUEL S. LEACH,
Acting Chief of Engineers.

The item referred to in the above letter as being in the rivers and harbors bill of 1902 is as follows:

Hamburg Bay is hereby included and is made a part of the general project for the improvement of the Mississippi River. (U. S. Stat. L., vol. 32, pt. 1, p. 386 (act of June 13, 1902).)

The above item, which is the last item carried in the rivers and harbors bill for Hamburg Bay—except an appropriation, afterwards obtained by me, providing for a survey of the bay—was obtained during the service of Congressman T. J. Selby, who succeeded Mr. Williams in Congress. Mr. Selby introduced a bill for the purpose of improving Hamburg Bay.

On the 26th day of March, 1900, Mr. Williams did introduce a bill for the purpose of making an appropriation for dredging Hamburg Bay, which was referred to the Committee on Rivers and Harbors and was never heard from again.

In order to find out what became of this bill, I addressed the following letter to the superintendent of the document room of the House of Representatives, and received a reply as to the fate of the above bill, and as to the fate of another bill introduced by Mr. Williams:

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., May 30, 1908.

SUPERINTENDENT OF DOCUMENTS,
House of Representatives, Washington, D. C.

SIR: Please examine the records and files of your office and advise me whether any favorable report was ever made on any resolution or bill introduced by Hon. William Elza Williams in the Fifty-sixth Congress for the dredging of Hamburg Bay, Illinois.

Please advise me what disposition was made of bills for public buildings introduced in the Fifty-sixth Congress.

What was done in the Fifty-sixth Congress with any bill introduced in that Congress for a public building at Jacksonville, Ill.?

Yours, truly,

HENRY T. RAINEX.

The following is the reply to the above letter:

HOUSE OF REPRESENTATIVES, UNITED STATES,
DOCUMENT ROOM,
Washington, May 30, 1908.

Hon. H. T. RAINEX,
House of Representatives, City.

DEAR SIR: I have carefully examined the records of this office on House bill No. 9997, Fifty-sixth Congress, introduced by Hon. W. E. Williams, and find that nothing was done with it. This bill is a duplicate of House bill No. 9968, and no other bills were introduced by Mr. Williams on this subject than these. No action was taken on either bill. I inclose copies of bills herewith.

Respectfully,

JOEL GRAYSON,
Special Clerk, House Document Room.

The following bill was attached to the above letter:

A bill (H. R. 9997) making appropriation for dredging Hamburg Bay. *Be it enacted, etc.,* That the sum of \$50,000 be, and the same is hereby, appropriated for the purpose of dredging Hamburg Bay, a tributary of the Mississippi River, in Calhoun County, Ill.

I regret that Hamburg Bay remains unimproved. The provision in the law of 1902 has so far been disregarded by the Engineers, and that legislation has now been abandoned and revoked by Congress. I, however, introduced as a preliminary for the improvement of Hamburg Bay the following resolutions:

House resolution 456.

Resolved, That the Secretary of War be directed to make a survey of Hamburg Bay, in Calhoun County, Ill., or so much thereof and of so much of the adjacent territory thereto as may be necessary in order to ascertain the best method of preventing the formation of the bar at the mouth of said Hamburg Bay, which bar is now caused by the deposit brought into said bay by Fox Creek, a small stream in Calhoun County, Ill., flowing into the mouth of said bay. And the Secretary of War is requested in said survey to ascertain and to report upon the propriety of diverting the flow of said stream through an artificial channel so that the same shall flow into the Mississippi River and not into Hamburg Bay as now. And the Secretary of War is requested to suggest and report as to the best method of improving and developing said bay, so far as the removal of said bar is concerned, and he is requested to report as to the cost of said improvements to said bay with all convenient speed.

House resolution 25.

Resolved, That the Secretary of War be requested to furnish the Congress with an estimate of the expenses that will be incurred if Fox Creek, a small stream which flows into Hamburg Bay, in Calhoun County, Ill., is diverted so that it will flow directly through an artificial channel into the Mississippi River; and also an estimate of the expense of dredging the bar formed by said Fox Creek at the entrance to Hamburg Bay, a tributary of the Mississippi River in Calhoun County, Ill.; and also that he be requested to report as to the desirability of said above improvements and as to the best manner of providing against the formation of a bar at the entrance to said Hamburg Bay, and the expense of the same, and the expense per annum of keeping said bay open for navigation.

As a result of the above bills, the rivers and harbors bill of March 3, 1905, contained a provision providing for a survey of Hamburg Bay, inserted in the bill at my solicitation. Since that time a careful survey has been made. The report is now printed and is known as Document No. 577 of the first session of the Fifty-ninth Congress.

While the report shows that the cost would be very great in order to make this proposed improvement, I still hope to be able to get a provision in the next bill for changing the course of Fox Creek and getting the bar removed from the mouth of the bay. If my project is carried out, great benefits will result not only to that section of Calhoun County, but to all land embraced within the limits of the great Sny levee district in Illinois, which district drains into Hamburg Bay. I therefore submit that I have proven by the records the absolute falsity also of the above claim of Mr. Williams with reference to Hamburg Bay.

PUBLIC BUILDING AT JACKSONVILLE.

In a further attempt in disparagement of my record and comparing it with his own while a Member of the Fifty-sixth Congress, Mr. Williams proceeds in the article to say:

I also secured a favorable report from the Committee on Public Buildings for an appropriation of \$50,000 for the erection of the post-office building at Jacksonville recently completed in that city.

The above statement is as devoid of truth as any of the other statements to which I have called attention.

The public building at Jacksonville was authorized during the service in Congress of Hon. T. J. Selby, a Member of the Fifty-seventh Congress, who succeeded Mr. Williams. I received to-day the following telegraphic statement from Mr. Selby with reference to the above contention:

HARDIN, ILL., May 29, 1908.

To the Hon. H. T. RAINEX, M. C.,
Washington, D. C.:

The bill authorizing the public building in Jacksonville was introduced by me and passed in the Fifty-seventh Congress.

T. J. SELBY.

To anyone who knows Ex-Congressman Selby the above answer would be amply sufficient. I, however, addressed to Maj. Alexander McDowell, the Clerk of the House of Representatives, the following letter:

HOUSE OF REPRESENTATIVES OF THE UNITED STATES,
Washington, D. C., May 29, 1908.

Maj. ALEXANDER McDOWELL,
Washington, D. C.

SIR: Please advise me whether any public buildings in the United States were authorized as a result of any bill introduced in the Fifty-sixth Congress.

Since the expiration of the life of the Fifty-sixth Congress has any bill for a public building and site at Jacksonville, Ill., been introduced, and if so, in what Congress was it introduced and what Representative introduced the same?

When, during what Congress, and under what bill was the public building at Jacksonville, Ill., authorized? When was the bill reported and when did it pass?

Yours, truly,

HENRY T. RAINEY.

To which I received to-day the following reply:

CLERK'S OFFICE,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 30, 1908.

Hon. HENRY T. RAINEY,
House of Representatives.

DEAR SIR: Replying to your favor of yesterday, asking me whether any public buildings in the United States were authorized as a result of any bill introduced in the Fifty-sixth Congress, I would say "No."

In reply to your inquiries as to whether since the expiration of the life of the Fifty-sixth Congress has any bill for a public building and site at Jacksonville, Ill., been introduced, and if so, in what Congress was it introduced and what Representative introduced the same, and, again, when, during what Congress, and under what bill was the public building at Jacksonville, Ill., authorized? When was the bill reported and when did it pass? I would say that on January 8, 1902, Mr. Selby introduced a bill for a building and site for Jacksonville, Ill., for \$100,000. On April 26, 1902, Mr. Mercer, then chairman of Committee on Public Buildings and Grounds, introduced an omnibus public building bill, which carried an appropriation of \$60,000 for Jacksonville, Ill. This bill was reported to the House on April 28, 1902.

This bill became a law on June 6, 1902. It was not amended in the Senate.

Yours, truly,

A. McDOWELL,
Clerk House of Representatives.

I also obtained from the document room of the House of Representatives in this connection the following letter:

HOUSE OF REPRESENTATIVES UNITED STATES,
DOCUMENT ROOM,
Washington, D. C., May 30, 1908.

Hon. H. T. RAINEY,
House of Representatives, City.

DEAR SIR: I have carefully examined the records of this office on House bill No. 6238, Fifty-sixth Congress, introduced by Hon. W. E. Williams, and find that no action was taken on it, and this was the only bill on the subject introduced by Mr. Williams.

I inclose copies of bill.

Respectfully,

JOEL GRAYSON,
Special Clerk, House Document Room.

The bill attached to the above letter was the following bill:

A bill (H. R. 6238) for the purchase of a site and the erection of a public building at Jacksonville, Ill.

Be it enacted, etc., That the Secretary of the Treasury be, and is hereby, authorized and directed to purchase a site for a suitable building, with fireproof vaults therein, for the accommodation of the post-office and other Government offices, at Jacksonville, Ill., and cause such building to be erected thereon. The plans, specifications, and full estimates of said building shall be previously made and approved according to law and shall not exceed, for the site and building complete, the sum of \$150,000: *Provided*, That the site shall leave the building unexposed to danger from fire in adjacent buildings by an open space of not less than 40 feet, including streets and alleys; and no money appropriated for this purpose shall be available until a valid title to the site for the said building shall be vested in the United States, nor until the State of Illinois shall have ceded to the United States exclusive jurisdiction over the same, during the time the United States shall be or remain the owner thereof, for all purposes except the administration of the criminal laws of said State and the service of civil process therein.

I have now disposed of all the contentions contained in Mr. Williams's letter as to what he accomplished in Congress, and to which he calls attention in his attempt to disparage what I have tried to do, except that in the article I am answering he claims that he secured the passage of all pension legislation to which he was entitled to in the Fifty-sixth Congress.

In this connection I call attention to the following confession of failure on the part of Mr. Williams. On February 8, 1901 (twenty-three days before the expiration of his term of office), at the second session of the Fifty-sixth Congress, page 2169 of the CONGRESSIONAL RECORD, in discussing the pension bill of Don Farrington, Mr. Williams said:

A CONFESSION OF FAILURE.

My district has been in the unfortunate habit for several years past of "swapping horses," as it were, every two years. There have not been a half dozen private pension bills passed for ten years for the benefit of that district. And yet it should not be forgotten that as many men responded to the country's call and went into the service of the Army during the war as from any other district in Illinois. We have not been here, as many Members have, asking the passage of private pension bills session after session. This is the third one reported

favorably during my term, and with the prospects in that district for the next ten years we will likely suffer the same default that we have suffered in the past.

THE EXTRA SESSION MILEAGE IN THE FIFTY-EIGHTH CONGRESS.

There were three sessions of the Fifty-eighth Congress. The law provides that mileage at the rate of 20 cents a mile for each session of Congress for each mile traveled in coming to Washington and going home again, shall be allowed Members of Congress as part compensation. The seventeenth section of the act of Congress of 1866 is the only act now in force upon this subject, and that act gives to a Member of Congress his salary, and mileage "as additional compensation." I have never voted to increase my own salary directly or indirectly, nor to increase any of the allowances fixed by law to a Congressman. Neither have I voted to increase the salary or allowance of any other official or employee of the National Government at any time. There are usually two sessions in every Congress. There were three sessions in the Fifty-eighth Congress. I voted for the mileage allowed me by law at each session of the Fifty-eighth Congress. There were three sessions in the Fifty-third Congress, and three sessions in the Fifty-fifth Congress. Mileage was allowed for each session during both the Fifty-third and Fifty-fifth Congresses.

President Cleveland called an extra session of the Fifty-third Congress June 30 to convene August 7, 1903. The Members of that Congress were paid mileage for three sessions, to wit, \$130,000 paid the Members of the House each of said sessions, and the members of the Senate \$45,000 each session. (See vol. 28, Stat. L., pp. 11, 19.)

President McKinley called an extraordinary session for the Fifty-fifth Congress in March, 1897. Mileage was paid the Members for three sessions of said Congress, to wit: \$130,000 for each of the three sessions for the Members of the House and \$45,000 for the members of the Senate for said sessions.

These appropriations for mileage were made for the three sessions of the Fifty-third and Fifty-fifth Congresses under the laws as they now stand, and approved by the two Presidents. No one has ever questioned the right to receive said mileage or the law under which payment was made.

Certain State officers and county officers are allowed a salary and mileage. They collect their salary and charge mileage whenever they serve a writ on a witness or a defendant living 20 or any number of miles from the office of the official serving the writ, and if the writ is served within the office of the official serving it, he is allowed mileage to the residence of the witness or defendant and charges it and collects it. It is part of his compensation. He is entitled to it. The same rule applies to Members of Congress. I voted for the mileage the law clearly gave me.

It is impossible for a Member of Congress to collect even his salary without voting for an appropriation bill making the necessary appropriation. This was what I did in all three sessions of the Fifty-eighth Congress.

On account of this vote I have been subjected in Mr. Williams's article to a most malicious attack. As a Member of the Fifty-sixth Congress the RECORD shows that he voted for his mileage for all the sessions of that Congress and collected the same.

The objection usually made, and the objection Mr. Williams makes to a vote for the mileage of the first session of the Fifty-eighth Congress is that there was only an interval of a few minutes between the two sessions of Congress. That the first session adjourned and within a few minutes thereafter the second convened, and that inasmuch as it was impossible for a Member of Congress to go home in the interval, and inasmuch as they did not go home, they had no moral right to vote for mileage they did not earn by going home.

Admitting that there is force in the argument as applied to other Members who voted for the mileage, there is absolutely no force in the argument as applied to me. I went home immediately before the commencement of the second session of Congress, getting back just in time to be there at the convening of the session. I effected a pair with a Republican Member of Congress, and took one week to make the trip. The record shows the above fact.

Admitting everything that the most violent and unreasonable opponent of the mileage system can say about the matter, I was wholly justified in voting for the measure.

The extra-session mileage was never paid. No Member of Congress ever collected a dollar of it. Mileage was only paid for two sessions during the Fifty-eighth Congress. It was understood in the House when the vote was taken on the proposition of making an appropriation for the mileage of the first session that the Senate would not pass the bill, and Members of Congress who voted for it voted for it believing that they were

voting within their rights, and knowing they would never get it.

The whole mileage system is wrong. It dates back to stage-coach days. No man can now expend 20 cents a mile for travelling expenses, and for that reason the act of 1866 is explicit and allows 20 cents a mile by the nearest traveled route each way as "additional compensation" to Members of Congress. I believe that nothing but actual traveling expenses ought to be allowed. It was understood by many when the vote was taken that if it passed the House a proceeding would be brought to establish the legal status of the mileage question, inasmuch as the Senate would refuse at that session to pass the appropriation. It was believed that the matter would be brought before the Court of Claims in order to once and for all time determine what construction should be placed upon the act of 1866. For that purpose soon afterwards a suit was brought in the Court of Claims by John F. Wilson, Delegate from the Territory of Arizona in the Fifty-eighth Congress.

The case is now pending in the Court of Claims and has gone over to the October term. The case is known as No. 29799. I am quite confident that this court will hold in October of this year that mileage under the law is "additional compensation," and that the Members of the Fifty-eighth Congress were entitled to mileage for three sessions of Congress. I might add that whenever this question has been presented on a point of order in the House it has been held that mileage is "additional compensation," and in the Fifty-eighth Congress two different occupants of the chair held as a matter of law that Members were entitled to the extra-session mileage. I have given the facts and data in the matter, and what I have said can be easily verified.

The extra-session mileage vote was severely criticised in articles furnished at that time by Walter Wellman to the Chicago Record-Herald, and in the Chicago Tribune, and in Collier's Magazine. The articles from the Tribune and Record-Herald were widely copied, and the articles from these papers were copied in the Commoner without comment.

Under the above circumstances and under the law, I contend that my vote for the mileage I never received was entirely justified.

There were three sessions in the Fifty-eighth Congress. The RECORD for each session is bound separately and is designated as "First Session," "Second Session," "Third Session."

All documents, bills, orders, and acts of said Congress were named and designated as of the "first session," or, if they were printed during the second session, they were designated as of the "second session," and the same holds true of the "third session."

A miserable attempt is made in the article attacking me on this question to show that the Commoner commented unfavorably upon my vote, and two alleged extracts are copied from the Commoner without calling attention to the papers where those extracts appear, thus making it almost impossible for a person desiring to ascertain whether the articles really appeared in the Commoner or not to locate the articles.

The first alleged Commoner article is to be found in the Commoner of March 17, 1905, on page 2. A comparison of the article in the Commoner with the alleged copy of the same appearing in Mr. Williams's article will show that the copy appearing in Mr. Williams's article is garbled, incorrect, parts of it have been omitted, and he has made it appear that it is the Commoner's article, when, in fact, it is a reprint without comment in the Commoner of an article which appeared in the Chicago Tribune.

The second alleged Commoner article appearing in Mr. Williams's attack on me can be found in the Commoner of March 24, 1905, on page 5. A comparison of the real article with the alleged Commoner article will show that what appeared in the Commoner simply purports to be a copy of a part of Walter Wellman's letter to the Chicago Record-Herald. This article, however, as given in the attack on me is garbled, is not a copy of the article appearing in the Commoner, and wholly misrepresents the matter in concealing the fact that it is a copy of the article of Walter Wellman which appeared in the Record-Herald.

The statement that in the Commoner, immediately following the last alleged extract from the same, there appears a roll of dishonor in which is printed my name is absolutely false.

Any reference to the Commoner of that date—and I have given the date above—will show it to be false.

I have not attempted to secure favorable newspaper comment. I have simply discharged my duty as a Member of Congress. In the discharge of my duty I have secured my full share of favorable comment. The editor of the Commoner is my ideal

among all the statesmen of the present day, and I appreciate his good opinion more than the good opinion of any other living man. I have done what I could to advance his candidacy for the Presidency. I have made the fights for the things he stands for in my own State, at his request. In the Peoria convention of two years ago, together with Judge Thompson and others, I made the fight on the floor of the convention for the things Mr. Bryan stood for, while the gentleman who writes the article attacking me under Mr. Bryan's name remained in the background and questioned the propriety of making the fight at that time. The fact that he is making this bitter attack against me now has some connection with his attitude in that convention.

I am willing to agree never again under any circumstances to be a candidate for Congress if it can be shown to me that my candidacy in the past has not met with the approval of Mr. Bryan. Since voting for mileage for all the three sessions of the Fifty-eighth Congress I have been twice indorsed by my party. The mileage question was an issue in the election four years ago and cut no figure whatever. Every man against whom the attack was made, either in the Democratic or Republican party, succeeded in securing his party indorsement by a large majority. Since the vote Mr. Williams complains of was cast, I have been elected to Congress twice—once as the only Democratic Member of Congress from the entire State of Illinois, and in that capacity I served all through the sessions of the Fifty-ninth Congress.

Inasmuch as the position of Mr. Bryan's paper with reference to my candidacy has been mentioned, I might call attention to some of the complimentary articles appearing in that journal since the Fifty-eighth Congress, when the three sessions of Congress were held.

In the Commoner of March 27, 1907, page 4, there is a complimentary notice covering more than an entire page of the Commoner having reference to one of my speeches in Congress. In the Commoner of April 12, 1907, on page 14, is another extended complimentary notice. In the Commoner of April 20, 1906, on page 6, is a complimentary notice of one of my speeches covering an entire page. And there are numerous other complimentary notices of my efforts as a Member of Congress. The notices to which I have called attention and other notices are too long to be inserted here. I, however, insert at this point the following short notice, which appears in the Commoner of November 2, 1906, on page 3:

RAINEY OF ILLINOIS.

Commoner readers in every State will be interested in the contest in the Twentieth Illinois district. HENRY T. RAINEY now represents that district in Congress, and he is the Democratic nominee this year. Mr. RAINEY is the gentleman who made the admirable speech on the tariff in which he paid special attention to the watch trust. This speech was reported in the Commoner and attracted widespread attention at the time. Mr. RAINEY is now serving his second term in Congress. He is now a member of the following committees: Labor, Irrigation, Pacific Railroads, Enrolled Bills.

He was one of the four Democrats on the Labor Committee who caught the Republicans when they were unprepared and reported out the eight-hour bill with the recommendation that "it do pass." The bill was reported out on his motion. At the time the motion was made there were present three Republicans and four Democrats. All the Democrats voted for it. The Republicans voted against it. Seven however, was a quorum of the committee. The Speaker of the House did not permit the measure to come before the House. Mr. RAINEY made speeches in Congress on the following subjects: Against a ship subsidy; in favor of railroad rate regulation; in favor of a deep waterway from the Lakes to the Gulf; acceptance of statue of Frances E. Willard, placed in Statuary Hall by the State of Illinois; on the subject of a statue to the memory of John Paul Jones, and in the closing days of the last session of the last Congress two speeches on the watch trust.

His district extends along both sides of the Illinois River, almost from Peoria to Alton; also extends for 60 or 70 miles along the Mississippi River. He is giving the subject of river improvement (particularly the question of a 14-foot channel from Chicago to the Gulf) special attention.

Mr. RAINEY has been a faithful servant of the people, and he deserves to be reelected by a rousing majority. (Commoner, Nov. 2, 1906, p. 3.)

THE SALARY INCREASE.

After establishing so thoroughly my assailant's lack of veracity I hesitate to go into this subject. It seems almost unnecessary to pay further attention to any other false and malicious statements made in the article in question. I voted against the increase in Members' salaries. I am recorded as voting against it. The vote was taken in the House on December 14, 1906, page 389 of the RECORD of the second session of the Fifty-ninth Congress. I voted against it, and am so recorded. The matter came up again in the second session of the Fifty-ninth Congress on January 18, 1907. It was considered in connection with a Senate amendment to the legislative appropriation bill. There were a number of calls for the yeas and nays. I was on

my feet, with others, demanding the yeas and nays. The Speaker put the usual request—that all who were in favor of demanding the yeas and nays “should rise, and remain standing until counted.” I stood and was counted among those standing. A sufficient number did not join in the request.

The yeas and nays were refused, and no other opportunity than this was given any Member to vote against the proposition. I voted against it; I could do no more. Mr. Williams insists that the salaries should have been increased, but he objects to the fact that they were increased. I did not favor the increase, at that time, of Members' salaries. I do not know what else I could have done in opposition to the bill than what I actually did in that Congress.

All Members of Congress are drawing their salary at the increased rate under the law as it now stands, and all Members of the next Congress, whether they were opposed to the increase or not, will draw salaries at the increased rate.

Injunctions by Federal Courts.

SPEECH

OF

HON. ROBERT L. HENRY,
OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. HENRY of Texas said:

Mr. SPEAKER: The President, many Senators of the United States, and a multitude of Representatives believe that inferior Federal judges should be curbed in relation to issuing restraining orders and injunctions. There is a widespread sentiment throughout the country that such legislation is necessary, and there has been and is now a strong popular demand for a law governing the issuance of restraining orders and injunctions. On the 10th day of April, 1906, it was my proud privilege to introduce the first bill amending the statutes in relation to granting restraining orders and injunctions by Federal courts. Since then many Representatives of both parties have introduced measures substantially like the one presented by me. At each session of Congress since that time it has been my privilege to reintroduce the same bill. The original bill read as follows:

A bill (H. R. 17976) in relation to granting restraining orders and injunctions.

Be it enacted, etc., That no writ of injunction or temporary restraining order shall be granted in any case without reasonable previous notice to the adverse party, or his attorney, of the time and place of moving for the same: *Provided,* That nothing herein contained shall be held to authorize the issuance of any injunction or restraining order not now authorized by law.

H. R. 69 is identically the same bill, and was introduced by me at the beginning of the Sixtieth Congress.

On April 3, 1893, Circuit Judge Taft, now Secretary of War and probable nominee for the Presidency, rendered the following opinion in what is known as the “Ann Arbor case:”

DECISION OF JUDGE TAFT.

(United States circuit court for the northern district of Ohio, western division.)

The Toledo, Ann Arbor and North Michigan Railway Company, complainant, v. The Pennsylvania Company et al., defendants.

Before Taft, circuit judge, and Ricks, district judge. April 3, 1893.

The opinion of the court was delivered by—

TAFT, Circuit Judge.

This is a motion by the complainant, the Toledo, Ann Arbor and North Michigan Railway Company, for a temporary injunction—to remain in force pending this action—against P. M. Arthur, the chief executive of the Brotherhood of Locomotive Engineers and a defendant herein, to restrain him from issuing, promulgating, or continuing in force any rule or order of said Brotherhood which shall require or command any employees of any of defendant railway companies herein to refuse to handle and deliver any cars of freight in course of transportation from one State to another, to the complainant, or from refusing to receive and handle cars of such freight which have been hauled over complainant's road, and also from in any way, directly or indirectly, endeavoring to persuade or induce any of the employees of the defendant railway companies, whose lines connect with the railroad of complainant, not to extend to said company the same facilities for interchange of interstate traffic as are extended by said companies to other railway companies. A temporary restraining order to this effect was issued by me against Arthur ex parte. A hearing has since been had, and the question now is whether, on the evidence produced, the order shall be continued in force until the final decision of the case.

The original bill was filed against eight railway companies and the superintendents of two of them, and averred that the defendants who were operating lines of railway connecting with that of the complainant company at Toledo had threatened to refuse to receive from and to deliver to the complainant company interstate freight, on the ground that their locomotive engineers, who were members of the Brotherhood, would refuse to haul or handle the same, because complainant employed on its line engineers who were not members of the Brotherhood; and

the bill further averred that if the threat was carried out, it would work an irreparable injury to the complainant, for which damages could not be estimated, and the law afforded no adequate remedy. The prayer of the bill was for an order enjoining the defendant companies, their employees and servants, from refusing to receive and deliver complainant's interstate freight. A temporary order as prayed for was issued by Judge Ricks. An amendment to the bill was afterwards filed making two new defendants, P. M. Arthur and F. P. Sargent. Sargent it subsequently appeared, was a nonresident of the district, and the bill as against him was dismissed for want of jurisdiction.

As to Arthur, the amendment charges that he, as chief of the Brotherhood, exercises a controlling influence upon its members in all matters treated by its rules and regulations; that one of its rules requires all its members in the employ of any railway company, whenever an order to that effect shall be given by its said chief officer, to refuse to receive, handle, or carry cars of freight from any other railroad company whose employees, members of said association, have engaged in a strike; that such a strike has been declared against the complainant by the members of the Brotherhood, with Arthur's consent and approval; that Arthur now publicly announces that unless complainant shall submit to the demands of its striking employees, he will order the rule above stated enforced; that the rule is in direct contravention of the interstate-commerce law and is intended to induce the employees of the defendant companies to violate that law and the previous order of this court; and that Arthur, with others, is conspiring to that end.

The jurisdiction of this court to hear and decide the case made by the bill can not be maintained on the ground of the diverse citizenship of the parties, for the complainant and at least one of the defendants are citizens of the same State. If it exists, it must arise from the subject-matter of the suit. The bill invokes the chancery powers of this court to protect the complainant in rights which it claims under the act of Congress passed February 4, 1887 (24 Stat. L., 529), known as the interstate-commerce act, and an act amending it passed March 2, 1889 (25 Stat. L., 855). These acts were passed by Congress in the exercise of the power conferred on it by the Federal Constitution (Art. I, sec. 8, par. 3) “to regulate commerce with foreign nations, among the several States, and with the Indian tribes.” Counsel for defendant Arthur contend that the interstate-commerce law and its amendments are only declaratory of the common law which gave the same rights to complainant, and that, therefore, this is not a case of Federal jurisdiction. The original jurisdiction of this court extends by act of Congress passed August 13, 1888 (25 Stat. L., 433), to “all suits of a civil nature, at common law or in equity, where the matter in dispute exceeds, exclusive of interest and costs, the sum or value of \$2,000 and arising under the Constitution or laws of the United States.” The bill makes the necessary averment as to the amount in dispute. It is immaterial what rights the complainant would have had before the passage of the interstate-commerce law. It is sufficient that Congress, in the constitutional exercise of power, has given the positive sanction of Federal law to the rights secured in the statute, and any case involving the enforcement of those rights is a case arising under the laws of the United States.

The Brotherhood of Locomotive Engineers is an association, organized in 1863, whose members are locomotive engineers in active service in the United States, Mexico, and the Dominion of Canada. Their number is 35,000. The engineers engaged with the defendant companies are, most of them, members of the Brotherhood. The purpose of the Brotherhood is declared in its constitution to be, “More effectually to combine the interests of locomotive engineers, to elevate their standing as such and their character as men.” These ends are sought to be obtained by requiring that every member shall be a man of good moral character, of temperate habits, and a locomotive engineer in actual service with a year's experience, and by imposing the penalty of expulsion upon any member guilty of disgraceful conduct or drunkenness, or neglect of duty, or injury to the property of the employer, or of endangering the lives of persons. A mutual insurance association is supported in connection with the Brotherhood, in which every member is required to carry a policy, and there is an efficient employment bureau for the members. A strong and complete organization is maintained for the systematic government of the Brotherhood, and its rules are well adapted to establishing and carrying out general and local plans with respect to the terms of employment of its members. Submission to these plans when once adopted by a requisite vote is required of every member on penalty of expulsion. The management of controversies with employer companies is immediately with a chairman of a standing general adjustment committee for the particular railroad system involved, and afterwards with the grand chief. The grand chief has large judicial and executive powers. He is the ultimate authority always called in to adjust differences between members and their employer, and he is the one to whom appeals are made to settle disputes arising between members and subdivisions. He is also the head of the insurance company.

Early last month the superintendent of complainant company refused to grant a demand by its engineers for higher wages. After some unsuccessful attempts at negotiation Arthur, who had been called in, consented to the strike which had previously been voted by two-thirds of the Brotherhood men in complainant's employ. As soon as the men went out, on March 7, Arthur sent to eleven chairmen of the general adjustment committees on as many different railroad systems in Ohio and the neighboring States the following dispatch:

“There is a legal strike in force upon the Toledo, Ann Arbor and North Michigan Railroad. See that the men on your road comply with the laws of the Brotherhood. Notify your general manager.”

A “legal” strike, in Brotherhood parlance, means one consented to by the grand chief. His consent is necessary under the rules of the order to entitle the men thus out of employment to the three months' pay allowed to striking members. Arthur admits that the particular law to which he referred in this dispatch was one adopted by the Brotherhood at Denver three years ago, but which is not published in the printed copy of the constitution and by-laws. It is as follows:

“12th. That hereafter, when an issue has been sustained by the grand chief and carried into effect by the B. of L. E., it shall be recognized as a violation of obligation for a member of the Brotherhood of Locomotive Engineers' Association who may be employed on a railroad running in connection with, or adjacent to, said road to handle the property belonging to said railroad or system in any way that may benefit said company in which the B. of L. E. is at issue until the grievance or issue of whatever nature or kind has been amicably settled.”

It is quite clear from the evidence that “a violation of obligation” is the highest offense of which a member can be guilty and merits expulsion. In obedience to Arthur's direction, it appears that several

general managers were notified of the intention to enforce the rule. Watson, the chairman of the adjustment committee of the Lake Shore system, sent the general manager of that system the following telegram:

"We ask you, in the interests of peace and harmony, not to ask your engineers to handle Toledo, Ann Arbor and North Michigan freight business after 6 o'clock March 8, as the engineers and firemen of said road go out on a strike."

Through the intervention of the Ohio labor commissioner, William Kirkby, negotiations for an adjustment began between Arthur and the local Brotherhood committee on the one side and the complainant on the other. Kirkby refused to take part until the embargo laid on complainant's freight was raised. Accordingly, on March 11, in Arthur's absence, his assistant sent in Arthur's name the following dispatch to chairmen of adjustment committees:

"Pending negotiations with the president of the Toledo and Ann Arbor road, resolution 12, page 45 of ritual, is suspended. In case negotiations fail you will be promptly notified."

Arthur says that he did not know of this dispatch when sent, but that he subsequently approved it. On March 13, as a result of the negotiations referred to in the telegram of March 11, the following paper was signed by Arthur and others for the striking engineers:

"We, the undersigned, late employees of the motive-power department of the Toledo and Ann Arbor Railroad, have authorized our chief executive officers to withdraw the embargo against connecting roads. Should we be reinstated, we hereby agree, each for himself, to submit to William Kirkby, railroad commissioner, as our representative in all matters of grievances touching orders issued by officials, with authority to confer with Governor Ashley, president of the Toledo and Ann Arbor Railroad, and we hereby agree to abide by their concurrent decision. This will also include the return of the men without prejudice and the rates of pay to be agreed upon."

A schedule of wages was agreed upon, but the negotiations were subsequently broken off because the striking engineers refused to consent to a requirement that applications in writing should be made for employment by each of their number. Thereupon, on March 16, Arthur sent to the committee chairmen the following dispatch:

"All efforts to effect an honorable settlement of the grievances of the engineers and firemen on the Toledo, Ann Arbor and North Michigan Railroad have failed. See that your men comply with the laws of the Brotherhood. Notify your general manager."

The result of this was that engineers, members of the Brotherhood, did refuse to handle complainant's freight on connecting lines for a short time, and in several instances quit the service rather than to do so. On the 17th of March the temporary restraining order issued by me and above referred to was served on Arthur. He was therein commanded to rescind any order he might have promulgated to engineers on connecting lines to refuse to handle complainant's freight. Under advice of counsel he obeyed, and sent a dispatch to committee chairmen rescinding his previous dispatch of March 16. This had the effect to lift the "embargo," so called.

The result of this evidence is that the members of the Brotherhood of Locomotive Engineers have by the adoption of rule 12 made an agreement among themselves that whenever any of their comrades, with the consent of Arthur, leave the employ of one company because the terms of employment are unsatisfactory, the members employed by companies operating connecting lines will inflict an injury on the first company by preventing as far as possible the first company from doing any business as a common carrier involving the interchange of freight with connecting lines. The engineers of the connecting lines are to effect this purpose, first, by refusing to handle the freight of the offending company, and, second, if necessary, by quitting the service to avoid handling it, in order that the connecting companies, by fear of the evil effect of a strike upon their own business, will be compelled to join with their engineers in a refusal to handle the offending company's freight and inflict the injury, which is the main purpose of the combination. In this connection should be noted in Arthur's telegrams of March 7 and 16, directing the enforcement of rule 12, the significance of the sentence, "Notify your general manager," and the language of Watson's dispatch to the general manager of the Lake Shore system. These notifications were threats to the connecting companies which it was hoped would lead them to assist in injuring the complainant company. No such notice was thought necessary when rule 12 was suspended.

Rule 12 is not operative until a strike has been declared with the consent of Arthur. Arthur states that there is nothing in the rules requiring him to communicate with the committee chairmen as he did and that the rule would execute itself. But it is obvious that as under the rule he must declare a strike "legal" before its consequences follow, he is the person upon whom devolves the task of authoritatively advising the rest of the Brotherhood through their immediate chairmen that the time has come for the enforcement of the rule and the injury of the offending company. That he and the members of the Brotherhood recognize this as a necessity is clear from the evidence of Watson and what actually occurred here. On March 8 the rule was enforced by his order. On March 11 the rule was suspended by an order issued in his name. On March 16 the rule was again enforced by telegraphic order from him, and upon March 18 the enforcement of the rule was again suspended. Arthur says that neither he nor his assistant had power, under the constitution and by-laws of the Brotherhood, to suspend the enforcement of rule 12, and that the dispatch of March 11 doing so was an unconstitutional assumption of power on his part. We are not called upon to construe the constitution and laws of the Brotherhood except so far as they reflect on the actual power exercised by Arthur in the enforcement of rule 12. It suffices to say that so much of the governing law of the Brotherhood as we have seen invests Arthur with wide powers and a great influence over the actions of his subordinates and the Brotherhood members, and that in the practical exercise of power he has twice both directed and suspended the enforcement of rule 12.

It will be convenient in discussing the question whether any relief can properly be given to complainant Arthur to consider rule 12 and the acts done or to be done in pursuance thereof, first, in the light of the criminal law; second, with reference to their character as civil wrongs, and, third, with reference to the remedies which a court of equity may afford against them.

First. The complainant and defendant companies are common carriers subject to the provisions of the interstate-commerce act, and the business exchanged between them is averred by the bill to be nearly all interstate freight. The second paragraph of the third section of the act provides that—

"All common carriers subject to the provisions of this act shall, according to their respective powers, afford all reasonable, proper, and

equal facilities for the interchange of traffics between their respective lines, and for the receiving, forwarding, and delivery of passengers and property to and from their several lines and those connecting therewith, and shall not discriminate in their rates and charges between such connecting lines." (24 Stat. L., 379.)

In view of the foregoing section, it needs no argument to demonstrate that one common carrier is expressly required by the interstate-commerce act to freely interchange interstate freight with another when their lines connect.

Section 10 of the act as amended (25 Stat. L., 855) provides that— "Any common carrier subject to the provisions of this act, or, whenever such common carrier is a corporation, any director or officer thereof, or any receiver, trustee, or lessee, agent, or person, acting for or employed by such corporation, who, alone, or with any other corporation, company, person, or party, * * * shall willfully omit or fail to do any act, matter, or thing in this respect required to be done, or shall cause or willingly suffer or permit any act, matter, or thing so directed or required by this act to be done, not to be done, or shall aid or abet such omission or failure, * * * shall be deemed guilty of a misdemeanor, and shall upon conviction thereof in any district court of the United States within the jurisdiction of which such offense was committed be subject to a fine of not to exceed \$5,000."

By the foregoing section, a common carrier who is not a corporation is made liable criminally for violations of the interstate-commerce law. But when the carrier is a corporation and violates the law, not the corporation, but its officers, agents, and persons acting for or employed by it, who do the wrongful work, are made liable. (In re Peasley, 44 Fed. Rep., 271.) The corporation is made civilly liable under section 8.

As every locomotive engineer of defendant companies is "a person employed by" a common carrier corporation, subject to the provisions of the interstate-commerce law, he is guilty of the offense described and subject to the penalty imposed by section 10, if he, while acting as engineer for his corporation, refuses to handle interstate freight for the complainant, and thereby, in his discharge of a function of the company, willfully omits to do an act required by the law to be done; and it is immaterial whether what he does or fails to do in violation of the statute is with or without the orders of his principal. (United States v. Tozer, 37 Fed. Rep., 635.)

Arthur and all the members of the Brotherhood engaged in enforcing rule 12, and in thereby aiding and abetting every such engineer to violate the section, are equally guilty with him as principals (United States v. Snyder, 14 Fed. Rep., 554); and they are thereby also guilty of conspiring to commit an offense against the United States and subject to the penalties of section 5440, Revised Statutes (United States v. Stevens, 44 Fed. Rep., 132).

But suppose that this view of section 10 is erroneous, and that the words "person acting for or employed by such corporation" refer only to its managing officer or agent, the enforcement of rule 12, with its evident purpose, would still be a violation of law. For even then it is quite clear that anyone, though not an officer or agent, successfully aiding, abetting, or procuring such officer or agent to violate the section, would be punishable under it as a principal. Thus in *The United States v. Snyder* (14 Fed. Rep., 554), under a statute making it a crime for a postmaster to render a false report to the Government of his receipts, one who aided, abetted, and procured a postmaster to send such a report was found guilty as principal of violating the statute, and the conviction was sustained by Judges McCrary and Nelson, in an opinion citing authorities fully justifying their conclusion.

It is therefore evident that Arthur and the other members of the brotherhood, if successful in procuring the managing officers of the defendant companies to refuse to handle interstate freight from complainant company, would be guilty of violating section 10, and punishable as principals thereunder.

Section 5440, Revised Statutes, provides that—

"If two or more persons conspire * * * to commit any offense against the United States * * * and one or more parties do any act to effect the object of the conspiracy, all the parties to such conspiracy shall be liable to a penalty of not more than \$10,000, or to imprisonment for not more than two years, or to both fine and imprisonment, in the discretion of the court."

All persons combining to carry out rule 12 of the brotherhood against the complainant company, if any one of them does an act in furtherance of the combination, are punishable under the foregoing section. This is true, because, as already shown, the object of the conspiracy is to induce, procure, and compel the managing officers of the defendant companies to refuse equal facilities to the complainant company for the interchange of interstate freight, which, as we have seen, is an offense against the United States by virtue of section 10 above quoted. For Arthur to send word to the committee chairmen to direct the men to refuse to handle interstate freight of complainant and to notify the managing officers of the defendant companies with the intention of procuring them to do so, all in execution of rule 12, is an act in furtherance of the conspiracy to procure the managing officers of the defendant companies to commit a crime and subjects him and all conspiring with him to the penalties of section 5440, Revised Statutes. Again, for the men, in furtherance of rule 12, either to refuse to handle freight or threaten to quit, or actually to quit, in order to procure or induce the officers of the defendant companies to violate the provisions of the interstate-commerce law, would constitute acts in furtherance of the conspiracy which would render them also liable to the penalty of the same section.

But it is said that it can not be unlawful for an employee either to threaten to quit or actually to quit the service when not in violation of his contract, because a man has the inalienable right to bestow his labor where he will, and to withhold his labor as he will. Generally speaking, this is true, but not absolutely. If he uses the benefit which his labor is or will be to another, by threatening to withhold it or agreeing to bestow it, or by actually withholding it or bestowing it, for the purpose of inducing, procuring, or compelling that other to commit an unlawful or criminal act, the withholding or bestowing his labor for such a purpose is itself an unlawful and criminal act. The same thing is true with regard to the exercise of the right of property. A man has the right to give or sell his property where he will, but if he give or sell it or refuse to give or sell it, as a means of inducing or compelling another to commit an unlawful act, his giving or selling it or refusal to do so is itself unlawful.

Herein is found the difference between the act of the employees of the complainant company in combining to withhold the benefit of their labor from it, and the act of the employees of defendant companies in combining to withhold their labor from them; that is, the difference between the strike and the boycott. The one combination, so far as its

character is shown in the evidence, was lawful because it was for the lawful purpose of selling the labor of those engaged in it for the highest price obtainable and on the best terms. The probable inconvenience or loss which its employees might impose on the complainant company by withholding their labor would, under ordinary circumstances, be a legitimate means available to them for inducing a compliance with their demands. But the employees of defendant companies are not dissatisfied with the terms of their employment. So far as appears, those terms work a mutual benefit to employer and employee. What the employees threaten to do is to deprive the defendant companies of the benefit thus accruing from their labor in order to induce, procure, and compel the companies and their managing officers to consent to do a criminal and unlawful injury to the complainant. Neither law nor morals can give a man the right to labor or withhold his labor for such a purpose.

It may be noted in passing that the enforcement of rule 12 presents a much stronger case of illegality than the ordinary boycott. As usually understood, a boycott is a combination of many to cause a loss to one person, by coercing others, against their will, to withdraw from him their beneficial business intercourse through threats that unless those others do so the many will cause similar loss to them. Ordinarily, when such a combination of persons does not use violence, actual or threatened, to accomplish their purpose, it is difficult to point out with clearness the illegal means or end which makes the combination an unlawful conspiracy, for it is generally lawful for the combiners to withdraw their intercourse and its benefits from any person and to announce their intention of doing so, and it is equally lawful for the others, of their own motion, to do that which the combiners seek to compel them to do. Such combinations are said to be lawful conspiracies, though the acts in themselves and considered singly are innocent, when they are done with malice, i. e., with the intention to injure another without lawful excuse. See the judgment of Lord Justice Bowen in *Mogul Steamship Company v. McGregor, Gow & Co.* (L. R., 23 Q. B. D., 298); *Walker v. Cronin* (107 Mass., 515); *Casey v. Typographical Union* (45 Fed. Rep., 135); *Steamship v. McKenna* (30 Fed. Rep., 46); *State v. Glidden* (55 Conn., 76); *State v. Stewart* (59 Vermont, 273); *Crump v. Commonwealth* (84 Va., 927); *State v. Donaldson* (32 N. J. L., 151); *Carew v. Rutherford* (106 Mass., 1); *Moore v. Bricklayers' Union* (23 Weekly Law Bulletin, 48). But in the case at bar, although malice is certainly present, the illegality of the combination does not consist alone in that, for both the means taken by the combination and its object are direct violations of both the civil and the criminal law as embodied in a positive statute. Surely it can not be doubted that such a combination is within the definition of an unlawful conspiracy, recognized and adopted by the Supreme Court of the United States in *Pettibone v. United States* (decided March 6, 1893), to wit: "A combination of two or more persons by concerted action to accomplish a criminal or unlawful purpose, or some purpose not in itself criminal or unlawful by criminal or unlawful means."

We have thus considered with some care the criminal character of rule 12 and its enforcement, not only because, as will presently be seen, it assists in determining the civil liabilities which grow out of them, but also because we wish to make plain, if we can, to the intelligent and generally law-abiding men who compose the Brotherhood of Locomotive Engineers, as well to their usually conservative chief officer, what we can not believe they appreciate, that notwithstanding their perfect organization and their charitable, temperance, and other elevating and most useful purposes, the existence and enforcement of rule 12, under their organic law, make the whole brotherhood a criminal conspiracy against the laws of their country.

Second. We now come to the character of rule 12 and its enforcement as a civil wrong to complainant. Lord Justice Fry said, in case of the *Mogul Steamship Company v. McGregor, Gow & Co.* (L. R., 23 Q. B. D., 598, 624):

"I can not doubt that whenever persons enter into an indictable conspiracy, and that agreement is carried into execution by the conspirators by means of an unlawful act or acts which produce private injury to some person, that person has a cause of action against the conspirators. (See also *Buffalo Lubricating Oil Co. v. The Standard Oil Company*, 106 N. Y., 609; *Steamship v. McKenna*, 30 Fed. Rep., 46; *Carew v. Rutherford*, 106 Mass., 1; *Moore v. Bricklayers' Union*, 23 Weekly Law Bulletin, 48.)"

Under the principle above stated, Arthur and all the members of the Brotherhood engaged in causing loss to the complainant are liable for any actual loss inflicted in pursuance of their conspiracy.

The gist of any such action must be, not in the combination or conspiracy, but in the actual loss occasioned thereby. No civil liability arises simply because of the rule 12 or its attempted enforcement unless injury is done.

Ordinarily the only difference between the civil liability for acts in pursuance of a conspiracy and for acts of the same character done by a single person is in the greater probability that such acts when done by many in a combination will cause injury. If a single engineer of one of defendant companies, acting alone, and with intent to injure the complainant, should actually cause the complainant loss by refusing to handle its interstate freight, complainant could maintain a right of action against him for damages. The refusal on his part would be a wrongful and illegal act under the interstate-commerce law, and as said by Lord Justice Brett in *Bowen v. Hall* (6 Q. B. D., 333, 337):

"Whenever a man does an act which in law and in fact is an unlawful act, and such act as may, as a natural and probable consequence of it, produce injury to another, and which in the particular case does produce such an injury, an action on the case will lie."

And so, if a single engineer, with intent to injure complainant, could, by threatening to quit or by actually quitting for the purpose, procure or induce the defendant company in whose employ he is actually to inflict a loss upon complainant by unlawfully refusing to interchange interstate freight, complainant could hold him civilly liable for the loss.

By section 8 of the interstate-commerce law the complainant is expressly given a cause of action in damages against any connecting common carrier company for such a loss, and it is clear upon the authorities that anyone intentionally procuring the connecting company to inflict such loss would be equally liable. Thus, in *Walker v. Cronin* (107 Mass., 515), the supreme judicial court of that State sustained an action for damages by the plaintiff, who was a shoe manufacturer, against the defendant for inducing plaintiff's employees to break their contracts of service with him, to his injury. In *Lumley v. Wagner* (2 Ellis & Blackburn, 215) it was held that the plaintiff could recover damages from the defendant for procuring a third person, with whom the plaintiff had made a contract, to break the contract, when such procuring was with the intention of injuring the complainant. The same principle was announced in *Bowen v. Hall* (6

Q. B. D., 333, 337), and has since been followed in other cases; and the doctrine has been applied even where there was no binding contract, but only the probability that one, though not binding, would be performed. (See *Rice v. Manley*, 66 N. Y., 82, and *Burton v. Pratt*, 2 Wend., 385.)

If a person, with rights secured by a contract, may in case of loss recover damages from one not a party to the contract, who, with intent to injure him, induces a breach of it, *a fortiori*, can one whose rights are secured by statute recover damages from a person who with intent to injure him procures the violation of those rights by another and causes loss?

The difficulty in supposing or stating any civil liability when the acts we have been discussing are done by a single engineer is in the improbability that either by singly refusing to handle the freight he could cause any injury to complainant, or by singly threatening to quit, or by quitting, he could procure his company to do so. But when we suppose that all or nearly all the engineers on the eight different defendant companies combine with their chief to do these unlawful acts for the purpose of injuring complainant the intended loss becomes not only probable but inevitable.

Third. Having thus shown that Arthur and all the members of the Brotherhood with him, conspiring by enforcing rule 12 to injure complainant, will be liable in damages to complainant for any loss they may thereby occasion, the question remains, Can equity afford any relief by preliminary injunction to prevent the loss?

We shall be assisted in answering the question by considering, first, what the court may do by injunction against the defendant companies and against the engineers under the averment of the bill that the defendant companies threaten to refuse to interchange freight with complainant because of the refusal of their engineers to handle it.

The office of a preliminary injunction in equity is to preserve the status quo until, upon final hearing, the court may grant full relief. Generally this can be accomplished by an injunction prohibitory in form, but it sometimes happens that the status quo is a condition not of rest, but of action, and that the condition of rest is exactly what will inflict the irreparable injury upon complainant which he appeals to a court of equity to protect him from. In such a case courts of equity issue mandatory writs before the case is heard on its merits. (*Robinson v. Lord Byron, Brown's Ch. Cases*, 588; *Lane v. Newdigate*, 10 Vesey, 192; *Hervey v. Smith, 1 Kay & Johnson*, 392; *Beadle v. Perry*, L. R., 3 Eq., 465; *London & Northwestern Railway Company v. The Lancashire and Yorkshire Railway Co.*, L. R., 4 Eq., 174; *Whitcar v. Michenor*, 37 N. J., Eq., 6; *Brown v. N. Y. & N. J. Co.*, 42 N. J., Eq., 141.)

Now the normal condition—the status quo—between connecting common carriers under the interstate-commerce law is a continuous passage of freight backward and forward between them, which each carrier has a right to enjoy without interruption, exactly as riparian owners have a right to the continuous flow of a stream without obstruction. Since Lord Thurlow's time the preliminary injunction has been used to keep clear the stream. (*Robinson v. Lord Byron*, 1; *Brown's Ch. C.*, 588; *Lane v. Newdigate*, 10 Vesey, 192.)

So an obstruction to the flow of interstate freight must be preliminarily enjoined, even though it requires a mandatory injunction. The quasi public nature of the duty to be performed by the common carriers and the irreparable character of the injury likely to result are ample grounds for this. The interstate-commerce law recognizes the necessity for such a remedy, for in summary equity proceedings at the instance of the Interstate Commerce Commission, provided by section 16 as amended in 1889, express power to issue injunctions, mandatory or otherwise, to prevent violations of the orders of the Commission, is given to circuit courts. Moreover, by a subsequent section, upon the application of an interested person, the district and circuit courts may issue a mandamus to compel compliance by the common carrier with the provisions of the act. As this latter proceeding is denominated cumulative in the statute, it does not prevent the remedy by injunction; nor would it in any event, because the inadequacy of the legal remedy which justifies equitable intervention by injunction is only the inadequacy of a recovery in damages by action at law. (*Attorney-General v. Mid-Kent Railway Co.*, L. R., 3 Ch., 100.)

As against the defendant companies, the complainant is, therefore, clearly entitled to a preliminary mandatory injunction to compel them, pending the hearing, to discharge the duties imposed by the interstate-commerce law and to exchange with complainant interstate freight. This was expressly decided by Judge Love, of the Iowa district, in a well-considered opinion in the case of the *C. B. & Q. R. Co. v. The Burlington, C. R. & N. Ry. Co. et al.* (34 Fed. Rep., 481.) And in analogous cases, where it has been sought to enforce the common-law obligation of a common carrier, the preliminary mandatory injunction has frequently issued. Thus in the case of *Coe v. The Louisville & Nashville R. R.* (3 Fed. Rep., 775) Judge Baxter issued a preliminary mandatory injunction to compel the defendant railroad company to deliver and receive cattle at a particular cattle yard. (See also *Chicago & A. Ry. Co. v. The New York, L. E. & W. Ry. Co.*, 24 Fed. Rep., 516; *Wolverhampton & Walsall Ry. Co. v. The London & Northwestern Railway Co.*, L. R., 16 Eq., 433; *Denver & N. O. R. R. Co. v. The Atchafalaya, T. & S. R. R. Co.*, 15 Fed. Rep., 650; *Scofield v. The Lake Shore and Michigan Southern Ry. Co.*, 43 O. S., 571.)

If a preliminary mandatory injunction may issue against the defendant companies to prevent irreparable injury, it may certainly issue against their officers, agents, employees, and servants. This is the usual form of the writ of injunction to prevent a trespass, a nuisance, waste, or other inequitable act. Mr. Kerr says, in his work on injunctions, 559:

"Though an injunction restraining the act complained of is claimed against the defendant alone, the order will, if necessary, be extended to his servants, workmen, and agents; and it is, of course, to insert these words. (Foster on Federal Practice, 1st ed., 234; 2 Daniels Ch. Pr., 5th Amer. ed., 1673; Seton's Decrees, 4th ed., 173; Lord Wellesly v. The Earl of Mornington, 11 Beavan, 180; Hodson v. Coppard, 29 Beavan, 4; Mexican Ore Company v. Guadalupe Mining Company, 47 Fed. Rep., 351, 356.)"

The necessity for inserting the words in the injunction issued against the defendant companies in the present case was made apparent by the averment of the bill that they had threatened to refuse to handle complainant's freight because of the unwillingness of their engineers to handle it. Mandatory as well as prohibitory injunctions have frequently been made to run against the defendant, his agents, servants, and workmen. In *Smith v. Smith* (L. R., 20 Eq., 500), Sir George Jessel, M. R., issued a mandatory injunction requiring the defendant to take down a wall which obstructed the light, and that injunction ran against the defendant, his contractors, builders, agents, and workmen. (See Seton on Decrees, 4th ed. from the 4th Eng.

ed., 89.) A similar mandatory decree was entered against the defendant, his servants, etc., from permitting an obstruction to the flow of water in a stream to continue on his lands. (Seton on Decrees, 103; *Ivimey v. Stocker*, L. R., 1 Ch., 496.)

This form of injunction against a corporation is generally necessary in order to enable the court to enforce its writ. A corporation acts only through its officers and employees, and it is through them only that its action can be restrained or compelled. While doing the work of the company, the employee is the company, and having notice of a mandate from a court of competent jurisdiction as to how that work must be done, he must in his work obey the mandate. Especially is this true with respect to employees of common-carrier corporations subject to the interstate-commerce law. They are fully identified with their employer in the discharge of its public functions. When doing the work of the corporation they are made criminally liable for disobeying the commands of the law to the corporation.

Nor is it an objection to granting complainant this equitable relief directly against the servants of defendant companies that the latter will be bound under the mandate of the court to discharge servants refusing to obey the law and the order of court. The complainant is not required to await this action on the part of the defendant companies or to suffer the delay which a refusal by the servants may entail. Such a refusal will be no defense to the defendant companies (*C. B. and Q. R. R. Co. v. The Burlington, C. R. and N. Ry. Co.*, 34 Fed. Rep., 481), but this is far from saying that the court may not, in complainant's interest, direct its process at once against all assuming to act for defendant companies in their business.

Nor is the mandatory injunction against the servants an enforced specific performance of personal service. It is only an order restraining them, if they assume to do the work of the defendant companies, from doing it in a way which will violate not only the rights of the complainant, but also the order of the court made against their employers to preserve those rights.

They may avoid obedience to the injunction by actually ceasing to be employees of the company. Otherwise the injunction would be in effect an order on them to remain in the service of the company; and no such order was ever, so far as the authorities show, issued by a court of equity. It is true that if they quit the service of the company in execution of rule 12, in order to procure or compel defendant companies to injure the complainant company, they are doing an unlawful act, rendering themselves liable in damages to the complainant, and they may be incurring a criminal penalty, as already explained; but, no matter how inadequate the remedy at law, the arm of a court of equity has never been extended by mandatory injunction to compel the performance of personal service as against either the employer or the employee. (*Stocker v. Brockenbank*, 3 Mac. and G., 250; *Johnson v. Shrewsbury Railroad Company*, 3 DeGex, M. and G., 914; *Pickering v. The Bishop of Ely*, 2 Y. and C. C., 249; *Lumley v. Wagner*, 1 De Gex, M. and G., 604.) The reason is obvious. It would be impracticable to enforce the relation of master and servant against the will of either. Especially is this true in the case of railway engineers, where nothing but the most painstaking and devoted attention on the part of the employee will secure a proper discharge of his responsible duties. It would even seem to be against public policy to expose the lives of the traveling public and the property of the shipping public to the danger which might arise from the enforced and unwilling performance of so delicate a service.

We finally reach the question whether Arthur can be enjoined from ordering the engineers to carry out rule 12. That he intends to enforce the rule if not enjoined is not denied. If, as we have seen, the injury intended is of such a character that the court may issue its mandatory injunction against the engineers to prevent them from inflicting it, Arthur may certainly be restrained by prohibitory injunction from ordering them to inflict it. Arthur's order, if issued, will be obeyed, because the penalty of disobedience is expulsion from the Brotherhood. The many engineers who serve the defendant companies will refuse to handle the complainant's freight. The defendant companies will probably be coerced thereby to refuse complainant's freight, for the bill avers that they have threatened to do so. The interstate business of complainant will be interrupted and interfered with at every hour of the day and at every point within a radius of many miles, and all because of Arthur's order. The injury will be irreparable, and a judgment for damages at law will be wholly inadequate. The authorities leave no doubt that in such a case an injunction will issue against the stranger who thus intermeddles with and harrasses complainant's business.

In *Sherry v. Perkins* (147 Mass., 212) the officers of a trade union were enjoined by the supreme judicial court of Massachusetts from displaying in front of plaintiff's premises a banner announcing a strike and requesting workmen to stay away. This was said to cause an injury of such a continuing character as to make it a nuisance. So in *Springhead Spinning Company v. Riley* (L. R., 6 Eq., 551), a case presenting facts exactly like those in *Sherry v. Perkins*, an injunction was allowed. In *Casey v. Typographical Union* (45 Fed. Rep., 135) Judge Sage granted an injunction against the members of a typographical union who had instituted a boycott against a newspaper, and who were attempting to drive away business from it by threatening its subscribers and advertisers to boycott them in case they continued their patronage. In *Emack v. Paine* (34 Fed. Rep., 47), Judge Blodgett granted an injunction against persons who, by threatening infringement suits without any intention of bringing them, were attempting to interfere with plaintiff's enjoyment of his lawful patent. And in *Coeur d'Alene Consolidated and Mining Company v. Miners' Union* (51 Fed. Rep., 260) Judge Beatty enjoined the members of a union from intimidating plaintiff's workmen and thereby preventing them from continuing in its employ. Arthur's proposed invasion of complainant's rights, in the means to be adopted and the character of the injury intended, is quite like the wrongs enjoined in the cases just cited.

It would seem from the foregoing authorities that we may enjoin Arthur from directing the engineers to quit work for the purpose of coercing the defendant companies to violate the law and complainant's rights. Though we can not enjoin the engineers from unlawfully quitting, it does not follow that we may not enjoin Arthur from ordering them to do so. An injunction in this form, however, has not been asked and we need not decide the question.

The rule that equity will not enjoin a crime has here no application. The authorities where the rule is thus stated are cases where the injury about to be caused was to the public alone, and where the only proper remedy, therefore, was by criminal proceedings. When an irreparable and continuing unlawful injury is threatened to private property and business rights, equity will generally enjoin on behalf of the person whose rights are to be invaded, even though an indictment on behalf of

the public will also lie. (See the cases cited in sec. 20 of High on Injunctions.)

We have thus far considered the right of the complainant to an injunction in an independent suit against Arthur. But the case as presented to this court is far stronger. Here a mandatory writ was actually issued against the defendant railroad companies and their employees restraining them from refusing to interchange with complainant interstate freight. Subsequently Arthur was made a defendant by amendment to the bill, which advised the court that he, as the chief of an unlawful conspiracy to injure the complainant by destroying its interstate business, had just issued or was about to issue an order to the engineers in the employ of the defendant companies not to handle complainant's freight, and that, if issued, Arthur's order was more likely to be obeyed than the injunction of the court then in force. Is it possible, in such a case, that a court of equity must remit the complainant to an action at law for the injuries which Arthur's unlawful order will certainly cause, and that the court must await in silence the defeat of its own injunction? The putting of the question answers it. It is the duty of the court promptly to prevent, at all hazards, the probable obstruction to its main injunction, by auxiliary injunctive process, and if such obstruction has actually been interposed, to remove it by the same means.

On this ground the court was fully justified in restraining Arthur as it did from continuing in force any order he might have issued in conflict with the previous order of the court. This was mandatory, but it was necessary to secure the enforcement of the court's previous order and to preserve the status quo. Had the order of Arthur, then in force, been allowed to continue, future equitable relief would have been unavailing. A rescission of his order could work injury to no one. Mandatory injunctions issue under such circumstances. Mr. High states the rule as follows in his work on injunctions, section 2:

"And when there is a willful and unlawful invasion of plaintiff's right, against his protest and remonstrance, the injury being a continuing one, a mandatory injunction may issue in the first instance. (See *Robinson v. Lord Byron*, 1 Brown's Ch. C., 588; *Hervey v. Smith*, 1 Kay & J., 392; *Lane v. Newdigate*, 10 Vesey, 192; *Whitcar v. Michener*, 47 N. J. Eq., 6; *Broome v. New York & N. J. Co.*, 42 N. J. Eq., 141; *Beadle v. Perry*, L. R., 3 Eq., 465; *L. & N. Ry. Co. v. The L. & Y. Ry. Co.*, L. R., 4 Eq., 174.)"

Arthur says that when he sent out his telegraphic instructions to the members of the Brotherhood on March 16 he had no knowledge of the injunction of this court against defendant companies and their employees, issued on the 11th. This is surprising, in view of the interest he had in the subject and the wide publicity given to the injunction.

His knowledge of the injunction would be quite material in a proceeding against him for contempt or in a criminal prosecution of him for conspiring to defeat the administration of justice in the United States courts (*Pettibone v. United States*, *ubi supra*), but it was not material here. The fact that his order actually nullified the order of the court and was continuing to do so was enough to justify the court in compelling him to rescind it.

The temporary injunction will be allowed as prayed for.

WM. H. TAFT, Circuit Judge.

On Tuesday, January 28, 1908, following up the bill theretofore introduced by me, I delivered in the House of Representatives the following remarks in regard to curbing the power of Federal judges:

MR. CHAIRMAN: For the purpose of calling attention of the country to a few matters now pending before Congress, I take the floor this morning. The gentleman from Iowa [Mr. HULL] said the Republican party in due time would revise the tariff, but would do it along protective lines. If we mistake not the rumblings from Iowa and other States, the people of this Republic will revise it sooner than that, and it will be along the lines of old-fashioned Democracy, following the flag of the Democratic nominee, William J. Bryan. [Applause on the Democratic side.]

This plea for postponement of the tariff issue is in the nature of an application for continuance in a criminal case—hoping that if the continuance be granted the evil day of punishment may not come. They think that a postponement now may indefinitely prevent tariff reform.

However, these are not the questions I have arisen to present this morning. It is now manifest that the Republican party has no intention of enacting any legislation at this session, except the usual appropriation bills. There will be an effort to pass some sort of currency legislation, but from the deadlock exhibited on this floor between members of the Committee on Banking and Currency, it is apparent that no two of these gentlemen agree upon common ground.

Mr. Chairman, there are certain people whom we choose to call the laboring classes in this country who have been clamoring at the doors of Congress for years for legislation along certain lines. They have appealed to the Speaker of the House, to the Committee on Rules, the only powers that can open the doors of relief to them; they have besought the Committee on the Judiciary and other committees. So far no relief has been given them, no encouragement has met their just demands. The first question I propose to discuss this morning is that of limiting the power of Federal judges in the issuance of temporary restraining orders and injunctions. For years the laboring people have appealed to Congress, and particularly to the Judiciary Committee, and no committee secrets are disclosed in making the statement. Their demands have been just and reasonable. I discuss them not because this is class legislation, but because it is just legislation that should be enacted in the interest of the whole people. Session after session bills have been introduced and referred to that committee and other committees, but they have been silently pigeonholed and never reported back to the House.

Is this legislation just? Is it something that is reasonable? Mr. Chairman, it is legislation that should be passed, and I only take the floor this morning because these bills have been introduced from time to time and no attention has been paid to them by this body. The honor was mine to introduce some of the measures, and let me call attention to the provisions contained in one of these bills. One of them reads as follows:

"That no writ of injunction or temporary restraining order shall be granted in any case without reasonable previous notice to the adverse party, or his attorney, of the time and place of moving for the same: *Provided*, That nothing herein contained shall be held to authorize the issuance of any injunction or restraining order not now authorized by law."

Mr. Chairman, substantially that language was the law of the country for seventy-nine years. In the act of 1791 it was provided that notice should be given by Federal judges before the issuance of temporary restraining orders and injunctions. In 1872 Congress passed an act which eliminated the provision requiring notice in injunction proceedings, and since that time Federal judges have held their star chamber sessions and have issued their temporary restraining orders and injunctions without any sort of notice to the adverse party or his attorney. This manifest defect should be remedied by an act of Congress. Are you ready and are you willing to pass legislation, not only for the benefit of the laboring people who have demanded it, who have been tyrannized over by injunction suits, who felt the sting of unjust government by injunction, but are you ready to give it to the American people? This bill has been introduced by me at several sessions of Congress. There have been other bills introduced. The gentleman from Kansas [Mr. CAMPBELL] has introduced one along the same line and still the Speaker and the authorities of this House turn a deaf ear to such legislation. Secretary Taft, seeing the impending storm, has sought cover, and now tries to face about and win back those he unjustly oppressed while he was Federal judge. He says in a letter to the Ohio labor organizations:

"Second. You ask me what I think of a provision that no restraining order or injunction shall issue except after notice to the defendant and a hearing is had. This was the rule under the Federal statutes for many years, but it was subsequently repealed. In the classes of cases to which you refer I do not see any objection to the reenactment of that Federal statute. Indeed, I have taken occasion to say in public speeches that the power to issue injunctions ex parte has given rise to certain abuses and injustices to the laborers engaged in a peaceful strike. Men leave employment on a strike, counsel for the employer applies to a judge, and presents an affidavit averring fear of threatened violence and making such a case of the ex parte statement that the judge feels called upon to issue a temporary restraining order. The temporary restraining order is served upon all the strikers; they are not lawyers; their fears are aroused by the process with which they are not acquainted, and, although their purpose may have been entirely lawful, their common determination to carry through the strike is weakened by an order which they have never had an opportunity to question, and which is calculated to discourage their proceeding in their original purpose. To avoid this injustice I believe, as I have already said, that the Federal statute might well be made what it was originally, requiring notice and a hearing before an injunction issues."

"Third. In answer to your third question, it would seem that it is unnecessary to impose any limitation as to the time for a final hearing if before an injunction can issue at all notice and hearing must be given. The third question is relevant and proper only should the power of issuing ex parte injunctions be retained in the court. In such cases I should think it eminently proper that the statute should require the court issuing an ex parte injunction to give the person against whom the injunction was issued an opportunity to have a hearing thereof within a very short space of time, not to exceed, I should say, three or four days."

Gentlemen, will you heed the voice of the people? If not, the time will come when they will be accorded this relief. I don't know whether it will be at the hands of a Republican Administration or at the hands of a Democratic Administration, but as certain as we live such legislation will be enacted.

Mr. GAINES of Tennessee. Why was the law changed?

Mr. HENRY of Texas. The gentleman from Tennessee asks me why the old law was changed. I have investigated that and find that when the statutes were recodified it was left out, as it has been since stated, inadvertently, and that it was not done intentionally. Yet during all this time the omission has remained upon the statutes, although session after session bills have been introduced and Representatives have come before the Judiciary Committee and have asked for relief.

Mr. Chairman, this is manifestly a just proposition. Let me give you the precise language of the act of March 2, 1793, and show that I have only provided for reenacting the law as it once existed. The Clerk will read the section I have marked.

The Clerk read as follows:

"Sec. 5. And be it further enacted, That writs of ne exeat and of injunction may be granted by any judge of the Supreme Court in cases where they might be granted by the Supreme or a circuit court; (a) but no writ of ne exeat shall be granted unless a suit in equity be commenced, and satisfactory proof shall be made to the court or judge granting the same, that the defendant designs quickly to depart from the United States; nor shall a writ of injunction be granted to stay proceedings in any court of a State; nor shall such writ be granted in any case without reasonable previous notice to the adverse party, or his attorney, of the time and place of moving for the same."

Mr. HENRY of Texas. In order to parallel the old law with the present law, let the Clerk read section 719 of the Revised Statutes, which shows the provisions requiring notice to have been eliminated.

The Clerk read as follows:

"Sec. 719. (Injunctions.) Writs of injunction may be granted by any justice of the Supreme Court in cases where they might be granted by the Supreme Court; and by any judge of a circuit court in cases where they might be granted by such court. But no justice of the Supreme Court shall hear or allow any application for an injunction or restraining order in any cause pending in the circuit to which he is allotted, elsewhere than within such circuit or at such place outside of the same as the parties may stipulate in writing, except when it can not be heard by the circuit judge of the circuit or the district judge of the district. And an injunction shall not be issued by a district judge, as one of the judges of a circuit court, in any case where a party has had a reasonable time to apply to the circuit court for the writ; nor shall any injunction so issued by a district judge continue longer than to the circuit court next ensuing, unless so ordered by the circuit court."

Mr. HENRY of Texas. Mr. Chairman, there is no demand for radical legislation, nor are the people who have come before the Judiciary Committee asking for that kind. They would be satisfied with a reenactment of the statute that was law for seventy-nine years, which requires notice by a Federal judge before an injunction issues.

Mr. DRISCOLL. Will the gentleman yield for a question?

Mr. HENRY of Texas. Yes.

Mr. DRISCOLL. I heard the bill read. I want to ask the gentleman if he would in all cases insist that a notice be first served before an injunction or a restraining order be granted?

Mr. HENRY of Texas. I certainly would, because it was the law for seventy-nine years and worked well.

Mr. DRISCOLL. I will submit this proposition which came to me and of which I know, as I was the attorney in it. Suppose a man got title to a piece of land with a mortgage and the building is being removed

off the land, which is practically all the value there is in it. Say that the building is being moved on rollers, etc., would you say the man who held the mortgage, practically owning the land, should be required to go to a judge and have him issue notice and serve notice on the party before he could restrain him from moving off that building? Would that be right or fair?

Mr. HENRY of Texas. Every State in this Union has laws against stealing horses, cattle, or any other property, and so they have against such an offense as that and covering all kinds of trespasses against property and persons.

Mr. DRISCOLL. There are many other ways in which said damage can be done as well as in that, and I am simply referring to that—

Mr. HENRY of Texas. I think that for all these difficulties, Mr. Chairman, there is a statute in every State in the Union to cover such offenses, to cover breaches of the peace and riots and all such cases as the gentleman may imagine.

Mr. DRISCOLL. For instance, in the case like that there can be no redress against the people moving that building. The man who really owns it has to protect himself; he must get an injunction to stop the removal before the damage is done.

Mr. HENRY of Texas. If the sheriff could not overtake a house with a writ of sequestration, he ought to be impeached.

Mr. DRISCOLL. The question is one of ownership.

Mr. HENRY of Texas. He steals without anybody knowing it, and when the house is found it can be recaptured.

Mr. HUGHES of New Jersey. As I understand this bill, it provides notice. In a case of that man I imagine a half-an-hour notice to the man would be sufficient.

Mr. DRISCOLL. It may take some time to get notice and serve it and have a hearing and get an injunction.

Mr. HENRY of Texas. I am glad these gentlemen put these questions, because it brings before the House just the point I desire them to investigate this morning. The bill only provides for previous reasonable notice. Letters from a number of Federal judges have come to me approving this bill, stating that it is reasonable and manifestly just and ought to be passed; that star-chamber proceedings ought to be stopped, and blanket injunctions without notice ought to cease; that traps for trying, convicting, and imprisoning men should no longer be set. [Applause on the Democratic side.]

I have no attack to make upon the judiciary of this country, either the Federal or State judiciary. But legislation of this kind ought to be given the American people. Before anyone is enjoined in his property rights or his personal rights he ought at least to have notice from Federal tyrants. He ought to have the poor privilege of appearing, filing answer, and being heard. Equity rule 55 provides for and requires notice in all such cases, but for years Federal tyrants have ignored it, flagrantly violated it, and spat upon it. They utterly disregard this plain provision of our equity rule. Let us pass a simple mandatory statute requiring previous reasonable notice before these blanket injunctions, or any other kind, can be issued by a Federal judge. Let us as Representatives of the people rob them of the power of imprisoning good and innocent men with their midnight orders and injunctions without hearing the other side, which often has a complete defense. But your Speaker and his Committee on Rules will stand with their eyes shut and as firmly as the walls of this Capitol spurn this just demand for relief. I freely make that prediction. [Applause on the Democratic side.]

Mr. GAINES of Tennessee. Are not cases reported where parties have been punished for contempt of court who had no real notice of the injunction and who disobeyed it unwittingly?

Mr. HENRY of Texas. Yes; there have been such cases, where they have been hauled up before a Federal judge without any notice that they were even charged with an offense, and Federal judges have denied them the poor privilege of trial by jury and placed them in prison and outraged them in many ways. Such judicial outrages ought to cease in this country, regardless of whether the man is a laboring man or any other citizen of the Republic. [Applause on the Democratic side.]

Mr. LENAHAN. Is it not a fact the case cited by the gentleman from New York is an exceptional one—so exceptional that it should be given no consideration in the consideration of this question which you are arguing now?

Mr. HENRY of Texas. I quite agree with the gentleman and think the trouble in that case is so small that it should not weigh one instant against the immense amount of benefit that would arise from the enactment of a just statute like this. Of course the injury could be prevented by other civil remedies. There is a remedy for all trespasses against property and personal rights.

I have introduced another bill, one that passed the United States Senate a few years ago by unanimous vote, with the exception of Senator Hoar, of Massachusetts. He did not vote against the measure, but refrained from voting for it because he had not investigated it. I refer to the bill which passed that body providing for a trial by jury in cases of indirect contempt—that is, in cases of contempt committed out of the presence of the court. It passed the Senate and came to this body, and session after session, year after year, it has been reintroduced, and those entitled to the relief have been demanding its enactment; and yet it has never found its way out of the Judiciary Committee, and, in my humble judgment, will never do so until the American people command the Speaker of this House and that committee to take favorable action. [Applause on the Democratic side.]

Substantially the same bill has been introduced by me at several sessions of Congress. It is now pending before the Judiciary Committee, of which I have the honor to be a member. It divides contempts into two classes—direct contempts and indirect contempts. Where the contempt is committed in the presence of the judge there should be no trial by jury, but the judge himself should have the power to punish summarily such offenses. But where it is committed out of the presence of a court, where the offender does not know whether or not he has committed a contempt, he ought to have the privilege of calling for a jury. Aye, more. We ought to transfer the case from the jurisdiction of the Federal judge that issued the injunction, and let some other judge, without prejudice, try the offense.

Are you ready to enact such legislation as that? Is the Republican Speaker ready to give ear to the demands of the people who have called for this legislation year after year? You will give hearings this session, but no relief. Year after year they have come in a body and have demanded it of the Speaker, and he has frowned upon them. They will come again and make the same demands. I serve notice now that as long as I am in Congress this matter will be pressed until you act. These people would be satisfied with reasonable legislation if we would enact it. True, some of them want to go further. This House should not enact any law that is unreasonable, that is too radical, but we could certainly afford to reenact this old statute, and we agree that an offender in cases where an injunction has been issued

without notice shall be entitled to the constitutional right of trial by jury. Jefferson said, and truly, that the Federal judges are "the sappers and miners, gradually undermining the foundation of this Government;" and he never stated a truer proposition.

Mr. Chairman, we have seen year after year one right after another taken from the American people, from the respective States of this Union by the Federal judiciary. When a power is conferred upon them they clamor for more. I know that in some quarters it is not fashionable to talk about State's rights. I know that it is not fashionable to denounce tyrannical Federal judges. And I do not criticize the just ones. The Constitution does not commend itself to some gentlemen. But we observe that only a few days ago the Supreme Court again decided a measure which passed through this House was unconstitutional. This reminded us that we still have a Constitution to govern us in our actions, and may go only so far in our legislative actions.

There is another bill introduced by me touching this subject—that no Federal judge shall issue an injunction or restraining order against a State officer or enjoin a State statute. That is to say, that whenever a State like Virginia, or North Carolina, or Alabama, or Missouri, or Pennsylvania, or any other State has enacted a solemn statute, there shall be some presumption in favor of the justice and validity of the statute, and Federal judges shall cease to enjoin them, at least "before final judgment on the merits of the case."

Now, gentlemen, we can afford to go that far. I would even go further, if I had my way. I would provide that where a corporation or an individual attacks the validity of a State statute they should raise that defense in the courts of the State, and if they have a Federal question involved in their litigation the case should go by writ of error from the court of last resort of the State to the Supreme Court of the United States. Let us not deprive any citizen or any corporation in this broad land of the privilege of going into the Federal courts and adjudicating their rights. Let us not take from them any right that is guaranteed by the Constitution and the statutes. Throw wide the doors of the Federal courts and the State courts as well to every citizen and corporation who has a right to assert. But, Mr. Chairman, when a Federal judge can enjoin a solemn act of a State acting within its inherent sovereignty the time has come when we should have legislation preventing such exercise of Federal power. Not many months ago when a railroad corporation in Missouri applied to Judge Smith McPherson to enjoin the 2-cent passenger-fare law of the State of Missouri he said:

"Gentlemen, the solemn enactments of the State of Missouri are entitled to some consideration, and I will not enjoin the enforcement of this State law, restraining the officers of the sovereign State of Missouri. I will allow it to be in operation for some time and see if it confiscates your property, as you say."

[Loud applause.]

Such is the true doctrine that should actuate a Federal judge. But it finds lodgment in the breasts of very few.

Mr. HACKNEY. I wish to make the suggestion that such order was made against the railroad companies a year ago, and they have made no application to have the injunction issue.

Mr. HENRY of Texas. I am glad the gentleman has made that statement, and desire to say that I understand the railroads have found remunerative business in carrying passengers at the rate of 2 cents per mile, although they swore in their ex parte affidavit that their property was being confiscated. [Applause.] Mr. Chairman, give the other side a hearing, give them an opportunity, and whenever a State in this Union passes a law, the presumption should be that it is acting within the scope of its constitutional authority and in accordance with the Constitution of the United States. [Applause.] For the just Federal judge who respects his oath and the Constitution, who recognizes the rights of the States that have not been surrendered to any other power, who believes that the people of the States have retained some powers, I have a wholesome respect. But I fail to see the goodness and patriotism of those who would spit upon State statutes, as has been done in Virginia, North Carolina, and Alabama and other States. [Applause.]

Let me call your attention to another fact. In many instances where corporations have taken their cases to the Supreme Court of the United States, that court has held the State statutes constitutional and they should not have been enjoined.

Mr. SHACKLEFORD. If the gentleman will allow me, is not the judge to whom the gentleman refers as denying the issue of some of these oppressive and improvident injunctions the very judge that issued an injunction suspending the laws of the State of Missouri in reference to freight rates?

Mr. HENRY of Texas. Well, he issued some, but since that he has reformed to some extent, because his last order is subsequent to the one alluded to by the gentleman.

Gentlemen, I wish there were time to go into these subjects further, but I am limited this morning. I only took the floor for the purpose of calling the attention of the American people to these things, and to say that those interested in such statutes are appealing for legislation at this session of Congress. They may appeal and appeal again to the majority of the committee of which I am a member, where I and other Democrats as well are ready to report such legislation at any time, but they will find no sympathy there. Such legislation will come. We will all live to see the time when it will be law. There will be jury trial in contempt cases. The American people will have it, and, though justice may be tardy, it is certain. The power of Federal judges will be curbed. The period is rapidly approaching when those whom you choose to call the laboring people will come into their rights. They are asking for nothing more than that which should be accorded to every honest and patriotic American citizen. Let me warn the Republican side of this House that while these people have patiently waited while demanding relief from you, they have done so for the last time. They will do so no longer. The party which I represent is ready to heed their just demands. We are ready to join hands with you and be just. Help us to command the Speaker in his high place, surrounded by his arbitrary Committee on Rules, and these just measures will be speedily presented to the American people as solemn statutory enactments. [Loud applause.]

In addition to these remarks, several short addresses were delivered by me urging the Republican party to join with the Democrats and pass the bill, or something substantially like the one herein above set out. The Republican party has turned a deaf ear to all such overtures and has studiously denied the passage of any sort of an injunction law at this session of Congress and the preceding ones, during all of which their attention has

been directed to the subject-matter. The Democratic convention in the State of Nebraska this year inserted a plank in its platform vigorously indorsing, in substance, the injunction bill introduced by me. This would indicate that the probable nominee of the Democratic party for the Presidency approves such a law. His home State takes a firm stand in its Democratic convention.

On July 13, 1894, Circuit Judge Taft rendered the following opinion in the case of *Thomas v. Cincinnati (N. O. & T. P. Rwy. Co.)*, which discusses at great length the proposition involved in the above bill and one hereinafter to be set out:

TAFT, Circuit Judge.

Samuel M. Felton was appointed receiver in the above-entitled cause March 18, 1893, and has ever since been engaged, under the order of the court, in operating the railroad of the Cincinnati, New Orleans and Texas Pacific Railway Company, which is more commonly known as the "Cincinnati Southern Railroad." On Monday, July 2, 1894, he filed an intervening petition in the original action, in which he stated that during the previous week and at the time of filing the petition he was greatly impeded in the operation of the road by a strike of his employees and of the employees of other railroads in the city of Cincinnati, who were prevented from receiving from him and delivering to him freight carried or to be carried over his road; that said strike was the result of a conspiracy between one F. W. Phelan, now in Cincinnati, and one Eugene V. Debs and others, to tie up the road operated, as the said conspirators well knew, by the petitioner as receiver, and other roads in the Western States of the United States, until certain demands or alleged grievance of certain persons not in the employ of the receiver or of any other railroad of the United States were acceded to by persons in no manner connected with the management of any railroad of the United States; that the demand of the employees of one George M. Pullman, or of the Pullman Palace Car Company, at Pullman, Ill., for higher wages was refused, whereupon said Debs, Phelan, and others, members of an organization known as the "American Railway Union," combined and conspired with each other and with sundry persons, who became members of the organization for the purpose, to compel the Pullman Company to comply with the demands of its employees, and that for the purpose of injuring the Pullman Company, and of thereby forcing from it the concession demanded, Debs, Phelan, and the others named had maliciously conspired and undertaken to prevent the receiver of this court and the owners of other railroads from using Pullman cars in operating their roads, though they are under contract to do so; that in pursuance of said conspiracy, Phelan, a resident of Oregon, came to Cincinnati a week before the filing of the petition and set on foot and incited a strike among the employees of the receiver and of other railroad companies whose lines run into Cincinnati; that on June 27 and at other times and places Phelan made inflammatory speeches to such employees, well knowing many of them to be employees of the receiver, in which he urged them all to quit the service of the receiver and the other railroads of the city, and to tie them all up, and to prevent others from taking their places, by persuasion, if possible, by clubbing, if necessary; that said Phelan was still in the city, directing and continuing the strike and interfering with the receiver in the operation of the road; that as a result of the conspiracy and strike the receiver had been obliged at great expense to secure and maintain the protection of armed men for his employees, and that all of the foregoing constituted a contempt of this court and a ground both for committing Phelan and for enjoining him from a continuance of said acts.

Upon the filing of the petition an attachment was issued for Phelan, the contemner, and on the morning of the 3d of July he was arrested and brought before the court. He was admitted to bail, and at the same time was enjoined by the order of the court from, either as an individual or in combination with others, inciting, encouraging, ordering, or in any other manner causing the employees of the receiver to leave his employ with intent to obstruct the operation of his road, and thereby to compel him not to fulfill his contract and carry Pullman cars. On Thursday, July 5, the motion of the receiver for Phelan's commitment came on to be heard, and a week has since been taken up in the giving of testimony and argument.

I propose first to run over the evidence, as briefly as may be, and determine the facts, and then to consider the law applicable to them. The American Railway Union is an organization of railway employees, to which are eligible as members all persons in the service of railways below a certain rank. It was organized in June, 1893. On May 11, 1894, at Pullman, Ill., the employees of the Pullman Palace Car Company, engaged in manufacturing railway cars of all kinds, including sleeping cars, left the company's employ because of its refusal to restore wages which had been reduced during the preceding year, and the works were then closed. On June 11, 1894, the general convention of the American Railway Union met at Chicago, and decided that the American Railway Union would take measures to compel the Pullman Company to resume business and to reemploy its employees, who had left its service, on terms to be fixed by arbitration. It does not appear that at this time the Pullman Company's employees were members of the American Railway Union, or eligible as such. At the June convention of 1894 there were present representatives from 450 lodges of the union, and the number of members, as estimated at that time, was 250,000. It is said that the local unions had voted for the Pullman boycott before the convention met. The question where the boycott originated is not very material, but it may be said that, as the Pullman strike occurred but a month before the convention, and as it had been deemed necessary by the union to send men all over the country to explain to its members the merits of the Pullman controversy during the boycott, it is obvious that the boycott had its real origin in the union convention at Chicago, where the subject was brought before it, presumably by its board of directors.

The chief governing body of the union is a board of directors, which elects a president, vice-president, and secretary, who are the chief executive officers of the union. Eugene V. Debs is, and has been since its organization, the president. Section 6 of the constitution of the union, as adopted in June, 1893, provides that "the board is empowered to provide such rules, issue such orders, and adopt such measures as may be required to carry out the objects of the order, provided that no action shall be taken that conflicts with this constitution." By section 11 of the same instrument the president's powers are thus described:

"It shall be the duty of the president to preside over the meetings of the board and the quadrennial meetings of the general union. He

shall at each annual meeting of the board and at each quadrennial meeting of the general union submit a report of the transactions of his office and make such recommendations as he may deem necessary to the welfare of the order. He shall enforce the laws of the order, sign all charters, circulars, reports, and other documents requiring authentication. He shall decide all questions and appeals, which decisions shall be final unless otherwise ordered by the board. He may, with the concurrence of the board, deputize any member to perform any required service, issue dispensations not inconsistent with the constitution or regulations of the order, and perform such other duties as his office may impose, and he shall receive such compensation for his services as may be determined at the time of his election.

Phelan, when on the stand, said that these were sections of the old constitution, but that he understood the constitution had been generally changed. He would not say that extensive or material changes had been made, but simply that general changes had been effected. He was in attendance as a delegate only during the last five days of the convention, and this is his explanation for not knowing what the changes were. Phelan's answers on this subject had really no effect to show that the foregoing sections are not still in force, but simply illustrated the evasiveness and verbal quibbling to which the witness was willing to continually resort under examination. It is certainly strange that if he was here, as he says, as a representative one had been made, in the constitution under which he was initiating men into the union and was receiving orders from his superior officers. We shall see as we progress that the two sections of the old constitution are still in force, if we can judge at all from the actual authority exercised by the officers of the union during the present boycott.

The plan of the boycott, as shown by the evidence, was this: Pullman cars are used on a large majority of the railways of the country. The members of the American Railway Union whose duty it was to handle Pullman cars on such railways were to refuse to do so, with the hope that the railway companies, fearing a strike, would decline further to haul them in their trains and inflict a great pecuniary injury upon the Pullman Company. In case the railway companies failed to yield to the demand, every effort was to be made to tie up and cripple the doing of any business whatever by them, and particular attention was to be directed to the freight traffic, which it was known was their chief source of revenue. As the lodges of the American Railway Union extended from the Allegheny Mountains to the Pacific coast, it will be seen that it was contemplated by those engaged in carrying out this plan that, in case of a refusal of the railway companies to join the union in its attack upon the Pullman Company, there should be a paralysis of all railway traffic of every kind throughout that vast territory traversed by lines using Pullman cars. It was to be accomplished, not only by the then members of the union, but also by procuring, through persuasion and appeal, all employees not members either to join the union or to strike without joining, by guaranteeing that, if they would strike, the union would not allow one of its members to return to work until they also were restored. I shall allude again to the gigantic character of this combination. For my present purpose it is sufficient to say that on Sunday, June 24, Phelan came to Cincinnati as the authorized representative of the president and board of directors of the union to enforce and carry out the contemplated boycott and paralysis of business on all railway lines running into Cincinnati which used Pullman cars until they should cease to use them.

I am aware that Phelan denies that such were his authority and instructions, but, as in the case of his answers in respect to the Constitution and its provisions, his denials do not, in view of the overwhelming proof of the circumstances not denied, and his previous admissions not denied, show the fact to be otherwise, but only decrease the reliance which can be placed on any statement made by him in this case. He says that he came here with no direction except to visit the employees of the Pullman Company at a branch factory at Ludlow, to explain to them the merits of the controversy between their employer and their fellows at Chicago, and then, if they struck, to see that they appointed committees who should keep order among them and look after the sick. At another time he says he was directed to be in Cincinnati during the boycott, but he strenuously denies that he was here for the purpose of laying on the boycott or inciting a general strike. He would have the court believe that what occurred was wholly spontaneous and not through his agency, and that his business was, if there should be such coincidental spontaneity resulting in a strike, to prevent disorder and to look after the sick. This hardly accords with his first telegram to Debs, his chief officer, dated noon, Tuesday, June 26, as follows: "Pay no attention to press reports. To be effective, was compelled to postpone action until 7, Wednesday morning." On Sunday, June 24, after Phelan's explanation of the Pullman troubles, the Pullman employees at Ludlow determined to strike, and did so Monday morning at 7 o'clock. Phelan says he did not advise them to strike, but just explained the situation, and then a strike followed. When he had explained, and organized committees among the strikers, after the strike had occurred, through no agency of his, his mission was ended so far as his instructions went. And yet we find him on Tuesday, June 26, at 12 o'clock noon, telegraphing his chief that he was obliged to postpone action until Wednesday morning at 7, in order to be effective. Now, what action was this which he hoped to make effective? Can anyone doubt for an instant that the action thus foreshadowed was that referred to in Phelan's dispatch to Debs of June 28 following, when he said: "The tie up is successful?" On Tuesday night, June 26, there was a meeting of all the switchmen of Cincinnati at Wuebler's Hall. There is no direct evidence how this meeting was called, but the circumstances leave no doubt. Phelan, having brought out the Pullman men, then set to work upon the railway men, and hence the meeting. The telegram of June 26 indicates that Debs expected him to have the meeting and action earlier, but that he was not able to secure an attendance at any earlier meeting sufficiently general to make the action taken effective. Indeed, when the Tuesday night meeting was held it was found that action must be still further delayed, and a second meeting for Wednesday night was called. At both of these meetings Phelan explained and discussed the Pullman trouble, and announced the Pullman boycott.

Now, what was his object? Was it for the purpose of inducing the men whom he addressed, and others not present, whom he urged them to talk to, to demand of the railway companies assistance in boycotting Pullman, and, on refusal, to tie them up, or was it simply for their general information? He repeats upon the stand, with much emphasis, that he at no time advised any man to strike. What was he doing? His speeches were all directed to that end, and, even if he did not use the word "advise," his conduct was exactly the same as if he had. His trifling with the truth, and his attempt to seek shelter again behind verbal quibbles, simply disparages him as a witness, without concealing the facts. Now, what was done at these meetings of

Tuesday and Wednesday night after or during Phelan's speeches? A city committee was appointed, consisting of one employee of each of the great railroads entering the city. This committee Phelan continually refers to in his testimony as "my committee," and the term was properly used, for it seems to have spent all of its time in his company and doing his bidding. On this committee was J. Madison, a switchman in the receiver's employ. The first duty of each member of the committee was, on Wednesday, June 27, or on the next day, to notify the yard master of his road that the switchmen and members of the American Railway Union would not handle Pullman cars, because a boycott had been laid on them. Madison duly notified McCarty, the yard master of the receiver. The necessary result was that three switchmen of the Cincinnati, Hamilton and Dayton Railroad were discharged or relieved of duty on the afternoon of Thursday, June 28, and within six hours a general strike of all the switchmen and yard men, including yard engineers and firemen, on all the roads coming into Cincinnati, took place. This was exactly in accordance with the plan which Phelan had outlined to Westcott, a reporter for the Enquirer, on Tuesday or Wednesday before the strike, in a conversation which he does not deny. Beginning with Tuesday night, June 26, Phelan has made speeches every night since, in which he has continued to explain the Pullman troubles to audiences of railroad men, and has read telegrams from Debs of a character calculated to incite and encourage all railway employees to quit their places, to assist in the Pullman boycott. He says he has made as many as twenty speeches. Two, at least, were made at Ludlow, Ky., a railroad town, the inhabitants of which are, or were, many of them, employees of the receiver. It is in evidence that when the meetings began the number of receiver's employees who were members of the American Railway Union was 150. And yet Phelan denies that he is in any sense responsible for the strike of the receiver's employees, or of those of any other road in the town, or for the paralysis of business which followed.

It is marvelous that Phelan can assume such a position in view of the circumstances and his own declaration. Take the evidence of Westcott, the Enquirer reporter, a witness evidently of much experience in acquiring and detailing accurate information, who has no motive to misrepresent Phelan in any way. He was assigned to report the strike, and seems to have found Phelan his best source of information. He made notes of everything at the time and prepared them afterwards for publication. Phelan has not attempted to deny anything he says. Westcott testifies that Phelan told him before the strike that his main object in coming here was to enforce a boycott against Pullman cars by tying up every road in Cincinnati for the American Railway Union; that he frequently and constantly repeated the statement that they intended to tie up every road in the town and keep them tied up until they refused to handle Pullman cars; that after the strike on Thursday he said he had most of the American Railway Union men out in Cincinnati, Ludlow, and Covington, and that those who were not out would be out the next morning; that after his arrest he explained that his course had been to tie up the freight trains, and not so much to stop passenger trains, because the money was in the freight business. Schaff, Gibson, and Bender, officers of the Big Four Railroad, testified that Phelan said to them on Thursday afternoon, when they met him for the purpose of seeing whether the "embargo," as Phelan and Debs expressed it, could not be lifted from the Big Four, because it was a Wagner sleeping car line, that he proposed to tie up every line in town, and was in a hurry, because he must go over and tie up the Panhandle and the Chesapeake and Ohio before sunset, and that, just to show Schaff what he could do, he had called out some more of the Big Four employees. Phelan and those members of the city committee who accompanied him to this meeting deny that this was said, but their denial shows nothing save that their loyalty to their chief is greater than their regard for the sanctity of their oaths. Westcott, the Enquirer reporter, talked with Phelan about this Schaff interview, and Phelan said that as Schaff tried to "bluff" him he had called out some more of his men to show that he had no hard feelings, and when Westcott expressed surprise at that way of showing friendliness, Phelan said that was the way the American Railway Union showed its friendliness in a fight. On June 28, the day of the strike, Debs telegraphed Phelan to let the Big Four alone, if not handling Pullmans, to which Phelan replied: "I can not keep others out if Big Four is excepted. The rest are emphatic on all together or none. The tie-up is successful. Once more will Big Four be let alone." If Phelan was not the chief agent and inciter of the general tie-up in Cincinnati, he has been most unfortunate in the use of the language in his telegrams. What he here said necessarily implied that he had induced all the employees to go out and was trying to keep them out, and that they threatened to return if the Big Four line was exempted from the tie-up.

What I have said of the credibility of Phelan in reference to his agency in enforcing the boycott and tie up applies with equal force to nearly all his witnesses, especially to those from his city committee. They would have the court believe that Phelan was merely a peace-maker in this community with no responsibility for the strike and no purpose to incite it or to continue it. Take Bateman. He was a switchman of the receiver and on the subcommittee of the road. Debs had been applied to by the president of the stock yards to allow the cattle cars to be unloaded, and Debs—presumably in the exercise of the dispensing power given him by the constitution—had directed Phelan to have this done if no injury to the cause resulted. Pending this matter, Westcott was inquiring into the outcome and applied to Bateman as the subcommittee for information. Westcott says Bateman told him the stock matter was in Phelan's hands and that the cattle could not be handled without Phelan's orders; that "whatever Phelan says goes." Phelan told Westcott substantially the same thing, and the telegram from Phelan to Debs is in evidence in which he says, "I am having stock unloaded." And yet Bateman denies his conversation with Westcott, and another member of the city committee says that Phelan had nothing to do with it and only applauded when it was done. Every committeeman who came upon the stand (and they made the majority of the contemner's witnesses) tried to give the impression that they were not acting under Phelan's orders, and so does Phelan, and yet his complete command is so apparent that it can not escape anyone. When Phelan forgot himself he used such expressions as "my committee," "I instructed them to do so and so," and occasionally such telltale words would creep into the evidence of all his witnesses. Another kind of statement indulged in by Phelan and all of the committee was to the effect that these committees were organized solely for the purpose of keeping the peace and assisting the sick, providing for parades, and hiring halls; but not one word is said about the efforts of the committee to induce men to leave the employ of the various railroads, and yet, if Phelan's injunction was followed, persuasion, explanation, and argument were to be used with all who did not join the cause at once. The committee and subcommittees were seventy-five in number. Phelan told Westcott at one time that he had to visit

railroad yards with his committee, and at another time that his committee were out visiting the various yards to see the day crews. Evidently they were visiting the men who remained still at work for the purpose of inducing them to quit; and this, though not mentioned by a single witness for the defense, was doubtless one of the chief reasons for their appointment.

With the intention of showing that he has been guilty of no interference with the compliance with the orders of this court, Phelan said upon the stand that he knew the Southern Railroad was operated by a receiver appointed by this court, and was therefore anxious to avoid interference with its operation, and prevented the calling out of the coach cleaners in the Ludlow yards on this account. Moreover, Buelte, of his city committee, testifies that the Cincinnati Southern was especially excepted from the operation of the boycott notice because it was in the hands of the court. And yet Tuesday night, in the preparation for the boycott and strike which was to be put into effect on Thursday following, through the action of committees in respect to which Phelan himself admits that he made suggestions, and which were appointed under his supervising eye, a switchman from the receiver's yard was made the agent of the American Railway Union and its allies to notify the receiver's yard master of the boycott. The notice was given and the strike occurred earlier among the receiver's employees than among those on some of the other roads. Phelan told Westcott on Thursday afternoon that the men were all out on the Southern, and yet this was the road he wished to save from the boycott because it was in the hands of the court. What did he visit Ludlow for on Friday, and address a meeting of railway employees. If he intended to be careful about interfering with the operation of the Southern Railroad by the court? There are no railway employees in Ludlow but those of the receiver. What was Bateman, the committeeman, doing in that place in attendance at two other meetings, if the respect of Phelan and his committee for the court's orders was so great? The purpose with reference to the Southern, as with respect to every other road, is so clearly shown by the telegrams between Debs and Phelan, that it could hardly be more certain if Phelan had admitted it.

Debs to Phelan.

JUNE 27, 1894.

Indications are that all Western lines will be tied up solidly before sunset to-day.

Phelan to Debs.

JUNE 28, 1894.

I can not keep others out if Big Four is excepted. The rest are emphatic on all together or none. The tie-up is successful.

Debs to Phelan.

JUNE 29, 1894.

About twenty-five lines now paralyzed. More following. Tremendous blockade.

Debs to Phelan.

JULY 2, 1894.

Knock it to them as hard as possible. Keep Big Four out, and help get them out at other places.

Phelan to Debs.

JULY 2, 1894.

Going out all around. Firemen a unit. Will soon be an avalanche to us. Working outside points.

Debs to Phelan.

JULY 2, 1894.

Hold Big Four solid. Going out to-day at every point. Gaining ground rapidly.

Debs to Phelan.

JULY 2, 1894.

Advices from all points show our position strengthened. Baltimore and Ohio, Panhandle, Big Four, Lake Shore, Erie, Grand Trunk, Michigan Central are now in the fight. Take measures to paralyze all those that enter Cincinnati. Not a wheel turning on Grand Trunk between here and Canadian line.

I have now gone over, more at length than necessary, perhaps, the evidence concerning Phelan's connection with the boycott and strike, his purpose in coming to Cincinnati, and what he did here, and I find the fact to be that he came here deputed by Debs, president of the American Railway Union and its board of directors, to enforce a boycott against the cars of the Pullman Company by inciting all the employees of the railroads running into Cincinnati to leave their employ, and thereby to tie up every road and paralyze all traffic of every kind until all the railroads should consent not to carry Pullman cars in their trains; and that his plan and his actions were directed as much against the Cincinnati Southern Road, in the hands of the receiver of this court, as against every other road in the city, and that he knew when he inaugurated the boycott on the Southern Road and incited the receiver's employees to strike that the road was in the hands of the receiver and was being operated under the order of this court.

We come now to consider the question of fact whether Phelan in any of his speeches advised intimidation, threats, or violence in carrying out the boycott. He is charged with having said, on Thursday night, June 28, at the meeting at West End Turner Hall, that the strike was then declared on; that it was the duty of every American Railway Union man to quit work, to induce and coax other men to go out, and, if this was not successful, to take the club and knock them out. He is charged with having said on another occasion during the same week that the committees should be appointed to persuade men to go out; that if they would not go out, then the committee should get around behind and kick them out. The meetings at which these remarks were said to have been made were behind closed doors, and no newspaper reporters were permitted to be present. Only American Railway Union men and railroad employees made up the audience. The first charge is supported by the evidence of one J. O. Sweeney, a timekeeper on the Big Four Railway, and he is, so far as the evidence shows, a wholly disinterested witness, and by the evidence of one E. W. Dormer, a witness whose credibility I shall consider later. They both say that the remark elicited much applause, and that shortly before or after Phelan advised them to be law-abiding citizens. To this charge Phelan makes an explanatory answer as follows:

"I told nobody to take the club, and do anything with anybody. I, upon several occasions in this city, have used about that one expression about in the same line with that, the substance of which is about this: I have told the boys—different ones—there was a good deal of demands upon me to go around and see everybody and explain this Pullman trouble. I was worried to death. I said, 'You can constitute yourself a committee of one, each of you, and go to the

people—the community in which you live. Go to the boys—I mean their acquaintances—and explain to them this trouble. Talk to them about it. Beseech them to listen, because I want them to get the idea before they would condemn us about it; but do not take a club and knock them in the head about it.' The peculiarity of the speech elicited applause, but I am afraid it was taken the other way."

With reference to the second charge, it is supported by the evidence of E. W. Dormer, who testified that he heard Phelan say it. An account of the speech in which it was said to have occurred was published in the Cincinnati Enquirer of June 29, and read to Phelan by counsel for the receiver. It was as follows:

"Mr. Phelan addressed the men familiarly. 'He who is not with us in this struggle is against us, and will be so regarded.' Then he spoke in scathing tones of the Pullmans. 'We want no weak-kneed individuals with us; we want warriors.' Mr. Phelan then launched into an eloquent denunciation of Grand Master Arthur of the order of locomotive engineers. 'He has not the courage to declare a strike.' So far Phelan admitted the truth of the article. The article proceeded:

"When this strike is declared, as it will be before we go home to-night, the members of the American Railway Union in San Francisco, Oregon, Chicago, and all over the great West will stand by you to the bitter end."

As to this he said he did not recollect it, though he would not deny it. "It might have accidentally slipped out," he said. The article, after stating the passage of a resolution not to go back to work until the strike was declared off, which resolution Phelan said upon the stand that he never heard of, proceeded:

"Mr. Phelan then resumed: 'We must stand solidly together in this hour of trial, and if anybody returns to work, or takes the place of strikers, seize them by the back of the neck and throw them out.'"

Upon this passage the examination was as follows:

"Q. Did you say that?—A. I don't recollect.

"Q. Will you swear to the court you did not say it?—A. I don't recollect of saying it.

"Q. Will you swear you did not?—A. I don't recollect of saying it. "Q. That is as much as you will say?—A. That is as much as I will say. I will state this, however, if you want any qualification on it.

"Q. I don't want any qualification.—A. If I did say it, I meant to throw them out of the organization."

This was not a denial of the remark at all, but a statement that it meant something different from what it purported to mean. Phelan said several times in his examination that in a speech remarks slip out that one does not intend. Certainly, if he did not intend personal intimidation by this remark, it was an unfortunate one.

An attack is made on the credibility of Dormer. He was a detective in the employ of Field's Detective Agency, of St. Louis, and in the employ of the receiver, ostensibly as a brakeman at first and afterwards a striker, under the name of Williams. His character has not been attacked otherwise than by showing an assumption of a false appearance and name. There is evidence tending to show a willingness on his part to involve some of his fellow-strikers in a trespass on the company's property, but I am bound to say that his accuracy as to everything else that occurred at the meetings which he attended has been borne out by the evidence of Phelan and his witnesses as far as they are willing to recollect. Were the charges as to Phelan's language dependent on Dormer's statement alone, I should not give them sufficient weight to overcome positive denials from Phelan; but the difficulty with Phelan's case is that he does not really and positively deny the statement of Dormer, but seeks to give the language another meaning, which it can not bear. He contends in respect to each of the charges of inciting violence that his meaning was misunderstood. Had his evidence and that of his committee upon the main issue in this case been most evasive and wanting in sincerity, I should still be inclined to give Phelan's explanation credit, and give him the benefit of a doubt on this point; but his whole case breaks down with the attempt of himself and his followers to conceal and pervert the most apparent fact in the case, namely, that he instigated, engineered, and controlled the boycott and strike at Cincinnati from beginning to end. After this his denials and evasions can be given little weight. It is doubtless true that Phelan did tell his men to be law-abiding, that he did tell them to stay out of saloons and off the company's property, in public, and that he did not wish his followers to subject themselves to the punishment of the law. Westcott testifies as to this, and so do Dormer and Sweeney, and this has doubtless prevented many open assaults and trespasses. But I do not doubt that at the same time he encouraged in them a vicious and malicious disposition toward those of their fellows who did not join with them in this boycott, by expressions of the kind testified to by Sweeney and Dormer, and most evasively denied by Phelan, slyly slipped in where they could be given a double meaning if questioned.

The expressions were for the purpose of bringing into operation that secret terrorism which is so effective for discouraging new men from filling strikers' places, and which is so hard to prove in a court of justice unless it results in open assault. That Phelan openly discouraged conflict with the law is to his credit as a strike organizer, for he wished public sympathy; but that he wished the aid of secret terrorism, which is as unlawful, seems to me to be established. The town of Ludlow has been in such a state that the receiver's employees who live there have been in constant fear. Two engineers have left town and moved their families away. The receiver has boarded employees within guarded precincts. It has been shown that storekeepers of Ludlow have refused to sell goods to receiver's employees because they were boycotted. Threats have been made and an assault. Insulting and aggressive language has been used to receiver's employees on both sides of the river. Threats are hard to prove. If effective, they not only keep away the employees from service, but the witness from the stand. The receiver has been obliged to keep a large force of the United States deputy marshals on both sides of the river and on his engines and trains in order to induce his employees, new and old, to remain in his service. I can not presume that such protection was invoked by the employees because of groundless fears. The question of fact whether Phelan used expressions in his speeches behind closed doors to the employees of the receiver which were calculated to induce intimidation is not of primary importance in this case, for, as will hereafter be seen, his interference with the operation of the Southern Road by the instigation and maintenance of the strike against the road was the main contempt of this court. The suggestions leading to intimidations would only be aggravations of the contempt; that is all.

Section 725, Revised Statutes of the United States, provides that:

"The said courts (i. e., courts of the United States) shall have power to impose and administer all necessary oaths and to punish by

fine or imprisonment, at the discretion of the courts, contempt of their authority: *Provided*, That such power to punish such contempts shall not be construed to extend to any cases except the misbehavior of any person in their presence or so near thereto as to obstruct the officers of said court in their official transaction and the disobedience for resistance by any such officer, or by any party, juror, witness, or other person, to any lawful writ, process, order, rule, decree, or command of the said courts."

It has been held by Judge Drummond, in *Secor v. Railroad Co.* (7 Biss. 513, Fed. Cas. No. 12605), that any unlawful interference with the operation of a road in the hands of a receiver is a contempt of the court because it is a disobedience or resistance by a person to a lawful order of the court. This view has been taken by Judges Brewer and Treat in *United States v. Kane* (23 Fed., 748) and in *re Doolittle* (Id., 544), and by Judge Pardee in *re Higgins* (27 Fed., 443). These authorities show that any willful attempt by anyone, with knowledge that the road is in the hands of the court, to prevent or impede the receiver from complying with the order of the court in running the road, when the attempt is unlawful and as between private individuals would give the right of action for damages, is a contempt of the order of the court. The rights of the receiver with reference to his business in conducting the railroad under the order of the court are not different in any respect from those of a private railway corporation. The only difference is in the remedy which the courts will apply to prevent or to punish a violation of them when such a violation prevents or impedes the operation of the road and is intended to do so.

There is no doubt that Phelan intended to prevent utterly the operation of the Southern road by calling out the receiver's employees. He wished thus to paralyze his business. He did the trust a very substantial injury by stopping all traffic for a time, by making it necessary for the receiver to pay heavy expenses for unusual police protection, and by putting him to much trouble and expense in securing new employees. Now, if the receiver were a private corporation, could he recover damages for the injury thus inflicted on the business of the road? A malicious or unlawful interference with the business of another by inducing his employees to leave his service is an actionable wrong and subjects the offender to liability for the loss occasioned. In *Walker v. Cronin* (107 Mass., 555) it was held that a count in a declaration which alleged that a plaintiff was a manufacturer of shoes and for the prosecution of his business it was necessary for him to employ many shoemakers; that the defendants, well knowing this, did maliciously and without justifiable cause molest him in carrying on his said business with the unlawful purpose of preventing him from carrying it on, and willfully inducing many shoemakers who were in his employ and others who were about to enter it to abandon it without his consent and against his will; and that thereby the plaintiff lost their services and profits and advantages, and was put to great expense to procure other suitable workmen, and was otherwise injured in his business, stated a good cause of action. (See also *Sherry v. Perkins*, 147 Mass., 212, 17 N. E., 307.)

The real question, therefore, is whether the act of Phelan in instigating and inciting the employees of the receiver to leave his employ was without lawful excuse, and therefore malicious. The question is not whether such an act would subject Phelan to punishment by indictment and trial under the criminal laws, but whether the act was unlawful in the sense that he could be made to pay damages for the loss occasioned. Of course if the act would subject him to punishment for an indictable misdemeanor and crime, a fortiori would the act be unlawful; but his act may be a contempt without being a crime.

Now, it may be conceded in the outset that the employees of the receiver had the right to organize into or to join a labor union which should take joint action as to their terms of employment. It is of benefit to them and to the public that laborers should unite in their common interests and for lawful purposes. They have labor to sell. If they stand together they are often able, all of them, to command better prices for their labor than when dealing singly with rich employers, because the necessities of the single employee may compel him to accept any terms offered him. The accumulation of a fund for the support of those who feel that the wages offered are below the market prices is one of the legitimate objects of such an organization. They have the right to appoint officers who shall advise them as to the course to be taken by them in their relations with their employer. They may unite with other unions. The officers they appoint, or any other person to whom they choose to listen, may advise them as to the proper course to be taken by them in regard to their employment, or, if they choose to repose such authority in anyone, may order them, on pain of expulsion from their union, peaceably to leave the employ of their employers because any of the terms of their employment are unsatisfactory. It follows, therefore (to give an illustration which will be understood), that if Phelan had come to this city when the receiver reduced the wages of his employees by 10 per cent and had urged a peaceable strike and had succeeded in maintaining one the loss to the business of the receiver would not be grounds for recovering damages, and Phelan would not have been liable to contempt even if the strike much impeded the operation of the road under the order of the court. His action in giving the advice, or issuing an order based on unsatisfactory terms of employment, would have been entirely lawful. But his coming here and his advice to the Southern Railway employees, or to the employees of other roads, to quit, had nothing to do with their terms of employment. They were not dissatisfied with their service or with their pay. Phelan came to Cincinnati to carry out the purpose of a combination of men, and his act in inciting the employees of all Cincinnati roads to quit service was part of that combination. If the combination was unlawful, then every act in pursuance of it was unlawful, and his instigation of the strike would be an unlawful wrong done by him to every railway company in the city, for which they can recover damages, and for which, so far as his acts affected the Southern Railway Company, he is in contempt of this court.

Now, what was the combination and its legal character? Was it an unlawful conspiracy? I do not mean by this an indictable conspiracy, because that depends on the statute; but was it a conspiracy at common law? If it was, then injury inflicted would be without legal justification, and malicious. A conspiracy is a combination of two or more persons, by concerted action, to accomplish a criminal or unlawful purpose, or some purpose not in itself criminal or unlawful, by criminal or unlawful means. (*Pettibone v. United States*, 148, U. S., 197, 13 Sup. Ct., 542.) What were the purposes of this combination of Debs, Phelan, and the American Railway Union board of directors? They proposed to inflict a pecuniary injury on Pullman by compelling the railway companies to give up using his cars, and on refusal of the railway companies to yield to compulsion, to inflict pecuniary injury on the railway companies by inciting their employees to quit their services, and thus paralyze their business. It could not have been unknown to the combiners that the Pullman cars were operated by the

railway companies under contracts with Pullman. Such large transactions are never conducted without contracts saving the rights of both sides, and the combiners had every reason to believe that it would be a violation of those contracts for the companies to refuse further to haul Pullman cars in their trains. One purpose of the combination was to compel railway companies to injure Pullman by breaking their contracts with him. The receiver of this road is under contract with Pullman, which he would have to break were he to yield to the demand of Phelan and his associates. The breach of a contract is unlawful. A combination with that as its purpose is unlawful and is a conspiracy. (*Angle v. Railway Co.*, 151 U. S., 1, 14, Sup. Ct., 240.)

But the combination was unlawful without respect to the contract feature. It was a boycott. The employees of the railway companies had no grievances against their employers. Handling and hauling Pullman cars did not render their services any more burdensome. They had no complaint against the use of Pullman cars as cars. They came into no natural relation with Pullman in handling the cars. He paid them no wages. He did not regulate their hours, or in any way determine their services. Simply to injure him in his business they were incited and encouraged to compel the railway companies to withdraw custom from him by threats of quitting their service, and actually quitting their service. This inflicted an injury on the companies that was very great and it was unlawful because it was without lawful excuse. All the employees had the right to quit their employment, but they had no right to combine to quit in order thereby to compel their employer to withdraw from a mutual profitable relation with a third person for the purpose of injuring that third person, when the relation thus sought to be broken had no effect whatever on the character or reward of their services. It is the motive for quitting, and the end sought thereby, that make the injury inflicted unlawful, and the combination by which it is effected, an unlawful conspiracy. The distinction between an ordinary, lawful, and peaceable strike entered upon to obtain concessions in the terms of the strikers' employment and a boycott is not a fanciful one or one which needs the power of fine distinction to determine which is which. Every laboring man recognizes the one or the other as quickly as a lawyer or the judge. The combination under discussion was a boycott. It was so termed by Debs, Phelan, and all engaged in it. Boycotts, though unaccompanied by violence or intimidation, have been pronounced unlawful in every State of the United States where the question has arisen, unless it be Minnesota; and they are held to be unlawful in England.

In *Moore v. Bricklayers' Union* (23 Wkly. Cin. Law Bull., 48), a union which embraces 95 per cent of the bricklayers of Cincinnati, got into a controversy with Parker, a boss bricklayer, concerning apprentices and other matters. The union boycotted Parker and notified all material men that any one selling him material would themselves be boycotted. Moore & Co. continued to sell Parker lime. Thereupon the union notified all the plaintiff's customers and probable customers that none of its members would work Moore & Co.'s materials, and seriously damaged the business of Moore & Co. There was no violence, actual or threatened, in the case. Moore & Co. sued the bricklayers' union and some of its prominent members for the damages caused by the boycott. This case was tried before a jury in the superior court of Cincinnati and resulted in a verdict for the plaintiffs of \$2,500. The motion for a new trial was reserved to the general term, where the case was fully considered and the conclusion reached that the verdict must stand, because the combination to injure Moore & Co. was an unlawful conspiracy. The case was then carried by writ of error to the supreme court of Ohio, and the judgment of the superior court was affirmed, without opinion. By the common law of Ohio, therefore, boycotts are illegal conspiracies. I quote from the opinion of the superior court in that case two passages which seem to me to state the ground for holding boycotts illegal:

"We are dealing in this case with common rights. Every man, be he capitalist, merchant, employer, laborer, or professional man, is entitled to invest his capital to carry on his business, to bestow his labor, or to exercise his calling, if within the law, according to his pleasure. Generally speaking, if in the exercise of such right by one another suffers a loss, he has no ground of action. Thus, if two merchants are in the same business in the same place and the business of the one is injured by the competition, the loss is caused by the other's pursuing his lawful right to carry on business as seems best to him. In this legitimate clash of common rights the loss which is suffered is *damnum absque injuria*. So it may reduce the employer's profits that his workmen will not work at former prices and that he is obliged to pay on a higher scale of wages. The loss which he sustains, if it can be called such, arises merely from the exercise of a workman's lawful right to work for such wages as he chooses and to get as high rate as he can. It is caused by the workman, but it gives no right of action. Again, if a workman is called upon to work with the material of a certain dealer, and it is of such a character as to either make his labor greater than that sold by another, or is hurtful to the person using it, or for any other reason is not satisfactory to the workman, he may lawfully notify his employers of his objection and refuse to work it. The loss of a material man in his sales caused by such action of the workman is not a legal injury and not a subject of action. And so it may be said that, in these respects, what one workman may do many may do, and many may combine to do, without giving the sufferer any right of action against those who caused his loss. But on this common ground of common rights, where everyone is lawfully struggling for the mastery, and where losses suffered must be borne, there are losses willfully caused to one by another in the exercise of what otherwise would be a lawful right from simple motives of malice."

"The normal operation of competition in trade is the keeping away or getting away patronage from rivals by inducements offered to the trading public. The normal operation of the right to labor is the securing of better terms by refusing to contract to labor except on such terms."

If the workmen of an employer refuse to work for him except on better terms, at a time when their withdrawal will cause great loss to him, and they intentionally inflict such loss to coerce him to come to their terms, they are bona fide exercising their lawful rights to dispose of their labor for the purpose of lawful gain. But the dealing between Parker Brothers and their material men, or between such material men and their customers, had not the remotest natural connection either with the defendant's wages or the other terms of employment. There was no competition or possible contractual relation between plaintiffs and defendants where their interests were naturally opposed. The right of the plaintiffs to sell their material was not one which, in its exercise, brought them into legitimate conflict with the rights of the defendants to dispose of their labor as they chose. The conflict was brought about by the efforts of the defendant to use plaintiff's right of trade to injure Parker Brothers, and, upon failure of this, to use plaintiff's customers' rights of trade to injure plaintiffs. Such effort can not be in the bona fide exercise of

trade is without just cause, and is, therefore, malicious. The immediate motive of the defendants here was to show to the building world what punishment and disaster necessarily followed a defiance of their demands. The remote motive of wishing to better their condition by the power so acquired will not, as we think we have shown, make any legal justification for defendants' acts."

And so here there was no natural relation between Pullman and the railway employees and their attempt to injure the companies because they would not injure him is without cause, and is malicious, and is unlawful, even though the injury is inflicted merely by quitting employment. *Temperton v. Russell* (1893) (1 Q. B., 715) was a case quite like the case just cited. There a firm of builders refused to obey certain rules laid down by three trades unions connected with the building trade at Hull. Thereupon a joint committee of unions boycotted the building firm—that is, they attempted to prevent it from procuring any material by notifying material men not to furnish them on pain of being themselves boycotted. The plaintiff, a material man, refused to comply with its demand, and the unions then demanded of his material men not to furnish him with any material, with the threat that, if they did so, their workmen would quit. The result of this was that contracts for supplies to the plaintiff were broken, and others who, but for the threats, would have made contracts were deterred from doing so. It was held that the boycott was an unlawful conspiracy and that the joint committee of the unions who were sued were liable in damages for a malicious interference with the plaintiff's business. There was no violence or threatened violence in this case. The case was decided by the court of appeals, England, consisting of Lord Esher, master of rolls, and Lopes and A. L. Smith, lord justices.

In *Carew v. Rutherford* (106 Mass., 1), a contracting stone mason, contrary to the rules of the union, sent some of his material out of the State to be dressed, and his men, members of the union, refused to work for him any longer unless he paid a fine to the union, and did not return until he paid the fine. This was held to be illegal conspiracy for the purpose of extortion and mischief, and the employer was given a judgment for the recovery of the fine and damages.

Boycotts have been declared illegal conspiracies in *State v. Glidden*, 55 Conn., 46, 8 Atl., 890; in *State v. Stewart*, 59 Vt., 273, 9 Atl., 559; *Steamship Co. v. McKenna*, 30 Fed., 48; *Casey v. Typographical Union*, 45 Fed., 135; *Toledo, A. A. & N. M. Ry. Co. v. Pennsylvania Co.*, 54 Fed., 730, 738; and in other cases.

But the illegal character of this combination, with Debs at its head and Phelan as an associate, does not depend alone on the general law of boycotts. The gigantic character of the conspiracy of the American Railway Union staggers the imagination. The railroads have become as necessary to life and health and comfort of the people of this country as are the arteries of the human body, and yet Debs and Phelan and their associates proposed, by inciting the employees of all the railways of the country to suddenly quit their service without any dissatisfaction with the terms of their own employment, to paralyze utterly all the traffic by which the people live, and in this way to compel Pullman, for whose acts neither the public nor the railway companies are in the slightest degree responsible, and over whose acts they can lawfully exercise no control, to pay more wages to his employees. The merits of the controversy between Pullman and his employees have no bearing whatever on the legality of the combination effected through the American Railway Union. The purpose, shortly stated, was to starve the railroad companies and the public into compelling Pullman to do something which they had no lawful right to compel him to do. Certainly the starvation of a nation can not be a lawful purpose of a combination, and it is utterly immaterial whether the purpose is effected by means usually lawful or otherwise.

More than this, the combination is in the teeth of the act of July 2, 1890, which provides that:

"SECTION 1. Every contract, combination in the form of trusts or otherwise, or conspiracy in restraint of trade or commerce among the several States or with foreign nations is hereby declared illegal. Every person who shall make any such contract or engage in any such combination or conspiracy shall be deemed guilty of misdemeanor, and on conviction thereof shall be punished by fine not exceeding \$5,000, or by imprisonment not exceeding one year, or both said punishments, in the discretion of the court."

That such a combination as the one under discussion is within the statute just quoted has been decided by Judge Billings, of Louisiana, in *United States v. Workmen's Amalgamated Council of New Orleans*, (54 Fed., 994.) His view has been followed by the circuit judges of this circuit within the past ten days, by Judges Woods, Allen, and Grosscup, of the seventh circuit, and by Judge Wilson of the eighth circuit. A different view has been taken by Judge Putnam in *United States v. Patterson* (55 Fed., 605), but, after consideration, Judge Lurton and I can not concur with the reasoning of that learned judge. The fact that it was the purpose of Debs, Phelan, and their associates to paralyze the interstate commerce of this country is shown conclusively in this case, and is known to all men. Therefore, their combination was for an unlawful purpose and is a conspiracy within the statute cited.

It could also be shown, if it were necessary, that this combination was an unlawful conspiracy, because its members intended to stop all mail trains, as well as other trains, and did delay and retard many, in violation of section 3995, Revised Statutes of the United States, which imposes a penalty on anyone willfully and knowingly obstructing or retarding the passage of the mail. It would be no defense under the statute that the obstruction was effected by merely quitting employment where the motive of quitting was to retard the mails, and had nothing to do with the terms of employment. Something has been said about the right of assembly and free speech secured by the constitution of Ohio. It would be strange, indeed, if that right could be used to sustain the carrying out of such an unlawful and criminal conspiracy as we have seen this to be. It never has been supposed to protect one from prosecution or suits for slander or for any of the many malicious and tortious injuries which the agency of the tongue has been so often employed to inflict. If the obstruction to the operation of the road by the receiver was unlawful and malicious, it is not less a contempt because the instrument which he used to effect it was his tongue rather than his hand.

But it is unnecessary to consider the question further. It is very clear that Phelan came here to carry out an illegal conspiracy, in the course of which and in the pursuance of which he attempted and partially succeeded in tying up the Southern Railroad, operated by a receiver under an order of this court, as he well knew. His purpose in calling out the employees of the Southern Railroad was unlawful by the law of Ohio and the laws of the United States. He intended to prevent entirely its operation. He partially succeeded, and he subjected the receiver to great expense in reducing the loss occasioned by his acts.

It follows that the contemner is guilty as charged and it only remains to impose the sentence of the court. This is in the discretion of the court to be exercised on any information in reference to the convicted person which the court believes to be reliable. The court would be much more disposed to leniency in this case if the contemner, after his arrest, had shown the slightest regard for the order of the court which the receiver was attempting to comply with in the operation of the road. Even if he did not fully realize the position in which he had put himself with respect to the order of the court to the receiver to operate the Southern Railroad, his arrest, and the service of the intervening petition, together with the restraining order, should have quickened his conscience and his perception of his duty in this regard. It was his duty, therefore, to cease all his operations with reference to the strike in this city which could in any way affect the operation of the Southern Railway, whether by inciting employees to leave the receiver or by preventing his employment of others. What did he do? Instead of ceasing to incite the receiver's employees to leave his employ in pursuance of his unlawful conspiracy, there has been no change whatever in his course from that pursued by him before his arrest. By speeches every night since the arrest he has aggravated his contempt. On the night of July 4, it is in evidence, the contemner said, in a speech to railroad employees of this city, referring to this trial:

"I don't care if I am violating injunctions. No matter what the result may be to-morrow, if I go to jail for sixteen generations, I want you to do as you have done. Stand pat to a man. No man go back unless all go, and all stay out unless Phelan says go back."

It was a direct invitation to continue the course already taken under his direction of preventing the return of employees to the receiver and of persuading the striking of others, and an avowed intention of disregarding the order of the court.

The punishment for a contempt is the most disagreeable duty a court has to perform, but it is one from which the court can not shrink. If orders of the court are not obeyed, the next step is unto anarchy. It is absolutely essential to the administration of justice that courts should have the power to punish contempts and that they should use it when the enforcement of their orders is flagrantly defied. But it is only to secure present and future compliance with its orders that the power is given, and not to impose punishment commensurate with the crimes or misdemeanors committed in the course of contempt, which are cognizable in a different tribunal or in this court by indictment and trial by jury. I have no right, and do not wish, to punish the contemner for the havoc which he and his associates have wrought to the business of this country and the injuries they have done to labor and capital alike, or for the privations and suffering to which they have subjected innocent people, even if they may not be amenable to the criminal laws thereof. I can only inflict a penalty which may have some effect to secure future compliance with the orders of this court and to prevent willful and unlawful obstructions thereof.

After much consideration, I do not think I should be doing my duty as a judicial officer of the United States without imposing upon the contemner the penalty of imprisonment. The sentence of the court is that Frank W. Phelan be confined in the county jail of Warren County, Ohio, for a term of six months. The marshal will take the prisoner into custody and safely convey him to the place of imprisonment.

These two opinions by Judge Taft are inserted to disclose exactly the points on these questions judicially determined by him during his career as a circuit judge of the United States. Inasmuch as he discusses at length the question of contempts in the above case, I hereby insert the bill introduced in the House of Representatives by me on April 10, 1906, and since then at every session of Congress, in relation to contempts of court:

A bill (H. R. 17975) in relation to contempts of court.

Be it enacted, etc., That contempts of court committed during the sitting of the court, or of a judge at chambers, in its or his presence or so near thereto as to obstruct the administration of justice, are direct contempts. All other are indirect contempts.

SEC. 2. That a direct contempt may be punished summarily without written accusation against the person arraigned, but if the court shall adjudge him guilty thereof a judgment shall be entered of record in which shall be specified the conduct constituting such contempt, with a statement of whatever defense or extenuation the accused offered thereto and the sentence of the court thereon.

SEC. 3. That upon the return of an officer on process or an affidavit duly filed, showing any person guilty of indirect contempt, a writ of attachment or other lawful process may issue and such person be arrested and brought before the court; and thereupon a written accusation, setting forth clearly and succinctly the facts alleged to constitute such contempt, shall be filed and the accused required to answer the same, by an order which shall fix the time therefor, and also the time and place for hearing the matter; and the court may, on proper showing, extend the time so as to give the accused a reasonable opportunity to purge himself of such contempt. After the answer of the accused, or if he refuse or fail to answer, the court may proceed at the time so fixed to hear and determine such accusation upon such testimony as shall be produced. If the accused answer, the trial shall proceed upon testimony produced as in criminal cases, and the accused shall be entitled to be confronted with the witnesses against him; but such trial shall be by the court, or, upon application of the accused, a trial by jury shall be had as in any criminal case. If the accused be found guilty, judgment shall be entered accordingly, prescribing the punishment.

SEC. 4. That the testimony taken on the trial of any accusation of indirect contempt may be preserved by bill of exceptions, and any judgment of conviction therefor may be reviewed upon direct appeal to, or by writ of error from, the Supreme Court, and affirmed, reversed, or modified, as justice may require. Upon allowance of an appeal or writ of error, execution of the judgment shall be stayed, upon the giving of such bond as may be required by the court or a judge thereof, or by any justice of the Supreme Court.

SEC. 5. That the provisions of this act shall apply to all proceedings for contempt in all courts of the United States except the Supreme Court.

The Democrats in the House of Representatives have frequently insisted on the passage of this bill and have challenged the Republican party to aid in its enactment. On many occasions Democrats in the House of Representatives have appealed to the Republican party and to the Speaker to permit the consideration of such a measure, and have met only with constant denial and scorn.

Drainage and Road Improvement.

SPEECH

OF

HON. JAMES O'H. PATTERSON,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. PATTERSON said:

Mr. SPEAKER: That the National Government should take active interest and exercise liberal spirit in the drainage of swamp lands and the betterment of the public roads is at once so pleasant a duty of gratitude and a policy of such wise forethought and foresight for the future as to be self-evident and to need no elaborate argument to convince any doubting Thomas who may in the selfishness of his immediate surroundings see nothing beyond the range of his own eyesight and hear nothing farther away than the whistle of the throbbing engines of his own vicinity. For the country is the nursery for the larger orchard of the nation, from which the men plants came that grow to protecting greatness in time of storm and stress into sheltering sweetness when skies are clear and winds are soft and soothing in their whisperings of peace.

From this fitting school of the country came the strong bodies, the ablest minds, the self-poised, intelligent, intellectual forces that develop in the captains of industry in the mercantile and manufacturing and commercial activities that have made such marvelous progress in this great Republic of the New World. From the rural communities come great evangelists of the churches, wise statesmen, leaders of the people, builders of its prosperity, and defenders and champions of the public good. Within hearing of my voice are many that first saw the light of life in quiet country homes, who in its freedom from artificial lanes and environments drew in with their youthful breaths the feelings of exultant independence, of sturdy self-respect and self-confidence, of broadening patriotism and love of the Union that have won the confidence of their constituents and guided and encouraged their upward ambitions until they have become worthy of enrollment among the law-makers of their country, of votes and voices in this greatest of all human parliaments.

More than that, when the public safety and the public honor call for strong arms and brave hearts and courageous souls, the battle cry outstrips the wind in reaching the simple home, the quiet hamlet, the little village, and the plow is left in the furrow, the yardstick laid on the counter, the hammer dropped to the floor, and the brave, true boys come, consecrated by the prayers of the mothers that bore them, nerved and cheered to heroic deed and daring by the promise of the rose-cheeked, dewy-eyed sweetheart girl to wait his home-coming when the cruel war shall have ended and drum beat and bugle blast have been hushed and the gentle music of peace, white-winged and soft-voiced, has come again.

Wherever the flag of the free floats, in arctic seas or on the burning equator, the man from the country is found, and grandly true to duty. From the broad fields of America, where the golden crops of grains that help to feed the hungering world are made; from the sunny South, where the snowy staple grows that clothes humanity, from the "four hundred" of New York to the semisavage in darkest Africa; from the country come the products that give employment to the manufactories of the cities, that give freights to the ships that sail all seas, that preserve the balances of trade in our favor. From the field is every beginning of prosperity; from the country every crusade for right.

Shall we not, in this splendid capital of this great world power, the youngest and the strongest and the fairest of all the civilized peoples of the world, trustees for the well-being of our fellow-citizens, stewards for the public good, show and prove our appreciation of the real foundation of our civilization, the foundation on which all the weal or woe of the future must be built?

The homes of the people! In them rest all peace, all prosperity, all power; in them may be all the weakness, all the discontent that drift toward disaster.

Modern science has shown that, not only on our own Southern coasts, but in the far-off Philippines; in Cuba, where the yellow pestilence had kept up its carnival of death for centuries; on the Isthmus of Panama, once called "the graveyard of America," "an ounce of prevention is worth a pound of

cure." Drainage of our swamp lands will not only minister to the health of the people, but it will add vastly to agricultural possibilities and realities and result in larger storehouses for home living and trade and commercial developments.

Highway improvement is the twin sister of drainage—almost equally beautiful and helpful. Give the people of the rural communities the helping hand in the improvement of their roads, in the marketing of their crops, in their social intercourse and association, and they will catch the spirit of progress and self-help and make their homes blossom as the rose. Make country life so attractive that from the sweatshops of the cities the pale-faced, ill-fed, worse-paid, heart-dead toilers shall go and be born again into a life of hope and comfort, and there will be no more strikes, or riots, or Black Hand crimes and assassinations. The tramp will cease his wanderings, the jail grow lonesome, and the golden age return again.

We are fringing our ocean coasts—Atlantic and Pacific—and the Gulf with fortifications for the protection of our people from foreign attack which may never come. God grant it shall not! The grandest battle fleet in all the history of all the ages is our messenger of peace to-day on the greatest of the oceans, threatened battle zone between the white and yellow races.

Let us not, in this policy of self-protection, forget the centered wisdom of the old creeds, that "charity begins at home;" that the love of home and of country is the surest guaranty of high citizenship and good government, the invincible protection of right against the assault of might or stealth of treachery.

Were we blind to the requirements of gratitude we can not, if there is wisdom among us, be indifferent to the requirements of the future, the exigencies that lie along the years when our children shall inherit whatever of good we may have done or bow beneath the burdens we may have heaped for them.

Let us, obedient to gratitude, faithful to duty, true to ourselves and our constituents, legislate to make the home happy, healthy, and hopeful, and we shall not have labored in vain, nor have spent our strength for naught, for so doing we shall, so far as mortals may, have made our country "four square to all the winds that blow."

GOOD ROADS.

My plea to-day, Mr. Speaker, is for good roads. Not a road here or a road there, but a system of good roads throughout the land. Making that plea in this place and in this presence it will naturally be argued that I stand for Government aid in so great an undertaking. And so I do. I want good roads from East to West, from North to South; roads for the construction of which the greater portion of the funds shall come from the National Treasury. Nor shall I be satisfied with asking that these funds flow sparingly through a long succession of years. I want to see such a system of good roads from one end of the country to the other perfected within the next twenty-five years. It can be done if the work is pushed forward with energy and with such appropriation at the start that it shall not lack money at any time of its progress.

For a people like that of the United States, standing in the very forefront of the civilized nations of the world, public roads such as, with but few exceptions, our highways are, constitute an anachronism. They would be in place in darkest Africa. Some one has said that "roads are indispensable to civilization; their absence is a sure evidence of barbarism." There can be no mistake about the majority of our public roads being barbarous, so far as their effect upon man and beast is concerned. The wear and tear in this case is not on the roads, but on those that are compelled to use them. We Americans pride ourselves upon our progressiveness. We point to our luxurious railway trains, our magnificently appointed steamships, our palatial hotels, to all the comforts with which our homes are equipped; but when it comes to the public highways we have to hang our heads in shame and confusion, because they are an everlasting reproach to the nation. They are a national disgrace. How much longer are we to tolerate this stigma on our vaunted progressiveness?

In all the world's history there never has been a nation that amounted to anything unless it was a great road builder. Greece, Egypt, Carthage, and above and beyond them all imperial Rome, gave evidence of the civilization of their time by the roads they constructed. Scratch Italy's soil and you will find the imperishable Roman roads. The Appian Way, traveled by millions since Appian Claudius Cæcus had it built, to-day proclaims the greatness of that nation. "Regina viarum" it was called, and "regina viarum" it is even in our day. Wherever Rome's victorious legions entered, whether in Gaul, or Spain, or England, they erected memorials to their nation in the shape of roads, and the ravaging tooth of Time has not been able to obliterate them. Rome bequeathed her prowess

in road building to the nations she had conquered, and so we find to-day the most superb highways in the world in France, Italy, Spain, Germany, and England. You may travel in those countries for months and never see a rut in the roads over which your wagon or carriage rolls. Not only the highways, but even the byways, are thus well kept.

Why not we here in the United States, Mr. Speaker? To paraphrase the old campaign song of "Tippecanoe and Tyler too," time, "we have the men, we have the grit, we have the money, too." Why do we lag ingloriously in the rear of peoples whose lack of less essential accessories of civilization we contemplate with a pitying smile? Somewhere I read the other day these lines:

Human existence is pleasant or painful as its wants are satisfied or denied, and of course that system of internal communication which provides for them becomes one of the first cares of civilized society, one of the greatest objects of all intelligent legislation.

This nation, Mr. Speaker, has reached man's estate; it can no longer be excused for failing to do what in its youth it attempted but failed to carry to a successful conclusion.

In theory, and for a number of years in practice, our Government has recognized its obligations to the people in the matter of the building of public roads. With few exceptions our Presidents, from Washington to Roosevelt, have favored such a policy, some more forcibly than others. Even Old Hickory, who vetoed bills providing for such public improvements as the Maysville and Lexington turnpike and to improve the navigation of the Wabash River, because he held such legislation to be inhibited by the Constitution, yet while in the Senate cast his vote for bills such as these:

Authorizing a road from Memphis to Little Rock.
Making certain roads in Florida.
Making a road in Missouri.
Extending the Cumberland road to Zanesville, Ohio.

In his first annual message to Congress in 1790, Washington said:

I can not forbear intimating to you the expediency * * * of facilitating intercourse between distant parts of our country by a due attention to the post-office and post-roads.

In his third annual message the first President of the United States said:

The importance of the post-office and post-roads on a plan sufficiently liberal and comprehensive as they respect the expedition, safety, and facility of communication is increased by their instrumentality in diffusing a knowledge of the laws and proceedings of the Government, which, while it contributes to the security of the people, serves also to guard them against the effects of misrepresentation and misconception.

Madison, in his annual message, in 1815, made use of the following language:

Among the means of advancing the public interests the occasion is a proper one for recalling the attention of Congress to the great importance of establishing throughout our country the roads and canals which can be best executed under the national authority. No objects within the circle of political economy so richly repay the expense bestowed upon them; there are none the utility of which is more universally ascertained and acknowledged; none that do more honor to the Government whose wise and enlarged patriotism duly appreciates them. Nor is there any country which presents a field where nature invites more the art of man to complete her own work for his accommodation and benefit. These considerations are strengthened, moreover, by the political effect of these facilities for intercommunication in bringing and binding more closely together the various parts of our extended confederacy. Whilst the States individually, with a laudable enterprise and emulation, avail themselves of their local advantages by new roads * * * the General Government is the more urged to similar undertakings, requiring a national jurisdiction and national means, by the prospect of thus systematically completing so inestimable a work.

John Quincy Adams, in his third annual message to Congress, in 1827, said:

The appropriations for the repair and continuation of the Cumberland road, for the construction of various other roads * * * may be considered rather as treasures laid up from the contributions of the present age for the benefit of posterity than as unrequited application of the accruing revenues of the nation.

President McKinley said, in his annual message in 1899:

There is widespread interest in the improvement of our public highways at the present time.

President Roosevelt, in his address before the National Good Roads Convention in St. Louis, in 1903, said:

No one thing can do so much to offset the tendency toward an unhealthy drain from the country into the city as the making and keeping of good roads. They are needed for the sake of their effect upon the industrial conditions of the country districts, and I am almost tempted to say that they are needed more for their effect upon the social conditions of the country. If winter means for the average farmer the existence of a long line of liquid morasses through which he has to move his goods if bent on business, or to wade or swim if bent on pleasure; if an ordinary rain means that the farmer's girl and boy can not use their bicycles; if a little heavy weather means the stoppage of all communications, not only with the industrial centers but with the neighbors, then you must expect that there will be a great many young people of both sexes who will not find farm life attractive.

When John C. Calhoun was Secretary of War during President Monroe's Administration, the House of Representatives directed him to submit a report on the subject of Government aid to roads and canals. In January, 1819, Mr. Calhoun sent in his report and in it occurs this passage:

But in such great undertakings (i.e., judicious systems of roads and canals), so interesting in every point of view to the whole Union * * * the expense ought not to fall wholly on the portions of the country immediately interested. As the Government has a deep stake in them * * * it ought, at least, to bear a proportional share of the expense of their construction.

While Albert Gallatin was Secretary of the Treasury he made a report, in 1808, in obedience to a resolution of the Senate, directing him "to prepare and report to the Senate, at their next session, a plan for the application of such means as are within the power of Congress to the purposes of opening roads and making canals, together with a statement of the undertakings of that nature, which, as objects of public improvement, may require and deserve the aid of the Government." In that report Mr. Gallatin says:

The early and efficient aid of the Federal Government is recommended by still more important considerations. * * * Good roads and canals will shorten distances, facilitate commercial and personal intercourse, and unite, by a still more intimate community of interests, the most remote quarters of the United States. No other single operation within the power of government can more effectually tend to strengthen and perpetuate that union which secures external independence, domestic peace, and internal liberty.

The total amount estimated by Mr. Gallatin for the improvements recommended by him in this report was \$20,000,000, and among the improvements suggested were the following:

A great turnpike road from Maine to Georgia, along the whole extent of the Atlantic coast, \$4,800,000; four first-rate turnpike roads from four great Atlantic rivers to four corresponding Western rivers, \$2,800,000; improvement of roads to Detroit, St. Louis, and New Orleans, \$200,000.

In his annual message to Congress in 1827 Mr. Adams tells of surveys, made by authority of Congress, for the following objects:

Continuation of the national road from Cumberland to the tide waters within the District of Columbia; continuation of the national road from Canton to Zanesville; location of the national road from Zanesville to Columbus; continuation of the national road to the seat of government in Missouri; post-road from Baltimore to Philadelphia; a national road from Washington to Buffalo.

President Monroe was not sure whether the Constitution was sufficient to warrant the Federal Government to undertake internal improvements, or that the States should be asked to grant additional powers to that. But he declared:

It seems to be the prevailing opinion that great advantage would be derived from the exercise of such power by Congress.

And then he says, further on in the same state paper:

Great improvements may also be made by good roads in proper directions, through the interior of the country. * * * Much has been done by some of the States, but yet much remains to be done with a view to the Union.

Surely these words apply with as great a force to present conditions as when first addressed to Congress; perhaps even more forcibly, because the country has become greater and richer and the Government better able to undertake the work of aiding in the construction of public highways of the most approved pattern.

Upon the defeat of the bill for a national system of roads and for the funds for the same, Congress returned to its former method of providing for road building from funds derived from sale of public lands. In 1811, 5 per cent of the net proceeds of the sales of public lands in Louisiana were, as in the case of Ohio, given to that State for the building of roads and levees; in 1816 the same percentage of a similar fund was given to Indiana for roads and canals, and in 1817 a like sum was given to Mississippi for this purpose. In 1818, 2 per cent of a similar fund was given to Illinois for roads leading to that State; in 1819, 5 per cent to Alabama; in 1820, 5 per cent to Missouri, and in 1845, 5 per cent to Iowa. In the meantime the annual appropriations for the Cumberland road of sums to be replaced from the funds thus set aside in the States through which it passed were continued. For the fiscal year 1819 over half a million was donated, and on May 25, 1838, the last appropriation, amounting to \$150,000, was made.

Internal improvements are again looming up in ever increasing proportions before the public eye. Inland waterways; the improvement of rivers; the junction of them by a system of canals; the binding together of the Great Lakes and the Gulf of Mexico, and of the Mississippi River and the Atlantic Ocean by some system of inland water communication—the importance of all these undertakings is admitted on all hands. The millions that will have to be spent to construct them are as nothing compared with the many millions which will be added to the national wealth by such works. And what is

true of these is equally true of public highways. Every consideration that can be urged in favor of inland waterways can also be urged with equal force in favor of public roads. Commerce and agriculture will be benefited by the former; they will be equal, if not greater, gainers by the latter. Especially is the farmer concerned in the construction of good roads, and inasmuch as the agriculturists contribute the greater share of the nation's wealth, they ought to receive at the hands of Congress that consideration which their interests demand. Add to the prosperity of the farmer and you increase the prosperity of the whole country. The richer the farmer, the richer the merchant. Napoleon placed agriculture at the head of the great assets of the state. The farmer of the United States has been aided by Government appropriations less than any other class of wealth producers of the country. He has been singularly modest. His just claims ought to have proper consideration. With good roads he would save millions every year on the wear and tear alone on his road stock—wagons and harness. It has been calculated that this saving would amount to 50 per cent on every ton of farm products marketed. He would not need as many horses and mules to take his produce to market.

Taking the figures of the last census there was something like 16,000,000 of horses and mules used for farm work in the United States. If the roads were as they ought to be—good, hard roads, not the agglomeration of ruts and holes and hills that constitutes our dirt roads—it is safe to say that at least 10 per cent of these animals might be dispensed with. The value of this 10 per cent is not less than \$80,000,000; the annual maintenance of that number of animals is certainly as much. So we have \$160,000,000 that would be saved to the American husbandman every year if he had good macadamized roads over which to carry his produce to market.

The Brownlow bill, which may be accepted as a model on which to construct legislation of this character, proposed an annual appropriation of \$24,000,000 to be allotted among the different States. The allotment is to be made, according to the terms of the bill, in the ratio which the population of each State bears to the total population of the United States. It ought to be subject, furthermore, to a stipulation that each State shall appropriate an amount proportionate to that given by the United States for the building of roads, this to be supplemented still further by appropriations from county funds. The construction of the roads ought to proceed in accordance with a general plan, modified perhaps by local conditions, under the joint supervision of officers of the Engineer Corps of the Army and officials appointed by the respective States.

Let me show you, Mr. Speaker, how derelict the people of the United States have been in this matter of road building. In 1904 there were in the United States, according to a bulletin issued by the Office of Public Roads of the Department of Agriculture, 2,151,570 miles of public road. Of this mileage, 108,232.9 miles were surfaced with gravel, 38,621.7 with stone, and 6,807.7 miles with special materials, such as shells, sand-clay, oil, and brick, making in all 153,664.3 miles of improved road. This shows 7.14 per cent of improved roads in this country. By comparing the total road mileage of all the States and Territories, it appears there was 0.73 of a mile of road per square mile of territory.

A comparison of road mileage with population shows there was 1 mile of road to every 35 inhabitants and 1 mile of improved road to every 492 inhabitants. Compare this with France, the country which stands at the head of all civilized countries in the matter of good roads and where road building may be said to have attained the degree of a fine art. From an official report, made about the year 1904, it appears that at that time France had 321,803 miles of stone roads. In the six years from 1881 to 1886, 25,994 miles of such roads were built at a cost of \$57,404,789. Assuming this to be about the ordinary cost of construction, we get an average of \$2,207.50 per mile, or a total cost of all the stone-road mileage in France of \$710,380,122. The annual expenditure for maintenance, including improvements and repairs, of all these roads is given approximately as \$31,551,860. Placing the population of the country at 40,000,000, this would make the per capita cost of maintenance annually about 80 cents. Of course we must consider that France has been engaged in this work of stone-road building for centuries, and we can not hope to rival her in this respect for a very long period of time to come, if at all. But with our wealth—national, State and municipal—and applying to this problem the same energy we are now displaying in building the Panama Canal, we ought to make a very respectable showing in the next twenty-five or fifty years, provided that we handle this problem as energetically and with the same liberality in the matter of expenditure that we are giving to the improvement of our rivers

and harbors, to the irrigation of our arid lands, and to other public works of like magnitude and importance.

Just at present we are doing nothing at all, or just as good as nothing. We have permitted the Secretary of Agriculture to establish a Bureau of Public Roads, and since 1893 we have been making some trifling appropriations annually, aggregating up to the present time something less than half a million dollars, and this money has been expended not in building roads, but in helping the people in different States who showed an inclination to do something to learn how to build them. Did I put the case too strongly, Mr. Speaker, when I said that our record as to public roads is simply disgraceful? And is it not time that we bestir ourselves in this matter? We have given hundreds of millions in cash and in public lands to aid in the construction of the great transcontinental railways. It has added billions to the national wealth. Does anyone doubt that the same generous policy applied to building good public roads would yield equally beneficial and remunerative results?

Our Government has not been so lax in this respect in our insular possessions. In the Philippines, where our officials have a pretty free hand, there have been considerable efforts to remedy the deplorable condition of the roadways. Under Spanish rule nothing was done save to exploit the islands and their inhabitants for the individual benefit of Spanish officials. The Spaniards cared little or nothing for the welfare of the people, and history simply repeated itself in this respect as it has in every Spanish colony since the days of Cortez and all the other robber bands who murdered the natives, scraped together all the gold they could lay their hands on, and then sailed back to Spain to let others of their countrymen continue the process ad infinitum.

The advent of the American in the Philippines has changed all this. Our insular officials at once appreciated the necessity of putting the islands in some sort of traversable condition. Almost from the very moment of our taking possession—certainly after the suppression of the Aguinaldo insurrection, and more particularly since the extermination of the *ladrones* and other robber bands—the work of road construction has been undertaken with some measure of success. In the beginning, of course, the work was more or less spasmodic, the greatest difficulty experienced being to get the natives to work on the roads in any systematic way, but gradually they are doing better.

In 1903 Congress, by act approved March 3 of that year, apportioned \$3,000,000 to relieve distress in the islands, to be expended in the discretion of the Philippine government, among the methods of relief being the employment of labor in the construction of wagon roads and other public works. It is not necessary for the purpose of my argument to go through all the details of the expenditure of that fund. I shall content myself with glancing at what was done in 1906 in the way of road construction. In that year (see Report of Philippine Commission, Vol. IX, pt. 3, p. 233) 404,664.52 pesos, or about \$200,000, was spent on the making of roads. Well done, say I. But what a commentary upon our pitiful appropriation, during fourteen years, of a total of \$461,000 for what may be called "aid to learners in road building!"

The Philippine Commission has done even better than that. In July, 1906, it enacted a law providing for the construction, repair, and maintenance of public highways, bridges, wharves, and trails, and imposing a penalty for malicious injuries to such public works. This act places upon every male inhabitant of the islands who is subject to the payment of a poll tax the duty of laboring on the public works named for five days of eight hours each, every calendar year, or pay the equivalent in cash of such days' labor. If any person under such obligations to work fails to respond to the notification to that effect, he is liable to arrest and to compulsory labor for a period of eight days, or to a fine equal to eight days' cash value. All such fines go into the treasury of the respective provinces where the work is to be or has been done. There is a kind of autonomous arrangement which leaves it to the choice of the respective provincial authorities to accept the double cedula or poll tax imposed by recent legislation. If they accept the tax, they share in the distribution of the 10 per cent of the internal-revenue tax proportionately to the population; if they do not, then their share is added to the fund of those provinces that do accept the tax. In addition to all this, the Commission made an appropriation of 1,321,225 pesos—approximately \$650,000—for roads and bridges, nearly \$200,000 more, Mr. Speaker, than we have granted for public road work in fourteen years. And right here be it said to the great credit of those provincial authorities—those little brown men—that all but four of them accepted the double-tax burden in order that they may participate in the \$1,000,000 of insular money available for road

purposes. (See Report of Philippine Commission for 1907, p. 162.)

Secretary Taft, in his special report to the President on the Philippines, says:

The truth is that good roads will develop as the people develop, because the people can keep up the roads if they will, and it is not until they have a large sense of political responsibility that they are likely to sacrifice much to maintain them.

Unconsciously, perhaps, the Secretary of War administers in these words a stinging reproach to the Congress and to the people of the United States. Do the people of our States, of our country, lack this "large sense of political responsibility," and does this lack account for the unwillingness to sacrifice much in money and effort for the construction and maintenance of good roads? Nearly all our States have road laws of some sort, but, with a few notable exceptions, these laws have not been able to evolve such highways as would be entitled to the designation of good public roads. This "sense of political responsibility," Mr. Speaker, ought to stimulate us to meet legislation along the lines proposed in the Brownlow and Latimer bills. It should move the Congress to spend annually as much for good roads as it costs to build and equip two first-class battle ships; it should move our State and county and municipal legislators to second any effort put forth by the National Government until every State has good, hard, macadamized roads throughout its domain and joining it to its neighbors.

A bad road, Mr. Speaker, is a perpetual tax, a burden which can not be lifted except by the permanent improvement of the highways. One of the officials of the Canadian Pacific Railway, in a paper entitled "Road making and maintenance," had this to say about the roads in the United States and Canada:

The country roads seem to be principally used by farmers, to whom time seems to be no object, and who do not apparently realize that good roads can be profitable, since they do not actually place dollar bills in their hands, and who seem to think that the only way to increase their income is to sell more produce, no matter how much it may cost to draw it to market, and accordingly they spend a great part of their lives slowly plodding over bad roads without a thought of trying to improve them.

The principal advantages of good roads are that larger loads can be carried with greater speed, that farmers can market their produce at whatever time they can get the best prices, without being dependent on the weather, and that they can also use the roads in wet weather during the winter and spring, when they can not plow, thus utilizing their horses when they would otherwise be idle. It is said on what appears to be good authority that it costs as much to haul a bushel of wheat over 5 miles of country road in Illinois from farm to railroad as it does to carry it by rail from there 1,100 miles to the elevator in Buffalo. If this is a fact—and there is no reason to doubt it—then think of the enormous capital the farmers of the United States waste each year because they have so few good roads. It is safe to say that bad country roads cost the American farmer not less than one-half of the profit he would get from his crops if he had roads in fact instead of in name only.

Within the last few Congresses a number of bills have been introduced looking to the beginning of the work of building good roads throughout the country. The beginning, I say, for though the provisions of the Brownlow bill and of the one introduced by the late lamented Senator from my State would be a great step forward, yet \$24,000,000—that is, \$8,000,000 a year for three years—distributed over the whole country would be a mere drop in the bucket. When I said a while ago that legislation on this subject ought to proceed along the lines laid down in these bills I had reference to their general tenor, but I do not think that the sum they provide meets the exigencies of the situation. There are two ways to finance the building of roads throughout the country. One is a bond issue, say, to the amount of \$200,000,000, the proceeds to be devoted to the construction of public roads; the other is an annual appropriation from the current revenues of the Government of \$20,000,000 for ten consecutive years. I would have it understood, of course, that each State should only receive its proportionate share of this annual disbursement upon conditions that such share would be supplemented by an appropriation of equal or nearly equal amount from the State treasury, and an additional proportionate appropriation from county funds. I have no fear, Mr. Speaker, that any State or any county in any State would not gladly avail itself of this offer of friendly assistance from the National Treasury or that it would fail to meet the liberality of the National Government with like liberality on its own part.

Like the appropriations for the postal service, the direct benefits of which come straight home to every citizen, the inestimable benefits arising from the building of good roads will be felt by everyone, whether resident of city or dweller on farm. No voice has ever been raised in protest against the

sums we spend for our mail service, even though they reach \$160,000,000 or more, as they do this year. Nobody cares whether the postal service is self-supporting or not, but everybody clamors that it be made as perfect and as far-reaching as possible, no matter what the expense. Rural delivery started on a small scale; it has grown to big proportions; it must continue to increase with the growth of the country. The farmer is the chief beneficiary of this part of the postal service, and he will be the chief beneficiary of the model highway.

History will have a luminous page for the Congress that appropriated the first millions for the Panama Canal. No less, Mr. Speaker, will it celebrate the Congress to whose credit can be recorded the inauguration of a well-thought-out and generously endowed system of good-roads construction throughout the length and breadth of this country. For the beginning of this undertaking, fraught with incalculable benefits to the generations of the future, I pray the day may soon dawn, and I trust I may live long enough to see the consummation of a goodly part of the work.

DRAINAGE.

Six years ago the Federal Government adopted a policy which looked to the preparation of the waste lands of the United States for the uses of man. The subject had been before Congress several years earlier. A committee to consider the question of irrigation was appointed by the Fifty-second Congress. Later President Roosevelt took up the subject in his message to Congress and treated it as a matter of the greatest importance. When the Fifty-seventh Congress met it was realized that the time had arrived for action and an irrigation bill was passed by both Houses and was signed by the President June 17, 1902. No ye-a-and-nay vote was taken on it in the Senate. When the matter came before the House of Representatives the bill was passed by a vote of 146 to 55. Eighteen Members answered "present." One hundred and thirty-two did not vote and of these 128 were paired. So the real vote, giving each side the number that was paired in its favor, stood 220 to 129, with 22 present and not voting or absent and not paired. The vote by which this bill was passed had no political complexion. Of the 146 Members voting in its favor 69 were Republicans, 72 were Democrats, 4 were Populists, and 1 a member of the silver party. The number of Republicans voting for it was greater than the entire number of votes against it. The number of Democrats voting for it was greater than the entire number of votes against it. Every Populist and the single silver man in the House voted for it.

And the vote by which this measure was passed was not sectional. The bill applied only to Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Utah, Washington, and Wyoming; and yet the votes that were cast in its favor from other States than these lacked only two of being double the entire vote cast against it.

So here was a matter concerning which no party strife displayed itself. A few individuals made objection, but no party took the view that in embarking on a career of irrigation the Government was transcending its powers. We may safely assume, then, that the act was not in any way violative of the Constitution.

In justification of it, however, authority may be cited. It is not necessary for the exercise of a power by the Federal Government that it should be expressly granted in the Federal Constitution, or even that it should be "clearly and directly traceable to some one of the specified powers" granted. Any number of the powers granted, or all of them, may be combined and considered together, and any power necessary to carry out the general purposes of any or all of the powers specified will be considered granted by implication and as an incidental means of executing the powers specifically granted. (Knox v. Lee, 12 Wall (U. S.), 457.)

Every statute is presumed to be constitutional. The courts ought not to declare one to be unconstitutional unless it is clearly so. If there is doubt, the expressed law of the legislature should be sustained. (94 U. S., 123.)

Every possible presumption is in favor of the validity of a statute, and this continues until the contrary is shown beyond a rational doubt. (99 U. S., 718.)

But it is useless to continue to fight a man of straw. The right of the Government to put water on lands when by so doing it will make them valuable is not questioned. This admitted, the right of the Government to take water from lands when by so doing it will make them valuable can not be questioned. The right to irrigate implies the right to drain. If irrigation is a duty where needed, drainage is a duty where needed. If the Government, in the exercise of its powers, enhances the value of property in certain States, it should, by

the exercise of its powers, enhance the value of property in other States if its work is needed. The States are all equal in rights and should be treated alike. A benefit bestowed on a few and withheld from others is sectionalism and injustice. A benefit bestowed on all alike removes all ground for a charge of sectionalism and gives justice to all.

The irrigation act as originally passed applied only to public-land States, but not to all of them. It applied to all in which large areas of public lands remained still unsettled, but I do not think it applied to them because of this fact. I think it was applied to them because they needed the work for which it provided. Generally speaking, these States had areas of arid land that was worthless, but that could be made valuable by irrigation. The States were provided for because of their needs. The act set aside all moneys received from the sale of public lands in the States and Territories mentioned in it as a specific fund, to be known as the "reclamation fund," to be used "in the examination and survey for and the construction and maintenance of irrigation works for the storage, diversion, and development of waters for the reclamation of arid lands and semiarid lands in said States and Territories."

If the irrigation act had been confined to the States for which it originally provided, it might have been held, with a show of reason, that the Government was only improving its own lands and that, if lands held in private ownership were benefited, this benefit was only incident to the work the Government was doing for itself. This impression, if it existed, was removed when the provisions of the act were extended to Texas—a State which held the original title to its lands and in which the Federal Government owned no lands unless by purchase. The extension of the provisions of this act to Texas showed that it was not intended merely for the improvement of the lands whose title was vested in the Government, but was intended to have a general application.

The irrigation act sets aside, for the purpose of reclaiming arid lands, so far as it is needed, all moneys received from the sale of public lands in sixteen States and Territories, except such as was applied by law to the cause of education, and a later act added Texas to the list. The bill I have introduced proposes the use for the purpose of drainage under the same conditions, and under the same restrictions, of the moneys derived from the sale of Government lands in the remaining public-land States. The lands available for sale for irrigation purposes are vastly more extensive than those which would be available for sale for drainage purposes, as the following table giving the public lands remaining in the different States and Territories shows. The figures given are for 1906, and show the areas of Government land unappropriated and unsurveyed at the end of that year. The changes since that time will very slightly affect the proportion shown:

Drainage.		Acres.
Alabama	-----	108,520
Arkansas	-----	1,859,809
Florida	-----	667,500
Louisiana	-----	145,121
Michigan	-----	306,208
Minnesota	-----	2,507,550
Mississippi	-----	44,834
Missouri	-----	107,538
Wisconsin	-----	36,900
Total	-----	5,843,980
Irrigation.		
Arizona	-----	45,571,305
California	-----	32,403,695
Colorado	-----	28,472,033
Idaho	-----	30,989,840
Kansas	-----	480,439
Montana	-----	51,398,631
Nebraska	-----	4,150,301
Nevada	-----	61,204,087
New Mexico	-----	49,890,637
North Dakota	-----	4,033,871
Oklahoma	-----	83,589
Oregon	-----	19,739,649
South Dakota	-----	8,673,727
Utah	-----	88,279,631
Washington	-----	6,260,980
Wyoming	-----	36,726,337
Total	-----	418,358,752

No Government lands remain in Illinois, Indiana, Iowa, or Ohio, and the title to the lands in Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Tennessee, Kentucky, and Texas was never vested in the Government.

In the States for which irrigation is provided the Government still holds 650,000 square miles of land—a domain greater than the combined areas of Germany, France, and Austria-Hungary. In the States where drainage is needed the total area of Gov-

ernment lands is little more than 9,000 square miles. The extent of the available land, however, matters little, for the proceeds of one acre might be sufficient to drain many acres.

The drainage bill, paralleling the irrigation act, authorizes the loan of money for drainage purposes, to be repaid in annual installments extending for a period of not longer than ten years. Thus the money borrowed to drain one acre, when repaid, may be used to drain another, and another, and another until the work is finished. The Government is not asked to give any money either for drainage or irrigation. Where other land than its own is drained it simply advances the money on ample security.

I have referred to irrigation in discussing drainage, because one is supplementary of the other. Both are needed to complete reclamation. One without the other supplies only half of what is needed. One without the other fails to deal out equal justice to all States and all sections. Both should have been provided for in the same bill. Both should have been paid for out of the same fund. I do not see why one group of States should derive all the benefits from the sale of public lands within its limits while another group is left to depend on a smaller area.

The public lands are the property of all the people, not simply of the people who live in the States in which they are located. The people of the older States acquired them, and those who remain in the older States should not be treated as sacrificing their rights to the proceeds from the sale of the public domain because of the fact that they did not move to the new States. They have a right to their share, to be used in the drainage of swamp lands.

To show what this drainage work might mean to the United States, it is only necessary to give the swamp areas of the different States. Expressed in square miles, the swamp area is as follows:

	Square miles.
Florida	29,000
Louisiana	15,000
Arkansas	9,000
Mississippi	9,000
Michigan	7,500
Minnesota	6,000
Wisconsin	4,500
Maine	4,000
North Carolina	3,750
Georgia	3,750
Illinois	3,500
Texas	3,500
Missouri	3,000
South Carolina	2,750
New York	2,500
Alabama	1,750
Virginia	1,600
Tennessee	1,250
Ohio	1,250
Indiana	1,250
New Jersey	900
New Hampshire	600
Massachusetts	500
Maryland	500
Iowa	400
Vermont	400
Nebraska	400
North Dakota	375
South Dakota	375
Kentucky	350
Pennsylvania	300
Kansas	250
Connecticut	100
Delaware	50
Rhode Island	30
Other States	10,000
Total	129,380

Figures do not always give the idea they are intended to convey. The swamp area of Florida is only 1,000 square miles less than the entire area of South Carolina. The swamp area of Louisiana is greater than the entire area of Delaware, Maryland, and the District of Columbia combined. The swamp area of Arkansas is only 300 square miles less than the entire area of New Hampshire. The entire State of Massachusetts could be put into the swamps of Mississippi and lack 700 square miles of filling them. New Jersey's entire area is only 300 square miles in excess of the swamp area of Michigan, and the swamps of Minnesota are more than 1,000 square miles larger than the entire State of Connecticut. The swamp area of the United States is larger by nearly 4,000 square miles than the combined area of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Delaware.

The swamps of the United States have a total area of 82,803,200 acres. The area planted in corn in the entire country in 1906 was only one-fifth larger than this, and it yielded a product worth, on the farms, \$1,166,626,479.

The area of wheat and oats was about 6 per cent less than

the swamp area, and it yielded \$796,625,738 worth of products, valued on the farms.

The area in hay and cotton was about 11 per cent less than the swamp area, and it yielded a product worth, on the farms, \$1,200,221,671.

In 1906, 260,000,000 acres in corn, cotton, hay, wheat, oats, rye, barley, buckwheat, tobacco, and potatoes yielded a product worth on the farms, \$3,491,888,710. This acreage was only three and one-third times the swamp area of the country. This area, if in cultivation and only as productive as the average land now in cultivation, would yield an annual value of more than a billion dollars a year. The land that would be reclaimed would be vastly more valuable than the average and would probably yield a product worth \$2,000,000,000 a year.

To give an idea of the value that awaits the work of drainage, I will make another comparison. The swamp area of the United States, as already stated, reaches a total of 129,380 square miles. The following table shows the area and population of three European countries whose combined extent is approximately as great:

Country.	Square miles.	Population.
Italy.....	110,550	32,475,233
Belgium.....	11,373	7,074,850
Saxony.....	5,787	4,508,601
Total.....	127,710	44,058,704

So we see in Europe, living on an area slightly less than that of the swamps of the United States, more than half as many people as live in all the States of this great Union.

Of course the people of Italy, Belgium, and Saxony do not all live on the local products of the soil, and probably not half of them do. Much of this land, however, is not available for cultivation and much that is cultivated is not fertile. Italy is ribbed through the center and shut in on the north by mountain chains, and Saxony is also mountainous. Their land is not nearly as fertile as that which lies beneath the slime of the marshes of the United States. The richest land in Europe is in Holland and it was reclaimed from the waters, as our land, greater in extent than Italy, Belgium, and Saxony, should be reclaimed.

Individuals have done, on a small scale, the work that the nation should do with the completeness that only its vast resources permit. Some of the land on the Atlantic seaboard, reclaimed from the swamps over a century ago, has been in constant cultivation for more than one hundred years, without fertilization or rotation of crops. Without the use of fertilizers it is still producing an average of 50 bushels of corn per acre. The largest average production of corn in the United States for the best crop year ever known was less than 31 bushels per acre.

Every variety of products could be grown on this land, and, if it were reclaimed for use, it would add not millions, not tens of millions, not hundred of millions, but billions to the wealth of the nation.

I do not decry the importance of irrigation. I would not divert a dollar from the good work that is enriching the West. But, as a Southern man, I say let the good work go on. I am an American, and I think I can justly claim that the people I represent are as broadly American as any who live between the oceans. I rejoice and my neighbors rejoice in the prosperity of any section of this great country—our great country—that our Marion and Sumter and other patriotic and devoted forefathers helped to endow with the rights of a separate national existence and with the blessings of free government. I represent a race not new to America, but sprung from the men who felled the forests when savages, meaning death, were lurking behind the trees, and who faced the bayonets that the British King had sent over for their enslavement. We inherit from our ancestors a love for everything American and a pride in everything American that is too broad to be hemmed in by State or sectional lines. So we say to the North and the West godspeed. May you ever advance in all that makes a nation great and a people prosperous and happy. We will try not to lag behind in the race, but we will keep up by accelerating our steps, not by trying to pull others back.

Our Representatives and Senators voted for Government aid for the work that is developing the West, and we rejoice in the success that is attending it, but we ask that a similar assistance be extended to an equally important work in our own States. We ask it as a matter of justice, and we have no fears that it will be denied.

I say the work of drainage is as important as that of irrigation. It is really more important. The States in whose behalf

I ask Federal assistance for drainage had in 1900 64,632,147 people on 1,190,496 square miles, an average of more than 54 inhabitants to the square mile. The States that are included in the provision for irrigation had 11,671,240 people in 1900 on 1,836,293 square miles, an average of little more than 6 to the square mile. The first-named group has less than 12 acres to the inhabitant. The last-named group has 106 acres to the inhabitant. Which is most in need of more land?

If the first-named group increases as rapidly in the near future as it has increased in the recent past, it will have a population of 140,000,000 in a third of a century, and nearly 200,000,000 in a half a century. In enlarging the tillable area of these States we are providing for the near, not for the remote, future. There are children alive to-day who will live to see a quarter of a billion people in these States.

If land is to be provided for people who need it, the nearest provision is the best provision. It costs money to move and pay railroad fares for a distance of 2,000 miles. The lands that would be made fit for use by drainage are right at the doors of the people who will soon be sorely in need of land. The lands that are being made fit for use by irrigation lie in States and Territories that are sparsely settled and will long need more people rather than more land.

The need of drainage has been long recognized, but I think the method at first adopted to secure it has hindered rather than promoted. In 1850 the Federal Government granted to the States in existence at that time, with three exceptions, all lands which were unfit for cultivation, because of the fact that they were swamp or overflowed lands.

The States, however, are hampered in their attempts at drainage by the powers granted the Federal Government. The Federal Government has charge of interstate commerce and it also controls all navigable waters.

By the act of September 19, 1890 (26 Stat., 454), the creation of any obstruction not affirmatively authorized by law, to the navigable capacity of any waters in respect of which the United States has jurisdiction is prohibited; and, in considering the scope of this act, the Supreme Court (174 U. S., 708) finds that the language is general and must be given the broadest interpretation.

It is not a prohibition of any obstruction to the navigation, but any obstruction of the navigable capacity, and anything whatever done or however done within the limits of the jurisdiction of the United States which tends to destroy the navigable capacity of one of the navigable waters of the United States is within the terms of the prohibition.

Whenever any public lands might be involved in any proposed scheme of reclamation the State would be powerless to act, because the constitutional grant of power to Congress over property of the National Government excludes all other authority over the property which could interfere with the exercise of that power or impair its efficiency. (133 U. S., 504.)

Where tide-water lands are to be reclaimed action by the Federal Government is necessary. In the case of *Coxe v. The State of New York* (144 N. Y., 401) it was decided that a State statute granting to a corporation the right of property in the tide-water marsh lands, with power to reclaim and drain wet or overflowed lands and tide-water marshes on or adjacent to Staten Island and Long Island is obnoxious to the Federal Constitution.

The proportion of swamp lands which could be reclaimed without Federal intervention is comparatively insignificant when compared with the large areas connected with navigable or tide waters or which involve the control of interstate waters.

Thus we see that the Federal Government is the only power that can do this work without hindrance. The expenditures and the work to be done under the provisions of the proposed act are public and governmental in character.

It is not necessary in order that a use may be regarded as public that the whole community or any large part of it may participate in it. If the drain be of public benefit, the fact that some individuals may be specially benefited above others affected by it will not deprive it of its public character. (*Ross v. Davis*, 97 Ind., 79; *Lake Erie, etc., Railroad Co. v. Hancock Co.*, 63 Ohio, St. 23; 57 N. E., 1009.)

The work is also governmental in the sense that the Congress has authority under the Constitution, to which it must look for all its powers, to effectively legislate with a view of making the lands habitable and valuable to the nation. All the property and revenues must be held and applied "to pay the debts and provide for the general welfare of the United States." (Constitution, Art. I, sec. 8, clause 1; *Van Brocklin v. State of Tennessee*, 117 U. S., 151-158.)

Another feature of this discussion is worthy of extended discussion, but does not need it. Drainage would increase comfort, prevent very many cases of illness, and save many lives.

It is now known that malaria is caused by the bites of a species of mosquito known as the "Anopheles." This is not now one of the theories of medical men. It is a fact proved as conclusively as if by mathematical demonstration. There are few opinions concerning which doctors do not differ. This is one of the few. Every physician will say that malaria is caused by mosquito bites and by nothing else. Then if we would get rid of malaria we must get rid of mosquitoes. If we would get rid of mosquitoes we must get rid of the swamps.

Many men think that malaria is peculiar to the South. It is peculiar only to regions where there are mosquitoes. It is prevalent in low, swampy sections only because mosquitoes are found in such sections in great numbers. Malaria exists in the swamp lands of the North and East and West as well as in the swamp lands of the South.

If the mosquito were not a transmitter of disease, it would be well worth while to go to any trouble and expense to get rid of him. He is an intolerable pest, and in low-lying parts of the country makes the day uncomfortable and the night intolerable.

But the mosquito fills with malaria hundreds of thousands—yes, millions—of our people every year. Not all of them have what they recognize as a spell of sickness. Many simply feel a lassitude that makes the discharge of their duties almost impossible. Many have to give up work and become seriously ill. Many die of malaria whose lives would be saved and whose health would be made nearly perfect by removing the mosquito, by draining the swamps.

Santiago was once little better than a death trap. General Wood made it a healthy city. Habana was once the constant victim of yellow fever. Yellow fever is rarely known there now. The Isthmus of Darien was once a region of sickness and death. Now few spots on earth are more healthful. What has made all these changes? The extermination of the mosquito has done the work. The Government is very properly devoting its energies to the prevention and the cure of consumption. It could just as properly bend its energies to the eradication of malaria. Fewer men die of malaria than of consumption, but vastly more suffer with it than suffer with consumption.

Americans ought to lead the world in prosperity. Our country in the variety, the extent, and the richness of its natural resources is far in the lead of all others. I wish to see this land put in its best possible condition throughout its entire extent. Such parts of this work as are too vast for accomplishment by individual effort are vast enough to deserve the assistance of the Federal Government in the discharge of its duty of providing for the general welfare of the United States.

Eulogy on the Late Senators Morgan and Pettus.

REMARKS

OF

HON. RICHMOND P. HOBSON,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 25, 1908.

The House having under consideration the following resolutions:

"Resolved, That the House now proceed to pay tribute to the memory of Hon. JOHN T. MORGAN and Hon. EDMUND W. PETTUS, late Senators from the State of Alabama.

"Resolved, That as a special mark of respect to the memory of the deceased Senators and in recognition of their distinguished public services, the House at the conclusion of the exercises to-day shall stand in recess until 11 o'clock and 30 minutes a. m. on Monday next.

"Resolved, That the Clerk communicate these resolutions to the Senate.

"Resolved, That the Clerk send a copy of these resolutions to the families of the deceased Senators."

Mr. HOBSON said:

Mr. SPEAKER: A scarcely higher privilege could come to an Alabamian than to have an opportunity to thus do honor to the memory of two great men from our State, General MORGAN and General PETTUS.

On June 11, 1907, JOHN TYLER MORGAN, and six weeks later, on July 27, EDMUND WINSTON PETTUS each answered the final call and closed his record of faithful service to his fellow-man, to his country, and to his God. On that day in June when the news of the death of Senator MORGAN reached our State, and on that day in July when the sad tidings came that Senator PETTUS had followed his lifelong friend and colleague to the grave, "the mingled tones of sorrow like the voice of many waters was heard throughout the State," for Alabama was "weeping for her honored sons." Joined with the grief of Alabama was

the sorrow of her sister States, for the loss was not alone to the State and the South, but to the nation as well.

In all the varied walks of the long and noble lives of these two great Alabamians they had played every part well; their records in war and in peace, in public and private life, are records of which the State is justly proud, and the memory of their lives and achievements is a rich heritage to the youths of our land.

SENATOR MORGAN.

Senator MORGAN's public career began before the civil war, and he early displayed those traits which won for him afterwards such a brilliant career in national life. When the war broke out he enlisted as a private in the Confederate army. Here his ability and courage soon won him a commission as major, and later as a brigadier-general. During the trying days immediately following the war he took an active part in the work of bringing order out of chaos. In this he so clearly demonstrated his ability and worth that he was chosen United States Senator for the term beginning March 4, 1877.

His six terms in the Senate were filled with evidences of highest patriotism, and he always strove to render a maximum of service to his State and country. His sterling honesty and persistence of character soon made him a powerful figure in Congress. His curt refusal of the offer of the president of the Southern Pacific Railroad to make him consulting attorney for the company, at \$50,000 per year, just after Senator MORGAN had forced an investigation of the Southern Pacific that enabled the Government to regain much valuable land that had been fraudulently used, is both well known and characteristic. He informed the railroad magnate that he had come to the Senate to serve the people and not the railroads, and that anyone who would make him such an offer was not welcome under his roof.

Though the route selected for the canal connecting the Atlantic and Pacific oceans is not the one favored by MORGAN, yet the canal itself will ever be recognized as a permanent monument to Senator MORGAN, for it was due to his untiring and persistent labor that the people were finally aroused to the importance and necessity of building the canal.

Gifted with a breadth of vision possessed by few men of this or any other generation, Senator MORGAN early recognized the great importance to America of acquiring the Hawaiian Islands. In the face of the opposition of his party, he fought consistently to have the United States annex these islands; and without his aid the great peace nation might have lost this important outpost in the Pacific.

Soon after the annexation of Hawaii the wisdom of his course was vindicated, for they proved invaluable to us in the Spanish-American war.

He had the vision of a world statesman, and saw far in advance of his time that the control of the Pacific depended upon the possession of this great strategic point, stationed at a point well named the "crossroads of the Pacific," and of still more importance, he realized that the control of the Pacific was vitally necessary to maintaining our national integrity.

In this, as in all other matters touching our foreign relations and policies, he took the lead in advocating that our Government maintain strong and just policies with foreign nations.

While always a loyal Democrat, he was an American before he was a Democrat, and when his principles and party policy conflicted he never hesitated in standing for those principles against his party.

The resources of Alabama were recognized by him before the world at large realized the wonderful natural wealth of our State, and he was a pioneer in proclaiming to the world the remarkable advantages of our State. He never ceased to work for the advancement and development of State and nation until the hand of death interposed.

SENATOR PETTUS.

The history of Senator PETTUS is that of the State which he has served so long, so faithfully, and so successfully. He was born but two years after the admission of Alabama into the Union, and in its every activity of war and of peace he took the active part of leader.

When the war with Mexico was declared Senator PETTUS volunteered his services to his country and served it gallantly as a lieutenant until the victorious end. Again, when the civil war opened, Senator PETTUS drew his sword, but this time in behalf of his State. He distinguished himself at Vicksburg by conspicuous personal bravery, and again at Franklin by the skillful manner in which he handled his brigade in covering the disordered retreat of the Confederates. When the god of war had declared against him Senator PETTUS did not nurse his grievances nor yield to the despair of defeat, but entered ac-

tively upon the rehabilitation of his State and country under the new régime.

He took but little part in politics as a profession, and sought no office for himself, but he spared himself never when there was aught he could do to win the white man's battle. As a private citizen he served his State so well that it finally thrust honor upon him by making him its Senator. That part of his life spent in the Capital working in the interest of his country is known to all, and, indeed, is writ so legibly in the annals of national achievement that he who runs may read. There remains, therefore, for me only to join my voice with the voices of my colleagues and my countrymen in sorrow at the loss, and in thanksgiving for the example of so illustrious an Alabamian and so able an American as the late Senator PETTUS.

Mr. Speaker, the world is better for the example of the lives of such men as Senators MORGAN and PETTUS, and I thank God that such men call themselves Americans.

Prohibition for the District of Columbia.

SPEECH

OF

HON. THETUS W. SIMS,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. SIMS said:

Mr. SPEAKER: When I came to Washington last October, I found that the newspapers were discussing the numerous personal assaults upon helpless, undefended women on the streets of Washington, and the snatching of their purses. Many of these robberies were accompanied by brutal assaults and batteries, and some of them occurring in the best parts of the city. These crimes seemed to increase as winter drew nearer, until a state of terror seemed to seize the people. Women were afraid to go anywhere at night unattended.

The attention of the police department of the city was called to the matter, and all possible efforts to relieve the situation seemed to be made, but resulted in very few arrests. Upon the report of the major of police the Commissioners recommended an increase of the police force by at least 100 men.

Such a condition resulted in a serious consideration of what was best to be done to remedy the then existing conditions. As ranking minority member of the House Committee on the District of Columbia, I was asked to make a study of conditions.

I began my study by reading the last report of the Metropolitan police department for the year ending June 30, 1907, in which I find the following:

For the fiscal year that ended June 30, 1907, there were recorded 34,417 cases of arrest—16,623 against whites and 17,794 against colored.

There was an increase of 3,000 misdemeanor cases during the year over the prior one, sustained by the courts, in a measure due to increased population and activity on the part of the guardians of the public peace.

On further examination of the same report I find the population for the year 1906 is given at 326,435 and for 1907 at 329,591, showing a total increase of 3,156. These include all persons enumerated, women and children, few of whom are among the number of persons reported as arrests. While the total population for the year 1907 shows an increase of barely 1 per cent, the cases of convictions for crime during the same year show an increase of about 10 per cent. The explanation of this increase given as based on increase of population falls to the ground, as the whole increase of population is barely 1 per cent. If the other 9 per cent of increase is due to activity on the part of the guardians of the public peace, as alleged, those same guardians must have been very inactive in the year 1906. This is an attempt at explanation that does not explain, as the whole number of increases of convictions is about equal to the whole increase in population.

The population, as shown by said report for 1907, is, white, 233,403; colored, 96,188, which shows the colored or negro population of the District of Columbia to be about 30 per cent of the whole.

This same report shows arrests, white, 16,623; colored 17,794, or that of the 233,403 white people there were 1,171 fewer arrests than there were of the 96,188 colored or negro population for the same year.

All the assaults upon defenseless white women, numbering about 31 or 32, occurring last fall and winter, were committed by negroes.

Unless we are prepared to admit that the negro, as a race, is more criminal and vicious by nature than the white race,

we must look for an explanation due to other causes. No doubt there are a greater per cent of the negroes of the District of Columbia that are educated than anywhere else in the United States. He is seen under more favored conditions, and with all these advantages we find 30 per cent of the population of this District, who are negroes, commit more crimes than the 70 per cent that are white.

By further examination of said report for 1907, under classification of offenses for which arrests were made, I find that the whole number of arrests made for disorderly conduct was 9,995, or 10,000, speaking in round numbers. Of this 10,000 I find that there were, white 3,604, colored 6,331, or nearly twice as many negroes were arrested for disorderly conduct as white people, though constituting only about 30 per cent of the population. Must we admit that by nature the negro is six times as turbulent and disorderly as the white man? This must be true or else we must seek other causes by which to explain these reports of arrests for 1907.

In the same report we find that the cases of arrests for assault for the year 1907 were 2,692. Of these, 729 were whites and 1,963 were negroes, or nearly 3 to 1. Must we admit that the negro, as a race, is nearly seven times as combative as the white race, or shall we seek other causes for this great disparity?

It will be observed that in all of the above classified offenses the use of intoxicating liquors naturally play an important part, being in almost every case the direct cause of the arrest or commission of the offense for which the arrests were made.

Now, let us examine further said report as to offenses committed by white and colored races for the same year in the District of Columbia, where the use of intoxicating liquors do not usually have any effect.

	White.	Colored.
Desertion.....	21	3
Fugitives from parents.....	104	21
Violation of—		
Building regulations.....	32	10
Boarding-house law.....	25	3
Barber-shop law.....	18	9
Food law.....	287	22
Game law.....	9	—
Gambling law.....	24	7
Health ordinances.....	254	174
License law.....	136	69
Police regulations.....	2,263	1,415

It will be unnecessary to carry this comparison any further, as the same relation holds throughout the list. In that class of offenses most usually committed while wholly or partly under the influence of intoxicating liquors, we find that the negroes are at least five times more criminal and vicious than are the white people, while in the eleven other classes of offenses cited, the commission of which is not caused or stimulated by a state of partial or complete intoxication, the negroes of the District of Columbia show themselves to be more law-abiding and less criminal than the white race. We can reach no other conclusion in a study of these reports than that at least 75 per cent of all minor offenses committed by the negroes in the District of Columbia are the direct result of the use of intoxicating liquors. This accounts for the otherwise unexplainable fact that 30 per cent of the population of the District of Columbia committed more than 50 per cent of the criminal offenses for which arrests were made for the year 1907. If this is the condition we find to exist in Washington, where the negro has his best environment in the way of education and moral training, what are we to expect of the race in the United States as a whole?

The conditions I have recited and a study of the official reports led me to believe that an abatement of the open saloon in the District of Columbia was the only thing that could give complete and perfect relief from these conditions of rapidly increasing crime in the District of Columbia.

The several temperance organizations and churches in the District of Columbia, through their authorized representatives, brought me a bill which they had prepared, and asked me to introduce it as embodying their joint efforts and as expressive of the kind of a temperance law they desired. This was done on the 19th day of February, 1908, and I introduced it on the same day. It reads as follows:

A bill (H. R. 17530) to prevent the manufacture and sale of alcoholic drinks in the District of Columbia.

Be it enacted, etc., That on and after the 31st day of October, A. D. 1908, no person or persons of any house, company, association, club, or corporation, his, its, or their agents, officers, clerks, or servants, directly or indirectly, in the District of Columbia, shall manufacture, sell, offer for sale, keep for sale, traffic in, barter, or exchange for goods or merchandise, or solicit or receive orders for the purchase of any alcoholic liquors, give away the same at his, its, or their place

of business in the course of, or as inducement to, trade within the District of Columbia. Wherever the term "alcoholic liquors" is used it shall be deemed to include whisky, brandy, rum, gin, wine, ale, porter, beer, cordials, hard or fermented cider, alcoholic bitters, ambrosia, or any article used as a beverage, in the composition of which whisky, brandy, wines, or alcohol, or any other spirituous, vinous, or fermented liquors shall be an ingredient.

Sec. 2. That nothing herein contained shall prevent the compounding and selling of alcoholic liquors as aforesaid on a prescription by a regularly licensed druggist or pharmacist upon a written and bona fide prescription of a duly licensed and regularly practicing physician in the District of Columbia, who must sign his own name thereto, but the said druggist or pharmacist shall make but one sale on any one such prescription. Each prescription shall be numbered and dated and pasted in a book specially kept for this purpose, which book shall, during business hours, be accessible to public inspection. He shall enter in said book the date of every sale of alcoholic liquors made by him, the quantity and price thereof, the name of the person to whom sold, and his residence; and said purchaser shall sign his own name in said book, receipting for the liquor received by him. Any failure of any such druggist or pharmacist to comply with the provisions of this act shall make him liable to the same penalties as if he were not at the time such druggist or pharmacist. Any licensed and regularly practicing physician or any other person who shall give a prescription for alcoholic liquor to a person not under his charge professionally, or who is not receiving medical advice or treatment from him, shall, upon conviction thereof in the police court, be fined not less than fifty nor more than three hundred dollars, or be confined in the District jail or workhouse for not less than thirty days nor more than one year, or both fine and imprisonment, at the discretion of the court.

Sec. 3. That any regularly licensed druggist or pharmacist may also sell or furnish wine for sacramental purposes, and pure alcohol for mechanical and scientific purposes, but before selling or furnishing wine or pure alcohol for the purposes specified he shall require and obtain from any applicant for the same an affidavit clearly setting forth the purpose or purposes for which such wine or alcohol is intended. Such affidavits shall be filed by said druggist or pharmacist and shall be accessible to public inspection during business hours. Any person who shall procure from such licensed druggist or pharmacist such wine or alcohol by making false representations as to the uses for which it is obtained or falsely give his name shall, upon conviction thereof in the police court, be fined not less than \$50 nor more than \$300, or be confined in the District jail or workhouse for not less than thirty days nor more than one year, or both fine and imprisonment, at the discretion of the court.

Sec. 4. That any person or persons of any house, company, association, club, or body corporate, his, its, or their agents, officers, clerks, or servants, who violates the provisions of section 1 of this act shall, on conviction thereof in the police court on a prosecution in the name of the District of Columbia, be punished by a fine of not less than \$100 nor more than \$500 for the first offense, and for the second or any subsequent offense for the violation of said provisions such person shall be fined not less than \$300 nor more than \$1,000, and be imprisoned in the District jail or workhouse not less than six months nor more than one year. And in case of any house, company, association, club, or corporation convicted of violating the provisions of this act it shall be lawful to impose the penalty herein prescribed upon the president, vice-president, secretary, treasurer, or other officer, or upon any and all of them, in the discretion of the court.

Sec. 5. That prosecutions of the violations of the provisions of this act shall be on information filed in the police court by the attorney of the District of Columbia, by whatever name he may be designated, or any of his assistants duly authorized to act for him, and said attorney or any of his assistants shall file such information upon the presentation to him or any of his assistants of sworn information of any person that said law has been violated. It shall be the duty of said attorney of said District, or any of his assistants, to prosecute any person who violates said act by information in said police court when satisfied by evidence or information from any source that said act has been violated; and it shall be the duty of all policemen and other officers whose duty it is to arrest violators of law within said District to give information to said attorney, or any of his assistants, of any infractions of said act that may come within their knowledge.

Sec. 6. That it shall not be necessary in order to convict any person, house, company, association, club, or corporation, his, its, or their agents, officers, clerks, or servants, of violating the provisions of section 1 of this act to prove the actual sale, delivery of, or payment for any alcoholic liquors, but the evidence of having or keeping them in hand or offering to sell or barter, exchanging for goods or merchandise shall be sufficient to convict; nor shall it be necessary in a warrant or information to specify the particular kind of liquor manufactured, sold, offered for sale, kept for sale, trafficked in, bartered, or exchanged for goods or merchandise, or orders solicited or received for the purchase of alcoholic liquor; but it shall be sufficient to allege in the warrant or information that the accused manufactured, sold, offered for sale, kept for sale, trafficked in, bartered, or exchanged for goods or merchandise, solicited for, or received orders for alcoholic liquors, or kept it deposited to sell or barter alcoholic liquors.

Sec. 7. That whenever any person shall charge, on oath or affirmation before the attorney of the District or any of his assistants, duly authorized to act for him, representing that any person or persons, house or company, association, club, or corporation has or have violated or is violating the provisions of section 1 of this act, and shall request said attorney or any of his assistants, duly authorized to act for him, to issue a warrant, said attorney or any of his assistants shall issue such warrant, in which the house, building, or other place in which the violation is alleged to have occurred or is occurring shall be specifically described; and said warrant shall be placed in the hands of the captain or acting captain of the police precinct in which house, building, or other place above referred to is located, commanding him at once to thoroughly search said described house, building, or other place, and the appurtenances thereof, and if any such place shall there be found to take into his possession and safely keep, to be produced as evidence when required, all alcoholic liquors, if the same shall be found in quantities and in condition to suggest that it is kept for sale, and all the means for dispensing same, also all the paraphernalia or part of the paraphernalia of a barroom or other alcoholic liquor establishment, and any United States internal-revenue tax receipt or certificate for the sale of alcoholic liquor effective for the period of time covering the alleged offense, and forthwith report all the facts to the attorney of the District of Columbia; and such alcoholic liquor or the means for dispensing the same, or the paraphernalia of a barroom or other alcoholic liquor establishment, or any United States internal-revenue tax re-

ceipt or certificate for the sale of alcoholic liquor, effective as aforesaid, shall be prima facie evidence of the violation of the provisions of section 1 of this act as charged or presented; if the accused shall be found guilty, the alcoholic liquor so seized shall, after the trial and time for writ of error, if no writ of error is taken, be destroyed by the police department; if the accused be found not guilty, the whole shall be held as his, its, or their property, or the property of the real owner.

Sec. 8. That every person who shall within the District of Columbia directly or indirectly keep or maintain by himself or by associating or combining with others or who shall in any manner aid, abet, or assist in keeping or maintaining any clubroom or other place in which any liquor, the sale of which is prohibited by this act, is received or kept for the purpose of use, sale, barter, giving away, or otherwise furnishing, or for distribution or division among the members of any club or association by any means whatever, and every person who shall use, sell, barter, give away, or otherwise furnish, distribute, or divide any such liquors so received or kept, shall be guilty of a misdemeanor and subject to the penalties prescribed in section 4 of this act.

Sec. 9. That the possession of a United States internal-revenue tax receipt or certificate shall be prima facie evidence of selling or keeping for sale alcoholic liquors, and it shall be only necessary to prove the possession of such receipt or certificate to convict of violations of any provision of this act, unless the same is disproved by positive testimony.

Sec. 10. That in the interpretation of this act words of singular number shall be deemed to include their plurals, and words of the masculine gender shall be deemed to include the feminine, as the case may be.

Sec. 11. That all laws and parts of laws inconsistent herewith are hereby repealed.

It will be seen at once that this is a drastic prohibition bill, for the language and provisions of which I claim no credit, but for its introduction and advocacy I assume full responsibility and have done all I can to have it favorably reported by the committee of which I am an humble member.

Believing as I do that the people of a locality know better what is needed in that locality than anybody else is my reason for introducing this bill. I believe the temperance people of the District of Columbia are largely in the majority as a whole, and I have not the slightest doubt that a large majority of the white people are for a sound, conservative, effective, prohibitive liquor law. But unfortunately there is no legal way by which a vote of the people of the District of Columbia can be had on anything. I would be glad to have any measure affecting the local welfare of the people of this District submitted to a vote, but I see no immediate prospect of getting any kind of a law passed by which the franchise can again be extended to these people. I therefore see no reason why we should wait for temperance legislation to some remote day in a more remote future when it may please the powers that be to restore to these enlightened people of the District the right and privilege to express their wishes by casting the ballot of a freeborn American citizen.

The negro has not had time to advance his standard of civilization, his moral ideals, his force of moral character to such an extent as to enable him to withstand the temptations furnished by the open saloon to the same extent as has his white neighbor. Hence we find in all classes of offenses which are most commonly committed while the offender is in a partial or complete state of intoxication that the negro race is at least five times more criminal than the white race, as shown by the official reports of the Metropolitan police department of the city of Washington, and I think this condition is general throughout the whole of the United States. The same classes of offenses committed by white people are also caused, in almost all instances, by the excessive use of intoxicating liquors. But if this is not the case as to the white people, is it not the patriotic duty of the white people of this District to give up the conveniences of drink furnished by the saloons rather than subject the negro race to temptations that they can not withstand, thus becoming criminals and, as such, a burden to the taxpayers of the District and the nation?

For fear that some gentlemen from the North will not accept the testimony of the white man unsupported by negro witnesses as to the effect prohibition has on the negro, I take the liberty to read the following newspaper clipping:

BOON TO BLACK MAN—BOOKER T. WASHINGTON REJOICES OVER PROHIBITION—OBJECT LESSON IN ATLANTA—NOT ONE NEGRO IN THE JAIL THERE CITED AS AN INSTANCE OF THE WIDESPREAD EFFECT OF THE REVOLUTION IN SOUTH—LEADER OF BLACKS SAYS ABOLITION OF BAR-ROOM ALMOST EQUALS THAT OF SLAVERY.

NEW ROCHELLE, N. Y., March 1, 1908.

Before the largest audience that ever assembled at the People's Forum, Booker T. Washington, at the New Rochelle Theater, this afternoon delivered an address on the race question, in which he expressed his gratification at the progress made by the temperance cause in the South and declared that the abolition of the barroom was a blessing to the negro second only to the abolition of slavery.

Two-thirds of the mobs, lynchings, and burnings at the stake, he declared, were the result of bad whisky getting into the stomachs of bad black men and bad white men.

"The great temperance movement which has swept the South," said he, "has been without parallel in history. Now that I have lived to see the whisky shops and open barrooms done away with, there is no telling what other reforms may take place anywhere. You little realize how much it means to the colored race."

"Without an expenditure of money a mighty revolution has been accomplished. To-day we find only thirteen counties in Kentucky where whisky is sold under licenses; in Tennessee, in only four cities and two towns. In the State of Florida there are only fourteen counties where saloons and barrooms exist. They are almost extinct in North Carolina.

"After next Christmas every barroom in Mississippi and Alabama will close up. Already every barroom in Georgia has gone out of business, and for the first time in forty years the Atlanta Journal came out and said that not a single black man was in the city prison." [Applause.]

The clipping just read is a statement of one of the most noted negroes in the United States, if not the most noted, as to the effect the removal of the saloon has on the negro race in the South, where it has been tried.

I am trying to confine my remarks as much as possible to conditions bearing on the local situation, as this bill is of local application. I now read from the hearings on this bill held by the District Committee the statement of Mr. James H. Harris, warden of the jail of the District of Columbia:

Mr. Chairman and gentlemen of the committee, as warden of the United States jail, there are committed to my care about 3,600 people annually; that is, more than 3,600 this last year and about 35,000 people in the last ten years. These people are committed for various causes, a very great many of them for assault, simple assault, and assault with a dangerous weapon, and assault to kill, and murders. A very large per cent, seven or eight out of ten, perhaps, either directly or indirectly, are committed there on account of drink. Nearly all the assault cases are in consequence of drunkenness. As I remember, every murderer who has come to the jail has been a drunkard. Every one who has been hanged, and there have been fifteen men executed since I have been warden in the ten years, has been a drunkard, and in my judgment there never will be one executed there who is not a drunkard.

The jail has more than twice the number of prisoners that it should have now in comparison with its size. There are just a few over 300 cells in the jail, all told, and they are very small, being only 5 feet by 8 feet long, and we have as many as 617 prisoners in the 300 small cells. It would cost the Government more than \$400,000—perhaps \$500,000—to make the jail as large as it should be to be anything like as good as ordinary county jails are. But the jail is large enough now and would be large enough for many years to come if you had absolute prohibition in this District. I am only speaking now of what people come to me; the workhouse is overcrowded also.

I have talks every day of my life with prisoners who tell me that their downfall is in consequence of strong drink. If he is a thief, he says it is because of his drinking; he spent his money that way and he must have money, so he steals. If he is a housebreaker, or if he is a criminal in any sense, you can almost trace every crime back to drink. That, I am sorry to say, is the case with women as well as men. I have not come here to make a temperance speech, gentlemen, and perhaps what I have said is as much as you care to hear from me.

Mr. SIMS. How long have you held the office of warden?
Mr. HARRIS. I have been warden ten years; I have been at the jail eleven years. Of course, I might say a great deal along the line of what ought to be done, if the whisky and the rum are going to be sold as they are, but I think this committee is not here to hear an argument of that sort now; but I do say that the jail is plenty large enough and would be for years to come. There ought to be some modern improvements. I will admit, because it is not up to date, but comparatively a small appropriation would be sufficient if there was no rum sold in the District.

Mr. MURPHY. What does your experience show the effect of the liquor on the colored population to be?

Mr. HARRIS. They nearly all drink, and a colored man is sure to do something that he should not do if he drinks, almost invariably.

Mr. MURPHY. What is the proportion of prisoners in the jail who are colored people?

Mr. HARRIS. More than six to one; we have six colored people to one white person, and I may say incidentally that the District is not getting a less proportion of colored people as the city grows, and if you will hear me, I will say this, that in view of the fact that there is now quite a move in some States of this Union in favor of prohibition, I think they have found it absolutely necessary to do this thing because of their inability to restrain and keep within proper bounds a certain class of their population, and I think this District is in the same condition.

In the same hearings Rev. Walter H. Brooks, pastor of the Nineteenth Street Baptist Church, colored, made a statement, which I now take the liberty to read:

Mr. Chairman and gentlemen, in asking you to abolish the liquor traffic in the District of Columbia, we do so from a sense of duty and patriotic devotion to the highest interests of this community and the nation. We recognize the fact that valued monied interests are at stake, that the employment of an army of men is threatened by this issue, that the pleasure of tens of thousands is menaced in what we advocate; nevertheless, we are satisfied that the thing for which we stand must come some day or the fairest city on the American continent must sink beneath the curse which it imposes upon itself. Reforms always bring with them some temporary hardships and losses; the closing of a brothel entails upon its inmates a condition of want and misery for a season; the shutting up of a gambling den destroys the proprietor's games and calling. The preaching of a well-known apostle in other times so affected the business of certain manufacturers that they convened the men of their crafts and set the ancient city of Ephesus in an uproar with the cry "Great is Diana of the Ephesians," and this cry was kept up for the space of three hours. It required a band of Roman soldiers to quiet the mob and to hush their voices; but the reform came and the shrines of Diana are not.

Here, in our own country, independence came as the result of great loss to the colonists and to Old England, but who would exchange the conditions of to-day for those which antedated the birth of the Republic? The emancipation of the slaves in these United States cost the nation millions of money and filled the North and South alike with widows and orphans, but the country is richer in every part and infinitely better off than it was before the great civil conflict. The responsibility for all these hardships and losses lies not with the reform which we urge in this community, but with the cause that needs reforming. "The reform in every age must stand squarely on the declaration, 'Let justice be done though the heavens fall.'" We think this a sufficient

answer to those who would tolerate in this community a great social and moral evil on the plea that the prohibition of that evil would entail nothing short of the confiscation of vast properties. We are deeply convinced that the liquor traffic is fraught with evil.

Now, I believe that the liquor traffic is, per se, a moral iniquity, and for that reason it has no right to exist. I have seen one boy who had killed another; I had two members of my church, the one had a brother, the other had a son; the son murdered the brother. I know where they got their liquor. One asked the other to treat him; they rushed out of that saloon, and in a few minutes one boy was dead and Mr. Cleveland saved the other from the gallows by sending him to the penitentiary. Only a few weeks ago a poor child came to my door in the care of a policeman. She was ragged and she had stolen a dress to hide the nakedness of her little sister. The next day that child was taken from its mother and is to-day in the hands of the Board of Children's Guardians. Is the thing right? Is the thing moral and right?

Only last week we had a murder—a man murdered his wife and then killed himself. This is a new order of things among us, of men killing themselves, but liquor turns men into demons, and this takes place in a part of the city where there are numerous saloons, and I might stand here and call up case after case where crime and murder have been manifest through the liquor traffic.

Now, gentlemen, it was said here that there are six colored people in that prison to one white, but we form only one-third of the population, and therefore you must multiply that six by three, which means that there are eighteen black people to one white person, according to the population, and what is the cause of it? We give all our money to these people, and if we get in a fight we have no money to pay the fines. If we misbehave we must go to prison. I say "we," I mean the people of our race. What I want to see in this District of Columbia is every saloon closed, and let me say I have no ill will against these people. I respect and honor the men in the business. I would do them any kindness, but I would wipe their business off the face of the earth, because it is destroying my people, and we can not go down without them going down, too. These people are destroying themselves as well as us. Let me tell you there are 500 saloons in the District of Columbia, but I do not think over 10 of those are managed by colored people. We are the victims; we are sinned against more than sinning in this matter, and I appeal to you, gentlemen, stand for the right and deliver us from the curse of the saloon.

I invite your special attention to the statement of the warden of the jail and to the statement of the colored Baptist minister as to the effect the open saloon is having on the negro race in the city of Washington, and beg to say that if the good, Christian, philanthropic people of the North who are so much concerned about the negro in the South being deprived of his vote will turn their attention to their own Representatives in Congress they can give to the negro in Washington, where neither negro nor white man can vote, the blessings of good temperance legislation which we of the South are giving both negro and white man, and for the effect of such legislation on the negro race I cite the above testimony of Booker T. Washington.

I shall content myself as to the negro race in Washington with relation to this bill with what I have already shown, and shall now call attention to the need of a saloonless Washington from considerations of a general character, as well as local, and with regard to the effect of legislation of this character on the nation at large. As Members of Congress are not voted for or nominated by the people of Washington, we ought to be able to give full weight to the true state of facts, without regard to political effect, as we find them. Bearing upon conditions here, I shall now take the time to read a clipping from a local newspaper:

PROHIBITION FOR FIREMEN—CHIEF BELT RECOMMENDS STRINGENT REQUIREMENTS FOR APPLICANTS—FINDS THAT NEW MEN ARE CHIEF OFFENDERS OF DEPARTMENT REGULATIONS FOR TEMPERANCE.

Absolute prohibition among the members of the Washington fire department will be required in the future. Chief Belt yesterday made a recommendation to this effect to Commissioner Macfarland. He said he made the suggestion in view of the number of cases of intoxication which have occurred in the department recently. All applicants for appointment are to be required to make affidavit that they have not indulged in any spirituous, malt, or intoxicating liquors for at least six months, and before any person is appointed in the service he will have to sign a pledge to totally abstain from the use of intoxicating liquors for a period of five years.

Chief Belt's recommendation said that provisions in the fire regulations regarding the conduct of members of the department are lax. They are designed to prevent officers and members of the fire department from overindulgence in liquors, but the chief observes that the increase in the number of violations of these provisions would indicate that the penalties imposed have not been sufficiently severe to discourage the practice.

Investigation shows, he says, that the new members of the department are the principal offenders, and it is toward new members that attention should be directed.

Chief Belt has been in the fire department of this city for more than forty years. He must know whereof he speaks. I ask, is it not an appalling state of affairs when the chief of the fire department of the Capital City of this nation has to resort to such drastic measures in order to have a sober body of firemen, capable of giving the city the protection from fire it needs and must have. I call special attention to the latter part of this statement, which says that the new members of the department are the principal offenders. This statement proves beyond the shadow of a doubt that drunkenness is on the increase in the city of Washington.

The opponents of this measure claim that prohibition does not prohibit. They claim that there is more drunkenness in cities and States where prohibition prevails than where the open

saloon is tolerated. I now call on all such persons to point out a single city in the United States where prohibition prevails where it has been necessary to resort to such means to keep firemen fit for duty as has been found necessary in Washington.

The State of Maine has had prohibition liquor laws longer than any other State in the Union. It is situated in the extreme far northeastern part of the United States. As a result fewer people from the other States of the Union visit or pass through Maine than perhaps any other State in the Union. These facts make it easier to misrepresent conditions in Maine than any other State where prohibition has been tried. As a result there are hundreds of false statements sent broadcast over the country as to the Maine prohibition liquor laws in order to prevent other States from following the example of Maine. While these falsifiers have been exceedingly busy for many, many years, the cause of prohibition is making rapid strides in all parts of this country. As a complete refutation of these false and slanderous statements as to Maine, I now read from a newspaper a statement given by the Hon. CHARLES E. LITTLEFIELD, an honored Member of this House, as to conditions in Maine, and put it against the whole army of false witnesses who slander the good name of Maine for so much per:

Is the prohibitory law against liquor selling actually effective in Maine, where it has been in supposed operation for fifty-seven years?

That is a threadbare question. Stealing is a crime in Maine, but men steal. Liquor selling is prohibited, but liquor is sold. The State law is secretly violated, as everyone knows who knows anything at all, but the men who violate it are afraid of the Government in Washington and are careful to pay the license fee which the law of the nation has established. I shall reply to your inquiry by saying that the last obtainable figures show that Illinois pays an internal-revenue tax of \$9.20 per inhabitant. In other words, if the money paid by all the makers and dealers of liquor in Illinois to the National Government were divided by the number of persons living in the State, the tax per person would be \$9.20. The tax in Ohio is \$3.36 per capita, in Kentucky it is \$8.72, and in Pennsylvania it is \$2.30. What do you suppose it is in Maine? Exactly 4 cents.

OBSERVATIONS ON PROHIBITION.

I think all decent men will say that the liquor business must be regulated. Well, what is the best way in which to regulate it? If it is by license, I should be for license. In my view, however, prohibition is the best way, and therefore I am a Prohibitionist. An internal-revenue tax of 4 cents per capita in Maine persuades me that I am right. I might further justify myself with figures as to insanity, pauperism, and crime, but I will not take the trouble. Nevertheless, I should like to add that Maine has \$66,000,000 deposited in savings banks. Maine is not a rich State, and has sent great sums of money into all parts of the country for investment, yet for each inhabitant of Maine there is \$95.22 in local savings banks. For each inhabitant of Ohio there is \$10.71 in local savings banks; for each inhabitant of Illinois there is \$13.43 in local savings banks; for each inhabitant of Pennsylvania there is \$16.72 in local savings banks. There are no savings deposits whatever in Kentucky.

A stranger comes to Maine, sees two or three drunken men on the streets of some city, and goes home to report that prohibition is a failure. A statement of that kind is puerile and unworthy of notice. Against it must be put the record of half a century. I have seen ships of rum unloading at our wharves, but such ships are to be seen no more. In Washington liquor in bottles is displayed in show windows like shoes, millinery, and dry goods. There is no such exhibition anywhere in Maine. There are places where liquor is sold, and men who drink may guess or learn their location, but the whole proceeding is under the ban and could be instantly stopped were the officers of the law mindful of their duty.

In order that the House may know the extent to which the saloon evil inflicts this city and in order that it may know how many dramshops are open in the nation's capital, how many wholesale liquor dealers, so-called, ply their vocation in this city, and how many illegal places sell intoxicants, and who some of them are, I shall give the House some official and unofficial evidence.

From the report of the excise board for the District of Columbia dated March 3, 1908, it appears that for the year ending October 31, 1907, 521 bar-room licenses were granted by said board, and for same period licenses for wholesale liquor dealers were issued to 142 applicants, making a total of 663 licenses issued to liquor dealers in the District of Columbia for year ending October 31, 1907, by the excise board. Under the excise law druggists can not be granted a wholesale liquor license, but are permitted to sell liquors on the prescription of a reputable physician. Wholesale liquor dealers are permitted to sell intoxicating liquors in quantities as small as one pint but not to be drunk on the premises.

In order to show how many persons in the District of Columbia paid special taxes as wholesale and retail liquor dealers for the year ending June 30, 1907, to the United States Government I read the following letter from the Hon. J. G. Capers, Commissioner:

TREASURY DEPARTMENT,
Washington, March 23, 1908.

Hon. T. W. SIMS, M. C.

House of Representatives, Washington, D. C.

SIR: I have the honor to acknowledge receipt of your letter of March 22, in which you ask to be informed as to how many persons in the District of Columbia pay special taxes as wholesale and retail liquor dealers.

The last report of the Commissioner of Internal Revenue shows that during the fiscal year ended June 30, 1907, there were issued in the

District of Columbia 930 special-tax stamps to retail liquor dealers and 65 special-tax stamps to retail dealers in malt liquors. During the same period there were reported in the District of Columbia 32 wholesale liquor dealers and 29 wholesale dealers in malt liquors.

Dealers in malt liquors are not permitted to sell spirituous liquors, such as whiskies, brandies, etc., but must confine their business to beers, ale, etc.

Respectfully,

J. G. CAPERS, Commissioner.

It appears from the report of the excise board that there were only 663 licenses, including both retail, or barroom, and wholesale dealers, for the year ending October 31, 1907, issued by said excise board for the whole District of Columbia, while from the letter of the Commissioners it appears that for the last fiscal year there were issued 930 special-tax stamps to retail liquor dealers and 65 special stamps to retail dealers in malt liquors, as well as 32 wholesale liquor dealers and 29 wholesale dealers in malt liquors.

From these letters and reports it appears beyond the shadow of a doubt that a large number of persons who have paid special taxes as liquor dealers in the District of Columbia have obtained no licenses from the excise board—that there must be a large number of unlawful "speak easies" in this District, notwithstanding the 521 licensed barrooms. Bearing on this question of the illegal sale of intoxicating liquors by unlicensed persons in the District of Columbia, I read from the testimony of Mathew E. O'Brien, Congressional representative of the National Prohibition Committee, given at the hearings on this bill before the District Committee:

There are in the District of Columbia to-day more than 200 "speak-easies." I am going to give you a list of those in what is known as "Hooker's Division," in the city of Washington. Here is a list of places that are to-day engaged in selling intoxicating liquors in violation of law in that little strip of territory where there are a number of licensed saloons, and most of them are also houses of prostitution, for which the licensed saloon is the feeder.

Mr. O'Brien then gave the names and street addresses of persons who have paid United States stamp taxes as retail liquor dealers, but who have not obtained licenses from the excise board. Mr. O'Brien, testifying further, said:

This list contains the names and addresses of eighty women who are selling intoxicating liquors without a license from the excise board, and this under a license system. Here you have speakeasies under a license system with which the mercantile association says we ought to be satisfied. A license system that they declare works well and is the best in the country.

If the conditions that exist down in the "Division" can be produced under what the liquor men claim is a good license system, is it not time to abolish that system altogether? In this small corner of Washington are found 80 houses of assignation all selling intoxicants and paying for a revenue-tax receipt to sell intoxicants, and yet there are plenty of licensed saloons in this vicinity.

As a matter of fact, the licensed saloon acts as the recruiting station for these places. The men behind the bar pilot the stranger into them. They know that both go together and they have no desire to have the law enforced against the illicit seller of liquor and the women of the lower class, because they are themselves violators of the law and know that all must hang together or hang separately.

Wherever the saloon abounds, you will find that the dive and the brothel go unmolested. You do not find these places where liquor is prohibited. In every city where they exist the saloon furnishes them their patrons. This is not supposition with me. I know from actual experience. By closing up the saloon you will drive out the vice that now flourishes in the "Division."

Recently in my home city, Bridgeport, Conn., I closed up the saloons on Middle street, known as "the Midway," and the Saturday night after these saloons were closed for violations of the liquor laws seventy-two lewd women departed from the city on a single train.

I was sheriff of the city of Bridgeport for four years and I enforced the liquor laws while I held that office. I would rather fight the man who has no sanction of law to engage in the business than the man who is licensed to do business under regulations and who violates the regulations.

I was compelled not only to fight the violators of the license law, but the mayor and police commissioners of the city as well, and it required determination on my part to make them understand that law must be respected. The licensed dealers are the worst violators of the law. They will not live within the provisions of the law if they dare violate it. They are the most persistent violators and the most daring bribers of public officials.

By intimidation or bribery they hope to keep the officials charged with the enforcement of the law under their control. There could be no such organized lawlessness under prohibition. The man selling liquor under prohibition could not occupy the position that the licensed dealer does in any community.

I have only in part given you the facts bearing on conditions existing in the city of Washington. Time and space forbid giving even a synopsis of the evidence developed at the hearings and arguments based thereon in support of this bill or some good temperance measure that will improve conditions. Bad as these conditions are, those who oppose this bill claim that conditions are ideal and that no change of any kind or character should be made. As a candid statement of those who oppose not only this bill, but any and all legislation in any way affecting the liquor traffic in Washington, I read the following communication from the Washington Mercantile Association:

THE WASHINGTON MERCANTILE ASSOCIATION,
Washington, D. C., February 15, 1908.

DEAR SIR: The Washington Mercantile Association is now actively at work endeavoring honorably to prevent the enactment of a prohibition law in the District of Columbia. This association is composed of

representatives of all the interests affected by the proposed legislation, but it represents also all persons who do not believe in prohibition. It intends to make a most vigorous effort to convince Congress that the people of this District do not want prohibition or any other liquor legislation. They do not want any change whatever from the law as it stands. The association invites the sympathy and support of all persons who believe, as we do, that the District of Columbia is well governed and needs no new and experimental laws.

In order to meet the determined and united attack of the prohibition people it is necessary that this association should be provided with funds for legitimate expenses—and there will be no other expenses. The fight is open and aboveboard, but it is costly, nevertheless. The prohibitionists are supplied with funds from their friends all over the country. We ask for help, likewise, from every person who opposes prohibition. Every cent of this money will be accounted for, and any person contributing to the fund will be at liberty to inspect the books at any time.

The association asks you to send in a contribution in such amount as you see fit to give. Make check, money order, or draft payable to Charles Jacobsen, treasurer, Twenty-seventh and K streets, NW., Washington, D. C. He will promptly acknowledge receipt. If you have any suggestion to offer for assisting us in this campaign, be free to send them with your contribution, and we shall give them careful consideration. We are in this campaign heart and soul, fighting your fight, and we feel that we have a right to ask your help. An immediate and liberal response to this appeal will be your best argument against the enactment of a prohibition law in this District. Any further information desired can be had of any member of the executive board, whose names appear above.

Yours, respectfully,

THE WASHINGTON MERCANTILE ASSOCIATION,
WILLIAM MUEHLEISEN, President.

HUGH F. HARVEY, Secretary.

I have read to you the charter and business occupations of those who oppose this bill as stated by themselves in the foregoing communication.

I now read you a communication from those churches and associations who favor this bill and then leave you to decide for yourselves in whose company you had rather be found and on which side of this controversy you will align yourselves, for in the end this question must be fought to a finish:

Churches.—Methodist Episcopal, Methodist Episcopal South, Presbyterian, Lutheran, Baptist, Christian (Disciples of Christ), Congregational, Methodist Protestant, Society of Friends, Catholic, African Methodist Episcopal, Washington Ministerial (Colored).

Temperance and other organizations.—Independent Order of Rechabites, Independent Order of Good Templars, Woman's Christian Temperance Union, Catholic Total Abstinence Union, Anti-Saloon League, International Reform Bureau, Woman's Interdenominational Mission Union, Prohibition Crusaders.

Executive committee.—A. E. Shoemaker, Anti-Saloon League; Rev. J. W. R. Sumwalt, presiding elder Methodist Episcopal Church; Rev. George E. Miller, Christian Church; Rev. George E. Cummings, Presbyterian Church; Rev. A. K. Wright, Baptist Church; Rev. B. P. Truitt, Methodist Protestant Church; Rev. S. Reese Murray, Prohibition Crusaders.

Petition committee.—Rev. B. P. Truitt, Rev. A. K. Wright, John R. Mahoney.

FEDERATION OF MINISTERS' CONFERENCES
AND TEMPERANCE ORGANIZATIONS,
Washington, D. C.

REVEREND AND DEAR BROTHER: The federation of ministerial associations and temperance organizations in the District of Columbia have, through the Hon. T. W. SIMS, introduced a bill in Congress for prohibition in the nation's capital, known as "H. R. bill No. 17530."

The bill is now in committee and under consideration. We are assured by friends in Congress that should the bill be reported to the House of Representatives by the committee it would pass by a large majority.

Efforts are being made to have a favorable report from the committee. Without voice or vote in our local affairs we are dependent upon the will of the committee; hence we appeal to you that you interest yourself in our behalf to the extent of urging members of your church and citizens in your community to write letters or send telegrams to the Member of Congress from your district, urging such Member to support the bill for prohibition in the District of Columbia, and insist upon a report of the same to the floor of the House by the committee.

Immediate action is necessary as the hearing is now on. May we not have your active aid and cooperation in this matter? Prohibition for the District of Columbia would be the death knell to the traffic in the nation. So in helping us you are hastening the saloon's overthrow in your section of the country.

B. P. TRUITT,
A. K. WRIGHT,
JOHN R. MAHONEY,
Committee.

As a further statement of the character of organizations and of the people who favor this bill I now read from a statement made at the hearings before the District Committee by Mr. Albert T. Shoemaker, local attorney and representative of the Anti-Saloon League, as follows:

Mr. Chairman and gentlemen of the committee, we are here to-day in the interest of House bill 17530, popularly known as the "Sims bill," which provides for the prohibition of the liquor traffic in the District of Columbia. This is an old question, but a very important one with us in the District of Columbia. I represent to-day a committee of seven, which in turn represents the following organizations in the District of Columbia. These organizations came together in a conference and discussed, over a period of two or three weeks, the question as to what legislation we should ask at your hands at this session of Congress. The organizations participating in this conference are as follows: The Presbyterian Ministers' Conference, the Methodist Protestant Ministers' Conference, the Methodist Episcopal Ministers' Conference, the Baptist Conference, the Christian Ministers' Conference, the Methodist Ministers' Conference South, the Lutheran Ministers' Conference, the Washington Ministers' Conference, the African Methodist Episcopal Ministers' Conference, the Catholic Church, represented by Reverend Father Mackin, the Prohibition Crusaders,

the Woman's Interdenominational Missionary Union, the Woman's Christian Temperance Union, the Anti-Saloon League, the Catholic Total Abstinence Union, the National Reform Bureau, the Rechabites, the Congregational Church, and the Society of Friends. We have the honor, gentlemen, to speak for these organizations to-day, representing, as they do, in all fully 100,000 people of the District of Columbia. And there are many other people in the District who also favor prohibition, but for whom we do not directly speak.

I do not know how I can more fittingly close these remarks than by reading the eloquent and burning words spoken at the hearings in behalf of this bill by the Rev. S. Reese Murray, of this city:

The Sims bill (H. R. 17530) was submitted, as you perhaps know, at the instance of the united ministerial and temperance bodies represented in a conference of the same at the Y. M. C. A. in the months of January and February just past. It represents the wishes of these forces and of the allied interests of congregations of Christian people, and householders and property holders in the District of Columbia. The morality, the intelligence, the civic conscience, the civic public spirit, all that constitutes the very essence of the public good, all that fosters the nobility of this community, all that hinders moral disorder and the injury of the individual character—are back of that bill. If it is passed it can do nothing but make the District of Columbia the happiest spot of world-wide significance on the globe. It will give it name and fame no other capital of the earth has ever enjoyed. It will produce consequences of the most momentous character in inducing the nations to take steps toward rehabilitating the manhood of their domain, which in the generations past and in that now on the stage of action has been burdened, humiliated, driven, cursed, frenzied by the use of intoxicating drink.

And it will be in the line of procedure which is beginning in the scientific study of alcohol and alcoholism everywhere in the foremost republics and kingdoms, in the actions of those associations of citizens of the most renowned character, and in the laws of legislatures, and the proclamations of courts upon those deadly beverages and drugs which ruin the physical man, overthrow the sanity of the intellectual man, and cast the spiritual man into perdition. Such a bill means everything as an object lesson for America and for the world in the way of pure civic life, a larger pursuit of liberty, and a degree of happiness never dreamed of in the wildest nightmare of a brain steeped in the revels and distraught with the poison of alcoholic drinks.

Against the bill you will not find arrayed any business of large character which has a right to exist under the common law of our land. You will not find the Christian opinion—which is the dominating opinion in our land—supporting any opposition to it. You will not find the centers of education, the great moral elements among us, the philanthropic spirit of this place, that great body of public enterprise known as the Young Men's Christian Association, nor any civic life which looks to the well-being of Washington, attacking this bill.

Its opponents and would-be destroyers are men whose business, under whatever high-sounding names it may be conducted and under whatever pretenses it may be lauded, tends as certainly to criminality, to lawlessness, to the support of lawlessness, to the arrest of the pursuit of life, liberty, and happiness on the part of millions in our land as the tides tend to their ebb and flow under the resistless pull of the moon.

When court after court, publicist after publicist, statistician after statistician, police record after police record, warden's testimony after warden's testimony, and the endless tales of sorrow and of horror poured into the ears of minister and priest pile up an irresistible demonstration of the foul ends to which the drink traffic leads on, no one lost to all decency of thought, no one not hopelessly sodden in immoral opinion can deny that the business of making and selling liquors for beverage purposes is cursed with an infamous outcome.

That outcome stands against this bill. That business which can not deny this outcome without a lying lip stands against this bill. That plea for its overthrow can not advance an argument which means anything for civic order, anything for the safeguarding of youth, anything for the preservation of virgin purity in woman, anything for the suppression of the bawd, the gambling den, the low carousal, the individual "drunk." It can not lift a plea for the home. It can not remove an infinitesimal of squalor. It can not wipe away a single tear of wretchedness. It can not hush the sob of a solitary orphan. It can not stand by the open grave with any bereaved heart and lend even the semblance of sympathy for the thousands that drink has slain. It is as cold, as cruel, as relentless, as perfidious as anything that links purposes with the nether regions can be imagined to be.

Election of United States Senators by the People.

SPEECH

HON. WILLIAM SULZER,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 27, 1908,

On the resolution to elect Senators in Congress by the people.

MR. SULZER said:

Mr. SPEAKER: The Democratic party to-day favors every reform demanded by the farseeing, patriotic, and intelligent electorate of the country. It is now, as it ever has been, the party of Jefferson, the party of the plain people, and the party of the Constitution. It stands for equal rights to all, special privileges to none. It is opposed to the centralization of wealth in the hands of the few by the robbery, under color of law, of the many. It is opposed to the further centralization of power in the Federal Government by depriving the States of their reserved fundamental rights. It is the foe of subsidies and of every special privilege; and, as a minority party, in recent years

it has accomplished much for the general welfare in preventing the enactment of iniquitous Republican legislation for the benefit of the few at the expense of the many.

The Democratic party favors the election of United States Senators by the direct vote of the people, and will make it an issue and a live question in the coming campaign. It favors this change in the Federal Constitution as it will every other change that will restore the Government to the control of the people. It wants the people, in fact as well as in theory, to rule this great Republic and the Government at all times to be directly responsible to their just demands.

In my opinion, the people can and ought to be trusted. They have demonstrated their ability for self-government. If the people can not be trusted, then our Government is a failure, and the free institutions of the fathers doomed. We must rely on the people, and we must legislate in the interests of all the people and not for the benefit of the few.

We witness to-day in the personnel of the United States Senate the supplanting of democracy by plutocracy. Here Mammon is entrenched. Here the criminal corporations take their stand and defy the people. Here is the last bulwark of the predatory trusts. Here is the citadel of the unscrupulous monopolies. And more and more the special interests of the country, realizing the importance of the Senate, are combining their forces to control the election of Federal Senators through their sinister influence in State legislatures. Forty-six United States Senators can prevent the enactment of a good law or the repeal of a bad law. The United States Senate is the most powerful legislative body in the world and its members should be elected by the people of the country just the same as the Representatives in Congress are elected. This is of the utmost importance to the wage-earners of the country, because when the Senate is directly responsible to the people they will control it; and then, and not till then, will that august body respond to the will of the people.

The right to elect United States Senators by a direct vote of the people is a step in advance and in the right direction. I hope it will speedily be brought about. It is the right kind of reform, and I hope it will be succeeded by others, until this Government becomes indeed the greatest and the best and the freest Government the world has ever seen, where the will of the people shall be, as it ought to be, the supreme law of the land.

Mr. Speaker, ever since I have been a Member of this House—for nearly fourteen years—I have advocated and worked faithfully to bring about the election of Senators in Congress by the direct vote of the people. In every Congress in which I have served I have introduced a joint resolution to amend the Constitution to enact into law this most desirable reform, and the record will show that I have done everything in my power, in Congress and out of Congress, to secure its accomplishment. On several occasions the resolution has passed the House, only to fail in the Senate, because the Senate would not allow the question to come up for action. At the beginning of this session of Congress I again reintroduced my resolution to amend the Constitution so that United States Senators shall be elected by the direct vote of the people. It is similar to the resolution I introduced in all previous Congresses of which I have been a Member. I now send this joint resolution to the Clerk's desk and ask to have it read in my time, so that it will be printed in the RECORD as a part of my remarks.

The Clerk read as follows:

Joint resolution (H. J. Res. 137) proposing an amendment to the Constitution providing for the election of Senators of the United States by direct vote of the people.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following amendment be proposed to the legislatures of the several States, which when ratified by three-fourths of said legislatures, shall become and be part of the Constitution, viz: In lieu of the first and second paragraphs of section 3 of Article I of the Constitution of the United States of America the following shall be proposed as an amendment to the Constitution:

"SEC. 3. First. The Senate of the United States shall be composed of two Senators from each State, who shall be elected by a direct vote of the people thereof for a term of six years, and each Senator shall have one vote. A plurality of the votes cast for candidates for Senator shall elect, and the electors shall have the qualifications for electors of the most numerous branch of the legislature.

"Second. When vacancies happen, by resignation or otherwise, in the representation of any State in the Senate, the same shall be filled for the unexpired term thereof in the same manner as is provided for the election of Senators in paragraph 1: *Provided*, That the executive thereof shall make temporary appointment until the next general or special election, held in accordance with the statutes or constitution of such State."

This amendment shall not be so construed as to affect the election or term of any Senator chosen before it becomes valid as a part of the Constitution.

Mr. SULZER. Mr. Speaker, that joint resolution speaks for itself. It needs no apology. I believe it is right. I know the

people favor it. I want to see it a part of the fundamental law of the land. I want to make the Senate less aristocratic and more democratic. I want to make it more obedient to man and less responsive to Mammon. I want to make it pay more heed to the appeals of the people and listen less to the demands of plutocracy. I want the Senate to be the people's Senate, in the interest of the many and for the benefit of all the people, and its accomplishment will keep the Government nearer the masses and herald the dawn of a better and a brighter day in the onward march of the Republic.

The people all over this country demand this much-needed change in the Federal Constitution, so that they can vote directly for Senators in Congress, and they appeal to us to enact this law to give them that right. It is not a partisan question, neither is it a sectional issue. The demand reaches us from all parts of the land and from men in all political parties with a degree of unanimity that is quite surprising. It is our duty to respect the wishes of the people and to give them a uniform law allowing them to vote for Senators in Congress just the same as they now vote for Representatives in Congress.

I am opposed to delegating away the rights of the people, and where they have been delegated away I would restore them to the people. I trust the people and I believe in the people. I believe that all governments derive their just powers from the consent of the governed, and hence I want to restore to the people the right now delegated to the legislatures by the framers of the Constitution, so that the Senate as well as the House will be directly responsible to the people and the Government become more and more a pure democracy, where brains, fitness, honesty, ability, experience, and capacity, and not wealth and subserviency, shall be the true qualifications for the upper branch of the Federal Legislature.

It may be said that it will be useless, and a waste of time, for the House to again pass this joint resolution, as the Senators will never consent to a change in the method of their selection. That may be true in regard to some of the Senators, but I know it is not true in regard to all of them. Many of them favor this change and advocate it. If we pass this resolution, it is true it may fail again, as it has failed before, to meet the approval of the Senate, but those who believe in this change will not give up the struggle to bring it about until it is accomplished, and, mark my words, sooner or later it will be accomplished.

If a majority of the Senators oppose the adoption of this resolution in this Congress and from private motives, or personal ideas, vote it down, the agitation of the people for this much-needed reform in the organic law will not cease, but will become more and more pronounced until there shall be a Senate that will listen to their demands. Do not be deceived; make no mistake; this reform is growing more and more in favor with the people every year and is destined to become more and more popular until in the near future it will be adopted.

Already twenty-seven States have passed joint resolutions through their respective legislatures demanding this change in the Constitution. These States are Pennsylvania, Indiana, Texas, California, Nevada, Missouri, Nebraska, Arkansas, Wyoming, North Carolina, Illinois, Colorado, Louisiana, Kansas, Montana, Wisconsin, Oregon, Michigan, Tennessee, Idaho, South Dakota, Washington, Utah, Kentucky, Minnesota, Iowa, and Oklahoma.

The action of these twenty-seven States of the Union demanding this change in the Federal Constitution, so that the people shall have the right to vote directly for United States Senators in Congress should be conclusive, and must impress Senators who are doing all in their power to prevent the enactment of this law that patience has almost ceased to be a virtue, and unless they take heed in time these States and some of the other States favorable to this reform will call a constitutional convention on their own initiation and amend the Constitution in accordance with the wishes of the people. This is a most important question to all the people and the Senate will make a sad mistake if it attempts longer to ignore it. The people are in earnest in this matter and any attempt to thwart their will in this reform will only hasten its consummation.

The adoption of this joint resolution will prevent corruption in State legislatures, stop scandal, and end to a great extent the temptation of political parties to gerrymander legislative districts for partisan purposes. Let me say to this House that this legislative gerrymandering has been carried further by the Republican party in my own State of New York than perhaps in any other State in the Union. In the State of New York, under the present outrageous Republican apportionment the people can not secure a Democratic legislature unless the

Democratic party carries the State by at least a plurality of 150,000 votes.

The Republicans in their partisanship went so far that they wrote in our State constitution that no matter what the population of Greater New York should be, no matter if it were twice as large as the population of the rest of the State, the city of Greater New York should never have more than one-half the members in the upper branch of our State legislature. I believe the change in our Federal Constitution sought to be made by this resolution will almost entirely prevent these unfair and outrageous apportionments and at the same time give the worthy man the same opportunity under the law as the corporation's man to submit his cause and his candidacy to the arbitrament of the people for the high and honorable office of a Senator in Congress.

The SPEAKER. The time of the gentleman from New York has expired.

The Currency Bill.

SPEECH

OF

HON. RUFUS HARDY,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 27, 1908.

Mr. HARDY said:

Mr. SPEAKER: I present the proposition that no party that deliberately and knowingly goes before the people with a false pretense inscribed on their banner and a fraud branded on their forehead deserves to be trusted. Harsher terms are not parliamentary, but when a party, through all its leaders, its President in office, its certain and already selected candidate for President at the approaching election, and its leaders on the floor of the House and Senate declare that they favor a law which shall make public every campaign contribution before the election, so that the people can know what people and what interests are supporting each party, and that before they vote, and when the party so declaring, having a large majority in both Houses and the acknowledged and undoubted and absolute power to do it, fails to pass such law during a six-months' session, such declaration is doubted. When such party has before it a bill embodying such law in plain, clear terms, reported by its own committee—the McCall bill—but holds it back till the closing days of the term, and then suddenly loads it down with an amendment—the Crumpacker bill—which they absolutely know will prevent its passage in the Senate, whereas the bill unamended would pass the House without a roll call and the Senate without opposition; when such party having such power pass such bill so amended in the House and send it over to the Senate, where they know it will never see the light again much less pass and refuse to pass the original unamended bill, the plain people outside of the Halls of Congress will call their declaration that they favor a publicity campaign contribution law a plain, simple lie. To prove these facts, Mr. Chairman, I refer the people, first, to the fact that the President, Mr. Roosevelt, in more than one message urged this Congress to pass a plain campaign contribution publicity law; second, to the fact that Representative McCall, a Republican, early in this session introduced a bill embodying such a law; third, that on the 20th day of April, 1908, that bill was reported to the House; fourth, to the CONGRESSIONAL RECORD, which shows that JOHN SHARPE WILLIAMS and other Democrats not once, but twenty times, offered to the Republicans to join them and pass the McCall bill if they would call it up with the minor amendments suggested by the committee which reported it; fifth, to the RECORD of the House dated May 22, page 7072, showing that Mr. CRUMPACKER that day moved to suspend the rules and brought in without notice the McCall bill with his—CRUMPACKER'S—bill added as an amendment, and with twenty minutes to the side debate passed the bill as amended, after being warned by Mr. RUCKER and other Democrats that the amendment killed the bill.

The warning was full, fair, and true, and known to be true by every Republican in the House. The warning of Mr. RUCKER, which was echoed and sanctioned by every Democrat and known to be true by every Republican, was so clear that I give it in part here. He said:

Mr. Speaker, if anything were wanting to demonstrate to every intelligent man in the United States that the leaders and managers of the Republican party here on this floor are guilty of hypocrisy, deceit, and

false pretense, we have that demonstration here to-day. [Applause on the Democratic side.] For more than a month the identical bill which you have reported here to-day, being the first ten sections of the pending bill, has been on the Calendar of the House, properly reported by a committee duly appointed by the Speaker of the House, and during all that time the Speaker has persistently and stubbornly refused to give recognition to any member of that committee to call it up and move its passage. Now, in order to hide behind a shabby false pretense and to deceive the public you hypocritically and falsely pretend that you want to enact a campaign contribution publicity law, when in fact and in truth your real purpose is to kill it. You have linked this wise and meritorious measure—this measure which, I add, the most corrupt man in Congress would not dare to openly oppose if presented in its original form—to one of the dead skeletons of the past, well knowing and intending that this unholy union ought to and will destroy every hope of its passage.

Sixth. To the fact that the measure, as it passed the House, sleeps in the Senate without even the shallow pretense of being called up.

Seventh. I call attention to the following, which appeared in all the great dailies about May 26:

Mr. Bryan's telegram was as follows:

"I beg to suggest that, as leading candidates in our respective parties, we join in asking Congress to pass a bill requiring publication of campaign contributions prior to election. If you think best, we can ask other candidates to unite with us in the request."

"W. J. BRYAN."

Taft sees President.

Secretary Taft, before he received this telegram, had a talk with the President at the White House, so that he was prepared immediately upon his return to the War Department to give out for publication his answer, as follows:

"Hon. WILLIAM J. BRYAN, Lincoln, Nebr.:

"Your telegrams received. On April 30 last, I sent the following letter to Senator BURROWS, the chairman of the Committee on Privileges and Elections of the Senate: 'My dear Mr. BURROWS: I sincerely believe that it would greatly tend to the absence of corruption in politics if the expenditures for nomination and election of all candidates and all contributions received and expenditures made by political committees could be made public, both in respect to State and national politics. For that reason I am strongly in favor of the passage of the bill which is now pending in the Senate and House, bringing about this result so far as national politics is concerned.'

"I mark this letter personal because I am anxious to avoid assuming an attitude in the campaign which it is quite possible I shall never have the right to assume, but so far as my personal influence is concerned I am anxious to give it for the passage of the bill.

"Very sincerely, yours,

"WILLIAM H. TAFT."

"Since writing the above, in answer to inquiry, I have said publicly that I hoped such a bill would pass.

"WILLIAM H. TAFT."

CHANDLER EXPRESSES VIEW—SAYS SECRETARY TAFT'S ANSWER IS "BETTER LATE THAN NEVER."

Former Senator Chandler sent the following letter to Senator BURROWS yesterday:

"MY DEAR SENATOR BURROWS:

"Better late than never! Secretary Taft, under Bryanitic pressure, to-day makes public his letter to you of April 30, favoring a publicity bill, and saying he is anxious to give his personal influence in its favor, but marking his letter personal, because anxious to avoid, without right, 'assuming an attitude in the campaign.'

"He adds that he has said publicly that he hoped such a bill would pass, omitting to note that this was said under a certain amount of pressure on May 19, nineteen days after his private letter to you.

"Secretary Taft has certainly done you much honor by assuming that you are not only Senator and chairman, but also the whole committee, the Senate, the Congress, and the people, so that to influence them all he needs is only to communicate with you privately.

"His desire, if it had been stated publicly to them all on April 30, would, in my opinion, have caused the passage of the bill. Was it withheld in order that after the bill should be smothered the letter might be produced in the campaign in answer to Bryanite taunts?

"The reason the Secretary gives for privacy is absolutely unintelligible. Is there any subject of public and political interest upon which either in writing or public speech he has failed to exercise the right to assume an attitude during the last few months? I know of none except that of publicity for election contributions.

"But while there is life there is hope." At all events we now have his public opinion that no secret Harriman contributions ought to be made during the coming canvass. The House has passed a bill forbidding such by a unanimous Republican vote.

"The bill also revives the crimes sections of the national election laws, repealed in 1894 by a Democratic Congress, and it suggests the probable enforcement of the fourteenth amendment. Senator GALLINGER has offered in the Senate an amendment for reenacting all the national election laws repealed in 1894 and making the fifteenth amendment a living constitutional guaranty of suffrage to our colored citizens.

"Herein is wisdom, good faith, and courage.

"The colored voters of this country, although smarting under the injustice of Brownsville and the exclusions enforced by the 'lily-white' organizations at the South, will vote the Republican ticket in November—even if the unassuming Secretary of War should be the nominee—if Congress will remain in session long enough to pass House bill No. 20112, with Senator GALLINGER'S amendment, which President Roosevelt will make haste to approve as his final tribute to his colored people.

"Banks and tariff, stocks and trade,

Let them rise or let them fall.

Justice asks our common aid;

Rally, one and all.

"Ever your steadfast friend,

"WILLIAM E. CHANDLER."

I call attention to the fact that Mr. Taft's letter to Mr. BURROWS was dated April 30, twenty-two days before the Crumpacker strangling amendment was brought into the House,

but not given to the public until after CRUMPACKER's strangle had done its work and the McCall bill was dead. The case is made out. I might talk of the time when the Roman Empire was put up at auction and knocked down to the highest bidder. I might talk of the notorious corruption that has bought public office in this country and in these latter days; but if the brand of hypocrisy, false pretense, deceit, and falsehood, firmly fixed upon a great party, when practiced by it in order to enable it secretly to gather its sinews of war in its struggle to perpetuate its power, is not infamy enough to damn it, no philippic grounded in truth will harm it.

Perhaps I ought to stop here, but in these last days another fraud is enacting. The Aldrich bill, as it was introduced, plainly sought to make railroad bonds the basis for the issue of paper currency, guaranteed by the Government in the interest of the speculator and the looter; but in the face of a storm of protests, the slippery advocates of that measure dropped the railroad-bond feature, apparently and professedly.

In the House, however, another bill was passed, and the House and Senate were loudly told that the House and Senate Republicans could never agree, that their differences were irreconcilable and fundamental. This "horseplay" was kept up till the very closing days of the term, in fact till there was not other business enough left to require a single day, and then suddenly the Aldrich and Vreeland bills swing corners and promenade together as one creature, in which the railroad-bond feature of the Aldrich bill is born again and a brood of any and all sorts of bonds of any and all sorts of schemes is ushered into life with it, under the broad term "any securities," as the basis of a currency to be redeemed by the Government. Then the Vreeland-Aldrich bill, before the country can fairly wake from its stupor of amazement, is rushed through the House in one hour's time, after six months' hatching, and is to be choked down the Senate with all the speed its sponsors can command, and this country is to be committed to the policy of the Government's redemption of bank-paper currency issued on any "old thing;" and the strangle hold of the banks upon the country is strengthened and entrenched and the power to loot the Treasury is legalized, while the depositors, the people who unjustly suffered in the last panic, are ignored. This bill is an iniquity never dreamed of by any party before, not even by the Republican party. This is the last and, I think, the greatest fraud perpetrated by the party in power on the people. In conclusion, the forces are lining up for the November election. High tariff, high finance, railroad mail jobbery, ship subsidy, greed, graft, and loot are on one side.

Where are the people?

National Corporations.

An American System of National Corporations for Enterprises of a National Character.

SPEECH

OF

HON. JAY F. LANING,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 28, 1908.

Mr. LANING said:

Mr. SPEAKER: The proposition upon which I address this House is not a political one and involves nothing of partisanship or party loyalty. It is not a matter of idle talk for the galleries or for the people merely, but is a subject for the consideration of Congress itself.

I offer a straightforward, business proposition, and one in which you all and all your constituents, whether Democrats, Republicans, or what not, are deeply and vitally interested. It is a matter whose influence reaches into every avenue, every byway, every highway, and every walk of life, and enters into the affairs of every professional man, every merchant, every farmer, every artisan, every laborer, and appeals to and concerns every man, woman, and child, no matter in what occupation he or she may serve or in what line of life their lot has been cast.

My theme is that of corporations. Nearly every American citizen works for one or patronizes one in some manner and is dependent upon it or interested in one, or the workings of one, thus giving them a widespread importance and an all-embracing character. But I do not mean trusts and combinations,

for I now present no scheme of trust busting or combination wrecking. I am seeking the people's interest through corrective rather than destructive legislation.

My plans are optimistic rather than pessimistic; they build up rather than tear down; they encourage rather than discourage; they are reformatory rather than radical; they are new roads to greater achievements and better successes in the world's fields of activity rather than the recitals of failures that have overtaken those who have been treading the uncertain highways of business. They help the deserving corporation, and hurt the undeserving one.

I am proceeding upon the theory that business needs and desires the support of law, and that the law should favor and foster enterprise and thrift, and welcome, stimulate, and applaud business successes, rather than burden, stifle, or oppress them.

I am told that 95 or more per cent of all the men who enter a mercantile life or business for themselves make a failure, and if so, is it not a fair proposition that tradesmen all need the support and forbearance, the confidence and consideration of lawmakers, and the help and sympathy of the public, rather than their coldness or opposition.

Corporations have become great instrumentalities in commercialism, and their methods of procedure should be as open and prevalent before the law as those of the individual business man.

Their history is the history of the marvelous progress of our nation during the last century, and especially during the last half century, as even fifty years ago hardly one existed in our extensive domain.

Then the country was poorly populated and all the people's movements necessarily slow. It was a time of the stagecoach, the hand loom, and the hand printing press, and the day of small business firms, small trade, and small enterprises. To-day corporations are doing 75 per cent of the business of this country. They have been the agency that has developed the age to its present mighty proportions and has promoted the immeasurable prosperity with which our progress has been marked. They have inspired inventions, conducted experiments, perfected processes, put through great undertakings, installed power machinery to take the place of hand, and produced such an untold and diversified wealth that millionaires are as plenty to-day in this country as they were scarce a half century ago.

But the day of small trade is over. The canal boat developed more speed than the wagon, the locomotive more than the stagecoach, and as the latest inventions had the most power to achieve results each old method in turn gave way before the competition of the new one. So the aggregated corporation method has developed more business speed and strength than that which segregated individuals possessed, and it has supplanted the single-handed efforts of the one-man business power, formerly holding undisputed sway over the world of transportation, of trade, and of commerce.

Fifty years ago we had no conception of what our present condition would be. We were poor then, and dependent upon the wealth of the Old World. We are now not only the greatest, but the richest nation of the earth, and are as free and independent of Lombard street, the Bourse of Paris, and the "money barons" of Europe as we were a few years ago dependent upon them. We have gained ascendancy in the world of wealth as well as in the domain of political power, and are now furnishing the ways and means to run all Christendom. And let us pause before this splendid achievement to imagine what our supremacy will be fifty or one hundred years hence if we do not overthrow the means which have so providentially been placed in our hands by which our development can go onward and upward as it has in the uplift of the half century just ended.

As corporations have played an important part in making us what we are to-day, so must they in developing us to what we are to be in the years to come. As capital has been one of the efficient forces which has blazed our way in the past, it is the thing which will make for our future progress, and upon corporations we must rely for its large accumulation and for its lavish use. We live in a transcendent age, an age of big things. No individual efforts seem now to be put forth in matters of any size; everything is the united effort of many. In the days of the stagecoach one man owned and drove, but now one individual must join another in order to provide the ability to administer and the capital to construct and conduct the railroads, steam or electric, the telegraph and telephone lines, and other twentieth-century enterprises. Corporation in one sense means cooperation, and mutualization, and aggregation of interests, and we should realize that they are to be the great aggressive factors that are to maintain and extend the efficiency

of our business institutions, and preserve the prominence of our position as a commercial world power.

Mr. Speaker, what I present is a proposition to conserve the power of corporations and throw safeguards around them that will protect the people's interests. It is a proposition to enable the formation of corporations which desire to do an interstate business under a national law, the franchise being granted by authority of the Federal Government.

Some time ago I introduced a bill (House bill 9124), now pending before our Judiciary Committee, to enable such corporations to be incorporated and regulated under national laws, that there might be brought into existence national corporations, not to displace, but to supplement State corporations, neither kind to transgress upon the other or to come into frictional or competitive contact with it or relation to it.

My premises are that the big commercial business of the country is transacted almost entirely upon national lines, and the control of the great corporate force which is moving commercialism on to its great achievements should be national, and the legal conditions and surroundings of the organization, regulation, and control of corporations doing an interstate business should be raised from State statutes to national statutes, and thus made to correspond with their business status by making them before the law as broad and efficient as they are in their trade relations and undertakings.

This bill presents a Federal law for the incorporation and regulation of corporations desiring to do an interstate business, complete in every detail. It prescribes how they may be formed, recites their powers, specifies their officers, enumerates their duties, defines the capital stock and the relation of stockholders, methodizes the authorized corporate changes, regulates the manner of their meetings, sale of assets, dividends, certificates, and transfers of stock, jurisdiction of courts, winding them up, insolvency, and so forth, and enacts offenses and exacts reports as fully and as liberally as provisions for those things are set forth in any of the State laws.

I will not attempt to give these provisions in detail, as I am not going to discuss the comparative merits of State franchises and national franchises, for I do not seek to destroy or override the former. I shall confine my argument to the propriety of the passage and maintenance of such a national statute and the upbuilding of an American system of national corporation law for enterprises of a national character.

Mr. Speaker, is there need for such a law? I contend there is, because the progress and well-being of the business interests of our country demand it. There is a gap in the statutory law of the country that is open for it, and our national jurisprudence lacks important provisions because we are without such a statute.

It is only a few years ago that franchises were hard to get, as each one was enacted by special act of a legislature, obtainable only at certain times of the year, and its passage was beset with difficulties. The abuses of legislators in granting, and of corporations in getting special charters were so great that the people went into frenzy over the institutions thus created, and they were proclaimed as a public enemy. Then the orator declaimed against corporate wrongs, the same as now, but for a different cause. They were charged with obtaining special privileges by private statutes, and so true were the accusations that all corporations were in public disfavor and discredit until, as a result of the awakened conscience of the people, State constitutions were so amended that lawmakers were forbidden to create such bodies except under general laws, with uniform provisions for all and special privileges for none.

Thus organized, persons who dealt with them could know and might understand when and where they were empowered to act, and were protected against an overstepping of the provisions of the laws from which they derived their existence and by which they were authorized to do business. The dissatisfaction had become so great that a point had been reached where but few charters were being granted, and enterprise languished, as it does now, because of the manner in which corporate instruments and movements were hampered.

This crusade against special charters was well-nigh universal throughout the United States, and its success inspired the people's confidence in the new organizations, where distrust had prevailed before, and a new era dawned for corporations and corporate enterprises. Before then, as I have said, the people's ideal of a corporation was limited. We were a small nation, with small conceptions, small in commercial territory, and about everything undertaken was of a minor or local character.

There was then but little need of interstate corporations, but as the way became open for their easier organization, and they had the sanction of law in their operations, commerce ex-

panded, territorial limits were ignored, and now corporations, although they have definite and prescribed State domiciles, know no limit in their field of operations.

The upbuilding of our country, until it has become a great world power, has been coincident with the growth of corporations, and who knows how much of the great progress we have made as a nation, and of our expansion in manufacture, in art and science, and trade and commerce, have been due to the favors that have been bestowed upon our corporations, and if so, may we not say that, as such an agency, they have been among the greatest of our commercial blessings?

But there now seems to be another standstill in corporate movements. History is repeating itself. Corporations seem to be encountering the same opposition they had fifty years ago. The people have again decided that they are oppressed and hurt by the operations of corporations, and while it is true that there is manifold ground for complaint, some of the fault, to say the least, is in the Government and the execution of the laws by officials and courts and judges, and not all in the corporate being itself or in the way it is managed.

Corporations give industrial power, but there is no harm in that. It is in the abuse and misuse of it that there is cause for complaint.

The corporation that uses unfair methods to destroy its competitors commits a grievous wrong, the same as does an individual who does the same deed, no more, and should likewise be compelled by the strong arm of the law to forsake its evil practices; but it is only when the law can not restrain or control it that it ought to be put out of existence in the business world.

The fact is that the age has grown faster than have the methods for handling its activities. Mind has not developed as much as matter, and art, commerce, and labor have needs incomprehensible to many who now live under the influence of the past age of small and slow-going things and processes, and are unaware of the evolution that has sent everything forward to higher planes of productiveness and need.

Steam and electricity have made mighty conquests in obliterating time and space, and we now have a new order of things we can not measure adequately by the economic rules we were wont to apply to old conditions. New ways of trade and commerce have been developed, and new agencies must be understood and applied to the modern swift and subtle movements of men and markets, superseding the old and slow-going ones.

Business must be treated with liberality, and we must harmonize its laws to the demands of the great fields of human activity and endeavor as they are to-day and discard all thought of the circumscribed efforts of the past.

STATES INCORPORATION SYSTEM.

Corporations exist only by force of the laws of the State wherein they are created, and as concerns their habitation are of two kinds, foreign and domestic. Each corporation is domestic in one State and foreign in forty-five other States and five Territories. Each corporation that does only a small portion of its business in the State which chartered it, does all the rest as a foreign corporation and subject to the disadvantages incident thereto.

The extent to which foreign corporations do business in every State and the variety of the operations in which they engage have created a demand that some method will be instituted that will bring about more uniformity in their rights and obligations, to the end that their operation may be directed and shaped by legal conditions imposed upon them by more than one of the many States where they go and that innocent parties may not be misled in patronizing them.

Because of this so-called "states system" the business marts of every State are now traversed by the representatives of concerns from the jurisdictions of forty-six different States. And the most serious consideration is the fact that each corporation takes with it its charter wherever it goes and stands upon it for its vitality and frequently as to its obligations. Thus forty-six different artificial bodies, made up of as many different basic ideas, because the States differ widely in the principles upon which their corporation legislation is based, are possible in every State and Territory of this Union. With these different creations it is possible for the citizens of each State to come or be forced into contact and be made to suffer more or less from them.

Persons who deal with corporations are bound to take notice of certain features they possess, and act at their own peril if they fail to do so. Among these are their organization, the relationship of the members, their corporate powers and authority, and the rights, duties, and liabilities of stockholders and officers, all everyday, commonplace, and vital matters.

Mr. Speaker, I submit to this body that it is a hazardous thing to run the gauntlet of these forty-six different sorts of charters in these important matters, and I do not believe the people would for a moment allow these dangers to continue if they were fully aware of their existence.

With charters emanating from forty-six different States having diverse requirements, who can tell when he deals with one what chances he is taking that its corporate powers are not being transcended and what losses may befall him in trading with it? When he attempts to collect the debts it has made to him, how can he know that he will not be confronted with a defense of ultra vires and stand to lose his claim? It is true that the statutes of most States prescribe that before a corporation is allowed to do business within the confines of that State it must file in a specified office at the capital a copy of its charter, to be inspected and found agreeable before it is allowed to do business therein.

But there are many instances where corporations do business in many States wherein they have never been formally admitted, and no one has protection against them. Hence arises the demand for a place where trading corporations that go out into the realm of interstate business can first equip themselves with charters that will give them a good commercial and financial standing with those whom they seek as customers. This can be done by the establishment of one national corporation to take the place of the forty-six separate State entities that are now possible.

Mr. Speaker, I desire to go further and illustrate how the forty-six separate and variable corporate bodies may injuriously affect those who deal with them. There are two classes of people who are liable to become contaminated with the virus of these variable foreign corporations—those who become creditors and those who become stockholders. There is no limit to the extent to which either class of persons may become hurt by contact with them, as State lines do not proscribe anyone in trading with or investing in corporate enterprises. Voluntarily or involuntarily, by acts of law, inheritance or otherwise, a man may unconsciously assume this relation and be made to bear consequences he can not fortify himself against, on account of an adverse charter or statute conditions in force in foreign States he has learned of only too late for his own protection.

The laws of some States are prolix and intricate, and so many various statutes exist for the different kinds of corporations that even local residents are misled as to which ones are applicable to the cases that spring up. Hence arises a general extreme dissatisfaction over existing conditions of corporate organic law, and the legal conditions under which corporate business must be carried on.

PERPETUAL CHARTERS.

In the diverse charters issued are further illustrations of the inadequacy of the laws of different States regulating corporations, and of how statutes have failed to keep pace with the growth of the people's interests. In some States charters are perpetual, and in others they run a specified number of years, and must be extended, or renewed by reincorporation. The company has no legal existence after the expiration of the tenure, and no right to do business, and its legal status is very uncertain. In some States charters are amendable, and in others they are not. In some the stockholders may amend, and in others only the directors. But whatever the method be, unless creditors and stockholders can control and can have notice their rights may be jeopardized by changes designedly and clandestinely made by those who are manipulating the institution.

SALE OF ENTIRE ASSETS.

In keeping with this danger is that of the disposing of the entire assets of a corporation. Under the laws of some States it can be done so quietly and effectually that creditors and stockholders have no realization of the transaction until the loss confronts them, and then they are remediless.

SCOPE OF BUSINESS.

In some States corporations are unlimited as to the scope of the business they may perform, while in others they can transact only the business specified in their charter. In the latter instances it is possible for one who deals with them to find himself in litigation to decide whether the powers they have exercised are ultra vires or otherwise.

FOREIGN BUSINESS.

Some States do not allow their corporations to do business in foreign States unless special authorization exists. In some States it must stand out in the articles of incorporation; in others it requires an affirmative action of a certain number of the directors, and in others it can be done only in those States where a reciprocal privilege is extended.

There lurks another danger in dealing with corporations having charters emanating from some fifty different legislative bodies and depending upon the construction by a variety of courts of some forty-six different sets of local statutes. In some States they try to overcome some of the objections that arise by compelling each foreign corporation to file in the office of the secretary of state, as I have noted, a copy of its charter, so that its citizens can—although often through a great loss of time—get at its provisions. In some of these States a failure to file this charter with the specified official and get an authorization deprives the foreign corporation of a right to do business in the State. In some of them the penalty is a fine only, with perhaps a denial of the right to pursue a legal remedy in its courts, and the right to statutes of limitation or exemption from attachment laws otherwise relieved from. In some of them all contracts and deeds of real estate made prior to compliance are declared void and unenforceable in the State courts.

There is a sample provision in the Indiana statutes prescribing inability to sue in the State courts, fine and forfeiture of all right to do business or hold property in the State, and that all contracts are rendered void. Agents are fined also.

While these drastic features tend to help collect the fee for the State, they do not sufficiently protect the persons liable to suffer most, for the corporation, being deprived of its right to do business in a State, and having its contracts made void, especially after once having the right to make them in the State, and probably having agreements which have gone into effect, is in a position to harm innocent patrons who trade with it, or capitalists who invest in its securities.

Does not this unsatisfactory state of things, Mr. Speaker, and this want of legal security for those who participate in any form of interstate commercial business, cry out for a remedy, and is it not time that some law was passed to remove the evils of the present exclusive States system of charters?

The absence of suitable and well-known provisions upon these familiar propositions and the uncertainties that abound as to them often impair the value of stock holdings and the credit of corporations and the marketableness of stocks and bonds, and also hurts the people and the Government, and this remissness of our State statutory laws gives greater force to the argument for a national corporation law.

CREATING DEBTS.

As corporations of an interstate character do not usually limit their field of commercial activity, they find friends and make financial deals and alliances in various States, and their operations of borrowing money and discounting notes, selling their bonds, and the like, are not confined to State geographical lines. Hence it is important for the creditor to know the limitations which their charters put upon this power. This is well nigh impossible under the present State system.

In some States all bonded debts and all mortgages must be made by the directors, in some by the stockholders, and in some by whom is not specified. In some it takes a majority vote of those who are authorized to act, in some a two-thirds vote, and in others a three-fourths vote. In some States the laws provide that the total indebtedness of the corporation must not exceed its capital stock, and in some the debts can not lawfully be more than two-thirds of it, while in some of them bonds on real estate are not counted in the limitation. Some States have no limitation, as in Delaware, New Jersey, and Massachusetts.

Here is a place, if one exists anywhere, that the statutory requirements for fixing the liability of the corporation ought to be simplified and the provisions made more secure and uniform, so that innocent creditors and investors may be protected.

STOCKHOLDERS' LIABILITY.

The matter of stockholders' liability concerns creditors and stockholders to an unusual extent. It may add to a creditor's resources and to a stockholder's responsibility, or take from them, and hence it is important that they be defined by a positive and uniform law the knowledge of which is easily accessible to all.

In California a stockholder is individually and personally liable in the proportion his holding bears to the total subscribed stock, for all debts incurred by the corporation during the time he is a stockholder.

In Indiana, and some other States, stockholders are individually liable for debts to laborers and employees to twice and, upon agreement, to three times their stock.

In twelve States the statutes impose a liability upon stockholders beyond that for unpaid stock subscriptions; hence it behooves a man who buys or has stock thrust upon him, or takes it in satisfaction of a debt, to beware whether it is an asset or a liability. It is also important to have some standard corporation whose legal provisions are constant and reliable as a

guide and a protection to everyone who is to become a stockholder in a corporation.

Furthermore, Mr. Speaker, it is of the highest importance that not only the enabling statutes, those which make for the financial interests of the organizer or promoter, should have close scrutiny and possibly reform, but that those laws serving the creditor classes who are interested because involved in having security for loans or credit, and those acts for the protection of stockholders, all of whom are but quasi creditors, should be safeguarded, while those of the dealer with whom they transact business in a commercial way should be guarded with jealous care.

STRONG CORPORATIONS.

But there are other reasons why there should be an opportunity for a corporation to be created under a national law, and these further illustrate the inefficiency of the present system of following forty-six diverse State laws to produce the result that can be better obtained under one general provision. That we may have uniform charters is a great consideration, but not the greatest. Protection to stockholders and creditors does not come by merely placing in their hands a chance to get wise as to the powers and disabilities of the corporation, but it comes also through the upbuilding of strong and efficient business institutions, capable of securing the confidence of the people and successfully promoting the enterprise the corporation is behind. One reason for wanting national corporations is the desire to establish strong, stable, and continuously prosperous concerns in the domains of business.

The arms of the Federal law are everywhere acknowledged to be stronger than those of the State laws, and a national corporation law would be more confidence inspiring and efficient than any one a State could promulgate.

It will at once be recognized that if the national banks were to be organized as local corporations, those of each State under its own laws, and had only the one national attribute of issuing and distributing money among the States, they would be very weak establishments. What is wanted is one possible fountain for the law of all corporations doing interstate business, as we now have one well-known, efficient statute for incorporating national banks.

Want of confidence in corporation efficacy and honesty in the people has now created a distrust of corporate investments, and depressed the prices of their stocks to the lowest point reached in years. No permanent relief is in sight until this confidence is restored. And one of the surest means of restoration is to place in the Federal statutes of our country a law under which investors will place their money freely in stocks and bonds. A law under the workings of which it will be known with certainty that a few individuals officering a concern can not manipulate its business and divert its earnings from the stockholders to their own private purse and thus wreck it.

There is a well-grounded suspicion among the people that the works presided over by the National Government are more efficiently managed than those under State supervision or individual control, and a corporation organized under national authority will be stronger and command the confidence of investors and patrons as well as of creditors more than any of State creation.

PROSTITUTION OF STATE POWERS.

Were there a way to create a national corporation we would do away with the vicious practice which we now see in States where, for financial gain merely, statutes have been passed to make it invitingly easy and agreeable for a corporation to be organized thereunder, the consideration for this prostitution of powers being merely the thus obtainable incorporation fee.

To get the patronage of promoters these States bid for it by enacting broad-provisioned laws, such as favor the organization, and not the stockholder, the creditor, or the corporation official. Some States have solicitors, who advertise "Where to incorporate," and for a division of the fee put in their time trying to divert from other States patronage of this kind, almost losing sight of the proper relation of the corporation to the State.

This practice creates what is known as the "tramp corporation," and also excites the people's distrust in all corporations. What I am now offering is a plan by which this prejudice can be done away with and the corporation can become the best known, best liked, and most efficient instrument of trade and commerce.

The natural place for an interstate concern to go for incorporation is to the nation, the Federal Government, the body which has the regulation of interstate commerce, and when the laws of one's own State do not suffice for the purposes of a corporation he wishes to promote, if he desires to enter a broader field than those of State affairs he should go to the National

Government, instead of off to some State that makes him the most inviting terms, giving him a charter easy to comply with and at a price that he can easily pay.

When a promoter goes to New Jersey, Delaware, West Virginia, Idaho, or Maine to incorporate a company it may mean something the public does not understand. There may be an exaction in the laws of his own State or a defect, or he may be looking for something easy, and no wonder that the people have imbibed a distrust for corporations, when we consider the extent to which this practice has gone.

If the many foreign corporations doing business in my State were national corporations instead of tramp State corporations, how much stronger would they be, not only in this crisis, but, in fact, all the time, and how much greater in them would be the people's trust and confidence.

Now, Mr. Speaker, the bill that I have introduced is not one to make it easy to get a business incorporated, nor one to make it hard, but just reasonable. The provisions of it are not unlike those of State law. They form a common-sense, practical code of organic corporation law and practice. It is not contended that they will derive force from the exactions which they contain, but from the fact that the General Government will be behind their execution, and that the people will believe that the Federal powers will exact a strict compliance with all of their requirements.

That is one of the things the people want, and such a law will certainly be a popular as well as a useful one.

My contention is for two sources of corporation organic law—the domiciliary State for local institutions, and the nation for larger enterprises that want to take on a broad national character.

Such a plan is in harmony with the sentiment of our laws, and such a measure will be highly acceptable to the people.

PUBLICITY.

The need of reform in corporation law goes unchallenged, but this bill is not advocated as a reform measure. It is in the line with reform ideas, and reform will grow out of the better system of erecting corporations and regulating them, that will follow on the heels of its adoption.

I am aware that publicity as a corrective force to abolish such evils as may arise in the affairs of a corporation is a matter declaimed for by the reformer, and it is regarded by reformers that corporations can not be regulated except through the constant administrative action, inspection, and supervision of the National Government, and a thorough co-operation between Government officials and corporation managers. But I have endeavored to take a more conservative view of this demand. In this bill I have not created a system of espionage, by which corporations are to be inspected and audited with regularity and exactness and a great army of public officials created to visit them, as is done to regulate national banks. Annual reports to the Bureau of Corporations are prescribed and examinations required only when suspicious circumstances arise or a demand from the stockholders necessitates it.

Too much publicity at critical times in the affairs of a corporation might be far more disastrous than too little. Some information that the Government might require should be withheld from the public, and every care should be taken to protect amply the rights of privacy, which are due to stockholders and creditors, and are essential to carrying on their business.

STATES RIGHTS.

Mr. Speaker, I presume there are some who may think that the adoption of a national corporation law would smack of interference with States rights. A few years ago the charge of disturbing State functions would have come with much greater force, but now that the General Government is regulating interstate commerce in many ways that were once objectionable, that obstructive idea has lost its efficacy. Such a law would be in harmony with the efforts that are being made to regulate the sale of impure foods, to promote public health, and the like, and will stand the same tests of States rights criticism.

It is conceded that there are no vital legal objections to the creation of corporations by Congress with power to engage in interstate commerce. The authority to do so is well settled by the practices of this body and by the decisions of courts. But the question has been raised whether an interstate-commerce corporation has additional power to produce or manufacture in any State, so that such a grant of power will be valid as against the States or individuals. But this legal difficulty is not regarded as having much force. From the analogies of other decisions it goes without saying that the courts will hold that the power to produce is necessarily incidental to the power of regulating interstate commerce, by sanctioning the creation of such corporations.

Such a law will be no menace to the States, as it deprives them of nothing they are now entitled to do. No State is entitled to set itself up as a haven to which corporations can go when they want to be organized in a way the domiciliary State would not permit, or have its laws operate as a harbinger against the liability of those who do corporate wrongs, and in fairness, the citizens of no State have the right to resent such a law as I propose.

A FEDERAL LICENSE SYSTEM.

I know that a Federal franchise or license system to State corporations to do interstate business has been proposed, and while this would nationalize the corporate business system of the country, which is now national from a commercial standpoint, and would be conducive to improvement of the present body of the corporation law, it would still have its foundation in State charters, and the operations of the franchise laws would extend over the provisions of the statutes of forty-six States and still be subject to the interpretations of their many courts. There would be dual jurisdiction, while under a Federal system the entire matter of such corporations as organized under the Federal statute would be under one jurisdiction and all chances for friction between the State and the Federal governments would be removed.

Some may think that an effort should be made to get the State governments to perfect their local laws and adopt uniform provisions, and thus provide properly for all interests involved; but this would be a hopeless task. Selfish interests of the States and their mercenary desire for revenues would continue the system of concessions now in vogue, and the present rivalry of States for this business could not be eliminated. There is no reasonable expectation that the forty-six different jurisdictions can ever agree on anything like a uniform system of law covering a matter wherein there is a chance for such sinister objections.

PROVISIONS OF THIS BILL.

Where a corporation is now organized by a special act of Congress, as they frequently are, it is necessary to set forth at length the constituting features which must be defined in order to make it an entity, and these provisions will differ in most cases; but if this bill is passed there will be no necessity for special acts of Congress, as all can then be formed under a general law with uniform provisions, and the business of organizing can be done at any time, whether Congress is in session or not.

Three or more persons can incorporate to carry on any kind of interstate business for which persons may lawfully associate, except for insurance, banking, and building and loan operations.

The articles are to be in the form prescribed by the Commissioner of Corporations and filed in his office at Washington, D. C.

The manner of subscribing and issuing stock, electing directors and officers, the rights of stockholders, and the many details of statutory law necessary to proscribe the powers, duties, privileges, and operations of these institutions are as extensive and do not differ essentially from those given under up-to-date State statutes of leading States.

COMITY.

There is a matter, however, in which such corporations will differ from the usual domestic corporation:

A corporation exists only in contemplation of law, and by force of law, and can have no legal existence beyond the bounds of the State or sovereignty by which it is created.

As the laws of one State can, by their own vigor, have no extra-territorial force in another State, a corporation created by one State can exercise none of the functions or privileges conferred by its charter in any other State of the Union except by the comity and consent of the latter.

Leading authorities agree that the recognition of a foreign corporation and the enforcement of its contracts in States other than that of its creation rests only on comity, and any conditions governing the right to transact business outside the domiciliary State of the corporation may be imposed upon them, or they may be entirely excluded. The legal authorities say that—

A State may preclude all foreign corporations not engaged in interstate commerce, or in the employ of the General Government, from transacting business within its limits, and courts can not inquire into its reasons for so doing.

A State may discriminate between foreign and domestic corporations. Foreign corporations are not guaranteed the same privileges as are enjoyed by domestic corporations, and not entitled to the privileges and immunities of citizens in the several States, under the United States Constitution (Art. IV, Sec. 2).

NOT A FOREIGN CORPORATION.

The bill which I have introduced provides, in section 2, as to corporations organized under it:

Any such national corporation may, without inhibition or hindrance from any State, Territorial, or municipal local law, conduct business in any State, Territory, or insular possession of the United States, or in foreign countries, and may have a principal office in one State or Territory, and one or more offices in the same or other States, Territories, countries, or possessions; and where State, Territorial, or municipal laws conflict herewith, the provisions of this act shall govern.

It has been held by our courts that a corporation constitutionally chartered by the United States is not a foreign corporation as to the soil of any State, nor does its status depend upon the comity of any State. It is also held:

A corporation created by act of Congress, with powers coextensive with the Union, is not a foreign corporation within any State of the Union, any more than an act of Congress is a foreign law within any State of the Union. (98 Pa. St.)

Congress has power to create a corporation whenever to do so is an appropriate means to carry into execution the enumerated powers of that body.

DOES NOT ANTAGONIZE THE STATES.

Mr. Speaker, this act may be unwittingly opposed by some on the theory that it antagonizes the financial interests of the respective States, but such is not the case. On the contrary, it protects and enlarges them.

The domicile of a corporation is the State wherein it is first created. Although it may have business houses in many States, it can not migrate into another State and establish a domicile there, as a man can change his residence.

Good authority says:

Where a corporation is created by the laws of a State the legal presumption, for the purpose of Federal jurisdiction, is that all its members are citizens of the State by which it was created, and in a suit against it is conclusively presumed to be a citizen of such State.

A corporation endowed with its capacities and faculties by the cooperating legislatures of two States can not have one and the same being in both States. Neither State can confer on it a corporate existence in the other, nor add to or diminish the powers there to be exercised. (Thompson on Corporations, sec. 7875.)

Wherever a corporation transacts its business, it carries its charter with it, and that becomes the law of its existence in the foreign State, for the charter is the same at home as abroad. (Frost on Corporations.)

It is laid down in Elliott on Corporations, page 56:

It is not uncommon for several States to incorporate what to all intents and purposes is the same corporation. It is impossible, however, for a State to give extraterritorial force to its laws. (32 W. Va., 164; 3 L. R. A., 572.) Although bearing the same name, there are as many corporations as there are creating statutes. (69 Fed., 753; 30 L. R. A., 250 and cases cited.) For the purpose of jurisdiction it is the corporation of each State, when acting under the authority of the charter of that State. (88 Ill., 615.)

It is said in Thompson on Corporations, section 7886:

Every corporation which seeks by its agents to establish a domicile of business in a State other than that of its creation, must take that domicile as individuals are always understood to do, subject to the responsibilities and burdens imposed by the laws which it finds in force there.

Thus it will be seen that each State has full control over the corporations which can do business therein, except as to national corporations, and in view of this fact there are only two methods by which a corporation can authoritatively do business outside of the State of its creation, viz, by becoming a national corporation and by the consent of the foreign State.

National banks and other national corporations do not need or ask for State consents or pay excise taxes. The States make no requirements upon them, but such is the extent that private corporations do an interstate business that nearly all, if not all, the States have laws for admitting foreign corporations to do business in them, upon the filing of required papers and the payment of a required fee.

With this practice we do not interfere. Sections 59 and 60 of the proposed act provide:

59. Payment of excise taxes: National corporations organized under this act shall be subject to the payment to State authorities of excise taxes upon the business transacted by them in each of the various States in which they do business, to the same extent and in the same manner only as if they were local companies organized and doing that kind and amount of business in the State wherein the tax is to be paid, or as if they were foreign corporations doing business therein in case more favorable local laws exist governing payment of excise taxes by foreign corporations of the class to which they belong. The annual report of the corporations to the Bureau of Corporations shall be the basis of such taxes.

60. Franchise fees and taxes: Such national corporations shall make the same reports and pay the State authorities same franchise fees and taxes in each of the States wherein they do business, and be subject to the same regulations as are required by the local law of foreign corporations doing business in such State.

It will thus be seen that this bill, should it become a law, does not menace States' rights or threaten even to deprive them of their local excise revenues, and hence this act should stir up no spirit of resentment from them. It would be possible to deprive the States, I think, of all restraint over and all revenue

from national corporations, after the example of the present practice with national banks, but as the bill does not attempt to do this, it is unnecessary to discuss the propriety or power of doing so.

FEES.

The Government is prohibited, under the proposed bill, from charging incorporation fees. In my judgment there should be no charge of the kind from a corporation any more than from an individual. Such a law should be as automatic as possible, involving as little expense, annoyance, uncertainty, and business disturbance as are necessary. In a factory business the corporation builds up the community where it is located, gives employment to labor, develops property and wealth, and produces taxes sufficient to compensate for all the privileges the State bestows upon it. But if the States are allowed to retain their excise taxes, that is a stronger reason why the United States should omit incorporation fees. The provisions of the bill are:

61. No United States fees or taxes on filing articles with the Bureau: No tax of any kind shall be levied or assessed by the United States upon a national corporation organized under this act, and no fee of any kind shall be charged for filing any articles of incorporation, report, certificate, or other paper relative to corporations in the Bureau of Corporations, or for any copy thereof required by law to be furnished to said corporation, and such Bureau shall furnish any copy of any such paper called for at a price not exceeding the actual expense of making the same, and all moneys so received by said Bureau shall be for the use of the United States.

This bill, if passed, Mr. Speaker, and if every interstate corporation now in existence should organize under it, would affect no State injuriously. The most that it could do would be to enable all of what are now foreign corporations entering for business in the different States, to become institutions created by one sovereignty instead of by a possible forty-six. It could thus bring about an abandonment of State corporation, entity and the substitution of a Federal entity therefor, but it would simplify and better corporate operations. There would then be but two systems—one State and one national—and two sources to go to to determine the rights, powers, duties, and responsibilities of all corporations doing business in any one State, instead of to the present widely scattered multiplicity of domiciles they inhabit.

PERMISSIVE ONLY.

The proposed act is not an exercise of arbitrary power, and does not seek to compel all corporations that are organized to do an interstate business to come in under its provisions, and thus become national institutions. It is permissive only.

It is to be hoped that the advantages it will bestow to those incorporated under such a law will be a sufficient inducement to compel all who wish to have a strong corporation, with marketable securities, and whose operations will be viewed with public confidence, to come in and avail themselves of its provisions.

Compulsory Federal incorporation of interstate companies is theoretically but not commercially wise, as it would involve radical industrial and political changes, and centralize great power in the Federal Government.

The question of centralization of power in the National Government, Mr. Speaker, is one with which legislators are familiar, and I do not need to discuss it for the benefit of Members of this House. But I want to point out that this question is not extensively related to my proposition, which, properly stated, is a concentration of what are now a lot of segregated doings in forty-six different places, with a view to combining them into one aggregated procedure, to secure the economies and acquire the benefits that will prevail.

While the Government would assume a function it has not been exercising in this instance and one of its administrative bureaus would have to be enlarged, it would be given no new power, as its new duties would be purely administrative. While the Government would be armed with a new duty, no State would be disarmed of its prerogatives, as the right to national incorporation is optional instead of obligatory.

CHOICE AS TO THE FORUM.

I am willing to concede that under ordinary conditions those who wish to have a corporation organized will prefer a State organization to a Federal one, especially if the Federal law imposes conditions upon national corporations which, from the standpoint of those interested in the organization, will be for the public benefit, rather than that of the individual organizers, or even the corporation, and will incorporate in one of the forty-six different forums now offered by the different States instead of the one given by the United States.

There was a time when this might have been taken as painfully true, but things have changed. The practice of corporations organized under loose, remote State laws and other abuses of corporate power have sickened the public, and the

sentiment has developed that a corporation to inspire and deserve confidence must be organized with a view to its business stability and its future prosperity rather than to the possibility of manipulating its stock, and they must avail themselves of such safeguards and bulwarks as are found in a safe and sound organic corporation franchise law. What heretofore might have been optional in this respect has become compulsory under this new order of public sentiment and will compel a preference, by new organizations, of the confidence-inspiring national law. A corporation doing an interstate business that is not organized as a national corporation and has not the designation in its name, if a national law is in existence, will secure poor credit ratings and be an object of suspicion, and will for its own good be forced to go out of business or qualify itself for it by changing its incorporation.

Should this law be adopted, I am satisfied that it will not be long after it is in operation before, by the law of self-interest and self-preservation, corporations will begin to make the selection and come in under it voluntarily.

TRAMP CORPORATIONS.

"Tramp corporations," Mr. Speaker, now numerous, will eventually be done away with by the passage of this act, to the general good of the whole. Citizens of one State, whose laws are not as liberal as those of some others, should not be permitted to go into another State for the purpose of organizing a corporation under more favorable statutes, without the intent of carrying on any business in such State, but with the purpose of carrying on business in the State of their own residence.

REPORTS.

It is not the province of this act, as I have said, to establish a system of espionage over the acts of corporations nor to give extensive publicity to their doings or conditions. It is thought that reasonable provisions of this kind, coupled with the fact that there is among business people a strong respect for the mandates of Federal statutes, will give the best protection to shareholders that it is possible to have in such institutions.

Annual reports are required on blanks to be furnished by the Commissioner of Corporations, provisions for which are:

62. First and annual reports: Every national corporation organized and doing business under this act shall file in the Bureau of Corporations, within thirty days after the first election of directors and officers, and annually thereafter, within thirty days after the time appointed for holding the annual election of officers, a report authenticated by the signature of the president and one other officer or by any two directors of the company, stating:

- I. The name of the corporation.
- II. The State and location (town or city, street, and number, if number there be) of its principal office and of the offices maintained by it in different States, and the name of the officer or agent in charge of each of said offices upon whom process against the corporation may be served.
- III. The name of the president, secretary, treasurer, and directors, with post-office and term of office of each.
- IV. The date of the annual meeting of stockholders for the election of directors.
- V. The character of its business.
- VI. The amount of its authorized capital stock, the par value of each share, the amount subscribed, the amount issued, and the amount paid up.
- VII. The value of the property owned and used by the company in the State where its principal office is located, and the value of the property owned and used by it in each of the States outside the State containing the principal office, and where such property is situated.
- VIII. The assets and liabilities of the company and business done by it in each State.
- IX. The dividends earned and paid to stockholders.

In the report of the Commissioner of Corporations for 1904 it is stated that the generally recognized principal evils of present industrial conditions are:

Secrecy and dishonesty in promotion, overcapitalization, unfair discrimination by means of transportation and other rebates, unfair and predatory competition, secrecy of corporate administration, and misleading or dishonest financial statements.

Much of this would pass away by a regular system of annual reports from corporations, covering their management and methods of business, financial condition, volume and direction of trade, cost and character of production, and other pertinent facts, and such as would naturally be required under such a law as this.

EXAMINATIONS.

Examinations may be made upon the requests of the officers or directors. The provision for this is as follows:

63. Failure to make report—Blanks to be furnished: If such report is not so made and so filed, the corporation shall forfeit to the United States \$200, and \$10 per day additional for each day's omission, to be recovered with costs in action of debt, prosecuted by the Attorney-General, who shall prosecute such actions whenever it shall appear that this section has been violated.

If such report be not so made and filed, all of the directors of any such corporation who shall willfully refuse to comply with the provisions hereof, and who shall be in office during the default, shall, at the time appointed for the next election, and for a period of one year thereafter, be thereby rendered ineligible for election or appointment to any office in the company as director or otherwise; but no director shall be thus disqualified for the failure to make and file such report,

if he shall file with the Bureau of Corporations before the time appointed for holding the next election of directors after such default a certificate stating that he has endeavored to have such report made and filed, but that the officers have neglected to make and file the same, and shall report so far as they are within his knowledge or are obtainable from sources of such information open to him, verified by him to be true to the best of his knowledge, information, and belief.

The Commissioner of said Bureau, upon application, shall furnish blanks in proper form, and shall safely keep in his office all such reports, and shall prepare an alphabetical index thereof; which reports and index shall be open to the inspection of all persons at the proper hours.

JURISDICTION OF COURTS.

The jurisdiction of United States courts over a national corporation under this law is to be the same as it would be over the corporation if it were a domestic concern of the State where it was doing business when sued. Its domicile for the purposes of litigation is that of the State of its principal office, and the courts of the United States have no jurisdiction other than they would have between individuals of that State. This means that the State courts retain jurisdiction over them, the same as of domestic corporations, and suitors are not deprived of the right to redress their grievance in the local courts.

CONVERSION OF STATE CORPORATIONS.

To convert a State corporation doing an interstate business into a national one under this act will not need the usual process of a new corporation and sale and transfer of the assets, but a much simpler and shorter method is provided, being substantially merely the filing of new articles of incorporation.

CRIMES AND CORRUPT PRACTICES.

In this bill are provisions against embezzlement, fraudulent appropriation of corporate property, keeping fraudulent accounts, willful destruction of books, making false entries, and so forth; publishing false statements, issuing false stock, being interested in competing companies, buying an interest in a subsidiary company, buying supplies for personal gain, misleading advertisements of capital stock and dividends, and the like; providing fines and personal imprisonment of offenders sufficient to prevent most of the losses that usually fall on stockholders by want of care and the misconduct of corporate officials.

INDORSEMENTS—ANARCHY SUGGESTED.

But, Mr. Speaker, I am not alone in my views as to the condition and standing of corporations before the law. In the annual report of the Commissioner of Corporations for 1904 he says:

The present situation of corporation law may be summed up roughly by saying that its diversity is such that in operation it amounts to anarchy.

If this is so, why should we not remove this lawless condition and have some standard of corporation law to look to whose provisions are constant and reliable and whose operations are a protection to every corporate creditor and stockholder?

The President of the United States has also, in several recent messages to this Congress, indicated that he favors such legislation as a means of compelling obedience to the law by corporations and a relief from the oppression which large corporations are visiting upon their weaker competitors.

I hesitate to believe that a condition of anarchy in our corporation law will be long tolerated if these institutions and their relation to the industrial and commercial interests of the country be properly placed before the people and the needs of corporations frankly considered.

MONOPOLIES NOT FOSTERED.

As I said at the outset, I am not attempting to foist upon the public, or this body, a scheme of trust-busting, and I want to say, in conclusion, that I am not endeavoring to work up a plan to make the organization of trusts easier or their careers more pleasant, or to enable them to conduct their operations more successfully. I am against monopolies. I believe that laws should be enacted, not only to disable them, but to cripple them in case they are formed; and we should have the foresight to anticipate them and make it impossible for them to organize.

In many States we have laws forbidding the consolidation of two competing railway companies. This principle should be extended so as to prevent any corporation being formed by the amalgamation of any two companies which are doing the same line of business, or the enlargement of the capital stock of one corporation, the proceeds of which is to be used to absorb another which is a competitor. In this safeguard only can the people be secure against the crushing out of competition and the consequent high prices which we must pay as a tribute to support the greed of monopoly.

One thing I think we can rely upon with certainty is that the interests of the people will be guarded more zealously and the business of the corporation be more closely scrutinized under a system of national corporation laws than under the loose laws of forty-six States. The efforts of one executive body to administer the laws in the people's interests, having the whole business in the aggregate, will be more effective than that of forty-six separate ones, each of which has only a part of it, a system under which monopolies now do not seem to be greatly hindered.

Therefore I can not otherwise than believe that this law will be helpful in a practical way in solving the great question of regulating corporation methods and dispensing with corporation unfairness and oppression. It will certainly be a producer of results that will tell for the good of the great reform movement now so uppermost in the minds of the people.

CORPORATE OPPRESSION.

From what I have said it follows that there is evil growing out of corporations and corporate influences as well as good. Corporations have grown faster than our conception of them, our familiarity with their movements and knowledge of their wants, and what may seem to be their faults may, in some instances, be appearances which are deceiving.

Corporations may at times appear oppressive. It is not unnatural that they should appear so to their competitors; but often it is merely because they are progressive. Each forward business movement oppresses those it leaves behind. The manufacture of shoes oppressed the individual shoemaker of forty years ago, found in all the cities and towns, that the swifter factory methods put out of business. The factory vehicle builders drove out of competition the wagon makers of the smaller towns. The watchmaker found a way to make each part by machinery in a great factory and drove out many employees that were doing the work by hand. The canal boat prostrated the stage, and the railroad train relegated the canal boat to a thing of the past. In some places the electric lines have given oppressive opposition to the steam railway. These evolutions come as a matter of course, and every new and improved mode oppresses its rivals, whom it finally puts out of business. But this would be the same with individual effort if it controlled the business of the country. It is not the fault of the corporation, nor due to its existence, but the result of the progress of the times and the development of our country.

We can not wonder that there has been complaint against corporations. That they should be assailed and that their movements should have produced friction. They have made mistakes and overreached. Notwithstanding their transgressions I believe it to be our duty to lay aside all prejudice and consider only the place of the corporations in the great utilities of our great Government, the development we have to secure, and how it is to be accomplished in the future, and do whatever we can for progress by fostering them and aiding them in the great good which they can do. And the surest way to do this is to remove one great obstacle to their growth, by providing for the erection of corporations under a well-guarded, uniform law, through the enactment of the bill which I have proposed, and at the same time curb their careers of predatory imposition upon the people, in the mad chase of their manipulators, after "swollen fortunes."

Mr. Speaker, corporations should be encouraged but made to feel their dependency upon business integrity. If they use their capital and ability in developing their resources and outgrow the law, they should not be required to slow down their pace to the gait set by dilatory legislation. If the laws become obsolete or a misfit the corporation should not be made to suffer for it, but the handicap should be removed by the enactment of laws as large, liberal, and elastic as the business interests of the country demand. If this be done there will be a new era of business growth, similar to that we experienced fifty years or so ago when corporations were put under the restraining ban of general laws. Uniform laws and uniform charters will be the making of the best system of corporation law that has ever been proposed, and the popularity of the American corporation will increase beyond measure. Corporations will be kept within their legitimate sphere of action and operation. Officers will be restrained from despoiling them, and violating their trust, stockholders will be protected to the point of the safety of their investment, and we shall have an ideal American institution, the pride and benefactor of the entire American people.

By the enactment of such a law as I have proposed the plain of corporate existence will be elevated, the power of corporations to take unearned increments will be destroyed, confidence will be restored, the conscience of the public calmed, investments will be protected, and these institutions will enter upon a new and enlarged field of usefulness and action.

The Swamp-Land Claim of Cass County, Ill.

SPEECH

OF

HON. HENRY T. RAINEY,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

The Committee on the Public Lands of the House of Representatives having under consideration the bill (H. R. 4334) providing for the payment of the swamp-land claims of certain counties of the State of Illinois—

Mr. RAINEY said:

Mr. CHAIRMAN: I think the chairman and the gentleman from Tennessee [Mr. GAINES] have come very near reaching the bottom of this matter. Clearing away the brush and getting at the exact equity of this situation, this is the condition of matters: The Government of the United States grants to the State of Illinois a certain definite number of acres of land. There can be no question about that. The number has been ascertained. The Supreme Court of the United States in a case which I will endeavor to find and put in record has recognized that fact. That matter is adjudicated.

Now, after having given to a young and growing State blank acres of land, the definite amount is given in the most solemn manner possible, the Government of the United States, in another way, equally solemn, acting through its agents, sells a portion of this same land granted to the State to private individuals and gives them a title to it, and the private individuals immediately enter upon the possession of the land. After that the State, by an act of the legislature, granted to the counties the lands granted to the State, and when the counties attempted to take possession of certain lands contained in the grant by the Government to the State they found that the Government had sold those lands to somebody else who was in possession and who held his title direct from the Government, and therefore the counties could not get the lands.

Now, certain of these counties, perhaps all of them, applied in the regular way to the proper officials and obtained scrip authorizing them to take the number of acres of land that the Government sold in error. But the Department, as they construed the matter, required them to take land within the boundaries of the State. The situation is this: The Government gave to the State of Illinois a certain number of acres of land and the Government afterwards sold that certain number of acres of land and got the money, \$1.25 an acre, and it is in the Treasury.

Mr. SMITH of California. You are mistaken in that point. The United States received cash for the lands selected by others that was turned over to the State of Illinois, but not so far as the lands were covered by military warrants or something of that kind.

Mr. RAINEY. The principle is the same, whether it is cash or military warrants.

The CHAIRMAN. Of course the gentleman did not finish his statement. He did not intend to say that the grant was by description; the grant was by a description of the character. In many cases the entryman was upon the land and occupied it before the State had identified the land so occupied as coming within the grant.

Mr. RAINEY. I think that would be true in a great many instances. But lands have been identified and the courts have recognized the identification, the courts of the State and the Supreme Court. We can tell exactly what lands are included in the grant.

The CHAIRMAN. As a legal proposition I do not think that makes any difference.

Mr. RAINEY. Yes, sir. Now, as to the point suggested by the gentleman from Tennessee, to which the chairman has also added some valuable suggestions along that line, that this is a matter for the Court of Claims. I think there is a great deal of force in it as applied to all the lands except the land embraced in this particular bill. The object of referring any matter to the Court of Claims is to obtain an adjudication and to find what the rights of the parties are. In my district there are four counties that have been deprived of the lands granted to the State and by the State to them—Calhoun County, 340 acres; Cass County, 1,880 acres; Greene County, 400 acres, and Pike County, 600 acres. I do not think this committee has a particle of jurisdiction as to four of these counties here, because their claims have, perhaps, not been adjudicated. I ought to modify that by saying, if the statement of the gentleman

from Tennessee has any force, and I think it has a great deal of force, it ought to apply only to three of these counties.

There is one of these counties which has obtained an adjudication as solemn, and it ought to be as binding, as could possibly be obtained if this matter was in a position to be referred to the Court of Claims, and that is Cass County. Cass County received from the Government scrip for its 1,880 acres. That is an adjudication that there can not be any question about. They hold the scrip there now, and it should be worth \$1.25 an acre. There has been an adjudication as to this county because they have the evidence of it. They have a certificate which says "the Government owes you so many acres that is worth \$1.25 an acre." What could the Court of Claims add to that adjudication? Absolutely nothing. Mr. Hitt is also of this opinion. But as to the other counties, there might be some question of fact. The only reason for carrying anything to the Court of Claims is to get a finding as to questions of fact. As to Cass County, with its certain definite number of acres, there has been an adjudication and the question of fact has been determined, but as to these other counties I think there is great force in the suggestion that the matter be referred to the Court of Claims in the proper way.

Mr. GRAFF. Do you mean the counties mentioned in this particular bill?

Mr. RAINEY. If all the counties in this bill have received scrip then I think there has been as solemn an adjudication as to them as the Court of Claims could possibly render.

Mr. GRONNA. I have been under the impression all the time that the only lands that received payments are the lands that have been adjudicated; is that right?

Mr. RAINEY. Yes, sir.

Mr. HALL. You alluded to certain scrip issued to one of the counties that you mentioned?

Mr. RAINEY. Yes, sir; in my district.

Mr. HALL. By the term "scrip" do you allude to the certificates we have been alluding to?

Mr. RAINEY. Yes, sir. Perhaps I have not used exactly the proper term.

Mr. HALL. I did not mean to find any fault with the expression, but I merely wanted to make the identification. In the absence of authority for the commissioner to issue scrip or any other agent of the Government to issue scrip, does that add any additional weight to the rights of the counties to which those certificates were issued?

Mr. RAINEY. I think so. The scrip was issued, the certificates, many years ago, and there has been no attempt on the part of this Department or on the part of any other Department for half a century or more in any way to repudiate the action of the official who issued the certificates.

Mr. HALL. In other words, you claim that the doctrine of estoppel would run against the Government.

Mr. RAINEY. No, sir; I do not think the doctrine of estoppel would run against the Government in a matter of that kind, or against a State, or against any sovereign power; but we ought to arrive at the equities of the situation, and that is what I understand the committee is trying to get at; of course, any sort of a proceeding before a committee is simply an effort to arrive at the equities, because you can not compel the Congress of the United States to do anything. You can not arrive at the equities of the situation except by determining what rights the courts would compel as between individuals. If this were a contest between citizens of different States or citizens of the same State, the rule of estoppel would certainly apply.

Mr. HALL. What is bothering me, and the reason that I make this inquiry, is that I am unable to understand why it is that these counties which hold these certificates have any superior rights to any of the other counties to which the certificates were not issued, or to any other State under similar circumstances, if those certificates were issued without the authority of law. In other words, that the officer issuing those certificates acted in an extrajudicial manner.

Mr. RAINEY. But the fact is that he did act within the powers granted him by the act of Congress itself.

Mr. HALL. That is precisely the question. I have examined that act, and I find in that act no authority for the issuance of any scrip or certificate. It is merely a general act, and the Commissioner of the General Land Office would have no more right to issue a certificate than would the President of the United States or the Indian Commissioner.

Mr. SMITH of California. Is not the status of the other 51 counties identical with those mentioned in this bill except that the Commissioner of the General Land Office arbitrarily refused to proceed any further with the issuance of the certificates? He had the same authority to issue certificates to the

other 51 counties as he had to issue them to these counties, and the same proofs were submitted by the other 51 counties that were made by these counties.

Mr. RAINEY. That may be true; I rather think you are right. Let me read section 2 of the act of May 2, 1855:

And be it further enacted, That upon due proof, by the authorized agent of the State or States before the Commissioner of the General Land Office, that any of the lands purchased were swamp lands, within the true intent and meaning of the act aforesaid, the purchase money shall be paid over to the said State or States; and where the lands have been located by warrant or scrip, the said State or States shall be authorized to locate a quantity of like amount, upon any of the public lands subject to entry, at \$1.25 per acre, or less, and patents shall issue therefor, upon the terms and conditions enumerated in the act aforesaid: Provided, however, That the said decisions of the Commissioner of the General Land Office shall be approved by the Secretary of the Interior.

I think the States under this act were clearly authorized to make this selection.

Mr. SMITH of California. To go elsewhere and locate land in lieu of it, but it does not carry with it the authority for the Commissioner to issue any scrip or warrants. I do not think these counties are in any different category from the 51 counties in the State of Illinois.

Mr. STEIN. Oh, yes, they are. Their claims have not been

Mr. SMITH of California. If the Commissioner had authority to issue the certificates to any county, why did he not issue certificates to the other 51 counties?

Mr. STEIN. Suppose the question of its being swamp or nonswamp land was in dispute, or unadjudicated?

Mr. SMITH of California. That would place a different phase on the matter.

Mr. RAINEY. All the swamp-land claims presented by the various States should not be placed upon the same basis as the claims of the 14 counties in the State of Illinois mentioned in this bill. I desire to call attention to the fact that under and by virtue of the respective enactments of Congress the Secretary of the Interior was designated as the person who should decide whether or not the land claimed by the State as swamp land was really swamp land. It must be taken into consideration that claims were presented by various States for lands which were not in fact swamp lands and could not be proven to be swamp lands to the satisfaction of the Secretary of the Interior. For example, from July 1, 1892, to June 30, 1906, the Department of the Interior rejected swamp-land claims presented by the various States to the amount of 9,983,572.41 acres. In relation to these rejections the Department says: "The rejections and cancellations represented in the above table were illegal, duplicate, and improper claims which have been encumbering the records for many years." Thus it will be seen that many swamp-land claims presented by the various States of the Union which are entitled to the benefit of swamp-land grants are in dispute and have not been proven to have been of a swampy character at the time of the original grant of 1850. Some of these lands may be swampy, but the mere fact that the Department rejected almost 10,000,000 acres in fourteen years is a very strong argument in favor of the proposition that most of the claims which are now pending are really claims that have been made to lands which are not now, nor have they ever been, swampy in character.

(Full data upon this proposition may be obtained by referring to the report of the Commissioner of the General Land Office for the year 1906, p. 116.)

It should be taken into consideration that the State of Illinois has an unadjudicated swamp-land claim for a million and a half acres, also that various other States have such unadjudicated claims. For the settlement of such claims or, rather, for the adjudication thereof no additional legislation is required for the reason that the various swamp-land enactments have conferred upon the Secretary of the Interior sufficient authority to determine the facts as to the respective claims and settle all those claims which were entered for cash upon a basis of \$1.25 per acre, or less.

The claims of these various counties were proven up and adjudicated over fifty years ago, and neither has Congress nor has any departmental official questioned the adjudication of the same. There is no way in which these claims can be satisfied, and whenever the attention of the Interior Department has been called to the condition of these adjudicated claims, upon which the State of Illinois could not realize, this Department has always stated that the claims were just and Congress should take steps to see that the same were satisfied.

No additional enactment is required in order to establish the swamp-land claims of the other States. All lands that were entered for cash will be settled for by the Interior Department when they are proven to be just, and no additional legislation is required to settle such claims. In those public-land States where land was entered with land warrants and scrip there are

sufficient public lands to satisfy any certificate which may be issued upon claims proven to the satisfaction of the Interior Department. We must not get the impression that the State of Illinois is the only State in the Union to which certificates of this character were issued. In the report of the Commissioner of the General Land Office for the year 1906 it is stated that there had been issued to the various States in the Union certificates of the character described in this bill aggregating 862,270 acres. It has been stated that practically all certificates have been satisfied in the other States, with the exception of a few acres in some of the States, and in such States there are a sufficient number of acres of public lands upon which they can be located. If this is correct it will be seen that the Government of the United States has been able to fulfill its obligations in regard to all the States with the exception of the State of Illinois. I submit that the State of Illinois should not be prevented from realizing upon certificates which are exactly similar to those which have been issued to the States of Alabama, Florida, Indiana, Iowa, Louisiana, Michigan, Mississippi, Missouri, and Wisconsin, upon the technicality that the Secretary of the Interior exceeded his authority when he issued the certificates to the State of Illinois. The other States have had the advantage of them, and Illinois should be entitled to similar consideration.

It has been asked if the difference between the claims of the counties mentioned in this bill and those of others which are not adjudicated is not similar to an account stated or to a book account which has not yet been rendered. I do not think so. The claim of these counties has been recognized as an obligation of the Government by the highest authorities of the land. In regard to whether or not these claims are just there is absolutely no dispute whatever; the Executive Department to which Congress delegated the authority to pass upon these claims has repeatedly stated that they were obligations that were just and right and that Congress should take some action to meet them. In regard to the claims presented by the other counties of the State of Illinois and in regard to the claims presented by the various other States in the Union there may be a dispute; as I understand it, the Department denies that the lands claimed by such various counties in Illinois and in other States were swamp lands at the time of the enactment of the act of 1850; hence it will be seen that the Government denies the debt or obligation in regard to all the other claims now pending in the Interior Department. These certificates are plain obligations upon the part of the United States Government to do certain things; they are issued by virtue of Congressional enactment, and bear the signature of an Executive Department. They ought to be the same as promissory notes or Government bonds; their validity is not in dispute, while the claims of the other counties are in dispute, and the most of them, if proven to be just to the satisfaction of the Interior Department, can be settled by the Interior Department without additional legislation.

In *Railroad Company v. Smith* (9 Wallace, p. 99), (1) in speaking of the swamp-land grant of 1850 the court said:

No act of Congress has ever attempted to take back this grant of swamp land, or to forfeit it, or to give it to any other grantee, or modified the description by which they were given to the States.

To show how much importance the Supreme Court attached to this solemn obligation on the part of the Government, the following expression by the court in this same decision may prove interesting:

By the second section of the act of 1850 it was made the duty of the Secretary of the Interior to ascertain this fact (meaning swampy character of land) and furnish the State with the evidence of it. Must the State lose the land, though clearly swamp land, because the officer neglected to do this? The right of the State did not depend on his action, but on the act of Congress, and though the States might be embarrassed in the assertion of this right by the delay or failure of the Secretary to ascertain and make out lists of these lands, the right of the States to them could not be defeated by that delay.

When in 1855 it appeared that the rapid settlement of the public domain was going to deprive the States of the rights intended to be granted by the act of 1850, Congress passed another act in which it sought to further protect the States in those rights. Nor did Congress stop there, but in 1857 passed another act confirming to the several States their swamp and overflowed lands.

SETTLERS' TITLE GOOD.

The title of the settler to these lands has been absolutely and positively determined by both the Congress of the United States and the Supreme Court.

Upon this subject the Supreme Court, after calling attention to the conflicting interests of the settlers and the States, makes the following statement:

The embarrassments of the land department growing out of this controversy between the States and the settlers were removed by this act

of 1855, which confirmed the title of the settlers and compensated the States for the land of which they were deprived. (9 Wallace, 91.)

The States claimed that the grant to them by the act of Congress was a grant in present and vested the title immediately. Such had been the opinion expressed by the Land Commissioner and also by the Attorney-General. (9 Wallace, 91.) In this opinion the Supreme Court sustained such contention.

In the case of *Marks v. Seymour* (7 Otto, 348) the court said:

The act of 1850 was a present grant subject to identification of the specific parcels coming within the description, and the selections confirmed by the act of 1857 furnished this identification and perfected the title.

Careful consideration of the three acts of 1850, 1855, and 1857 compels the conclusion that it was not only the intention of Congress to give to the States the swamp lands in order that they might be made profitable farming lands, but to emphasize that intention in the most positive and solemn manner possible. Reference to the many decisions of the Supreme Court upon this subject shows conclusively that they have in all cases brought before them interpreted the law so as to protect the rights of the States granted to them by reason of these enactments. The court has consistently held that the title of the States was superior to all others, even the National Government itself.

AUTHORITY FOR ISSUANCE OF CERTIFICATES.

It certainly will not be contended that an Executive Department upon which there has been placed the duty of carrying into effect a Congressional enactment has not the authority to perform such duties as are commonly known as "ministerial acts." How would it be possible to execute the acts of Congress without this power? Rules and regulations supplementing and assisting the acts of Congress are promulgated with reference to every act of Congress requiring some labor upon the part of an Executive Department. A vast army of men is constantly employed for that purpose.

Now let us see if the issuance of the certificates was not simply a ministerial act, simply making matter of record a debt which Congress had already acknowledged and recognized. In 1850 there were in Illinois tracts of land amounting in all to over 100,000 acres that Congress desired to grant and did grant to the State. The act became effective immediately. Now, out there in the State of Illinois was a land office, and the official in charge of that office permitted this same 100,000 acres, which the Government had ceased to own, to be sold in the name of the Government or absorbed in some way by individuals. Five years after this tract of land had been granted to the State Congress in substance said: "Through error our enactment has not been carried into effect. We gave the State of Illinois 100,000 acres of land and then we took it away. Here is a solemn obligation on our part. In lieu of the 100,000 acres which we took from the State we will give it 100,000 acres elsewhere." In effect Congress said:

"Furnish us with a description of that land, prove that it was swamp land to the satisfaction of the land department, and then it will be the duty of the land department to permit you to locate upon a like amount elsewhere." Now, in order to carry this into effect it became necessary that rules and regulations should be promulgated and that all should be made a matter of record. A description of the lands lost, the steps taken in the making of proper proofs were made matters of record. These were ministerial acts. Now, when they were through and the final adjudication was made in accordance with acts of Congress was it not just as necessary for the Secretary of the Interior to make his findings a matter of record as it is for a judge to make his decisions matters of record?

The Secretary of the Interior furnished the governor of the State of Illinois with certificates setting forth the result of his findings, and in such certificates stated that according to acts of Congress the State had a right to locate an amount of land equal to that which was set forth in the certificates. He practically said, however, "but each time you locate upon a tract it must be noted upon the back of this certificate, and when it is all taken up you can not locate any more." These certificates were for the guidance of the State of Illinois and for the protection of the National Government. The Secretary of the Interior never made the debt. Congress made the debt and the Secretary of the Interior simply issued the certificate of indebtedness, a ministerial act which he was compelled to perform if he properly carried out the wishes of Congress. He could not go to the governor of the State of Illinois in person and state to him verbally that according to an act of Congress that State had 100,000 acres of land coming to it, so he simply acknowledged the obligation in writing and mailed it to the governor.

He acknowledged several hundred thousand acres of indebtedness to other States and sent them the same kind of documents.

The Government paid those debts; it ought now to discharge the obligation to the State of Illinois.

In the case of *Webster v. Luther* (163 U. S., 331) the Supreme Court of the United States said: "The practical construction given to an act of Congress fairly susceptible of different constructions, by one of the Executive Departments of the Government, is always entitled to the highest respect and in doubtful cases should be followed by the courts, especially when important interests have grown up under the practice adopted." The Supreme Court follows this same reasoning in the case of *Bates Refrigerating Company v. Sulzberger* (157 U. S., 1-34) and the *United States v. Healy* (160 U. S., 136-141).

It will be seen by these decisions that the Supreme Court of the United States recognized the construction that an Executive Department placed upon similar enactments even where the enactment is susceptible of different constructions. There can be but one construction placed upon the enactment of 1855, and all the Interior Department did relative to issuing these certificates was simply done to carry into effect the enactments of Congress and to make its acts a matter of record. All that they did was simply in a ministerial capacity, and even if they had gone so far as to construe the law the Supreme Court of the United States would have recognized such construction.

I speak particularly for Cass County, which is in my district. But the other counties embraced in the present bill are in the same condition exactly. Cass County has been diligent. This county has fully performed all the obligations devolving upon her. She has waited for her money or for the right to dispose of these certificates for over half a century. It has been impossible for her to lay these certificates on public lands within the State of Illinois for the reason that since they were delivered to her there has been no public lands within the State. The Government will not permit this county to take any of the public domain outside the State, and the Government refuses to pay over to the county the proceeds now in the Treasury of the United States arising from the sale of the lands which belonged to the county. The situation is this: The Government sold lands belonging to Cass County, and collected the money on the sales it made; the Government then gave to Cass County its promissory note for the proceeds of the lands so sold, and for fifty years the Government has said to this county, "We will not pay the note and we will not permit you to take any part of the public domain in settlement of the same."

I respectfully submit to this committee that simple justice demands that the established, undisputed claim of this county should now be settled, and that this committee ought now to report this measure out and give us an opportunity to present this matter to the Congress.

The Tariff and Its Effects.

There are two ideas of government. There are those who believe that if you will only legislate to make the well-to-do prosperous, their prosperity will leak through on those below. The Democratic idea, however, has been that if you legislate to make the masses prosperous, their prosperity will find its way up through every class that rests upon them. (William J. Bryan.)

SPEECH

OF

HON. G. M. HITCHCOCK,
OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. HITCHCOCK said:

Mr. SPEAKER: The most discredited law upon the statute books at the present time is the Dingley high tariff passed by a Republican majority in July, 1897.

Under its operation and protection most of the voracious trusts which feed upon the productiveness of the American people have been organized.

Under its stimulation most of the spoliation of our national resources of mine and forest have occurred.

Under its cunning provisions trusts have extorted high monopoly prices from the American people and enormously increased the cost of living to the masses, while creating prodigious fortunes to trust organizers.

Under its license the trusts it has created have sold their products abroad in foreign lands at prices much below the prices extorted from Americans at home.

Under its operation labor has found the struggle for existence growing yearly harder, and even constant work scarcely enables the clerical and industrial classes to make both ends meet.

Under it women and children in increasing numbers have been driven to seek industrial employment in order to eke out the family income.

Under it capital in competitive lines of trade has found increasing risks, so that failures in business are more numerous now than ever before in the country's history.

Under it a vast amount of the country's wealth has by the power of monopoly been transferred from the industrial classes to the protected interests.

Under it occurred last October one of the worst bank panics known in history.

Under it we are now experiencing a business depression in trade, manufactures, and transportation, notwithstanding great crops and all natural causes for good times.

Under it a great army of idle and anxious men, estimated at far over one million, now vainly seek work.

Under it national revenues have greatly fallen off, and the national budget shows that expenditures exceed national revenue by \$70,000,000 for the year just closing, while the deficit for the next year will be a hundred and fifty million dollars.

The American people, therefore, suffering from this perversion of the protective idea and this spoliation by tariff-created trusts, have resolved to repeal the tariff responsible for the trusts and force the latter to come down to reasonable prices and moderate profits.

They are ready at last to listen to the Democratic party, which for eleven years has been denouncing this iniquitous tariff and its foul brood of trusts.

When the Republican leaders enacted the Dingley tariff eleven years ago they did so at the behest of the manufacturing interests. Those interests had contributed largely to the campaign of 1896 and demanded their reward. They received it. The iron and steel manufacturers dictated the iron and steel tariff, which was made so high as to shut out foreign competition. Then after several efforts American competition was ended by the formation of the steel trust. Prices of iron and steel were enormously advanced and trust earnings made great enough to pay returns on a thousand million dollars of capitalization that was fictitious. The paper makers dictated the tariff on paper and six months later formed the paper trust which recently advanced the price of paper 25 per cent in one year. Each other interest secured its shelter in the tariff, and then when secure from outside competition organized its trust to kill off American competition.

Every tariff-protected interest then organized into a trust to monopolize the American market.

The result in eleven years has been a great and artificial rise in prices and an enormous increase in the cost of living.

This increase in the cost of living has vastly intensified the struggle for existence.

According to statistics gathered by Dun's Commercial Agency, the cost of living in America increased from 1896 to 1906 about 49 per cent.

According to the Bureau of Labor, the rate of wages increased during the same ten years 19 per cent.

The change is illustrated by this diagram:

Rate of wages _____
Cost of living _____
INCREASE.

That does not look as though the high-tariff period had benefited labor. Apply the figures to a man who was earning \$600 a year in 1896 and spending \$550 for living expenses. There have been many such cases:

	Year's earnings.	Year's cost of living.
1896.....	\$600.00	*\$550.00
1906.....	\$714.00	*\$819.50
Increase (per cent).....	19	49

* Surplus, \$50.

* Deficit, \$105.50.

As a deficit in the finances of a laboring man's family can not long exist, the result of increasing his cost of living, as above, is to drive his wife or his children into some employment to help out the family income or to absorb his savings or to go into debt.

The only offset to the figures above given is that men were more steadily employed in 1906 than in 1896.

Since then, however, has come the bank panic of 1907 and the depression which has followed, throwing a million or more men out of work.

The favored interests, which asked for and secured the present high protective tariff, averaging over 45 per cent of duties, have pretended that this great amount of protection was necessary to compensate them for the higher wages they paid to their workmen as compared to foreign manufacturers.

Many Americans have cheerfully submitted to paying exorbitant prices for American-made goods, believing that the extra amount they paid went to American labor.

A few official figures easily expose this fraudulent pretense. They show that in many cases the tariff is so exorbitant that it is greater than the whole cost of labor in the article. In many other cases it is nearly as great. These facts prove that the protected trusts are getting a great deal more protection than the difference between the cost of labor in Europe and in America.

The Statistical Abstract, published by the Government, shows that the iron and steel manufacturers (the steel trust) in 1905 turned out \$941,000,000 worth of products, and in doing so paid \$143,800,000 in wages. The total wages paid therefore only amounted to 15 per cent of the value of the product.

The average protective duty levied was 32 per cent. This effectually disposes of the claim that the Dingley tariff is designed merely to compensate for the "difference" between American and foreign wages.

For every \$100 worth of iron and steel manufactured the trust receives \$32 protection and only pays out \$15 for labor.

Stated in proportions, this fact may be illustrated by the following diagram:

Value of product, \$100.	_____
Tariff protection, \$32.	_____
Labor cost, \$15.	_____

What is true of the iron and steel schedules is true of many others, the tariff not only compensates for the difference between American and European wages, but it enables the trusts to get their labor practically for nothing and thus pay dividends on watered stock.

Following are a few of the articles manufactured by trusts. The first column gives the per cent of labor cost as figured from the United States Statistical Abstract, the second column gives the per cent of tariff protection given to the manufacturer:

	Per cent labor cost.	Per cent duty.
Agricultural implements.....	22	20
Ammunition.....	20	20 to 35
Artificial feathers and flowers.....	25	50
Belting and hose, leather.....	8	35

Wall paper.....	20	25

The above are only samples of the labor cost and tariff protection.

The best evidence, however, that a confidence game has been worked on the American people is that most of the tariff-protected trusts are selling their goods abroad in other countries in open competition with European manufacturers.

This is now generally admitted, though at first denied.

The prices at which these American-made goods are sold abroad are, of course, far below what they are sold for in America, where the tariff gives the American trust the monopoly.

The fact is that American labor is so much more productive than European labor that it is nearly as cheap. Even though a manufacturer pays a higher rate of wages in America, it often does not cost him any more in wages to make a given quantity of product than it costs in Europe.

When the laborer comes to buy what he needs, moreover, he pays so much more for what he gets that his high wages do him but little good.

He gives as many days' work for a suit of clothes as the European laborer. His rent costs him as many days of toil. It is high because building is expensive. The tariff on lumber, iron, and steel is responsible for expensive building. In fact, the tariff has enabled the trusts to put up the prices of most things to pay dividends on fictitious capital.

Bradstreet's Commercial Agency compiles each month prices on 107 commodities. These prices are then added together. This gives what is called the "index figure." It indicates the price level. This index figure has risen almost 50 per cent in ten years in America under the Dingley tariff.

The following table shows the index figures for 107 commodity prices for the past ten years, the average for each year being given:

Prices of 107 commodities.	
Index figure:	
1897	\$6.11
1898	6.57
1899	7.21
1900	7.88
1901	7.57
1902	7.87
1903	7.93
1904	7.91
1905	8.09
1906	8.41
1907	8.90

In other words, it takes \$8.90 now to buy what \$6.11 would buy before the Dingley tariff was adopted and the trusts began their work of exploiting the American people. Or, to express it otherwise, an income of \$890 now is no better than an income of \$611 was ten years ago.

George Gray on the New Federalism.

SPEECH

OF

HON. JOHN S. WILLIAMS,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. WILLIAMS said:

Mr. SPEAKER: Under the leave to print granted by the House, I insert the following as expressive of sentiments truly American and the very antipodes of the theory and practice of the Republican party, which is the embodiment of the "new federalism."

[Address before the Pennsylvania Bar Association June 25, 1907, by Hon. George Gray, of Delaware.]

Mr. President and gentlemen of the Pennsylvania Bar Association, under such a government as ours constitutional discussion can never be out of place, and surely no apology is necessary for such discussion before a body of American lawyers. "A frequent recurrence to fundamental principles is absolutely essential to the preservation of our liberties." This is as true to-day as it was the day it first found expression.

I therefore propose to talk this evening, though in somewhat desultory fashion, of what may be called "the new federalism," in contradistinction to that older "federalism" which had its origin prior to the adoption of the Constitution. As we all know, "federalism" was the name given to the doctrines of those who had sought for the making of a strong central government, whose powers should be, to a large extent, unlimited, and to which the States should be entirely subordinate. When the Federalists, who advocated the making of a different and much more centralized government than that which was made by our Constitution, were compelled to acquiesce in its compromises they devoted themselves to the task of overcoming the formidable opposition that existed in most of the States to the ratification of the work of the Convention by demonstrating how carefully it had preserved the rights of the States and how drastic were its limitations on the power of the General Government. Though the name continued afterwards as a

designation of a party, it necessarily ceased to have much of its former significance. Those who had favored a highly centralized government and the complete subordination of the States had confessedly failed in their object, and were estopped by their own arguments, addressed to the opponents of ratification, from insisting that the character of the Government was other than they had declared it to be, and they contented themselves with regarding the new Government as an experiment doomed to failure.

It was but natural that in the launching of the Federal Republic, created in 1789, its scheme should have been considered on all hands an experiment, and that for more than a period of a generation its practical working should have been watched with anxious solicitude by thoughtful men of all parties and political creeds. That it was beautiful in theory but not workable in practice was the confident belief of many. The prestige of Washington's name and the influence of his character served to ballast, and the genius of Marshall to direct the course of, the ship of state in these first perilous years of trial. These were some of the happy accidents or, to speak more reverently, special providences that allowed use and time and habit to perform their work of bringing confidence to those who were thus embarked. When another generation had passed the Constitution had become, as it now is, "the Constitution of the fathers," and as such evoked those feelings of reverence and affection which naturally associate themselves with the traditions of an honorable past. Thus intrenched, Webster was able to strike those chords of sentiment and patriotism which echoed in the hearts of the people and enabled our institutions to withstand the shock of civil war and the more perilous days of reconstruction when the foundations of the great social deep seemed broken up.

It would seem as if, having survived through the changeable years of more than a century, our dual scheme of government had passed the experimental stage and was destined to rest for generations yet to come on the foundations upon which it was erected. We can not, however, close our eyes to present-day conditions, which, if they do not now seriously menace the permanence of our constitutional scheme, they at least should challenge the serious thought of the country, and especially of that body of men who, by their oath of office, have dedicated their lives to its support and to whom the country at large must look for guidance and instruction.

Let us consider, then, in the brief hour allotted to this discussion what are the grounds of our hope for the continuance in the future of those blessings which we have enjoyed in the past and which we undeniably owe to the wisdom of those who framed our Federal Constitution—the greatest product, as Gladstone said, that was ever struck at one time from the mint of man's brain.

The experiment of 1789 was a fundamental one, and was to test the capacity of the people for self-government. Self-government means self-restraint. Can the sovereign people, in whom all power resides, impose, or continue to impose, such restraints upon the exercise of that power as are necessary to the security of individual and political liberty, as we understand those terms, and prescribe for themselves, by a "self-denying ordinance," such limitations upon their governmental agencies as shall make the absolutism of a majority as impossible as that of a king?

It is not to doubt either the good will or the intelligence of the people for whom and by whom, in 1789, this Constitution was framed, or of the more than 80,000,000 who now consent to be governed by it, or, indeed, to disparage in any degree the capacity of our people, in general and in the mass, for self-government to say that this capacity has been demonstrated and developed only under the peculiar governmental plan evolved by the Federal Constitution of 1789. Whether it could have been demonstrated under any other plan than that of our dual scheme of government is matter of speculation. It is sufficient to know that under it and by it this Federal Republic—this Republic of Republics—has been successfully founded and is maintained upon the will of the people expressed, not through the voice of a majority of all the people of the States collectively, but by the voice of the people of each State, acting separately and independently.

It is not irreverent to say again that, owing to the happy chance that our separate colonies grew into separate States, each endowed with a sovereignty which is only qualified by the formation of a general government, to which enumerated powers have been delegated, there has been an opportunity for the realization of a local self-government which theretofore and in other lands had only been the dream of political philosophers. In other lands its attainment has been attempted by a distribution of powers by a central government down through and among the

communities which were the creations of such government, and were dependent upon it for their existence, while here it has, like all enduring institutions, been the natural product of time and circumstance. The right of local self-government is inherent in the sovereignty of each State and depends on no power extraneous to itself, and it looks to no great central authority except for its guaranteed protection. The States, one and all, the smallest as well as the greatest, the newest as well as the oldest, stand on the firm ground of their equal sovereignty, and equally share the rights of the charter members of the great corporation of American liberty. It is our birthright, and we can boast, as St. Paul did when his Roman citizenship was challenged, that our States were freeborn. When we reflect upon these facts in our history and upon what tremendous and beneficent results have flowed from them, we are driven to believe that neither chance nor accident but the guiding hand of a divine power has shaped our destiny and controlled our ends.

It may be idle now to guess what would have been the result if these separate colonies and their outgrowth of separate States had not in the beginning existed. I do not believe, however, that, even if in their absence successful resistance had been made to Great Britain, we could ever have garnered the fruits of that resistance in a consolidated republic, or have realized a self-government that 80,000,000 of people in the aggregate now enjoy, through the medium of separate and sovereign statehood.

I can not sympathize with those whose constant endeavor seems to be not only to minimize the rights of the States, but to obscure their true relation to the Federal Government, by argumentation in support of the contention that the Federal Constitution was the creation of all the people who inhabited the thirteen original States in the mass, and without regard to the separate States and communities of which they were citizens and members. However much this extreme view of the power of the General Government may have been justified or excused by the extravagant pretensions urged on behalf of the rights of the States—pretensions which did not stop short of the claim to a constitutional right of secession—no such justification or excuse now exists. The open door, which many thought had been left by the framers of the Constitution for such pretensions, has been closed by the inexorable logic of war, and no one now doubts that this Union of ours is "an indissoluble Union," and no more should we doubt that it is "a Union of indestructible States."

A favorite argument of those who are obsessed with a desire to aggrandize the Federal Government at the expense of the States, and to whom the idea of a strongly centralized national government, to which State governments should in all respects be subordinate, has become attractive, is founded on the language of the preamble to the Constitution, that "*We, the people of the United States, in order to form a more perfect Union, etc., * * * establish this Constitution.*" Thus, they say it was the will of the aggregate mass of the people who inhabited all the States that framed this Constitution for themselves, independently of the States or of their people. But the wish here is father to the thought. As a mere matter of construction, the inference drawn by these doctrinaires is not a necessary one, for it is quite as reasonable, as a matter of verbal interpretation, as well as more consistent with the facts, to take the word "people" of the United States as the aggregate of the peoples of the several States. This plural noun "peoples" had not at the time of the adoption of the Constitution made its way into the political vocabulary, as it since has done.^{*} This extreme view, however, is opposed by the facts of history and the provisions of the Constitution itself, and by the calm and deliberate declarations of that great tribunal, which, by the express will of the people of these United States, is the supreme arbiter in all controversies as to the true interpretation, scope, and meaning of the Constitution, and of the great dual system of government which it established.

The facts of history which throw light upon the making of the Constitution and the conditions from which it sprang clearly demonstrate how the great principle of popular self-government worked itself out, not through a merger of the peoples of the several States into one common mass, constituting the people of the United States, but by the expressed will of the peoples of the several States, each acting independently and in its sovereign capacity for itself, and possessing the power to consent to or reject any particular plan of government, even if agreed upon by a majority of the peoples or States represented.

Looking, however, to the provisions of the Constitution itself, we find that its seventh article declares that "the ratification of the conventions of nine States shall be sufficient for the establishment of this Constitution *between* the States so ratifying the same." The use of this preposition clearly indicates

^{*} Its first conspicuous use, it has been said, was by Louis Kossuth, in his speeches here in 1851.

not, of course, that the Constitution is *merely* a compact *between* the States, but that it was the result of a compact between the *ratifying* States, who were, as Tucker says in his recently published Commentary on the Constitution, "still existent parties to the compact between them." This provision alone absolutely negatives the suggestion that the Constitution was ordained by one sovereign people, to wit, the people of the United States, whose will was paramount and sufficient for the enactment of this great organic law, irrespective of the will of the peoples or bodies politic of the several States.

It is clear from this article that the will of the people of the United States was to be ascertained by the act of the peoples of the several States, in their separate conventions assembled, in ratifying or rejecting the Constitution framed by their delegates. In ratifying it they agreed each with the other that when nine had so ratified it it should be established. But how, and as to whom, established? Why, *only as to the nine or larger consenting number.* The right to ratify was the right to reject, and, as a matter of history, the Constitution was established and the Government under it became operative with two of the States, North Carolina and Rhode Island, outside of its jurisdiction, by reason of their not having as yet assented thereto. There can be no question that if these States had refused to ratify, or until they ratified, their peoples would not have been within the jurisdiction of the Federal Government, but would have retained unimpaired that "sovereignty, freedom, and independence" which the second of the Articles of Confederation had declared to be theirs. Nothing of this kind could have happened if the Constitution had emanated from the will of one sovereign people of the United States acting *en masse*. Its will, expressed through the delegates representing its majority, would have been supreme over all its component parts.

The language, moreover, of the Constitution is at war with the idea that the Constitution and Federal Government represent one sovereign people, instead of the peoples of the several States. In Article IV there is a provision recognizing treason against a State—a crime only to be committed against sovereignty. The United States are nowhere spoken of in the singular, but the plural number. "Treason against the United States," it is said, "shall consist only in levying war against *them*, or in adhering to *their* enemies." A person is spoken of as "holding any office of profit under *them*." Article III says that the "judicial power shall extend to all cases arising under this Constitution, the laws of the United States, and treaties made under *their* authority," and finally, the thirteenth amendment, proposed while the war between the States was flagrant, and adopted within a year after its close, prohibits slavery within the United States, "or any place subject to *their* jurisdiction."

What is hoped to be accomplished, I do not know, by the fashion introduced within comparatively recent times of speaking of the United States in the singular number and ignoring the plain implication of the language employed in the Constitution itself, that the United States are multiple and not unitary; plural and not singular. But I do know that the plain facts of history can not be thus contradicted or their significance obscured. Such an affectation is not necessary to enforce the truth, which calm and dispassionate exposition has abundantly established, that in the practical partition of power between the States and Federal Government, accomplished by our Constitutional scheme, the Federal Government has plenary power to govern our intercourse with the outside world, and may do and perform all those acts and things which are really necessary for our independent existence in the family of nations. For all practical purposes that power is national. As to the world at large, we are a nation, whose sovereignty is restrained alone by the canons of international law, the rules of individual justice, and such constitutional limitations as are inherent in our dual scheme of government.

But, after all, the Government of the United States is sui generis. It has the complexity of structure which characterizes all highly developed organisms. In its exterior aspects, as we have seen, it may be called "national." In its interior, or domestic, relations it has been not inaptly denominated a Federal Republic. I have no quarrel with the words "nation" and "national." Popular use has demonstrated their convenience in distinguishing the General Government from those of the States. And, apart from mere popular use, they aptly describe the General Government in some of its aspects. But it is dangerous to permit ourselves to derive from this use of these words substantive powers not granted. The Constitution itself authorizes no characterization or special name for this Government, except that of the "United States" or the "United States of America." It is what it is, and presents itself to our admiring gaze, after more than a century of trial, as adequate

to all the great purposes for which it was framed and as having done more to promote and less to interfere with the happiness, prosperity, and progress of the people subject to its control than any that the world has ever seen.

After what has been said, it seems unnecessary to pursue further the argument, founded on the language and provisions of the Constitution itself, that this great instrument of government proceeded from the peoples of the several States, acting separately, and not from any ideal and supposititious conglomerate people of the whole United States merged in a common mass. Nor is there need to recite the crowning declaration of the tenth amendment, made out of abundant caution, that the great residuum of governmental powers not delegated to the United States by the Constitution, or prohibited by it to the States was reserved "to the States, respectively, or to the people," meaning clearly the people of each State. Nothing else could be meant, as the word "reserved" is applicable only to powers not granted, but which remained in their original depository—the States and their people.

That this highly complex scheme of government, whose blessings we have so long enjoyed, was thus formed, and not otherwise, is a fact pregnant with meaning in these days when the restless spirit of our times chafes at the restraints on governmental power imposed by the Constitution and is pressing in the interests, first of this class and then of that, for governmental interference in the promotion of ends which may seem desirable to the caprice or passion of the hour, forgetting for the time that this Government derives its strength not more from the powers granted than from the limitations on power imposed by its charter, and that encroachment or usurpation by any of its departments can only sow the seeds of its overthrow and bring ruin to the cause of popular self-government the world over. In view of these things, it seems to me the time will not be wasted if I ask your attention for a brief space to a few of those decisions of the Supreme Court with which we are all familiar and which have become monumental landmarks along the pathway of our constitutional history.

Though aside from the purpose of showing the trend of the decisions of that great tribunal, as to the relations between the Federal Government and the States under the Constitution, but that I may not here be understood as contending for any narrow or impracticable construction of the Constitution, let me first repeat that great canon of construction laid down by Marshall in *McCulloch v. Maryland*, which we, as lawyers, all loyally accept: "If any one proposition could command the universal assent of mankind, we might expect it would be this, that the Government of the Union, though limited in its powers, is supreme within its sphere of action. * * * We admit, as all must admit, that the powers of the Government are limited and that its limits are not to be transcended," but "let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consist with the letter and spirit of the Constitution, are constitutional."

Turning from this to the subject in hand, let me quote the language of the great Chief Justice in delivering the unanimous judgment of the court in the same case. It is true that in this opinion he was asserting to the full the power of Congress to incorporate such a bank as the one in question and denying the right of the State of Maryland to tax its operations, it being one of the constitutional means employed by the Government of the United States to execute its constitutional powers. It is also true that, in defense of the position taken by the court, he was combating the contention of counsel that the Constitution was an emanation of the organized State governments, as distinguished from the people of the several States, in their primary and sovereign capacity. The historical fact, as the Chief Justice pointed out, is that the Constitution was ratified by each State in a convention of delegates chosen in each State by the people thereof under the recommendation of its legislature. It therefore emanated from the peoples of the States as bodies politic, and not from the legislatures, to which the sovereign people of each State had delegated only a limited authority. But in asserting this undeniable proposition he uses the following language: "This mode of proceeding was adopted; and by the Convention, by Congress, and by the State legislatures the instrument was submitted to the people. They acted upon it in the only manner in which they can act safely, effectively, and wisely on such a subject by assembling in convention. It is true they assembled in their several States—and where else should they have assembled? No political dreamer was ever wild enough to think of breaking down the lines which separate the States and of compounding the American people into one common mass. Of consequence, when they act, they act in their States."

The authority of this great opinion has grown with the years that have passed since its deliverance, and the doctrine established by it, that the States have no power to tax or control any of the constitutional means employed by the Federal Government to execute its power, has been rounded out by later decisions of the Supreme Court that the Federal Government can not tax, control, or interfere with the governmental agencies or instrumentalities of the States. [Unfortunately not altogether true; vide Supreme Court decision upholding right of Federal Government to levy 10 per cent tax on State bank issues of notes.—J. S. W.] It is, moreover, perfectly apparent, in reading this and other opinions of the Supreme Court delivered by Marshall, that, though he often speaks of the sovereign people of the United States and of the American people as the source from which the Constitution sprang, he means to be understood as speaking of a combination and union of the peoples of the States as distinct bodies politic.

In the much later case of *Texas v. White* the Supreme Court, speaking through Mr. Chief Justice Chase, says: "But the perpetuity and indissolubility of the Union by no means implies the loss of distinct and individual existence, or of the right of self-government, by the States. Under the Articles of Confederation each State retained its sovereignty, freedom, and independence and every power, jurisdiction, and right not expressly delegated to the United States. Under the Constitution, though the powers of the States were much restricted, still all powers not delegated to the United States nor prohibited to the States are reserved to the States, respectively, or to the people. And we have already had occasion to remark at this term that 'the people of each State compose a State, having its own government and endowed with all the functions essential to separate and independent existence,' and that 'without the States in union there could be no such political body as the United States.' Not only, therefore, can there be no loss of separate and independent autonomy to the States through their union under the Constitution, but it may be not unreasonably said that the preservation of the States and the maintenance of their governments are as much within the design and care of the Constitution as the preservation of the Union and the maintenance of the National Government. The Constitution, in all its provisions, looks to an indestructible Union, composed of indestructible States."

In *Collector v. Day*, decided in 1870, one of the cases in which it was held by the Supreme Court, as a sort of complement to the doctrine of *McCulloch v. Maryland*, that the United States can not tax or otherwise control the instrumentalities of a State government, the Supreme Court again says: "It is a familiar rule of construction of the Constitution of the United States that the sovereign powers vested in the State governments by their respective constitutions remained unaltered and unimpaired, except so far as they were granted to the Government of the United States. That the intention of the framers of the Constitution, in this respect, might not be misunderstood, this rule of interpretation is expressly declared in the tenth article of the amendments, namely: 'The powers not delegated to the United States are reserved to the States, respectively, or to the people.' The Government of the United States, therefore, can claim no powers which are not granted to it by the Constitution, and the powers actually granted must be such as are expressly given, or given by necessary implication."

"The General Government and the States, although both exist within the same territorial limits, are separate and distinct sovereignties, acting separately and independently of each other within their respective spheres. The former, in its appropriate sphere, is supreme; but the States, within the limits of their powers not granted, or, in the language of the tenth amendment, 'reserved,' are as independent of the General Government as that Government, within its sphere, is independent of the States."

"Such being the separate and independent condition of the States, in our complex system, as recognized by the Constitution, and the existence of which is so indispensable, that, without them, the General Government itself would disappear from the family of nations."

No statement, however casual, of the work of the Supreme Court, in maintaining upon its original foundations that political edifice reared by the Constitution, should omit a reference to that great opinion delivered by Mr. Justice Miller, only seven years after the close of the war, in the "Slaughterhouse cases." The ground swell that followed the great upheaval of the civil war had not yet subsided, nor had the bitterness of sectional conflict been entirely assuaged. Good reason, then, there was to apprehend that the extreme assertion of the so-called "States rights" doctrine, which accompanied, if it did

not cause, the bloody conflict, would find an extreme reaction in judicial utterance, as well as in public sentiment, that might have changed the character of our Government and seriously imperiled the constitutional guaranties of State autonomy. But the contrary of this took place, and the triumph of good sense and moderation was due in largest measure to the judicial calmness and fidelity to duty with which public opinion was recalled to a true sense of the importance of our dual scheme of government, to the happiness and welfare of our people. In answering the argument of counsel that, under the thirteenth and fourteenth amendments, certain rights of property and of person, which theretofore had belonged to the domain of State control, had been transferred to the control of Congress, whenever, in its discretion, any of them are supposed to be abridged by State legislation, and that Congress might, in its discretion, pass laws in advance, limiting and restricting the exercise of legislative power of the States in these respects, Mr. Justice Miller uses this forceful language:

"And still further, such a construction" as he was opposing "followed by the reversal of the judgment of the supreme court of Louisiana in these cases would constitute this court a perpetual censor upon all legislation of the States, on the civil rights of their own citizens, with authority to nullify such as it did not approve as consistent with those rights as they existed at the time of the adoption of this amendment. The argument, we admit, is not always the most conclusive which is drawn from the consequences urged against the adoption of a particular construction of an instrument. But when, as in the case before us, these consequences are so serious, so far-reaching and pervading, so great a departure from the structure and spirit of our institutions, when the effect is to fetter and degrade the State governments by subjecting them to the control of Congress, in the exercise of powers heretofore universally conceded to them, of the most ordinary and fundamental character; when, in fact, it radically changes the whole theory of the relations of the State and Federal governments to each other, and of both these governments to the people, the argument has a force that is irresistible, in the absence of language which expresses such a purpose too clearly to admit of doubt."

"We are convinced that no such results were intended by the Congress which proposed these amendments nor by the legislatures of the States which ratified them."

Further on in the opinion, in speaking of the prevalence of a sentiment in favor of a strong National Government, he says:

"But however pervading this sentiment, and however it may have contributed to the adoption of the amendments we have been considering, we do not see in those amendments any purpose to destroy the main features of the general system. Under the pressure of all the excited feeling growing out of the war our statesmen have still believed that the existence of the States, with powers for domestic and local government, including the regulation of civil rights—the rights of person and property—was essential to the perfect working of our complex form of government, though they have thought proper to impose additional limitations on the States and to confer additional power on the nation."

And I think we may all agree with the learned justice in the truth of his concluding words, as vindicating the wisdom of the fathers in establishing this great arbitral tribunal:

"But whatever fluctuations may be seen in the history of public opinion on this subject during the period of our national existence we think it will be found that this court, so far as its functions required, has always held, with a steady and an even hand, the balance between State and Federal power, and we trust that such may continue to be the history of its relation to that subject, so long as it shall have duties to perform which demand of it a construction of the Constitution or of any of its parts."

As we all of course know, Judge Miller stated the historical fact that the main purpose of the last three amendments was the freedom of the African race and the security and protection of that freedom; but it was admitted, both in the prevailing and dissenting opinions, that the fourteenth amendment was not restricted to that purpose. This amendment has, undoubtedly, brought within the protection of the Federal tribunals from hostile action of the States fundamental rights belonging to citizens of the United States which were before protected by the fifth amendment to the Constitution from invasion by the General Government.

But the wisdom of the decision in these cases, though by a divided court, has vindicated itself, and has been fully recognized by subsequent decisions, and its authority and reasoning accepted in innumerable cases in the State courts. Owing to it, largely, the ameliorating influences of time have had oppor-

tunities to instill in the minds of the people at large the understanding that the three postbellum amendments were not destructive of the character of our Government, and did not seriously or radically diminish the police power of the States. This power, as asserted by Mr. Justice Miller, extends as efficiently as before the adoption of these amendments, and as part of the sovereignty of the State, to the protection of the lives, limbs, health, comfort, and quiet of all persons and the protection of all property within the State. "Of the perfect right of the legislatures of the States to do this," he says, "no question ever was or, upon acknowledged general principles, ever can be made." It would be interesting, but time does not permit the further citation of opinions of the Supreme Court to the same effect. Since writing this, however, the judgment of the Supreme Court in the case of the State of Kansas *v.* the State of Colorado et al. has come into my hands. It is the latest expression of that court touching the relations of the General Government to the States, and as such challenges our attention. It was delivered on the 13th of last month, and has been published within the last two weeks.

As the controversy was between States, the original jurisdiction of the Supreme Court was invoked by a bill in equity filed in behalf of the State of Kansas against the State of Colorado. The gravamen of the bill was that the latter State was threatening to deprive the State of Kansas and its inhabitants of the natural flow of the water of the Arkansas River across the State of Kansas by impounding it for irrigation purposes. A petition for intervention in behalf of the Government of the United States was filed. The ground upon which intervention was claimed was the alleged right and duty of the Government of the United States to legislate for the reclamation of arid lands. "In other words," as stated by Mr. Justice Brewer, the claim was that "the determination of the rights of the two States inter se in regard to the flow of waters in the Arkansas River is subordinate to a superior right on the part of the National Government to control the whole system of the reclamation of arid lands. That involves the question whether the reclamation of arid lands is one of the powers granted to the General Government." He then says: "As heretofore stated, the constant declaration of this court from the beginning is that this Government is one of enumerated powers."

After considering the legislative powers granted to Congress by section 8 of the first article of the Constitution and the claim made for power under section 3 of the fourth article, the conclusion arrived at is that the power contended for does not exist. Adhering to the canon of construction laid down by Chief Justice Marshall, which I have already quoted, the court says: "Yet while so construed, it still is true that no independent and unmentioned power passes to the National Government or can rightfully be exercised by the Congress."

But the part of this judgment which appeals to me just now, as in line with the thought I have endeavored to express, is what is said as to the inherent powers of the General Government. After using the language just referred to, as to unmentioned powers, Mr. Justice Brewer says: "Appreciating the force of this, counsel for the Government relies upon the doctrine of sovereign and inherent power." He then quotes the argument of counsel in support of this doctrine, and says: "But the proposition that there are legislative powers affecting the nation as a whole which belong to, although not expressed in, the grant of powers, is in direct conflict with the doctrine that this is a Government of enumerated powers. That this is such a Government clearly appears from the Constitution, independently of the amendments, for otherwise there would be an instrument granting certain specified things, made operative to grant other and distinct things."

As I have already said, it is thus, and not otherwise, that this dual scheme of government of ours has come into being; it is thus, and not otherwise, that the American people have decreed that their sovereign right of self-government shall be secured and enjoyed; and it is thus, and not otherwise, that you and I, my friends, as part of that people, believe that the blessings of political and individual liberty can be best secured and transmitted to an indefinite future, as they undoubtedly have been secured and transmitted to us through nearly a century and a quarter of eventful history.

Let us consider for a moment what have been some of the results of these providential facts in our history. First, as I have said already, we have had secured to us as a birthright the autonomy of the States—that right to local self-government by the people of each State which is derived from no power superior to the peoples of the several States, and which rests securely on the bed rock of State sovereignty. It can only be diminished or impaired by the consent of the States themselves, given in the manner prescribed in the Constitution.

It is more than doubtful whether a consolidated government of one people, constituting one body politic, could successfully have accommodated itself to the expansion of this Republic or met the needs of a growing population scattered over half a continent. Distance from the seat of central authority, even under present-day conditions of communication and intercourse, difference in physical environment, community interests, and in the degrees of social and political development, would all have created demands which could not have been satisfied by the absolutism of a majority, and would have tended in the end to discontent and disintegration. No grant and distribution of local self-government by a central authority, down among the provinces itself had created and could again destroy, could have developed that moral fiber, that civic pride and manhood which permeate the independent and sovereign peoples, from whom, without their own consent, the right of self-government can not be withdrawn. It was the withdrawal of the rights of self-government, such as they were, from the prefectures of France and the rapid centralization of all governmental powers in the monarchy, and the substitution of intendants appointed by the King with control over the local magistracy that disabled and at last unfitted the French people for resistance to the oppression of the Crown, and to the anarchy which followed the explosion of the Revolution and culminated in the reign of terror and the reaction under Napoleon.

Think you that it has been worth nothing to the great cause of free government by the people and of liberty regulated by law that in all these years the people comprising the community of each separate State have learned to feel and believe that their civic well-being, their enjoyment of the largest measure of individual liberty consistent with public order and the rights of others, and their protection in the rights of person and of property depended upon themselves—upon the wisdom, virtue, and self-restraint they could bring to the exercise of their duty as citizens of a free state? Could the inherent capacity of the people for self-government have been thus increased and developed under a consolidated government, established by the absolutism of a majority of the whole people of this Republic merged in a common mass? I do not believe it, nor, in my opinion, do the thinking people of this country believe it.

But however we may indulge in speculation as to this, it is as Tucker, in his instructive work on the Constitution, says, "a question of historic fact, and not of theory, that our Federal Government was created by the peoples of the several States as separate bodies politic, reserving to themselves, respectively, all governmental power not delegated by the Constitution, nor prohibited by it, to the States." And the burden of my thought, which I have endeavored, however imperfectly, to bring before you at this time is that the people as a whole could not otherwise have made successful the great experiment of self-government inaugurated by the fathers; and further, that the people as a whole must be taken to have sanctioned this method at the beginning, and by their acquiescence, as manifested through the various organs of public opinion, through all these years must be taken to have continued that sanction and to be content, as they have reason to be, with the result. Their capacity for self-government will be tested by their ability to recognize the wisdom and to appreciate the importance of those limitations which while they are limitations on their own power will preserve their liberties in the future as they have done in the past.

In the scheme of government thus established there is no place for absolutism. Arbitrary power is everywhere checked, even should its exercise be attempted by the people themselves. Much more is it denied to and withheld from the mere governmental agencies that have been established. The fathers who framed our Constitution had a keen realization of the hatefulness of arbitrary power, and they took care that no place should be found for its exercise in the frame of the government they were about to erect. It was to be a national government in many important respects. In its own sphere it was to be supreme, and the physical force behind it was to be strong, if not overwhelming. They were sedulous, therefore, that its powers should be specifically enumerated, and all not delegated expressly or by necessary implication were withheld and declared to rest, where they had always rested, in the States and the people thereof. Not satisfied with the guaranties thus inherent in the Constitution itself, immediately after its ratification, and almost as a condition thereto, the first ten amendments were adopted, every one of which was an express limitation upon the possible exercise of any powers by the General Government in disparagement of those powers and rights retained by the people of the States.

Is arbitrary power less hateful now than then to the people of this country? If not, let us remember that we can only preserve

ourselves from its baleful sway by keeping alive in the breasts of the men of to-day the sentiments that animated their fathers and the hatred of tyranny and absolutism from whatever source it springs. Let us rejoice in the fact that by the law of the land the arbitrary will of no mere majority of all the people can deprive anyone of the right to be secure from unreasonable searches and seizures of their persons, houses, papers, or effects, and that they can not be deprived under color of State or Federal authority of life, liberty, or property without due process of law. All this is made secure to us by the scheme of the Constitution, and no department of the Government, executive or legislative, nor even the judicial by construction, has authority in the least degree to diminish or impair these fundamental rights. These rights, as said by a distinguished jurist, are inviolable, for if they are not so they are only enjoyments on sufferance. Civil liberty itself is only the enjoyment of these fundamental rights in their full extent under the protection of an inviolable law. Anathema be he who would seek to confound the intelligence and confuse the judgment of the people by persuading them to gratify the passion or caprice of an hour by the sacrifice of that institutional law themselves have established and whose blessings time and use have demonstrated. *A demagogue and a courtier are of the same kidney*—they both seek favor by an ignoble flattery of the source of power, and both earn the contempt they receive.

But besides these beneficent results, which constituted the ends and purpose of our peculiar dual scheme, there are some incidental advantages which have flowed from it that are worthy our consideration. Owing to it and the separateness and independence of the States, each with its independent legislature and judiciary, there has been developed a comparative jurisprudence of which there is no other example in the world. With the advancing education and intelligence of the people *experiments in government have thus been enabled to be localized*, and while one State takes a tentative step the others can and do stand by to observe and watch and record the result for the benefit of all. The tentative step sometimes proves a desirable advance step, which is thus safely taken by other communities without shock or disturbance of public feeling or existing institutions. A certain healthy rivalry and competition between the States have resulted and have done much for the common advancement of all. Wyoming and Colorado are trying the experiment of woman suffrage, and the results are watched with increasing interest by the people of all the States. Whether this system shall generally obtain will depend upon the comparison of advantages and disadvantages that flow from it as found by an actual experience. Some instances might be cited where the example of one State has been a deterrent to others, and experiments begun abandoned by the State in which they were initiated. But it is certain, as I have said, that there has been a healthy competition between the States by which the ideals of government have been materially advanced and the welfare of the people promoted.

A wholesome State pride is not inimical to the union of the States, nor does it detract from the loyalty to the General Government in the exercise of its just powers. On the contrary, that self-respect and pride in State citizenship was a potent factor in rallying the military force of the nation to the defense of its Government in the civil war, and we all remember the keen and loyal competition with which the States furnished their regiments at the call of the National Government in the late war with Spain, each proudly bearing the designation of its State. Nor does respect for the rights of the States derogate from our respect for the national features of our Federal Government in its intercourse with the outside world. In this domain its authority is unquestioned and plenary, and the place of the United States in the family of nations is one of gratifying influence and power. Feelings of just and patriotic pride fill our hearts as we turn the pages of our diplomatic history and read how American conscience and American altruism have measurably raised the standards of international morality and strengthened the moral sanction of international law.

And here let me pause to remark with satisfaction how wide is the field under the Constitution for the activities of an American lawyer. The treaty-making power, expressly conferred by the Constitution upon the President, to be exercised by and with the advice and consent of the Senate, is broad and ample, and fully commensurate with our national needs and our national dignity, and all treaties made under this authority are, equally with the Constitution and laws of the United States, the supreme law of the land. The Constitution, moreover, expressly delegates to Congress the power to define and punish piracies and felonies committed on the high seas and offenses against the law of nations. This brings the courts of the United States, as well as, in some respects, the courts of the

State, in touch with the law of nations, and the scope and obligation of international law must constitute part of the learning of our profession, and "the glad some light" of a world-wide jurisprudence invites us all to the high debates that may influence the peace and civilization of the world.

Into this inviting field the Supreme Court of the United States has opened a gateway. The right of Congress to define and punish offenses against the law of nations necessarily imposes upon the judicial department the authority and duty to determine in any given case what the law of nations may be. Not only so, but the judicial power extends to the interpretation of treaties, and, in some cases, to enforce their obligations as part of the law of the land, and in that connection to consider all related questions of international law. Upon it, also, is devolved the duty of adjudicating the infinite variety of questions touching personal and property rights as they may be affected by that law. It is gratifying as well as interesting to know at this day, when the awakened conscience of the civilized world is demanding the settlement of international controversies by arbitration, that it has been decided by a Federal court of appeals, reversing the court below, in a decision that must commend itself to the judgment of the profession, that where a treaty between the United States and another nation provides that the decision of a tribunal of arbitration shall be final, that decision becomes the supreme law of the land and will be enforced in the courts. (*La Nina*, 21 C. C. A., 434.) The growing importance of our foreign commerce and our foreign relations must tend to enlarge this jurisdiction.

The action of the courts, in cooperation with the diplomacy of our executive department, has made a contribution to the development of international law of which, as citizens of the United States, we may well be proud. Prof. John Bassett Moore has eloquently said, in his essay on *The Beginnings of American Diplomacy*, that the "declaration of American independence" * * * presaged the developments of a theory and a policy to be worked out in opposition to the ideas that then dominated the civilized world. *Of this theory and policy the keynote was freedom; freedom of the individual, in order that he might work out his destiny in his own way; freedom in government, in order that the human faculties might have free course; freedom in commerce, in order that the resources of the earth might be developed and rendered fruitful in the increase of human wealth, contentment, and happiness.* And he adds: "Besides exerting an influence in favor of liberty and independence, American diplomacy was also employed in the advancement of the principle of legality. American statesmen sought to regulate the relations of nations by law, not only as a measure for the protection of the weak against the aggressions of the strong, but also as the only means of assuring the peace of the world." It thus prepared the way for the greatest achievement of our modern civilization—The Hague Conference and the creation of a permanent court of arbitration.

A Constitution which has enabled us to occupy this high place in the family of nations and has clothed our Government with every national attribute necessary for the assertion of our self-respect at home and abroad needs no amendment in the direction of increased powers that would destroy the balance between them and those reserved by the States. On the contrary, it is satisfactory to assume that the limitations on power, so characteristic of our form of government, are applicable to the treaty-making power as well as to others and that as a treaty may be repealed by the legislative branch, so it may be reviewed by the judicial branch, if contrary to the express provisions of the organic law or to the spirit and genius of our institutions.

But it would be idle to close our eyes to the fact that there are many good people in this country to whom an enlargement of this national power seems attractive and who would transfer to the General Government many of the responsibilities and duties which have from the beginning been recognized as belonging to the local government and sovereignty of the States. It has been more than suggested that this enlargement of Federal power should take place as the result of judicial action and that by some of those subtle refinements of which the human mind is always capable and to which human language is always amenable we may create and aggrandize a National Government that would strip the States of much of their reserved sovereignty. *The greatest blessing of our system of government in the past has been that the people of the States, as separate bodies politic, have been compelled to develop their capacity for self-government and provide, by their own civic activity, for the healthful exercise of those great police powers upon which the well-being and safety of the individual and of the community must depend.*

The danger of this centralizing sentiment is that it appeals to the selfishness of human nature and to the willingness to be relieved of the burdens and responsibilities of self-government. But I am persuaded that the prevailing sentiment of the Amer-

ican people does not favor the exchange of our self-governed communities and the individual liberty that they foster for the paternalism of a National Government which suppresses the one and must, in the nature of things, tend to extinguish the other.

Fortunately, on this subject political party lines do not divide us, as witness the protests that have gone up from the press of the country and from the lips of public men, without distinction of party or of section, against the intimation, which only seemed to be made, rather than was made, in certain high quarters, that unless the States performed what certain people considered their duty, a way would be found, by construction of the Constitution, to vest those unused or misused powers in the National Government. That a seeming suggestion of this kind should so alarm thoughtful people in the country at large and call forth such an expression of public opinion in opposition to it is a hopeful sign for our future and increases our confidence in the stability of our institutions.

There is no danger that our courts, and especially our Supreme Court, will respond to such a suggestion, whatever be its source.

Limitation on power has always been recognized as the essential feature of our system of government. President Harrison has said: "A government of unlimited legislative or executive powers is an un-American government." The view expressed by Mr. Justice Miller, in the great case of *Loan Association v. Topeka*, that "the theory of our government, State and National, is opposed to the deposit of unlimited power anywhere. The executive, the legislative, and the judicial branches of these governments are all of limited and defined powers;" and by Mr. Justice Matthews, in *Murphy v. Ramsay*, that "complete and unlimited power is repugnant to our institutions," is emphasized within the year by Mr. Justice Brewer, who, in delivering the opinion of the Supreme Court in the recent case of *Hodges v. United States*, has said that, "notwithstanding the adoption of these three amendments," the last three, "the National Government still remains one of enumerated powers, and the tenth amendment, which reads, 'The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people,' is not shorn of its vitality." *If the Federal Government is to absorb any of the powers that have been reserved by the States, it will be done in the way pointed out by the Constitution, by amendments, consented to by three-fourths of the States, and not by usurpation or by the insidious method of judicial construction. Under the Constitution as it is there is no supervisory power or function in the General Government over the States. Both governments are supreme in their appropriate spheres, and there is no room for conflict or collision between them. The State governments are not subordinates of the General Government, except so far as the Constitution and laws enacted pursuant to it are the supreme law of the land, and no department of the General Government can prescribe in what manner the States shall perform the duties that belong to them or threaten their people with any diminution of their sovereignty for a supposed dereliction in that regard. As said by Mr. Justice Miller, in the *Slaughterhouse* case, "The Federal Government is not a censor upon the legislation of the States or the civil rights of their citizens."*

With such a list of compurgators as I have cited as to the nature and character of our dual Government, the authority from which it sprang, and the inestimable blessings of civil liberty and individual freedom of which it has been the source, our confidence in its stability should be assured, and we should be able to believe that it will stand unaffected by the clamor of the hour and will remain unshaken on its original foundations to bless generations yet to come. That this may be so we must look to you, gentlemen, and such as you—the lawyers of the country. It has been well said that without your acquiescence no judicial opinion can permanently stand as law, and it is for you to guard this priceless inheritance received from the fathers. We are all high priests in the temple of liberty, ministers at its altar, and are bound by our oaths and by our high calling to the duty of defending the charter of our freedom, of expounding its meaning, and so addressing the intelligence of the people that they may appreciate its benefits and enshrine in their affections this scheme of the Constitution. For more than a hundred years it has preserved and maintained for us the right of self-government and enabled this Republic of Republics to expand over a continent and embrace within its benign sway more than 80,000,000 people, whose allegiance to its dual sovereignty has secured to them the largest amount of individual freedom ever enjoyed in the history of the world.

Free States, like free men, may err in judgment, but if they are really free their freedom to make mistakes can not be impugned and their correction must come from their awakened conscience and better informed judgment. If we are to continue

to enjoy this freedom, we must forego some of those advantages which seem to inhere in absolutism, and content ourselves with the slower, and perchance less efficient, processes which the exigencies of local self-government impose. There are times when we must choose between them and say that we "prefer the stormy sea of liberty to the deadly calm of a despotism." In making that choice are we paying too high a price for this freedom of which I am speaking? If not, we do well to be jealous of power wherever lodged, and should scrutinize with anxious care all suggestions that we part with any of the self-governing powers reserved to the States in order to increase the powers of a central government already so strong, no matter how desirable the ends in view may seem. Our fathers had just freed themselves from the arbitrary rule of the British Parliament and appreciated to the fullest extent the necessity for those limitations on the power of the General Government which were imposed upon it at the time of its creation. Let us not in our day lapse into forgetfulness of their importance.

I have already remarked that there is something in the make-up of human nature to which the proposition of shifting any of the burdens and responsibility of local self-government to other hands strongly appeals, and there is also a tendency of the human mind to admire, if not the pomp and circumstance of a strong government, at least the readiness and directness with which it accomplishes its ends. These tendencies require to be actively resisted, if we would preserve our Government on its original foundations.

Judge Cooley, in his work on "Constitutional Limitations," has said:

A principal share of the benefit expected from written constitutions would be lost if the rules they established were so flexible as to bend to circumstances, or be modified by public opinion. It is with special reference to the varying moods of public opinion, and with a view of putting the fundamentals of government beyond their control that these instruments are framed.

This is true and well said, but it is also true that, with the growth of wealth and population and the increasing activities of modern life, under the new conditions that steam and electricity has wrought, there has been found a wider range for the exercise of the powers delegated by the Constitution to the General Government. In that sense it is not to be gainsaid that those powers have been asserted in a manner, and as to objects ["phases"] would have been a better word than "objects."—J. S. W., that could not have been foreseen by those who framed and adopted the Constitution. But this only proves the wisdom of its founders, and the courts are not enlarging its powers by construction, much less adding to them, when they apply its provisions to the new conditions that have arisen. Powers hitherto dormant may thus be awakened and brought into activity, and powers which have been only partially exercised in the past may be extended to new objects of Federal control. An apparent, but only apparent, expansion of the Federal powers will take place. As I have said, with reference to the plenary national powers as to all exterior matters with which the Government is endowed, so with reference to what may be called the domestic powers, when we reflect on their wide legitimate scope under present-day conditions, there must indeed be lack of appreciation of the value of limitations on governmental power to desire their increase.

The few and simple words which have conferred on Congress the power to regulate commerce among the States have served as a door which has been opened wider and wider in recent times for the admission of the General Government into participation in the internal affairs of the States. We do not wish to close that door, but it does behoove all who love our institutions to guard, so far as they can, against entry through it of those forces of centralization which, under the mere pretense of regulating interstate commerce, are now clamoring for admission. Admitted, unguardedly, they will throng thick and fast over all the barriers of the Constitution, and reduce to ruin the citadel of local self-government, so long and so fondly believed to be the palladium of our liberties. It is no fancied danger against which I presume to warn you. Examples of this mode of seeking to surmount the bulwarks erected by the Constitution against encroachments on the rights of the States are in evidence at each session of Congress. It is a trick easily practiced. It is only to insert in a bill the words "so far as affects commerce among the States," and there are never wanting those who, to forward private interests or class interests, propose enactments by Congress to control the most intimate and exclusive police powers of the States—powers which affect the everyday business and conduct of their citizens. Mr. Justice Brewer, in a recent public address, has sounded a note of warning by asking: "Has not the manifest tendency been to increase and centralize power in the National Government, and to that extent diminish the sovereignty of the State, as well

as the reserved power of the people, and is not the result what might have been expected? Was there ever seen such a mad scramble on the part of everyone believing in the existence of some wrong for Congressional legislation to redress? Trade-marks, divorces, polygamy, insurance, supervision of corporations, inspection of factories—all are crowded upon Congress, and an appeal made to it for action, and when some of the legislation which is proposed proves to be in conflict with previous decisions of the Supreme Court, the effect of these decisions is sought to be obviated by subterfuges of legislation."

It hardly needs pointing out how dangerous such abuse of the tremendous power conferred by the commerce clause of the Constitution may become. Thanks to the common sense and wisdom of Congress, many of those propositions do not escape the limbo of the committees to which they are consigned. But it sometimes happens otherwise. A conspicuous instance of this occurred in the last session of Congress. An appeal to place all child labor under Federal control, on the pretext that its product might enter into interstate commerce, was reported from the committee, and seriously and ably discussed by its distinguished advocate. Of course, if one kind of labor can be brought in this way within the purview of Congressional legislation, all kinds of labor can, and it is easy to see, if such projects were successful, that little power of managing their own affairs would be left to the States. Emasculated and degraded, we might expect that they would soon lapse into the condition of provinces, to be governed by the satraps of a central government. Why not leave the power to remedy the ills of the body politic, or most of them, in the hands of the virile citizenship, which was born of the self-government of the States, where it has reposed so long? If some States lag behind, others are forward in social improvement, and the emulation and experimentation, which is constantly going on among the States, in all that makes or is thought to make for good government, will sooner or later bring the laggards to the front.

I have given one example of the insidious character of the attempts that are made under the commerce clause of the Constitution to enable the Federal Government to absorb powers that properly belong to the States. I have used the epithet "insidious," not in an offensive sense, but because the very benevolence and humanitarianism which characterize the ends in view, serve to mask the peril to our institutions with which they are pregnant. Such is the case with most, if not all, schemes that seek to find a pretext for clothing the Federal Government with powers that are reserved to the States. Zealous and eager reformers, as well as social sciolists, possessed with the sense of their own altruism, are eager to enlist for the advancement of their schemes the all-prevailing and powerful agency of the central Government. They little heed the consequences that may flow from their mistakes, which will fall at once upon the whole people, from ocean to ocean and from the Lakes to the Gulf, and not upon the people alone of a single State.

Not many years ago a most serious and threatening attempt was made to place in the hands of the General Government the matter of education, to control which has been the pride, as well as one of the dearest rights of the States. How think you, if any there be whose attention was not called to the debate in the Senate on this question, this menacing attempt to interfere with the exercise of a right so clearly and undeniably reserved to the people of the several States was sought to be justified? Those who advocated this measure professed to find their justification in the eighth section of the first article of the Constitution, which, in enumerating the powers of Congress, begins by saying: "The Congress shall have power to lay and collect taxes, etc., to pay the debts and provide for the common defense and general welfare of the United States" [as herein-after defined and understood.—J. S. W.] Here, they argued, with great force and earnestness, is an "express power of appropriation" for whatever, in the opinion of Congress, concerns the general welfare of the United States. As these phrases, "public safety" and "general welfare," are capable of precise definition—that is, of course, tantamount to saying that Congress may enter upon the domain of State activities and duties whenever, in its discretion, it sees fit to do so. The bill that was before the Senate appropriated large sums for support of schools in the different States, the amounts being based upon certain statistics as to school population and illiteracy, and upon conditions which prescribed a surrender to the General Government, by the States accepting this largess, of a measurable control over their common schools.

Inasmuch as the General Government could not, by force, enter the States for such a purpose, it seemed to me a monstrous proposition that it could enter the prohibited domain by buying its way in, and I so characterized it at the time. The

advocates and opponents of the bill were not divided by party lines. The suggestion of relieving the people of the States from a large part of the expense of their common schools seemed to appeal strongly to some of those from whom opposition was to have been expected, and the danger of the interpretation of the "general welfare" clause of the section given in certain high quarters seemed to be unappreciated. It was claimed not only that this appropriation, on condition, might be made, but also by some that this right of appropriation, as it was called, implied the power to enter a State and impose upon it, in invitum, just such a scheme of education as might be prescribed by the peculiar notions of the public requirement entertained by the advocates of the bill. Fortunately this view of the "general welfare" clause was rejected, and the saner interpretation prevailed that the power to lay taxes for the common defense and general welfare was limited by the specific enumeration of the powers of the General Government; that *the power to lay taxes is not an original power to be exercised for its own sake, but an ancillary and an attendant power*—one subordinate to and limited by the other powers as necessary to carry them into execution. It might possibly have been inferred without any express provision from the delegation to make all laws necessary and proper for carrying into execution the powers granted. The statement, therefore, of the general intent with which the taxing power is conferred can not enlarge that power, which is shown by its nature to be incidental and subordinate, for all must admit that those words are qualifications and limitations on power.

They are a renewed and express injunction upon Congress that in exercising this ancillary power of taxation, so important and so delicate with reference to subjects within their jurisdiction, they shall keep carefully in view "the general welfare of the United States." Moreover, it is the "general welfare of the United States" that is spoken of; that is, of the Government, the organized body politic created by the Constitution. It is this portion of the "general welfare" which is committed to its keeping. The words "the United States" are used throughout the Constitution to denote the body politic, or governmental organism, as, where it says in this same section, Congress is empowered "to borrow money on the credit of the United States." "The United States shall guarantee to every State in this Union a republican form of government." And so throughout the instrument it is apparent that "the United States" is used in lieu of the corporate name and style of "the United States of America." It is, therefore, with reference to that part of the general welfare which is committed to the keeping of the Government of the United States, and with reference to that part alone, that Congress may, under this section, lay and collect taxes. This is but the briefest summary of the argument used to combat the argument of those who, through many days of interesting debate, advocated with zeal and ability the existence of this so-called "unlimited power of appropriation," for which they found some support in the writings of Monroe and of Judge Storey. I refer to it now only to illustrate from how many different directions assaults on our system of government may come, and how the plain words of the Constitution may be wrested from their true meaning to support the extremist doctrines of centralization. I must say, however, that the debate was worthy of the dignity of the Senate, and the result has been that the control of the school system remains with the States.

And where, on the face of the earth, is there such a system of good schools as has grown up in the several States of the Union, under the fostering care and under the life-giving influence of the free institutions that are cherished and nurtured and protected by the system of local self-government? This common school system was born in one small State, and might have been strangled in its birth had it depended upon a consensus of the whole people of all the States—indeed, would have been. Fostered by the intelligence, independence, and patriotism of the separate States, it has grown by their generous rivalry and competition among themselves, each stimulated in the pathway of progress by the achievements of a sister Commonwealth, until in all the States the system of public education is firmly established upon the solid foundation of self-interest and State pride.

The obligations of the Constitution rest upon all, but especially do they rest upon those in official station who have sworn to support and defend it. They rest upon all Departments of the Government alike—upon the executive and legislative equally with the judicial. But, unfortunately, the attempts so constantly made to pervert its powers to unauthorized purposes are in large part encouraged by the license which individual legislators give themselves in dealing with constitutional restraints. The situation is sometimes hardly caricatured by the witticism, "What is the Constitution among

friends?" Seriously speaking, however, do not legislators abdicate their solemn duty when they promote legislation of more than doubtful constitutionality, and satisfy their conscience by the thought that the courts will nullify their acts if they violate the organic law? And is not the dereliction still more serious when they gain their own consent to so exercise the legislative function as to evade judicial scrutiny and thus permanently enlarge, by misuse, the powers of the General Government?

I have already spoken of how the commerce clause has been perverted to ends foreign to its true purpose, and how an unlimited and distinct power of appropriation has been asserted by some as among the powers conferred upon Congress, but one of the readiest means for circumventing the will of the people, as expressed in the Constitution, has been found in the taxing power conferred on Congress by the section we have just been considering. From necessity it is unlimited, both as to the objects upon which its heavy hand can be laid and the amount and extent of the exactions it can make, and the right to its exercise is plenary, *as to all legitimate governmental objects*. It is obvious, however, that it can confer no new power upon Congress or legitimately bring within Congressional control matters clearly reserved to the States. Marshall's dictum, that "the power to tax involves the power to destroy," gives startling emphasis to the danger that lurks in the exercise of this power for an unauthorized purpose.

How constant has been the endeavor to use this power, not for the purpose of raising revenue, but to accomplish ends not within the scope of Congressional power, and in derogation of the rights of the States, I have had frequent occasion to observe. A notable instance of the successful perversion of this power was the passage by Congress of a bill to levy a tax upon the manufacture and sale of oleomargarine. *Prima facie*, it was a revenue measure within the power of Congress to enact, and therefore the amount and extent of the tax was within its discretion, but the unconcealed purpose of the act was to suppress altogether the manufacture and sale of the product proposed to be taxed and to protect the manufacture of another. Its very title discloses this purpose. Those who supported and promoted the passage of the bill resorted to no subterfuges, but with entire candor said that the object was to protect the dairy interests of the country from competition, and with that avowed object the bill was passed, bringing not one cent of revenue into the Treasury, but accomplishing the purpose as stated. No matter that the people of a State might wish to regulate the sale of this product in such fashion as not to suppress it, but to permit the use of a cheap and wholesome article of food in such way as to protect those who used it from being imposed upon by false appearances, the General Government has, by what I think should be considered the unauthorized use of the taxing power, practically destroyed a right expressly reserved to the States and their people. As it was a bill exercising the power of taxation, no court could set it aside.

It is a doctrine full of peril to our liberties, that Congress may seize upon any weapon it pleases out of the great armory of Federal powers and *wield it for a purpose for which it was not there deposited*. It would be in vain to call this a Government of limited powers, if the powers granted for one purpose could be perverted to another not contemplated in the Constitution. Something else is needed besides the specification and enumeration of the powers of legislation, and the definition of their scope and purposes, to insure the maintenance of the constitutional scheme of government devised by our fathers, and that is an absolute fidelity to the great trusts of power conferred by the Constitution on the part of those who administer and exercise them. That the end in view is in itself desirable only enhances the danger I have endeavored to portray.

And what are we to say of the suggestion recently made, that if Congress is dissatisfied with the control given it by the Constitution over interstate commerce, it may arrogate to itself the power to control all commerce—that which is confined within State boundaries as well as that which is interstate in its character. The specific power under which this claim is to be made is, I believe, the power to establish post-offices and post-roads, which is among the legislative powers enumerated in the eighth section of the first article of the Constitution. No intimation is made as to the creation and building of a post-road by the Government or of any *needed regulation in the interest of the postal service* of those roads over which that service is conducted. *It is a bald assertion of the right to exercise a power not granted, under color and guise of an essentially different power, granted for a specific purpose, in the exercise of which the power proposed to be usurped is not involved. It is a claim of the right to regulate intrastate commerce, though the Constitution has expressly confined the power of regulation to interstate commerce.*

If this suggestion can be carried out, what police power of the State, however essential to its existence, will not be at the mercy of the caprice of Congress, under some such fanciful construction as this, and of what value is our boasted right of local self-government if a legal casuistry can be invented for the perversion of the plain language of the Constitution? *It is not a question between a strict construction and a liberal construction.* That distinction is no longer to be recognized. *It is the honest construction of the Constitution upon which we should always insist.* It can only be so interpreted by reading the language employed in its natural sense and giving to words the natural meaning of men, whose intention, in the words of Marshall, "required no concealment."

Believing that the whole people are capable of recognizing, and do recognize, the peculiar character of the complex government under which they live, and place a proper value upon the scheme of local self-government they have so long exercised and enjoyed, and that they have the intelligence to believe that the great principle of self-government could never have been so well assured by any other scheme, I look with unabated confidence to the future. I do not believe that this new federalism, this recrudescence of the old federalism, which had its only legitimate place before the adoption of the Constitution, will commend itself to the calm judgment of the American people. Let it be our duty to contribute to the formation of a sound public opinion in these matters—not the effervescent opinion of a day, the popular clamor of the hour, which finds expression in appeals to Congress for the remedying of every fancied grievance—but that sober second thought, that intelligent and enlightened opinion which crystallizes after discussion and argument, and which is ultimately supreme, controlling the destinies of nations and the policies of kings and cabinets.

Let us teach our children the history of their country and imbue them with the spirit of her institutions. Let us impress upon their minds the sentiment of Edmund Burke, so felicitously used by our President the other day, that "we have a government to save as well as a government to reform." Let its Constitution be carried in the memory of every child that comes out from the portals of a common school. Let them all be taught that the government that it establishes is as strong in its limitations as it is in its powers, and that the edifice reared by our fathers, which has withstood the shock of foreign war and the tempest of civil strife, will survive to protect them and their children's children so long, and only so long, as they are true to the principles on which it is founded and to the genius of its structure.

Rural Free Delivery.

SPEECH

OF

HON. ARTHUR L. BATES,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. BATES said:

Mr. SPEAKER: The rural free-delivery service has fully kept pace with the growth and development of our whole country. The farmer is now reaping some of the rewards he has so justly earned in the past by the burdens that he has borne. He is the producer of wealth. He is coming to be one of the most independent of all our citizens. No branch of the public service has been so well developed and improved in the past few years as the rural free delivery. There were only 8,000 rural routes in operation six years ago. There are now almost 40,000, and these are scattered through every State and Territory of the country, so that there is not a rural section in the whole land that is not practically covered. This entire service has been extended from a small beginning eleven years ago, during the three Republican Administrations with which this country has been blessed since 1897. I believe that the appropriation of \$35,000,000 made this year for the support of rural free-delivery service brings more direct benefit to the people of this country whom it affects than almost any other appropriation made by the General Government.

In 1900 President McKinley, in his message to Congress, in speaking of the postal service, used language as follows:

Its most striking new development is the extension of rural free delivery. * * * This service ameliorates the isolation of farm life, conduces to good roads, and quickens and extends the dissemination of general information. Experience thus far has tended to allay the ap-

prehension that it would be so expensive as to forbid its general adoption or make it a serious burden. Its actual application has shown that it increases postal receipts and can be accompanied by reduction in other branches of the service, so that the augmented revenues and accomplished savings together materially reduce the net cost.

In his first message to Congress President Roosevelt said:

Among the recent postal advances the success of rural free delivery wherever established has been so marked and actual experience has made its benefits so plain that the demand for its extension is general and urgent. It is just that the great agricultural population should share in the improvements of this service.

Again, in his last annual message, the President says:

The rural free-delivery service has been steadily extended. The attention of Congress is asked to the question of the compensation of the letter carriers and clerks engaged in the postal service, especially on the new rural free-delivery routes. More routes have been installed since the 1st of July last than in any like period in the Department's history. While a due regard to economy must be kept in mind in the establishment of new routes, yet the extension of the rural free-delivery system must be continued for reasons of sound public policy. No governmental movement of recent years has resulted in greater immediate benefit to the people of the country districts.

Rural free delivery, taken in connection with the telephone, the bicycle, and the trolley, accomplishes much toward lessening the isolation of farm life and making it brighter and more attractive. In the immediate past the lack of just such facilities as these has driven many of the more active and restless young men and women from the farms to the cities, for they rebelled at loneliness and lack of mental companionship. It is unhealthy and undesirable for the cities to grow at the expense of the country; and rural free delivery is not only a good thing in itself, but is good because it is one of the causes which check this unwholesome tendency toward the urban concentration of our population at the expense of the country districts.

These indorsements demonstrate beyond the possibility of question that under Republican rule this service, fraught with so much good to the people of the rural communities, has been nurtured and cared for until it has become one of our permanent institutions, against which no political party will ever dare raise a voice.

At present New York has nearly 2,000 routes in operation; Pennsylvania, 2,100; Indiana, 2,200; Ohio, 2,500; Illinois, 2,800; Minnesota, 1,600; Missouri, 2,000; Nebraska, 1,000. In fact almost all cases pending during the past year have been disposed of, and wherever an adequate number of people desired the service it has been established and put in daily use.

INCREASED VALUE OF FARM LANDS.

The testimony of those who enjoy this service from all over the country proves that by reason of the free rural delivery the actual value of farm lands has been greatly increased. I have had farmers inform me that they would not dispense with the service for \$50 or even \$100 per annum. It has been estimated that the value of farm lands has risen by this means as high as \$5 per acre in many States. A moderate estimate would show a benefit to the farm lands of from \$1 to \$3 per acre.

BETTER PRICES FOR FARM PRODUCTS.

A better knowledge of trade conditions is always of great advantage. The farmer is not only the producer, but he is also his own salesman, and it is essential that he should be acquainted with the daily prices of the produce he raises in order to know when it will be to his advantage to market his goods. He is now enabled to receive a city daily paper giving him quotations and prices of stock and produce, and in fact the changing values of everything he raises on the farm. By means of this better communication with the markets he is able to obtain better prices for all that the farm produces. He can also receive and dispatch mail much more quickly than before—in fact he can in many cases obtain an answer to his letter on the day following its dispatch. In the old days our rural inhabitant was obliged to send to the post-office for his mail, and in the busy season, when his horses were busy in the fields, a week would sometimes elapse before he or any of his family could reach the post-office. Now there are delivered daily in the course of a year a half million pieces of mail on rural routes throughout the country to the farmers and inhabitants of the sparsely settled regions.

Increased facility always brings increased use and enjoyment. The increased number of letters written and newspapers subscribed for and received has so greatly augmented the revenues of the country's postal service as to make the rural free-delivery service almost self-sustaining.

Rural free delivery is encouraging the building of good roads. The farmer desires the delivery of his mail, and the Department wisely insists that each locality must furnish roads easily traversed if such a benefit is to be bestowed. In many localities, therefore, our people have taken the matter of good roads into consideration, and through their supervisors and commissioners have improved grades, turned waterways, built bridges, and thus not only aided the delivery of mail, but have facilitated general communication among our people.

This service has been practically established and built up within the last eleven years. During the last Administration

of President Cleveland rural free delivery was condemned and rejected by the Committee on Post-Offices and Post-Roads of the House. Under this same Democratic Administration in 1894 the Postmaster-General refused to make use of the appropriation of \$10,000 offered him to begin the service. He stated that the project was unwise and could not be carried out. Under the Republican Administrations it has been extended until it has become one of the most beneficial and useful portions of legislation provided by the Federal Government. It has become, under Republican prosperity and Republican Administration of law, thoroughly established as one of our permanent institutions. Its general use and benefits are conclusive proof of the wisdom of recent Republican progress.

Eulogy on the late Senators Morgan and Pettus.

REMARKS

OF

HON. HENRY D. CLAYTON,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 25, 1908.

The House having under consideration the following resolutions:

"Resolved, That the House now proceed to pay tribute to the memory of Hon. JOHN T. MORGAN and Hon. EDMUND W. PETTUS, late Senators from the State of Alabama.

"Resolved, That, as a special mark of respect to the memory of the deceased Senators and in recognition of their distinguished public services, the House at the conclusion of the exercises to-day shall stand in recess until 11 o'clock and 30 minutes a. m. on Monday next.

"Resolved, That the Clerk communicate these resolutions to the Senate.

"Resolved, That the Clerk send a copy of these resolutions to the families of the deceased Senators."

Mr. CLAYTON said:

Mr. SPEAKER: Doubtless the custom which the House of Representatives observes to-day will never be abolished. Certainly it will be cherished as long as the American people love free institutions, appreciate faithfulness and ability on the part of their public servants, and so long as there is in the hearts of men affection for former associates and a just regard for the great and good deeds of those who have passed from the activities of this life to the undiscovered country.

So much has been said here in this Hall and at the other end of this historic building, the greatest legislative building in the world, in eulogy of the characters, lives, and public services of JOHN TYLER MORGAN and EDMUND WINSTON PETTUS, the two distinguished sons of Alabama, now gone to their reward, and whose memories we honor to-day with our last sad tribute, that one can not be expected to do much more now than to repeat, in different form, what has been by others so truthfully and beautifully expressed. Perhaps, sir, a Representative from the State of Alabama would be criticised by the people of that Commonwealth were he to remain silent on this occasion when distinguished men from different States of our common country unite in doing honor to the illustrious dead. However that may be, I am constrained, Mr. Speaker, by a higher motive, by my affection for and admiration of Senator MORGAN and Senator PETTUS, to give utterance to my sentiments for them and my estimate of them and their achievements.

JOHN TYLER MORGAN.

JOHN TYLER MORGAN was born at Athens, Tenn., but in his early youth removed with his parents to Talladega County, Alabama, and was there reared to manhood. Senator MORGAN rarely ever spoke of himself, and on account of this modesty we do not know as much of his childhood and youth as we would like to know. It is said that as a child he was far from robust, and that on account of this fact he was compelled to cultivate and pursue a fondness for reading books for his entertainment and instruction. He could not and did not engage as much in youthful sports as boys generally do. If this be true, then it would seem that what might have been a misfortune in his youth was turned into a blessing, and the delicate boy became studious and finally developed into a learned and great man, who kept up the intellectual industry and habit of his youth almost to the very hour of his departure from this life.

Perhaps it is not an exaggeration to say that Senator MORGAN had more information on a greater variety of subjects than any of his associates in that august tribunal, the Senate of the United States, of which he was a useful and conspicuous member for more than a quarter of a century. It is not overpraise to say that in years to come he will be written down as one of

the few great statesmen of America who wrought during the last two decades. Not only, sir, did Mr. MORGAN have a wonderful store of information, but his information was full and accurate, for he was always a student and was blessed with a marvelously good memory.

No man could read a book or treatise and analyze and comprehend it more quickly and accurately than he could; and he never forgot anything that he had learned. His mind was a vast storehouse of knowledge of every kind that he had ever acquired, and he had the rare ability to use his information aptly in writing, in discourse, or in debate. Some teachers deplore very much training of the memory of the youth upon the assumption that great development of the memory is at the expense of the reasoning faculties. But Mr. MORGAN's case furnishes an illustrious example where a good memory was ever ready to serve and did serve a splendid intellect in the sublime art of reasoning, the great weapon of offense and defense of men eminent in statecraft, in the pulpit, at the bar, and on the bench. A distinguished man, who served in the Senate for a number of years with Mr. MORGAN, said of him that he was the most wonderful man that he had ever heard; that there seemed to be no limit to his knowledge, and that the accuracy of his learning and statements was marvelous.

Senator MORGAN's intellect was so fruitful and he so industrious, and spoke and wrote so much and so well, it is, perhaps, true that his reputation suffered as a consequence. He said so much that was worth knowing, so much that was worth remembering, that he sometimes surfeited his listeners or readers. Hardly anyone except a student or a specialist was willing to follow him in all of his wonderful speeches and writings, exhaustive in research and learning and faultlessly expressed in dignified and excellent English.

Mr. MORGAN was famous as a statesman before he added to his renown by his work as a member of the Bering Sea tribunal. His reputation was great and secure without his conspicuous service on the Hawaiian Commission. He was illustrious throughout the world and beloved by the people of the South before he defeated the "force bill" in the Senate, a bill that was designed to reintroduce there the saturnalia of crime, misgovernment, and corruption that characterized the period of reconstruction. He was a renowned statesman before he persuaded the people of the United States and all their representatives in high places that the construction of an isthmian canal was essential or important in the commercial progress and development of the country and necessary for the better national defense. Almost in the beginning of his Senatorial career he became the persistent champion of the construction of this canal. At first he had but few coworkers or sympathizers, but he lived to see the day when the people of the whole country recognized what he had seen with his wise and wonderful vision many years before. No one will dispute, when the two oceans shall have been united by a canal across the Isthmus, that this great work will stand as an imperishable monument to the statesmanship, the persistence, and wisdom of Senator MORGAN.

We must leave it to his biographer to catalogue his many wonderful speeches, his many learned reports and other documents and state papers—all of them constitute a large part of and a real contribution to the legislative and political literature and history of the last two decades and more.

Senator MORGAN was a member of the Methodist Church, and was esteemed for his many virtues of head and heart by all the people of his State, regardless of creed. It was beautiful on that June day when he was laid away in "God's acre," when the trees were in full foliage and the roses there in bloom, to see the whole population of Selma and the surrounding country unite in paying his memory respect and honor. This great man lived a long and useful life, and when, as ripe grain ready for the harvest, I doubt not that he consoled himself with the elevated thought and conviction that he so appropriately pronounced in his eulogy on Senator Hill when he said of that distinguished son of Georgia:

Discarding all blind confidence in fate and deeply sensible of responsibility to God, his noble and just spirit left its brief existence for one that is eternal, satisfied with the past and confident of the future.

EDMUND WINSTON PETTUS.

EDMUND WINSTON PETTUS was a native of Limestone County, Ala., where he grew to manhood. Early in his career as a lawyer he was attracted to Selma, where the fertility of the land, the wealth of the people, and the large farming and other interests presented an inviting field to a young lawyer of ability and ambition. He was of sturdy Welsh descent and came directly from Revolutionary heroes. He rarely ever spoke of himself and never boasted of his many achievements, the legitimate

fruits of his intelligence, his unswerving honesty, and his sturdy manhood. He was too brave and too modest to make pretensions or to engage in self-laudation.

Senator PETTUS was one of the greatest lawyers that Alabama ever produced. It is easy to say that he was learned and able. It is but just to him that we particularize. He was learned, because he had mastered the hornbooks in his profession and was a faithful student of the commentaries on legal subjects and the opinions of the courts. He was able because he had stored away in his well-ordered and great mind knowledge of the law as a science. And he was able also because of his unsurpassed power of analysis and statement. He had the rare gift of being lucid and yet brief in his argument before courts and juries.

No court or judge ever tired of hearing him maintain or controvert a proposition asserted as law. He knew what to say, how to say it, and had the good sense always to know when to end his argument either before the court or jury. He was a strong advocate. He never shot his argument over the heads of laymen, but had the rare faculty of applying the facts of his case to correct exposition of the law, so that any man of ordinary intelligence could comprehend his argument and appreciate the logic of his conclusions. He made no pretense at what may be called mere oratory, and yet in any great case or on any great occasion his ringing sentences, his vigorous statements were at times most eloquent. He was a diligent student of the Bible. He quoted from it more frequently than from all other books combined. Occasionally he would quote from Shakespeare or some other author, but the Bible seemed to be the source from which he drew all of his philosophy and nearly all of his illustrations.

General PETTUS was about 76 years of age when he came to the Senate. He at once devoted himself to the duties of his high position and met every requirement of his people and his country. Those of us here who served in the House of Representatives during the same time that he served in the Senate can testify to his faithfulness in the discharge of his duties, not only in the Senate, but before the Departments of the Government in any case where any of the people of Alabama were interested. He was never too busy, nor was any day so unpleasant as to prevent him from going cheerfully, if requested, with any of the Representatives from Alabama to look after the interests of any of his constituents before any Department. It seemed to afford him a pleasure to be able to do good outside of the mere discharge of his duties as a Senator. He was always polite, courteous, and considerate of those who invoked his aid or advice in his official or unofficial capacity. He was never impatient, never disagreeable, but always obliging and manly and helpful.

He came to the Senate after he had lived out the allotted time of man, and was immediately thrown in contact with great lawyers, distinguished statesmen, men who had been exponents of constitutional law for years. Yet he easily took rank among the foremost of them. It is true that as an advocate he had passed beyond the zenith of his glory before he came to this new scene, and yet his learning, ability, and great wisdom readily gave him high standing among his fellow-Senators. He was a ripe and wise counselor. His conciseness of statement was pleasing, the brevity and logic of his argument was attractive and generally convincing. His inflexible adherence to vital points involved in any case or question was attractive and remarkable. He never went off after side issues or immaterialities. He never sought at the bar or in the Senate to mislead an antagonist into some byway to divert attention from what seemed to be a vulnerable place in his own case. He had too much intellectual integrity for that; his honesty would not permit him to resort to any tricks. He believed his position right and had the courage to present it with his argument fully in front of the case and contention of his antagonist. He knew what to say, and struck at the vital and essential points. He had a rare sense of humor, which sometimes he used to great advantage.

He had the respect and admiration of his fellow-Senators. He was a hard worker in the committee and a regular and faithful attendant upon the sessions of the Senate. He had great respect for the dignity of his position, and often insisted in the Senate upon the decorum becoming to that body, and for which it has been so long distinguished.

General PETTUS served his people long, well, and faithfully in his capacity as private citizen, as jurist, as soldier, and statesman. With the exception of a short while in his early life when he was a circuit judge, he never held any civil office until he came to the Senate. Mr. Speaker, I would not institute invidious comparisons, and I would not say that General

PETTUS performed during those dark days following the great civil war, from 1865 to 1875, more services to his people than any other man in the State, but I believe, sir, that were the question submitted to the people of Alabama to name the most conspicuous, the most modest, unselfish, and influential private citizen of that Commonwealth in those terrible and trying times they would, perhaps, and without offense to anybody, respond with the name of EDMUND WINSTON PETTUS.

It is difficult for those who have come upon life's stage since the reconstruction period to fully comprehend, even when told about it, the wonderful courage, fidelity, and unselfishness of this great man. After he had fought for his people he returned to them, lived with them, counseled and acted with them and for them. Not only was he modest and brave, but he was one of the wisest of men. He loved peace rather than war, preferred tranquillity to violence, but he never hesitated to fight if that was the only avenue to right and the only way to prevent wrong. He revered his God, loved his fellow-man, and feared nothing beneath the shining stars. Senator PETTUS was a great lawyer, a brave and distinguished soldier, an able and faithful Senator, a devoted husband, father, and grandfather, and an honest and just man. He has gone to the reward that belongs to those who faithfully meet every obligation of life in its every relation—to God, to country, to fellow-man, and to family.

MORGAN AND PETTUS.

Mr. Speaker, there are many remarkable features about the lives and careers of these two men, JOHN TYLER MORGAN and EDMUND WINSTON PETTUS. Many of these features belong alike to the history of each of them. Their public and private careers touched each other in many relations. They were both lawyers and came to the bar about the same time. They each took up residence at Selma about the same time, where they continued to reside until their death. They were among the great leaders of the bar of Alabama, for they were great lawyers. They were friends and fellow-workers and political associates from early manhood to ripe old age, and in their latter days, after having been before so honored, they were each nominated by the people of Alabama in the same primary election for and reelected by the same legislature to the high office of United States Senator, which in the case of Senator MORGAN began the 4th of March last and in the case of Senator PETTUS was to begin the 4th of March, 1900, at the expiration of the term he was serving when death came to him.

Mr. MORGAN and Mr. PETTUS alike believed that the States had the right to secede from the Union. They both fought for their convictions, and each became a brigadier-general in the Confederate army. After Appomattox they accepted in good faith the results of the war, and renewed their allegiance to the Union, and counseled and labored to the end that our distressed country should be reunited in fact and in the affections of all the people. They were honest, brave, and were always guided throughout their lives by exalted patriotism. After the disastrous and unsuccessful war they returned to their homes in Alabama and devoted themselves to binding up the wounds of the suffering people and State, and, facing the new situation, proclaimed the gospel of hope and encouragement to the oppressed in the well-nigh desolate country. The wall of despair never fell from the lips of either of these great men, they never chafed under the new conditions; and when the unfortunate period came in the history of America, when reconstruction, with attendant evils, was forced upon the people of the South, these patriots resented in every proper way the wrongs perpetrated upon their helpless neighbors and fellow-citizens. MORGAN, PETTUS, and other Confederate soldiers showed the way to liberation from oppression, and pointed out the course by which the people of that State came again into the possession of their own, and the blessings of a white man's government and Christian civilization.

Many other facts could be recited, Mr. Speaker, to show how, in many particulars, the careers of these two illustrious men were intertwined the one with the other. Finally, they both died within a few weeks of each other, being at the time United States Senators from Alabama, one, Mr. MORGAN, past 82 years of age, and the other, Mr. PETTUS, upward of 86 years of age. They now sleep, after "life's fitful fever," within a few yards of each other in the same hallowed spot.

Their lives were useful and honorable. They enriched the history of their country; they were a credit to the people of Alabama, by whom they were beloved, and their examples furnish inspiration to ambitious and struggling youth throughout the land.

WAR DEPARTMENT, THE ADJUTANT-GENERAL'S OFFICE.

Statement of the military service of Edmund W. Pettus, C. S. A., major, Twentieth Alabama Infantry, September 9, 1861; lieutenant-colonel, Twentieth Alabama Infantry, October 8, 1861; colonel, Twentieth Alabama Infantry, May 28, 1863; brigadier-general, provisional army, Confederate States, September 18, 1863.

EDMUND W. PETTUS entered the military service of the Confederate States as major of the Twentieth Alabama Infantry September 9, 1861; was promoted to lieutenant-colonel and colonel of the same regiment October 8, 1861, and May 28, 1863, respectively, and to brigadier-general, provisional army, Confederate States, September 18, 1863.

In the earlier part of his service he was with his regiment in the Department of East Tennessee. Of his service at this time it is officially stated that "his conduct was of the noblest character, and there, while he won the admiration of his superiors and the love of his subordinates, he evinced those qualities as a commander that have since on several bloody fields rendered his name illustrious."

Moving with his regiment from East Tennessee to Mississippi, he bore a part in the operations preceding and during the defense of Vicksburg. His conduct on these occasions is thus recorded: "At the battle of Port Gibson his gallantry was conspicuous. At Bakers Creek and during the siege of Vicksburg his deeds of daring earned a prominent place on the page of history." He is also specially mentioned by Maj. Gen. C. L. Stevenson in his report of the siege of Vicksburg, as follows: Referring to the assault of the Union forces on May 22, 1863, he says:

"An angle of one of our redoubts had been breached by their artillery before the assault and rendered untenable. Toward this point, at the time of the repulse of the main body, a party of about sixty of the enemy under the command of a lieutenant-colonel made a rush and succeeded in effecting a lodgment in the ditch at the foot of the redoubt and planting two flags on the edge of the parapet. The work was constructed in such a manner that this ditch was commanded by no part of the line, and the only means by which they could be dislodged was to retake the angle by a desperate charge and either kill or compel the surrender of the whole party by the use of hand grenades. A call for volunteers for this purpose was made and promptly responded to by Lieut. Col. E. W. PETTUS, Twentieth Alabama Regiment, and about forty men of Waul's Texas Legion. A more gallant feat than this charge has not illustrated our arms during the war.

"The preparations were quietly and quickly made, but the enemy seemed at once to divine our intention and opened upon the angle a terrible fire of shot, shell, and musketry. Undaunted, this little band, its chivalrous commander at its head, rushed upon the work, and in less time than it requires to describe it and the flags were in our possession.

"Preparations were then quickly made for the use of hand grenades, when the enemy in the ditch, being informed of our purpose, immediately surrendered."

Other commanders also commend his services during the defense of Vicksburg. At the battle of Port Gibson, May 1, 1863, he was captured by the opposing forces, but soon thereafter made his escape and rejoined his regiment, with which he was surrendered July 4, 1863.

After his promotion to the rank of brigadier-general he was assigned to the command of a brigade, which he led in the Chattanooga-Ringgold campaign, in November, 1863. General Stevenson, in his general orders of November 27, 1863, says:

"It was PETTUS's brigade * * * which first checked an enemy flushed with victory on Lookout Mountain and held him at bay until ordered to retire. On the next day, on the right of Missionary Ridge, * * * and PETTUS's brigades * * * fought with a courage which merited and won success."

General PETTUS, with his brigade, participated in the campaign which culminated in the capture of Atlanta, Ga., by General Sherman's army. Moving northward with General Hood's army, he commanded his brigade in the campaign which resulted in the battle of Nashville and the subsequent movement of the Confederate army into the Carolinas.

He was specially commended by superior commanders for his conduct in the Nashville campaign.

In the campaign of the Carolinas he and his brigade bore an active part, participating in the engagements at Kinston and Bentonville. In the last-named battle he was wounded.

He was paroled at Salisbury, N. C., May 2, 1865.

Official statement furnished to Hon. H. D. CLAYTON, House of Representatives, April 24, 1908.

By authority of the Secretary of War.

F. C. AINSWORTH,
The Adjutant-General.

You Can Not Make a Silk Purse of Reform Out of a Sow's Ear of Bossism.

SPEECH

OF

HON. DAVID A. DE ARMOND,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. DE ARMOND said:

Mr. SPEAKER: In our scheme of Government the House of Representatives was designed to be, and should be, peculiarly the forum of the American people, speaking, heard, and acting through their chosen Representatives.

There is no place in our governmental system for the boss. In its essence and purity ours is a bossless Republic of sovereign citizens. Appear wherever he may in these United States, the boss is an intruder, a usurper, a corrupter, a destroyer of sound American institutions. He is bad in the town council, worse in the legislative assembly of city or State, and worst of all in the popular branch of the American Congress. In this

House he paralyzes other Representatives who in rights are his peers and in merit much superior to him. In striking down the Representative the boss nullifies the will of the sovereign people, and converts their free Government into a despotism. He is the lion in the path of every reform; he is the promoter and bulwark of every wrong.

We are at the closing of a session of Congress, characterized in this House by usurpation of power and denial of rights unparalleled in the legislative history of our country.

As our constituents are equals under the law, so we, their Representatives, come to this House equal under the Constitution, in our rights, privileges, duties, and responsibilities. That representative equality the Speaker of this House has denied, ignored, and, for the time being, destroyed. In this work of usurpation, tyranny, and spoliation he has assumed the rôle of the boss and acted the part.

The Speaker determines whether a measure shall be voted upon in the House—yea, more, he determines whether it shall be considered at all by the body over which he is elected to preside, but of which he has wantonly made himself the master. Recognition is accorded to a Member as a matter of grace, not of right, or it is arbitrarily denied. Those measures which the Speaker wishes to have passed, by the gracious permission of the Speaker are brought before the House for passage; those which the Speaker does not wish to have passed have no chance to pass, for the Speaker will not permit a consideration of them.

And while the Speaker acts the boss, his peers meekly submit to the degradation, and tamely endure the humiliation of being bossed. Indignation at the outrages perpetrated by the Speaker melts into pity for the abject mien of subdued Members, and both indignation and pity give way to an abiding feeling of contempt for all thus involved. Not all the Members cringingly bend low for the master's yoke or wear it in patient submissiveness; but too many take to the yoke as if they never were free men, and wear it as a decoration. In some minds familiarity with tyranny breeds a contempt for liberty.

Let us particularize a little. As a rule, no Member can get recognition to call up a measure for consideration unless the Speaker wishes to have it considered. Generally the Member must appeal privately to the Speaker for permission to exercise a clear constitutional right, and if the Speaker deny the boon of recognition, the unfortunate, if he would follow the precedents, must submit to a wrong which also is a humiliation.

Individuals, organizations, and the country may in vain demand or petition for rights which it may please the autocrat in the Speaker's chair to deny.

Shall a proposition to amend the tariff law have consideration? The Speaker determines that. Shall the voice of millions of laboring men be heard or heeded when they petition for legislation which they believe would be just and to their interest? Certainly not, if the Speaker does not favor such legislation! There shall not be granted the poor comfort of consideration against his controlling will. Is there an earnest, respectful demand from a multitude of American citizens for some legislation to enable the people to deal with the troublesome liquor question in their several communities according to their local laws? Well, what of it? Let the sovereign citizens—millions of them—go hence and take nothing with them; the Speaker is not upon their side, and he decides against them. Do the people want a law that will cause a disclosure of the amounts and sources of campaign contributions? Who could expect to find the Speaker's wants identical with theirs? In a spirit of faceiousness the Speaker gives them a taste of publicity "loaded." Insult is added to injury. As for financial legislation, find out what the Wall street gamblers would have, and then note that that is in harmony with what the Speaker permits the House to enact into law.

There is urgent need for many reforms, but none of them are likely to come by Congressional action until the first great reform is accomplished—the Speaker must cease to be the House boss. It is idle to write and speak and campaign and petition for this reform or that reform, so long as the Speaker remains a czar who despotically bars the way to reform. This is and ever must be true: You can not make a silk purse of reform out of a sow's ear of bossism.

In choosing their Representatives in Congress it is well for the people to consider and determine whether they wish those Representatives to submit to the Speaker as a boss or to maintain their own dignity and freedom by resisting and opposing bossism; whether their Representatives shall be subjects or sovereigns in the House of Representatives. This issue is above partisanship. It is one of patriotism. In all parties are men independent enough to stand up for their own rights and the rights of their constituents, and brave enough to oppose the boss and bring him down to his proper level. In every party,

also, are men who, whatever their professions and proclamations made to get office, will be the subservient tools of the boss, that petty thrift may follow pettier fawning.

The choice between the two classes is more important far than any selection based on party distinction can be. The wise choice means independent, manly representation of the people in the lawmaking body over which the people have, or may have, the most direct control. The other choice means a continuance and if possible an extension of boss rule, with the sacrifice of right and the promotion of wrong in legislation.

There is a brutal injustice in the make-up of committees in the House. Of the great committees, the majority party has twelve members and the minority but six. Thus, with about 58 per cent of the membership of the House, the majority party takes two-thirds of the committee places and graciously gives one-third to a minority of 42 per cent of the whole. Stated roundly, 58 Republicans out of every 100 Members get sixty-seven committee assignments, while the 42 Democrats get but thirty-three. How far this outrage of boss rule goes toward making majority Members its servitors may be a conundrum for the curious and inquisitive.

Upon the Currency Commission provided for in the Wall street gamblers' financial act just passed, boss rule in the House gives six places to Republicans and three to Democrats. In the Senate contingent are five Republicans and four Democrats—a just division. In the House bossism gave the Republicans one place on the Commission which of right belongs to a Democrat. This outrage, beside which larceny might appear semi-respectable, is not exceptional, but is according to the formula of boss rule. The Member in the stolen chair may be expected to stand—or sit—firm for the boss.

I repeat that the beginning of reform in legislation is the elimination of bossism from the National House of Representatives. When the people recover control of that body then, and not before, may they expect their will and not the will of the boss to be done. They can recover that control in the coming election. If they do recover it, well and good; if they do not, bad and worse.

Boss rule or the rule of the people; which shall it be?

Postal Telegraph.

SPEECH

OF

HON. SAMUEL W. SMITH,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. SMITH of Michigan said:

Mr. SPEAKER: I find in the CONGRESSIONAL RECORD of May 28 that the following resolution was adopted in the Senate by unanimous consent:

Resolved, That the Secretary of the Department of Commerce and Labor be, and he is hereby, directed to institute an investigation into all the telegraph and telephone companies engaged in the conduct of an interstate business as to the methods used in handling the public's business, the wages paid telegraphers, telephone operators, and other employees of such companies, and the working conditions of the employees thereof, together with a statement of the receipts and expenditures of such companies for a period of five years.

And he is further directed to report the result of such investigation to the Senate on the first Monday in December, 1908.

On the 20th of last April I introduced in the House of Representatives a similar resolution. I hope the investigation will be speedy, thorough, and effective, and, if possible, result in preventing another telegraph strike such as paralyzed the business of the country in 1907.

May 26, 1906, I made a speech in the House of Representatives on the subject of "postal telegraph," looking to the reduction of telegraph rates, and I am pleased to be able to state that in my judgment the cause is rapidly gaining ground. Notwithstanding, the Western Union and Postal Telegraph companies have since increased their rates, as they claim, so as to enable them to pay their employees better wages.

In my speech of May 26, 1906, I made use of this language:

Telegraphy is still pounding along with hand labor, very much as Morse devised it nearly seventy-five years ago. It can never be cheap or fast until machinery is used to prepare the messages and to hurl them at higher speed over the wires.

A short time ago a friend wrote me using the following language:

No; I had not noticed that the telegraph companies had been left out of the operation of the Public Utilities Commission of New York. Neither had I heard of the particular appliances you speak of (mean-

ing the telepost) for increasing the work done by a telegraph machine, but I do know this, that years ago when the elder Gould was managing the Western Union, I was told by an employee of the telegraph company that in the second story downstairs of the Western Union Building, in New York City, in one of the vaults was two large safes filled with patented appliances that would greatly increase the speed and lessen the cost of telegraphing, but if put into use would reduce the rates; that they were mostly "Edison" patents, had cost over a million dollars, and that aside from that Mr. Gould had an arrangement with Mr. Edison for the first refusal of all of that kind of patents; thus you see the present method of suppression is not a new one, and that is one reason why the Western Union has been able to hold the field against all comers for so long a time.

The telepost is one of the modern inventions that the telegraph companies have not been able to control. This machine will send 1,000 words a minute over a single wire by actual test. If the telepost were to be put into general use, we would be able to send twenty-five words for 25 cents between all points and fifty words for 25 cents where the dispatch is delivered at the post-office and subsequently by carrier. The telepost has been on exhibition in the city of Washington during the last few months, and in the closing hours of Congress was in the committee room of the Committee on Post-Offices and Post-Roads of the House of Representatives, where it was seen by many Members of Congress and others, and I think this exhibition has done much to aid in securing hearings before the Committee on Post-Offices and Post-Roads at the coming session of Congress, and I believe when they are once more begun that the work will be kept up until there will be some legislation looking to a reduction of telegraph rates. In this connection I desire to say that if there is any other machine that will do as good or better work than the telepost, I would suggest that it be brought to the attention of the Committee on Post-Offices and Post-Roads, both in the Senate and the House, and placed on exhibition if possible, so that Members of Congress can see and know for themselves the importance of taking some immediate action regarding this subject, which is of such vital interest to all our people.

I would like to insert, as a part of my remarks, a very able article, entitled "A Government telegraph system," by Romyn Hitchcock:

A GOVERNMENT TELEGRAPH SYSTEM.

[By Romyn Hitchcock.]

- I.—Introductory comments.
- II.—Present condition of telegraph service—Methods.
 - The Morse key and sounder.
 - Keyboard, Morse transmission.
 - Printing telegraphs.
 - Keyboard, page printers.
 - Tape-transmission printers.
 - Tape transmission.
- III.—Automatic high-speed telegraphy.
- IV.—The utilization of different methods.
- V.—Effect of cost upon volume of correspondence.
- VI.—Effect of high charges on kind of business done.
- VII.—High speed as a fundamental need of a national telegraph system.
 - Cost of line.
 - Cost of operating.
 - A hypothetical pneumatic mail tube.
 - Private preparation of messages.
 - Private transcription of messages.
- VIII.—Economies of the page-printing telegraph.
- IX.—Business policy and attitude of telegraph companies toward improved methods.
- X.—Capitalization—The burden of excessive fixed charges.
- XI.—The Telepost Company.
- XII.—Government ownership or control of public utilities.
- XIII.—Means of effecting government ownership or control of telegraphs.
 - Government purchase of telegraph lines.
 - Special service and private wires.
 - Government control of telegraphs.

I.—Introductory comments.

The telegraph service of the United States is the poorest, slowest, and most expensive of any commercial nation. It is likewise the only great telegraph system under private control. If it were necessary the direct relation between these facts could be convincingly shown. But it is not necessary to repeat statistics and arguments which are doubtless familiar to Members of this body. The average charge per message in this country, 31 cents, is "three times the average rate in all other countries under post-office telegraph service." (Judge Walter Clark.)

In other countries the excessive and restrictive charges of private telegraph corporations and the right of the people to enjoy the benefits of electrical communication at cheap rates has been recognized by statesmen, and governments have purchased private lines and extended the service. Sir W. H. Preece, for many years engineer in chief of the British telegraph service, says: "Telegraphy became * * * so closely allied with other modes of communication that public opinion in 1868-69 forced the government to purchase and absorb all the telegraph companies." The rates were immediately reduced one-half, and—note this equally important fact—the time of transmission of messages between cities in England has been reduced from two to three hours in 1870, when the government took control, to seven to nine minutes.

We need not discuss the annual British deficit—a deficit, by the way, which has saved the British public more than \$150,000,000 since it began to accumulate—but Vice-President Clark of the Western Union testified that, in his opinion, "it was the policy of extending the telegraph to unprofitable places that caused the deficiency." This extension for the benefit of the people is precisely what government can do in response to demands, and what private ownership will not do.

I am no faddist on the subject of government ownership. Whether we have government ownership or government control and supervision is a question subordinate to the achievement of the great purpose of making the telegraph most effectively a public utility. Most kinds of business must be privately developed and conducted, but monopolies of service which should be universally enjoyed ought to be managed by government for the benefit of all. This can not be if dividends are to be paid out of income and profits divided among a few individual owners.

To argue that government can not conduct business as well or as cheaply as private corporations managed for profit, is contrary to experience. If the people want a government telegraph they will take measures to have it well conducted, and opponents of the idea need not cherish so many misgivings on the political side. Authoritative confirmation of the conviction thus expressed has since been given by Sir William Preece. He says: "The telegraph business of this country (Great Britain) has reached its present dimensions because the work has been done well, and it has been done well because the mode of doing business has been so well and so thoroughly supervised by the public."

Legislation is supposed to be for the public welfare and if representatives of the people in Congress recognize, as I believe they do, a duty to contribute ever more and more to a realization of the great purposes of the Constitution, there can remain no doubt with any Member who studies this question that the telegraph should belong to the people. The telegraph franchise has never been surrendered by the Government. The exclusive right of the Government to carry the mails, whether by pony post, steam railroad, or pneumatic tube, implies also the exclusive right and obligation to utilize the best agencies available for facilitating correspondence.

All that can be said in opposition to this view has been said persistently and repeatedly. Fallacies, misrepresentations, have been many times exposed, yet they are reiterated and no doubt are believed by many who ought to be better acquainted with the facts. If we eliminate from the discussion the errors upon which the strongest arguments against government control are based, confining attention to testimony which results from careful investigation, honest and well-intentioned, we find but little to contend against. What does remain pertains mostly to questions of policy as, for example, the academic question whether it is a proper function of government to do anything that can be done by private means, the dangers of increased political patronage, and so forth. The real question of the general good is made subordinate to disputations on such subjects as these.

All such arguments lose their force in the face of the significant fact that the United States is alone among nations in permitting the private control of telegraphs. Sir William Preece has summed up the case in these words:

"It is amusing after this length of time to read the arguments that were adduced against the absorption of the telegraphs by the state. The objections raised were:

- "1. It was not the Government's business to telegraph.
- "2. There would be a loss if it did.
- "3. The telegraph would be better conducted under private enterprise.
- "4. The Government rates would be higher.
- "5. The use of the telegraph would decrease.
- "6. The Government service would be nonprogressive, with no stimulus to invention, etc.
- "7. The secrecy of messages would be violated.
- "8. The telegraph would be used as a party machine.
- "9. The Government could not be sued.
- "10. To establish a public telegraph would be an arbitrary and unjust interference with private interests. The companies had risked their capital in the new enterprise, and just as they were about to get their reward the Government was going to take the business away from them. Private enterprise experimented and the people wanted to steal the fruit.

"Every reason has been proved wrong, every prophecy has remained unfulfilled. I can say this with good grace, for I was one of the prophets. The advantages of a state-controlled telegraph system have been amply shown. There has been established a cheaper, more widely extended, and more expeditious system of telegraphy; the wires have been erected in districts that private companies could not reach; the cost of telegrams has been reduced not only in their transmission, but in their delivery; the number of offices opened has been quadrupled; a provincial and an evening press has been virtually created."

The evidence is all in, the arguments have been made, it remains for Congress to act. Doubtless on no other question are the people so united. More than seventy-five bills have been before Congress advocating a postal telegraph. Sixteen investigating committees have reported in its favor. The following organizations and many others have expressly favored a postal telegraph system: The Farmers' Alliance, the National Grange, Knights of Labor, Railway Union, American Federation of Labor, International Typographical Union, the People's Party, the Prohibitionists, many boards of trade and commercial bodies. More than 2,000,000 votes have been cast for it. Successive Congresses have investigated the subject, committees have reported in favor of it, specialists and eminent legislators and Postmasters-General have urged it; but there seems to have been an adverse power greater than the popular will, an influence stronger than constituencies, which has defeated every effort for its realization.

With men in Congress or in private affairs responsibilities are not lightly assumed. In this matter of the telegraph the natural disposition is to give undue weight to arguments and representations from those who speak with experience in the administration of existing telegraph companies. But I would say, in all earnestness, that the best source of information concerning the possibilities of a business largely dependent upon technical knowledge, is not those who are responsible for its unprogressive administration and whose business interests might be injured by government ownership.

We are an enterprising, inventive, and progressive people; but the telegraph monopoly has not favored the introduction of new methods. Stock dividends issued with a lavishness that puts wild-cat mining companies in the shade, have proved more alluring to the management than investment in improved methods. The natural consequence is that the great telegraph monopoly is powerless to withstand competition. The Western Union Company has hitherto met competition by purchase of competitors, the most costly and ruinous policy known, and it can no longer do so. The logical result of pernicious, speculative financiering, even when it aims to perpetuate the control of a great monopoly, must be stagnation and ruin. Sooner or later blind conservatism finds it has gone too far and the old methods are shown to be obsolete and unsuited for modern requirements.

II.—Present condition of telegraph service—Methods.

As now conducted the telegraph is the most inefficient service in the whole range of developed industries. This inefficiency is not only absolute as relates to the amount of business done by operators, but when compared with the possibilities afforded by the application of improved methods it is enormously below reasonable demands. No technical knowledge is necessary to understand that the making of dots and dashes by hand is a slow and consequently inefficient method of transmitting signals. An eminent authority has pronounced it the greatest anachronism of the time. A means that served admirably in the early days, when the business was light, is not necessarily or presumptively satisfactory now, and the effect of adherence to such a method is to prevent such an expansion of the service as would naturally come if it were better and cheaper. The president of the Western Union officially declared, in April, 1907, "That 99 per cent of the messages transmitted now are transmitted in the same old way that was in operation in the days of Morse. The system is not changed except that the output per operator is not nearly so great as it used to be." The only notable improvements in methods that have been largely introduced in operating our telegraph have been adopted to increase the amount of business over a wire with Morse key sending. Practically the sum total of telegraph experience in fifty years has resulted in an increase from an average of 15 words a minute with two operators to 60 words a minute, quadruplex working, with eight operators. This is the result of private management. No one can believe that this represents the progress made in the art by electricians and inventors.

Improvement in the telegraph service requires that the efficiency of operators shall be increased to the highest limit, that the conducting system be improved and adequately utilized in its carrying capacity, thus reducing the number of wires. To make clear the importance of these items in their bearing upon an up-to-date Government system, a concise statement of the principal available methods seems desirable.

The Morse key and sounder.—With this apparatus two operators are required, one to transmit messages, the other to receive them by sound and transcribe them, usually on a typewriter. The average speed is fifteen to twenty words a minute, or seven and one-half to ten words a minute for each operator. This is the measure of the commercial efficiency of operators.

Different methods of multiplex operating are in use, whereby a number of messages can be simultaneously transmitted over a wire without interfering with each other. Practically, the limit of multiplexing with us is found in the quadruplex, with which four messages are sent, two in each direction. If the operators are skillful and line conditions favorable, eight operators may do an average of eighty words a minute with the quadruplex. But, in fact, the quadruplex is not continuously operative, and it is by no means possible to average eighty or even sixty words a minute during active business hours.

When it is understood that the figures given represent the commercial efficiency of 90 per cent of the telegraph business of the Western Union Company, it must be conceded that herein is one excellent reason why the tolls for messages are so high.

Keyboard, Morse transmission.—A good receiving operator is able to read by sound faster than one can send with the Morse key. Recently machines have been introduced with typewriter keyboards which send Morse signals automatically when the keys are operated. The signals are thus more rapidly made, and the speed can be adjusted to the ability of the receiving operator.

Printing telegraphs.—It is obvious that if messages can be printed automatically at the receiving stations this would dispense with the receiving operator. If, in addition, the speed of working is equal to that of rapid typewriting, the gain in both economy and time over any form of Morse operating is considerable.

Without referring specifically to the older forms of printing telegraphs which, like the well-known stock tickers, deliver messages printed on tapes, we may pass directly to the later forms of page printers, which deliver messages in letter form, like typewriters. Among these we have only to consider such as are commercially available and which have the requisite speed, since only with such apparatus can the necessary efficiency for large commercial business be attained. Telegraphic page printers are operated in two ways. First, we have the keyboard transmitter with the keys arranged in the same manner and order as on the standard keyboard of typewriters, so that it may be operated by any person who can use a typewriter. Second, we have a form with automatic transmission from a previously prepared perforated tape.

Keyboard, page printers.—Among these, although many forms have been devised and tried, the machine of Mr. J. E. Wright is the most perfect and the only one commercially available and adapted to ordinary use. This apparatus can be operated by any typist, as it has a free keyboard—that is to say, the keys are all independent and free as on a typewriter—and it can be worked at ordinary typewriter speed.

Not less admirable, although far more complex, is the Rowland printer. This is not so easily manipulated, and it is more particularly adapted to the larger requirements of the telegraph service where it is desirable to multiplex and operate a number of machines with separate keyboards and printers simultaneously on a single wire. It is used by the Postal Telegraph Company.

Tape-transmission printers.—Of these we need only mention the Buckingham and the Barclay printers, which are operated automatically by previously prepared punched tapes. The paper strip is first prepared with a keyboard machine, which punches holes corresponding to the characters on the keys. The punched strip is then run through a mechanical transmitter which sends the proper electric impulses to the line and thus operates the distant printer. The transmission is thus more rapid than direct keyboard sending, the speed being limited to the line conditions and by the electrical and mechanical possibilities of the printing mechanism. It may be approximately stated at rather less than twice the speed of direct keyboard transmission. The Barclay machine is used by the Western Union Company.

Tape transmission.—Until the adoption of the Barclay tape-transmission printer by the Western Union, Mr. Barclay being the chief electrician of the company, a few years since, the attitude of telegraph authorities generally in this country was one of uncompromising hostility toward the use of tapes in telegraph operating, either for transmitting or receiving. Regardless of the fact that the Wheatstone automatic, which is a rapid method using tapes both for sending and receiving, has been in extended use abroad for many years, and that it is also used occasionally in this country for "emergency service," which apparently means when the slow hand methods are not in good working order and it becomes necessary to get business through on a few wires that may be working, the opposition to the use of tapes has been so strong that the advantages of the Wheatstone method have

never been properly utilized here. The speed of the Barclay printer is no greater than has been available to the Western Union Company with the Wheatstone for fifteen years. The Barclay machine has only the advantage of receiving the messages in printed form, which is, indeed, considerable.

The argument has always been that there is no advantage in using tapes, because in the time required to prepare a message on the tape it can be directly sent over the wire. This is true if only one message is in question. But the great advantages of tape and automatic working are found when there are many messages. The machine works faster than hand sending, it transmits messages without interruption as rapidly as they can be fed and run through and it can work continuously at full speed all the time. There are always many interruptions in manual work on the wire.

If it were not that the adoption of the Barclay machine by the Western Union has effectually set at rest all controversy concerning the advantages of tape transmission, it would be necessary to deal with the subject here at greater length. I am glad enough to be relieved of the necessity to repeat arguments which are well understood as false, their main reliance having been upon "authority." There is now some disposition to give a twist to the old controversy which is not supported by the published literature of the subject, by asserting that the objection has not been to the use of tapes for transmission, but for receiving only. This is quite untrue. Fortunately, however, surrender at one end of the line necessitates defeat at the other end. The arguments are precisely the same fundamentally. What is true as regards feeding the wire is equally true of handling the received messages.

III.—Automatic high-speed telegraphy.

We have now to consider messages that are transmitted at a speed far beyond the possibilities of a printing receiver—at a speed which precludes the use of any mechanical marking or printing device to make a record. Such messages must be electrolytically recorded—preferably in regular Morse characters, on moving tape. They can then be transcribed on typewriters. The transcription is not so rapid as the Barclay direct printing, but the transmission is perhaps ten times as rapid. The advantages of the increase in transmission speed will be shown further on.

The somewhat indefinite term, "high speed," is used to designate any method of telegraphy which permits messages to be sent at a speed restricted only by the electrical limitations imposed by the conducting wire. This electrical limitation is far beyond the speed possible for any moving mechanism to record signals. The most rapid mechanical recorder is that of the Wheatstone apparatus, but that, as has been before remarked, "is not speedy enough to establish automatic telegraphy on a plane by itself." The ideal method has only electrical limitations. The result has been commercially accomplished by Mr. Patrick B. Delany. By his method impulses of alternating polarity are transmitted, all of the same duration, and the record at the distant station is made by electrolytic action, the line current passing through the receiving tape. Thus we have purely electrical transmission and recording, the attendant simple mechanism having to do only with the running of the tapes. By this method the practicable speed is determined by the nature and length of the conductor and the electromotive force used. It may be 1,000 words a minute or 5,000. There is practically no limit to the speed of legible recording, but, commercially, 1,000 words a minute is sufficient for the most urgent demands.

The features that give this method precedence over all others are reliability and accuracy, combined with extreme simplicity in operation. The apparatus is always in condition for use; there is nothing to get out of order. I need not more fully describe the Delany telegraph, because it can be seen in operation at Washington. But I hope Mr. Delany will be called upon to make a statement in connection with the general subject of cheap telegraphy.

IV.—The utilization of different methods.

It should be evident that all these different methods are necessary in a national telegraph system which aims to afford the full benefits of electrical communication. The people have a right to expect cheap rates and facilities embracing all possibilities available by the state of the art. It is no time now to consider corporate interests, vested rights, capitalized franchises, or established business. Nor is it necessary to deal with corporations which have basely neglected opportunities to utilize improvements, as they were morally bound to do in return for the immensely valuable franchises they have so long enjoyed. If we review the great field of industrial work, noting the wonderful advances in all directions, particularly in the field of electricity, we find only one example standing out conspicuously, absolutely by itself and unique, in which there has been no advance, no change in method for fifty years—the most typical, convincing illustration in the whole wide world of the deadening power of an irresponsible, unprogressive monopoly in control of a public utility. During the years of remarkable progress in every other art and industry, the telegraph alone has been stagnant, actually opposing radical improvement, discouraging invention, holding down the vast telegraph business of the country to the slow, primitive method of hand sending, the least efficient and most expensive of all. While in all other electrical distributions the aim has been to utilize conductors up to their full carrying capacity, in telegraphy they have only been permitted to carry what can be sent by hand—60 words a minute, while they can carry 1,000 or 2,000.

The benefits of utilizing the carrying capacity of a conductor have not been wholly disregarded in the practice of the monopoly, but they have been limited strictly to the method of hand sending. Even with this narrow limitation they have proved extremely valuable. Mr. Norvin Green, formerly president of the Western Union Company, declared that the introduction of the two additional circuits of the quadruplex, which at most only doubled the duplex, was worth to that company \$10,000,000. If at that time an increase from 30 words a minute to 60 words was worth \$10,000,000, what is the value now of a method that will transmit 1,000 words or more over the same wire and in the same time?

That such a method possessed any practical value has been emphatically denied by high telegraph officials. For fifty years they have seen no value in anything that would supersede the Morse key. The argument finally came down to this: That since the established wire system is sufficient to carry all the business offered (it is not done with promptness), there is no need of more rapid methods. The multiplicity of wires has been partly the result of purchasing competing companies and taking over their wires, partly necessitated by the arbitrary adherence to hand working. But, in fact, the more potent reason for

opposing a considerable increase in speed and efficiency has been the anticipated demand that would follow for cheaper rates and better service.

V.—Effect of cost upon volume of correspondence.*

The average rate for telegrams in this country has advanced from 31 cents in 1902 to 33.7 cents in 1907. Proof that the charges are too high is shown by the relatively small proportion of the people who use the telegraph. President Green stated that the proportion of social messages in this country was about 8 per cent. In England the proportion is ten times as large, and on the Continent social messages constitute two-thirds the entire business. It is thus evident that there is in this country an immense volume of telegraphic business that has not been developed and which awaits only adequate rate reductions to come forth.

The effect of changes in rates in different countries is well shown by the following quotations, taken from good sources:

GREAT BRITAIN.

A reduction of 33 per cent on three-tenths of the messages and 50 per cent on the remainder caused an increase of 100 per cent in about two years.

The social business is said to be four times as large as in this country—eight times as large in proportion to population.

CANADA.

A reduction which applied to less than 10 per cent of the business augmented it 25 per cent in the first year.

BELGIUM.

These reductions have caused four times the number of dispatches that would have been sent at the old rates.

SWITZERLAND AND BELGIUM.

A reduction of one-half in the rates produced a double business in one year.

AUSTRALIA.

Australians send more than twice as many messages over the lines at the lower rates as Americans do at the present prices.

PRUSSIA.

A reduction of 33 per cent in the rate was followed by an increase, in the very first month after the change, of 70 per cent in messages.

SWITZERLAND.

The Swiss inland rate was reduced 50 per cent * * * and in the first three months there was an increase of 90 per cent in messages.

BRAZIL.

The rates charged are high, amounting in 1899, the last year for which there are available statistics, to an average of 4.4 cents a word. Two years earlier, when the rate was just half that amount, nearly 10,000,000 more words were sent over the wires, and the revenues were much increased. The experience of the Brazilian Government during a series of years has been that the lower the rates the greater the traffic and the amount of revenue produced.

The testimony is wholly, unexceptionally, in one direction. Mr. Wanamaker once said: "It would be such a benefit to get twenty words for 10 cents that I am afraid, if rates were lower, we would be in the same position as the English lines were in the beginning. They were overwhelmed with business."

The following statement shows the number of messages for each hundred of population in certain countries, and the relation between letters and telegrams. It is not up to date, but has no less significance for that reason.

Telegrams per hundred of population.

Great Britain	184
Switzerland	127
France	108
United States	95

Letters and telegrams.

Great Britain, one telegram to thirty letters.
Switzerland, one telegram to thirty letters.
Belgium, one telegram to twenty-three letters.
France, one telegram to twenty-three letters.
United States, one telegram to forty-two letters.
Before the British telegraphs became Government property there were 121 letters to 1 telegram, and in Belgium at the same time 37 letters to 1 telegram.

If the statistics possess any significance whatever, they reveal immense possibilities in telegraph development in this country through cheapening the tolls. People can not afford to use the telegraph freely when they must pay from 25 cents upward for ten words. The minimum charge possible with improved methods and profitable returns to an operating private company is lower than the world has yet experienced, and would lead to a volume of correspondence by wire impossible to estimate from any known data. At the same rates a Government system would pay for itself in a few years.

VI.—Effect of high charges on kind of business done.

President Green stated that 46 per cent of the Western Union business was brokerage and exchange, the kind known as speculative; 12 per cent was press business, 34 per cent legitimate trade or general commerce.

* Mr. George H. Fearons, general attorney for the Western Union Telegraph Company, in an address before the House Committee on Interstate Commerce, May 5, 1908, is reported to have stated "that 60 per cent of the telegraph business of the country was the transmission of information for exchanges, boards of trade, and similar commercial bodies, 20 per cent was newspaper matter, 15 per cent railroad intelligence, and less than 3 per cent private and social telegrams."

Can there be any clearer evidence of the extremely restricted use of the telegraph in the United States—only 3 per cent of private and social telegrams, against a proportion of two-thirds the entire business on the Continent of Europe?

cial business, and only 8 per cent social. Thus it appears that the companies are not serving the public generally, but only a small part of the public that can afford to pay the high tolls because of the nature of the business done or the absolute necessity to use the telegraph. We shall later refer to this aspect of the subject in another connection.

VII.—High speed as a fundamental need of a national telegraph system.

The economies of high-speed operating may be realized under two widely different conditions, viz:

(1) When the volume of correspondence to be developed on short lines is sufficient to keep the apparatus in reasonably constant operation during hours of active business.

(2) On long lines universally, since on these the capital investment is large and the maintenance costs heavy.

This brings to mind that there are two elements in the cost of telegraphing which ought to be separately considered, the cost of the engaged line and the cost of the operating force. Assuming an equal wage scale between stations the latter is constant, while the line costs are variable, involving under present methods repeating or relay stations.

Cost of line.—A copper wire weighing 400 pounds to the mile will carry 1,000 words a minute between New York and Chicago with no higher voltage than is now in common use in telegraphy. The same volume of business by Morse methods would require from 17 to 20 Morse wires representing perhaps 1,800 to 2,100 pounds of copper per mile. The cost of copper is only one of the elements in line construction and maintenance. A large number of wires require high and strong poles which are not only costly, but because of the great weight of metal and the strains, and the surface exposed to accumulate ice, and the pressure of wind against the structures, such lines are subject to frequent damage, and serious interruptions of communication occur. Pole lines carrying two to four wires, such as serve for high-speed distance working, are much less costly to construct and may be made almost proof against damage in storms.

Cost of operating.—Mr. A. B. Chandler, formerly president of the Postal Telegraph Company, stated before the Industrial Commission that "salaries for all classes of service" are "approximately 70 per cent" of the expenses of operation. This is not a particularly illuminating statement for what we would like to know, but it indicates that operative costs are a very important item. Material reduction in this direction would therefore result in great economy.

If we can actually take operatives away from the line, so that their work is done on machines that have no connection with the sending of messages over the wire but consists only in preparing messages to be sent by some other person, and if that other person can send over the wire all the messages that can be made ready by twenty preparers, working continuously, we then have the conditions of high-speed operating. If we further conceive that the twenty operatives prepare messages for transmission by working on keyboard machines resembling typewriters, but which punch tape at more than double the speed of Morse sending, it is clear that we have reduced this part of the work to simple typewriting. The telegrapher has been removed from the wire and a machine that sends 1,000 words a minute takes his place. The work hitherto done at the end of a wire by telegraphers is now done by ordinary typists, each working three times as fast as the telegrapher could work on the wire.

Thus the efficiency of the operative service is increased about three times over that of Morse working, while the rate of pay is reduced to the typewriting basis. The time required for one man to transmit each message is perhaps the tenth or a fifth of a second. It is so short as to be negligible, and no message is delayed since the wire can carry all messages as fast as they can be prepared and run through the machine. The operative economy may thus be reduced by probably 75 per cent when the business is large.

At the receiving station the message comes out on tape in Morse dots and dashes. These can be transcribed on typewriters at a speed not less than double that of Morse sending.

A hypothetical pneumatic mail tube.—Suppose a private corporation had established a pneumatic tube to carry letters of 50 to 100 words at great speed and low cost between New York and Chicago. Suppose also that such letters sent from one city after business hours would be delivered in the other city early the next morning. The benefits to the business world would be very great. But, for reasons which need not detain us, we will suppose that the company requires that all letters for transmission through the tube must be handed in to be copied by its own employees upon special blanks, thus enabling the company to count the words, read the contents, and adjust the charges. Would there not be indignation and a strong protest? Patrons would say: "We have our own stenographers and typists, our letters are clearly written, why should we pay you for rewriting them as well as for transmission? You have no right to read our correspondence; but you can give us your blanks and we will use them and inclose them in addressed wrappers ready for your tube. Your business is to transmit correspondence. We are willing to pay you for doing that, but we will not pay for the clerical work of rewriting our letters."

Now, it is a curious fact that while every person who hears of such a proposal concerning letter correspondence would be highly indignant, we have only to substitute telegraph wire for pneumatic tube when there is not a word of protest. A few words in a letter must be sacred from prying eyes; the same words in a telegram are always read by two persons in the telegraph office, one who copies in transmitting them, another who transcribes them at the receiving station. There can be no privacy about a Morse telegram, and the charges include the dual operations. So long as telegrams are sent by operators who must spell out every word and form every letter in dots and dashes it is impossible to avoid this technical service. But with a rapid machine taking the place of the operators the condition is totally changed. It is impossible for the one who feeds the machine to read the message, or for the one who receives it. The tapes are unwound and rewound from reels at the rate of 5 feet a second.

Although the introduction of high-speed methods will make telegraphing absolutely private, this result will not be perfectly attained at first. With the introduction of the system, business will be done at the telegraph offices in the same manner as at present—that is to say, messages will be written on blanks and handed in to be prepared on tapes and transmitted. At the distant station they will be transcribed and delivered in typewritten form by post-office or messenger, as may be ordered. There will be a radical departure, however, in the length of messages. Because of the cheap rates, they will be 50 to 100-word messages or more. They will be letter telegrams, which will greatly facilitate business and social correspondence. There will natu-

rally follow the demand for privacy and the home preparation of messages.

Private preparation of messages.—The punching of tapes being a purely mechanical operation, independent of transmission, it can be done anywhere and by stenographers or typists in private offices. It is only necessary to have a keyboard punching machine. A reel containing the message thus privately punched can be sent to the telegraph office, where the tape may be run through the machine, automatically rewound, and given back to the messenger. It has been sent through without the possibility of reading it. The charge would be for transmission only. Relieve the telegraph administration from the clerical work of preparing messages, and the operative costs will be greatly reduced.

The private preparation of messages is not only practicable, since it involves no change in the present routine of office work, for telegrams are now dictated and written on typewriters, but it is sure to be much more widely extended. Stenographers at hotels will be prepared to punch telegraph tapes, and it can also be done at the telegraph offices directly from dictation. It leads to this great change in conditions, however, that the charges for preparation and for transmission will be separate items. Payment will be made for service actually rendered.

Private transcription of messages.—At the receiving station the message comes out in Morse dots and dashes on the tape, which is rolled on a reel. The person in charge unrolls the tape far enough to read the address—it should be understood that messages pass over the wire backward, hence the address is first unrolled—and sends it to its destination either by mail or by messenger. The reading of the tape is quickly learned by typists, as the Morse letters are clearly spaced on the high-speed tape, and transcription is as rapid as reading from print.

VIII.—Economies of the page-printing telegraph.

The keyboard printer is of particular importance in this connection. This is not in disparagement of the tape-transmission printer, which has great value also; but we have now to consider the most useful accessories to high speed on important lines, including means of collecting and distributing messages which must be delivered locally or retransmitted for short distances. It is evident that if such messages are to be retransmitted to a final destination in some small town or village it will generally be desirable to transcribe them directly by use of a keyboard telegraphic printer. The operation is the same, in fact, as transcribing them from the high-speed tape on a typewriter, except that the printing is done at a distance.

It is therefore desirable to consider in some detail the merits of the keyboard printer. The increase in speed over Morse working is partly due to the more rapid sending from a keyboard, on which a single movement of the finger prints a letter, partly to the fact that the receiver is a machine which does not "break" or call for repetitions, as does a Morse operator. Without entering upon a full exposition of a subject which must be reasonably clear to anyone who gives it a little thought, it may be more to the point to state the actual results of experience abroad with printing telegraphs, all of which are quite inferior in speed and ease of manipulation to the forms heretofore mentioned. The Hughes printer, long in use abroad, doubles the capacity of a Morse line in the same time. In the rental of telegraph lines in Germany, twice as much is charged for a Hughes as for a Morse line. The Hughes machine is operated with keys arranged similarly to those of a piano. It requires specially skilled operators and prints on strips of tape. A less number of operators is required than for Morse, because the receiver is an automatically operating printer. The Baudot printer, considerably used abroad, shows in practice the same superiority over Morse as the Hughes.

These two forms of printing telegraph have been used abroad for many years, thus effectually demonstrating the commercial utility of such apparatus. They practically double the operative efficiency by dispensing with the receiving operator, and they also work at higher speed. Putting the matter in tangible form, a quadruplex Morse line sends four messages at a time, two in each direction, but requires eight operators. The same amount of business is done on a duplexed Hughes line with two keyboard operators.

IX.—Business policy and attitude of telegraph companies toward improved methods.

The policy of the telegraph companies has been to put up an additional wire for every increment of business beyond what can be done at forty to sixty words a minute, regardless of the length of the line or the amount of business available. In the early days no other means of increasing facilities was known. It was later discovered that two messages could be simultaneously sent in opposite directions on one wire, thus doubling the capacity with no additional cost for wire. This duplexing idea was ridiculed and opposed by the Western Union Company. It was developed by others and became competitive, when the old company was obliged to adopt it or go out of business. Then followed the quadruplex, which enabled four messages to be sent simultaneously. This likewise was derided and opposed, but finally adopted. But remember that this is the limit to-day—sixty to eighty words a minute—determined by the speed of hand sending.

It would be unjust to attribute this condition wholly to the non-technical directors of the company. However strongly an improvement may be advocated by outside parties, however clearly may be presented the advantages of the new device, those gentlemen of wide business experience know that not every much-lauded invention is practicable. Naturally they refer such things to their own technical men; and if these report unfavorably, there is no reason to consider the matter further. The attitude of technical men in the telegraph service, and of operators generally, has been one of uncompromising opposition to any proposed departure from Morse key working. With all respect for the knowledge and experience of technical men of influence in the telegraph service of this country, the responsibility for the backward condition of the telegraph service in this country, which has led the world in notable telegraph inventions not used by the companies, rests in a large measure with them. So long as such men are unwilling to declare in favor of changes of obvious advantage to the service, because they tend to replace the Morse key, it is difficult to see how non-technical directors can assume the initiative in introducing them.

If our telegraph companies had favored rapid methods in early days, they would not now be burdened with the great number of wires required to carry the business at the speed of hand working. Although automatic methods were at first quite imperfect, they really revealed great possibilities and needed only the encouragement and support of

the telegraph authorities to make them practicable and profitable. The telegraph electricians opposed them, therefore they could gain no favor or use from the established companies. When they did come into use at one time, and were doing good business, the old company managed to get control and killed them. The electrical engineer of the Western Union Company states the company's case against the better utilization of line when he says: "Whatever necessity may have originally existed for the use of automatic systems passed away with the multiplication of wire facilities." This remarkable declaration regards the telegraph as having reached its fullest development, and assumes that wire facilities will need no further increase.

But there are not wires enough now where they are wanted to afford quick service by hand methods, yet poles are greatly overloaded and large expenditures are necessary to meet the increase of business due to larger population and business extension. The multiplication of wires must continue indefinitely and will prove ruinous to the companies unless radical changes of method are adopted. On the same authority we are told (in 1902) that "college professors, interested inventors, promoters, and other advocates of fast methods of transmission may figure it out theoretically and say what they please about quicker service, cheaper rates, or other alleged benefits to be derived by the public by the adoption of automatic methods of working, but twenty years of actual experience with the best of these methods have emphatically demonstrated the utter fallacy of such reasoning and conclusions."

The world generally, including business men, is coming to believe that when college professors figure out a thing theoretically in these days there is likely to be something in their conclusions that can not be so easily dismissed from consideration. Moreover, the Western Union has not had twenty years of experience with "the best of these methods," for it has had no experience whatever with the best, and if the allusion is intended to be to the Wheatstone method, all that can be said is that although it is much better than the Morse, it has not been developed in this country because it is an automatic method. Its efficiency and accuracy are, however, below the requirements of automatic telegraphy as conceived by college professors and others.

Let it be understood, then, that only under the compulsion of successful competition will the telegraph monopoly adopt cheaper and high-speed methods. If such competition develops, as it surely will, and if the Western Union Company should attempt to meet it by introducing improvements, the conditions would be these:

(1) The company would be unable to get the use of the only known efficient and perfected system of high-speed operating.

(2) If it should attempt to get such a system it would find that the cost of patent rights and of new equipment would add so much to the burden of interest and dividend payments upon the increase of bonds and stock necessary to purchase them that the operative economies would be largely offset. The company can not now become competitive against a new company doing business on a reasonable basis of profit on necessary money investment. Hence we must look to other means for attaining cheap telegraphy. The Western Union is absolutely out of the race.

X.—Capitalization—The burden of excessive fixed charges.

The late Mr. Russell Sage once declared that a new company could enter the field, parallel the Western Union lines, and do profitable business at one-half the Western Union rates. This was said with no thought of the economies of new methods. The business is now done on an exceedingly small margin of profit, only 3.5 cents a message. The cost of sending a message by the Western Union is, however, no indication of the necessary cost of the service, as will be shown further on.

One reason for the excessive cost may be seen from an examination of the growth of the capitalization, as shown by the statement compiled some years ago by Prof. Frank Parsons, which is here given:

WESTERN UNION CAPITALIZATION.

Original investment	\$150,000
Original capital	240,000
Capital stock, 1852	385,700
Brownsville line, worth \$75,000, bought by issuing stock	2,000,000
1863 Western Union plant, worth \$500,000, stock	3,000,000
Stock dividends, 1863	3,000,000
Total stock, 1863	6,000,000

* In 1870 the chief electrician of the Western Union officially reported that he had proved the utter impossibility of attaining by any known means a greater speed than fifty to sixty words a minute automatically on 100 miles of line. The editor of the Scientific American declared, however, that he had in his possession a perfectly legible communication by the American Automatic system sent at a speed of 100 words a minute, from Washington to New York, 280 miles.

In 1873 President Orton of the Western Union conceded that the American Automatic would send an equivalent of about 36,000 words an hour over 300 miles of single wire, which would require eight Western Union wires and sixteen expert Morse operators.

"To the everlasting glory and honor of the discoverer of the telegraph, it should be remembered that Professor Morse gave to the world a well-nigh perfect system when his great brain evolved the entire theory, principle, and practice of telegraphy." (Telegraph Age, 1902, p. 229.)

"I know of no automatic system that can be employed to move the great telegraph traffic of the country so expeditiously and economically as is done by the present Morse." (Francis W. Jones, electrical engineer, Postal Telegraph Company, 1902.)

When Mr. Wanamaker was Postmaster-General he had occasion to know something of the subject and he said: "I have had enumerated perhaps a score of devices already patented for the purpose of cheapening and quickening the telegraph service, which find no use and no profit under the present conditions, but they can not get into operation with the field monopolized. The public can not have the benefit of this rare class of brains, nor can the inventors find a deserved remuneration for their work. The Western Union Company having control of the telegraph business has no use for devices which cheapen and quicken the telegraph service and warrant a claim for reduction of rates." At the same time the Hon. Charles Sumner said: "The Western Union has suppressed inventions. It has done so systematically."

It has been charged, and correctly I believe, that of all nationalities the American operator is at once the most proficient and the most prejudiced. He excels at the Morse, but will learn nothing else. * * * The three-keyed puncher of the Wheatstone system contains two keys more than the Morse operator cares to use. One has always been quite enough for him. (Edward A. Calahan, 1901.)

Stock to buy other lines	\$3,322,000
Stock dividends	1,678,000
Total stock, 1864	11,000,000
Stock dividends	11,000,000
Total stock, January, 1866	22,000,000
Stock to buy United States Telegraph Company, worth \$1,433,000	7,216,300
Stock for American Telegraph Company, worth perhaps \$1,500,000	11,833,100
Total stock, 1866	41,049,400
Stock dividends	5,060,000
Stock for American Union and Atlantic and Pacific companies (worth together about \$3,232,000 aside from the franchises), over \$23,000,000, but as Western Union already owned over \$4,000,000 of Atlantic and Pacific, the new issue was	19,080,000
Stock dividends	15,000,000
Total stock, 1884	80,000,000
Stock for Mutual Union, worth about \$5,000,000	15,000,000
Total stock, 1895	95,000,000

Since the above statement was compiled the issued stock of the Western Union Company has been increased to \$97,370,000, and in November, 1906, an issue of \$25,000,000 in bonds was authorized.

The total capitalization of the telegraph under the control of the two principal telegraph companies, exclusive of ocean cables, may be stated as follows:

TELEGRAPH CAPITALIZATION.

Western Union stock	\$97,370,000
Western Union funded debt	35,815,000
Western Union, other stocks	1,946,592
Postal Telegraph Company, 4 per cent	20,000,000
Total	155,131,592

The sum of interest and dividend charges against the two companies is, annually, as follows:

Western Union bonds, interest	\$1,420,061.00
Western Union stock, dividends	4,868,096.25
Postal Telegraph Company bonds, interest	800,000.00

Total annual payments—7,088,157.25

From the above it may be seen that the profits of the business must be large. Mr. Wanamaker said: "An investment of \$1,000 in 1858 in Western Union stock would have received, up to the present time, stock dividends of more than \$50,000, and cash dividends equal to \$100,000, or more than 300 per cent of dividends a year." Aside from the excessive amounts of stock issued when competing lines were taken over, partly used, no doubt, in payment for properties, it would appear that no stock has been issued for capital since 1858, until within the last two years through the sale of part of the last bond issue. Nevertheless, it seems the profits are not sufficient in these later days to pay dividends. Not only has it been necessary to obtain new capital, but to increase the charges for messages. The rate between New York and Philadelphia has been advanced from 20 cents to 25. Formerly the New York-Washington rate was only 25 cents. When business becomes large the costs of doing it ordinarily decrease, but it is different with the Western Union. Of course there are attempts at explanation, but they do not explain very well.

It seems desirable to give some illustrations of the great possibilities of profit from operating telegraphs without reference to the use of new methods. Some of us will remember when the Baltimore and Ohio Telegraph Company was in competition with the Western Union. It had a 10-cent rate on nineteen routes and was doing a profitable business. President Green said: "They came into the field to smash things, and they did." In reply to statements that the business was not profitable Mr. D. H. Bates, the manager of the company, declared that "The Baltimore and Ohio did make a profit in spite of its low rates, and that the Western Union succeeded in buying up the Baltimore and Ohio lines not because they were unprofitable, but because disaster overtook the road in other departments and it sold its telegraph business as the most available source of realizing the funds necessary to right itself."

At the annual meeting of the National Board of Trade, in January, 1888, Hon. R. W. Dunham, of Chicago, described the operations of a telegraph company doing business between Milwaukee and Chicago, and of which Mr. Dunham was a stockholder. The company began with a charge of 1 cent a word and within two years paid back to the stockholders 90 per cent of the money they had paid in. Then they reduced the rate to one-half cent a word, or 5 cents a message, and at this rate paid over 40 per cent on the entire stock. This went on for two years, and then "we doubled our stock from \$14,000 to \$28,000, making it one-half water, and still the result is the same, and from 25 to 40 per cent is still paid back on the 5 cents a message paid by the patrons." Such results with a business all the time under fire of fierce competition clearly prove the possibilities of a low tariff. This Milwaukee fact, together with the Western Union rates for Signal Service and press messages, points to the conclusion that a 10-cent rate would be more than sufficient, even with present methods. (The Telegraph Monopoly, Prof. Frank Parsons.)

"The Connecticut Telegraph Company, a small local concern capitalized at \$35,000, has for some years been paying 8 per cent in dividends, but in April it paid a dividend of 100 per cent, thus returning to its stockholders all the money put into the company. The circular accompanying the checks says that the business is uncertain and that, as this surplus has been accumulated, the management thought it would be well to make the shareholders good as to their investment. Future dividends, it is significantly said, will be less regular or certain." (Telegraph Age, 1906.)

From this the conclusion is irresistible that there is a large profit in the telegraph business without the use of improved methods at less than present rates, and that the cost of telegraphing is at least double what it would be to-day but for monopolistic control. It has well been said that "Under real competition consumers pay the actual cost of the service plus a moderate profit; under monopoly they pay the actual cost plus all the traffic will bear."

XI.—The Telepost Company.

This company, which is now constructing its first wire line for commercial business, proposes to enter the general field of telegraphy with the use of the best methods known to the art. It represents a new departure and will bring about radical changes, not only in the methods of operating, but also in the increased use of the telegraph by the people. Although the company is not yet engaged in the telegraph business, its operating methods are not experimental, and it is proper to recognize it now as a corporation to be seriously considered in this connection.

To avoid possible misconception concerning my personal relations to the Telepost Company, a matter of no public interest but which might be made a subject of unjust comment, I may be permitted to say that I am a stockholder in the company because of services rendered in connection with the Delany system before the company was formed, and have no more knowledge of the organization, resources, or plans of the corporation than is available to any person who may choose to make inquiries. My contention has always been that great improvements in telegraphy should not be controlled by a private corporation. Doubtless the Government will eventually take over the Delany and other useful inventions and give the public all the benefits. I submit herewith a report of an address recently given by Mr. Delany before the Franklin Institute. From this it will be seen that automatic telegraphy is not confined to high-speed operating, but is adapted to all ranges of speed. The one feature characterizing these adaptations is the great economy over all other methods.

XII.—Government ownership or control of public utilities.

Under this head is afforded opportunity to discuss academic questions and others of a quasi political or socialistic nature; but since there is no finality to arguments on these lines I propose to treat the subject from a purely commercial and practical standpoint. Opponents of government and municipal ownership refer to many conspicuous failures on record, particularly of undertakings in the industrial field. In the same way critics of cooperative enterprises select specific examples to prove false generalizations. In neither case are the arguments sound. They are unreliable and unconvincing because they do not deal with basic principles or causes. A business depends for success upon proper management. Such management is as readily available to Government as to private parties or corporations. Government has, indeed, exceptional means of administration and while these may be in some ways complex, cumbersome, and wasteful, these faults, which are minor and only incidental, can be corrected. Efficiency of service is more easily secured by opportunities for promotion for merit in Government service, and pensions for age, than by commercial establishments in which the workers are mere units in a machine, with suppressed ambition and hopeless of advancement.

But charges were brought against Government methods which should be squarely met, for they are not sustained by observation. It is said that Government business is not conducted economically, that private management is altogether better and more satisfactory to the public, and that it is impossible for official administration to compete with private methods. It may be true that private business is more exacting of service from employees, but that the economies resulting from this and in other ways correspondingly accrue to public benefit is not so clear. On the contrary, it can easily be shown that, with all its faults, Government administration of public utilities would be greatly advantageous to the public. (See quotation from Sir W. Preece, p. 4.)

No doubt political influence and wire-pulling does tend, to some extent, to demoralize Government service. Most of us are convinced there are some influential politicians with a disposition to interfere, for selfish purposes, with the competent administration of Government business. Such men care nothing for the efficiency of the public service, and strive to replace competent and trained officers or employees by ignorant incompetents. Unfortunately, we must reckon with this selfish, moral irresponsibility. But it is to be doubted if, in these later days, the effect of such pernicious activities is sufficient to greatly influence, certainly it can not fatally affect, the general efficiency of Government work. It is to be hoped that any argument tending to magnify the importance of the comparatively few instances of reprehensible political interference with Department administrations will be treated as involving assumptions to be emphatically resented. Certainly I am not prepared to admit as an outsider, and I do not think there is a Member of this House who believes, that the evils of political favor and graft are inherent in or inseparable from our institutions.

If it is true that in some ways Government business is not conducted with quite the same economy as well-organized private business, the difference between the actual cost of administering and operating telegraphs, including interest payments on a Government bond issue at 3 per cent, for example, representing the value of the physical properties, and the present charges under private management is so great that the relative administrative efficiencies are an insignificant consideration. Sooner or later the question of government ownership or control of public utilities must be comprehensively dealt with by Congress. For uncontrolled private ownership has recognized no responsibility to the public. There is no power exercised to-day so directly and strongly inimical to the welfare of all the people, as distinguished from the few beneficiaries, as the private ownership of public utilities, unless we specify also the private ownership of the earth. It has been shown that railroad magnates have regarded railroads as sources of private gain only. In no case have the charges for freight and passenger business been based upon reasonable earnings of the necessary capital investment engaged in construction, maintenance, and operation. In this connection one of the most exacting and monstrous and enormously profitable private monopolies, which has to a large degree usurped the functions which railroads should perform, is the express business. The charges for express transportation of merchandise are higher to-day than they were ten years ago. Where formerly the charge was 25 cents and the companies eager to get business, the charge to-day is 35 cents and deliveries are less prompt. This transportation business is conducted over rights of way granted by the people, and the public has a right to demand adequate and efficient service at reasonable rates, which will not be granted by private corporations.

Such facts stand clearly before us, indefensible, and of the highest public importance. They can not be indefinitely ignored; they are dangerous, for they are arousing public resentment, and unless we are to encourage the spread of anarchistic and disturbing socialistic teachings, such as are already gaining many followers, a remedy must be quickly applied. The facts are not new. They have been repeatedly and adequately discussed before committees of Congress, but it would

seem there has always been some influence strong enough to prevent action in behalf of the public. There seems to be no remedy for the extortions of public utilities except Government intervention in some form. The telegraph monopoly has increased its tolls. The Western Union Company has been so badly managed that an increase of rates became necessary to maintain dividend payments on a business enormously profitable. Here is a fine example of how the boasted economies of private management result in practice. The annual interest and dividend payments for the telegraph exceed \$7,000,000. This is in excess of the cost of a service conducted by the most ineffective and expensive method known. It is safe to say that it costs the people twice as much as they ought to pay.

I hope the time has come when this subject will be earnestly taken up and brought to a conclusion. It is worth any man's devotion of whatever powers he may possess to achieve a result so universally beneficial to the people of this country as the establishment of electrical communication by the best and cheapest means. It has been my thought for years. My desire is to be identified with such an effort, as closely as may be advantageous for the cause, to establish, with American inventions, the best Government telegraph in the world. Ours is the only important nation with its telegraph system under private control. In this respect we have ignored a constitutional obligation. (See, on this subject, Judge Walter Clark, 54th Cong., 1st sess., S. Doc. 205.)

XIII.—Means of effecting government ownership or control of telegraphs.

The simplest and most direct and probably the best way to establish a government telegraph system is precisely the plan that would be adopted by a private concern entering the field with an independent system. This would be to begin by constructing or leasing lines, later purchasing such wire facilities as it needs and can get on satisfactory terms from the old companies. Many telephone wires might be found immediately available for telegraph use. The advantage of new construction of lines with special regard for their permanence and adaptation to the use of new methods are very great. Existing telegraph lines comprise tall poles carrying as many wires as possible. Such lines are liable to damage from strains and storms. By the latter methods shorter and stouter poles would carry only the few wires necessary for a much larger volume of business at a greatly increased speed.

Government purchase of telegraph lines.—When government undertakes the telegraph business the private companies will offer to sell their properties, or such portions of them as are least valuable, for a large consideration. There is no objection to the purchase of good and desirable lines by the Government at a proper valuation, based upon cost of construction. But there is decided objection to purchase at any price lines that are not well constructed or that are not needed. Under the law of 1866 the Government is empowered to take over all the telegraph lines and properties at an appraised valuation. But it would be wasteful folly to purchase, even at bargain-counter prices, all the existing lines or all the apparatus owned by the companies. The Government, as representing the people who pay the bills, should expend no more for acquiring the properties it needs than it would cost to construct its own good lines and appliances sufficient for the needs of the service at the time.

But what about the immensely valuable rights of way, the franchises, and other intangible assets represented in outstanding bonds and capital stock? These obligations aggregate for the two companies about \$155,000,000. The law says nothing about these securities, and it is doubtful if the Government has anything to do with them. For although in the realms of high finance "securities" are bought and sold which represent no tangible values, the Government can not properly use public money except for the purchase of real property. It will be said that to carry out this policy in the purchase of the telegraphs would be destructive of large money investments. If investors in securities evolved, as shown on page 23, suffer loss it would seem to be only a logical result. By no fair reasoning can it be made the duty of Government to protect investors in inflated shares of stock. As regards franchises, they are not exclusive, therefore their value must be subject to competitive influences. The competition of the Telepost Company is certain to be ruinous to the old companies, since they can not possibly meet the rates of automatic operating for the general business of the country. But in this connection, disregarding any competition based upon the use of improved methods, we should recall the remark of Russell Sage, that a new company could do business at half the Western Union rates (p. 23). But small value can therefore be claimed for the franchise rights of the present companies.

Special service and private wires.—Referring to the statement of President Green (p. 14) that 46 per cent of the business of his company was stockjobbing and speculative deals in futures, it ought to be considered that this kind of business is the kind the Western Union has specially fostered, even to the extent of subordinating to it the regular commercial business. It is the only business that is done with telegraphic promptness, and presumably it is the most profitable. It may be questioned whether gambling in stocks and in agricultural products is to be allowed to continue, but if so it certainly ought not to be conducted by the use of Government telegraph wires any more than should horse racing events be delivered to pool rooms. My proposal is, therefore, to leave the whole of this gambling business in the hands of the private telegraph companies, under Government supervision only, taking from them the legitimate commercial business and general correspondence by wire. This would leave to the present companies one-half the business now done, and presumably the more profitable half, and with this they might easily make a readjustment of their finances and avoid the more serious losses which would inevitably result in a short time from strong competition.

Government control of telegraphs.—There seems to be a growing sentiment favoring government supervision over corporate business. Many persons opposed to the principle of government ownership favor Federal control. Certain of the larger corporations have also signified approval of it, but seemingly under the impression that it practically tends to eliminate competition, which must be an error. While govern-

* When it became known that the British Government proposed to take over the telegraph business there was great booming of stocks of the telegraph companies, some of which were quoted at extraordinary prices. It is difficult for government officials to defeat such speculative activities when capital stock is to be bought instead of the properties or real values such stock is supposed to represent. The British Government paid five or six times the value of the properties purchased. The public certainly derived much benefit from the change of management, but the overvaluation imposed heavy burdens, while large amounts have since been expended every year in improvements and extensions, so that the charge for telegrams is higher than on the Continent.

* See statement of Romyn Hitchcock, Postal Telegraph System. Report of Industrial Commission on Transportation (Vol. IX, 890).

ment control may be corrective or preventive of some forms of wrongdoing, its functions in this direction would seem to be only supplementary to courts of law. The conditions with us are not quite the same as in some countries abroad, for our great corporations are operative under State charters. There are very narrow limitations to the effectiveness of government control under such conditions. It would seem that the only sound basis for government activities in relation to private business is to protect the public in the purchase of goods against corporate greed and extortion. Government control of private business can have no other purpose than to provide goods for public consumption at actual and necessary costs plus a fair, competitive profit on the properly engaged capital; and if this single purpose is accomplished, all the evils which characterize the methods of corporations will necessarily be self-corrective.

One element which now enters more or less, sometimes very largely, into the cost of production of goods by great capitalistic organizations, is no proper element of cost and does not appear in business conducted by individuals or copartnerships. It is an anomalous and intolerable condition that the money actually utilized in the legitimate business of a corporation, the capital invested in cost of real estate occupied, machinery, materials, and engaged as working capital or for other necessary purposes (the only capital that would be contributed by a copartnership), must divide its earnings with other capital not engaged in the business, which has not added to the assets, resources, or earning capacity of the corporation, but only to its nominal book liabilities. This extraneous, unavailable, useless capital is represented in overcapitalization, in water stock, and imposes an eternal, unnatural, reprehensible tax upon almost every great incorporated industry in the land, which must be paid by the public in the form of an increase in the price of goods. The amount of this overcapitalization is some thousands of millions of dollars. The additional charge for goods is necessary to pay dividends to capital that has done nothing, but is invested in stocks that have been issued, not for the benefit of the corporation, but for private gain.

It is not within the power of the Federal Government to directly attack this monstrous evil, for it has been sanctioned and legalized by the corporation laws of the several States. Hence this unnecessary, extraneous element becomes virtually inherent in production costs, making the net cost of goods to a highly capitalized corporation actually greater than it would be to an individual producer or copartnership operating with the same facilities.

Applying these considerations to the telegraph, we find that the combined capitalization of the companies precludes the possibility of adequate reduction in tolls through government control. We can not get away from annual interest and dividends of over \$7,000,000. Referring to the figures on page 23, it is startling to learn that the total investment in Western Union by stockholders, including the amounts paid into the treasuries of all the companies taken into the fold, has been estimated at not over \$16,000,000. The business is therefore exceedingly lucrative. It is not possible to say what is the present value of the properties; but the Government would not be justified in undertaking control of the business of the two companies if it involves an obligation to maintain payments on stocks and bonds aggregating \$155,000,000 or more. It would be infinitely better to issue 3 per cent bonds for a new system throughout, for bonds can be redeemed out of earnings and the interest payments would soon come to an end.

As an appendix to the remarks of Mr. Hitchcock, I would like to insert an article entitled "The Telepost System," delivered by Patrick B. Delany, before the Franklin Institute in Philadelphia, January 15, 1908:

APPENDIX.

THE TELEPOST SYSTEM.

Patrick B. Delany, the well-known telegrapher and inventor, read a paper before the Franklin Institute, Philadelphia, on January 15, 1908, in which the telepost system of automatic or machine telegraphy, the invention of Mr. Delany, was discussed at length. He said in part:

"As you all know about the ordinary Morse system, comprising the relay, sounder, and key, it will be easy to understand the modifications by which it is proposed to improve Morse working, to the extent of quadrupling its present message capacity, whether the wire be used for simplex, duplex, or quadruplex transmission. In these days it is hardly worth while, however, to include the Morse quadruplex in any practical estimate, as its day is about done, owing to increasing underground construction and inductive interferences from power wires. Wherever operable, however, the ratio of gain will hold.

"The president of the Western Union Telegraph Company stated publicly last April that 99 per cent of the messages handled in this country were still transmitted by the old-fashioned Morse key, at a speed averaging seventeen messages an hour, and stated also that this was considerably less than the speed of several years ago. Allowing thirty words for each message, including address, date, and signature, this shows an average of nine words per minute per circuit. Thus it seems that while the transfer of energy over a wire in another department of electricity has been increased from a few hundred volts to 75,000 within the last twenty years, the transfer of words has fallen off during the same period and is now about one-fourth of what a wire is able to convey.

"Up to a few years ago there was strong opposition on the part of telegraph companies to the preparation of messages on tapes preliminary to their transmission, but it is now conceded that in no other way can the speed of a circuit be appreciably increased, and the perforated tape is coming into use even for unimportant advances in telegraphy.

"Four operators may be employed in perforating tapes by Morse key at the rate of twenty-five words per minute each, and the product of their united work sent through the mechanical transmitter and reproduced on a perforated tape at the distant station. This tape is then distributed among four local circuits where a perfect reproduction of the original characters are ticked off on the sounder and copied on the typewriting machine by the operator, just as if the characters were coming over the wire from the operator's key direct. As a matter of fact, the original manipulation of an operator in preparing the message is greatly improved by the perforating process, since all impulses, whether regularly or imperfectly made by the operator's key, make the same sized hole in the tape. The impulses over the line must therefore be all uniform. Of course, the variations in length of dashes or spaces will be faithfully duplicated on the receiving tape, but the evenness of impulses passing over the line from the uniform perforations greatly improves the general quality of the work. Obviously, the original preparation of the message and the transcription by sound may be carried on at any rate that the operator is capable of perforating

or reading by sound. For instance, a keyboard Morse transmitter can be used for perforation at fifty words per minute, there being no interruptions incidental to a line, and no operator at the distant end to limit manipulation by the perforating operator. Similarly, the operator reading by sound from the reproduced tape at the receiving station may regulate the speed of his tape to any speed that he is capable of reading and working his typewriter, and may confirm any doubtful word by looking at the perforation. Of course, transcription may be done by reading from the tape direct by those not proficient in reading by sound.

"An inexperienced operator at some way station may perforate 10 words per minute, the message goes over the line at 100 words per minute and is transcribed by sound, locally, at the receiving station at 25 words per minute. Ordinarily, if this message was sent directly over the line the entire use of the wire would be monopolized by the slow operator.

"For through business, New York to San Francisco, for instance, a tape can be reproduced in Buffalo and used for retransmission into a Chicago circuit, where another reproduction can be used for transmission to Denver, then again reproduced at Salt Lake, and finally at San Francisco, at 100 words per minute, as against an average of about 12 words by the present Morse method, using five or six automatic repeaters. Instead of perforating tapes, repetition may be effected by the movement of the perforating levers, or perforation and repeating may be done simultaneously at any station. Duplexed, this system would yield 200 words per minute in perfect Morse and without the slightest deviation from the regular Morse method, the sender working his key and the receiver copying by sound, while the message capacity of the duplexed wire is increased from about 40 words per minute to 200.

"A most important application of this system will be for the distribution of press news. Drop copies can be made at 100 words per minute at thirty or forty way offices, either perforated on a tape for operation of a local sounder at any speed desired or recorded in plain dots and dashes for deliberate transcription by those who can not read by sound. A linotype operator knowing the Morse code will be able to compose directly from the tape. The reproduced perforated tapes may be used for retransmission over other circuits, so that a news dispatch perforated in New York may be distributed all over the country and newspapers now too poor to buy press matter may be supplied at a nominal charge.

"Coming now to the system of rapid automatic telegraphy, or the 'telepost' which records 1,000 words per minute in plain Morse characters, the electrostatic capacity of a line is its capacity to hold current, and this capacity has to be satisfied before a signal can be manifested at the distant station, and the charge left in the wire after the signal has been delivered must be discharged to ground or neutralized by a reverse current before another signal can arrive. The electrostatic capacity of the wire is increased by its envelope, whether it be air or insulating material. The static discharge after each impulse runs out at the ends of the wire, about two-thirds coming back to the sending station and one-third following the signal impulse on to the receiving station. The portion coming back is an obstacle in the way of the next signal, and the portion running out has the effect of elongating the signal which it follows, and if the signals are too close together and the wire long enough, they will appear on the recording tape as a solid line without definition, so that letter p, comprising five dots, would look like letter l, which is a long dash. The remedies for this very troublesome obstacle in the past have been transmission of reverse impulses after each signal, so as to neutralize the static discharge in the line, or connecting the line to ground after each signal, so as to let the static run out. Another way was to put artificial leaks or partial grounds at different points along the line and work over them by surplus power. The first of these remedies is the only one that is practically effective, as the static discharge can be neutralized in about one-tenth of the time taken for its discharge to ground.

"In this system three very important factors are combined for obtaining the best result from a telegraph circuit: First, a positive current sufficiently powerful to make the record electro-chemically in the shortest possible time; second, a regulable source of electrostatic capacity for use where the normal capacity is not enough to make a dash; third, adapting the power of the negative current to the electrostatic capacity of the line, normal or artificially augmented, to give the record the maximum plainness consistent with safe separation of the characters, so as to make transcription easy and accurate.

"It is thought that in this organization is reached the highest signaling efficiency for all conditions of lines—overhead, underground, long or short. There are no electro-magnets to energize, no armature to actuate, no inertia to overcome, or electro-mechanical work to do. The chemically prepared tape is a part of the circuit, and the characters are made simply by the current passing through it. Once installed on a line, there is practically no adjusting to do. A change in weather conditions sufficient to put out of operation any electro-magnetic system does not seriously interfere with the electro-chemical. Half the current might be suddenly diverted during transmission without loss of any of the characters. The record would be fainter, but no impulses would be missing.

"The system can be superimposed on a telephone circuit and worked simultaneously with telephony at about two-thirds of its independent speed.

"While our time has been taken up altogether with the main electrical methods, it may be said that there are numerous features of operation and control which are indispensable for practical commercial telegraphy. The demonstration will show that as the tape bearing the message comes from the perforator it is automatically wound upon a reel, and whether there be one or a dozen messages, or 500 words of press, the tape is a single unit and goes through the transmitter last and first.

"At the receiving station the tape is also wound upon a reel, which brings it right end first for transcription. The received tape is drawn in plain view of the transcribing operator by means under his own control, not continuously moving, but in fixed stops, so that it is at rest while being read. The receiving machine is under control of the transmitting station. When the transmitting lever is put down to start the tape an impulse is sent which starts the receiving tape. When the transmitting tape runs out another impulse is automatically sent which stops the receiving tape. Should the receiving operator wish to stop the transmitting machine he can do so, and the transmitting operator can stop the receiving machine at any stage. Should the wire come accidentally in contact with another both machines would be thrown out of operation.

"It is only by the utilization of the full facilities of a wire that a telepost service can be established. Cheap rates are impossible at 9 words a minute. At 500 to 1,000 words per minute the charges can be

brought to apply to ordinary correspondence now sent by rail. When a letter of 50 words filed in the telepost office in Philadelphia can be dropped in a post-office in Chicago or any other city within half an hour for 25 cents, an enormous traffic will be speedily developed. It will be entirely feasible for business houses or newspaper correspondents to compose their letters or reports on a tape in their own offices by keyboard machine, send the tape in a roll to the telepost office, where it will be forwarded without delay, and have the record tape delivered to the party at the other end for private transcription. In this way correspondence would be absolutely private, for, if desired, the perforated tape could be returned to the sender. Here the telegraph toll would be merely nominal.

"There is nothing now between the high-priced telegram and the 2-cent stamp, of which over \$100,000,000 worth are used yearly. The argument of the telegraph companies has been that telegraphing is an emergency business. People only use it when compelled to, and then are willing to pay the price. This position is in strong contrast with every other art or industry, and must surely give way to a more enterprising policy, and all correspondence of any importance whatever will be telegraphed. Words will go by wire instead of by train. To restrict the use of a wire by working it at from 9 to 40 words a minute when it is capable of carrying 1,000 words is wasteful.

"To put a letter in a bag, cart it to the train, haul it a thousand miles, and then cart it to the post-office, is slow. Between those two methods of communication it is thought there is room for the telepost."

During the lecture 100 words per minute were transmitted from a perforated tape and reproduced in perforations at the receiving end of a 500-mile artificial line. The received tape was then run through a local sounder circuit, yielding perfect Morse at speeds ranging from 10 to 60 words per minute. Over the same line by the rapid automatic or telepost system 1,000 words per minute were plainly recorded in Morse characters on a chemical tape.

Investigation of Controversies Between Capital and Labor by Commissions Appointed by the President.

We are asked to pass a bill that the people or the press of the country have not petitioned for; one that is of great importance to both capital and labor, yet neither has been heard in its favor.

SPEECH

OF

HON. WILLIAM H. RYAN,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. RYAN said:

Mr. SPEAKER: In opposing this bill I am fully aware of the responsibilities I assume, but being firmly convinced of the correctness of my position I will proceed.

This, to my mind, is a peculiar situation, but Congress has had many queer conditions in the last few years.

The country has run a mighty hard race, from San Juan Hill to phonetic spelling; we have seen the legend "In God we trust" stricken from the coin of the realm and children cast aside their dolls for "Teddy bears."

That Congress has refused to answer the demands of the people for legislation none can deny. Petitions for revision of the tariff have been presented from every district in the country, and yet those in control of this House deny the demands of the people, while all must admit that the demands are justified.

The demands of labor, as pointed out many times this session and fully set out in labor's protest to Congress presented a few days ago by the representatives of national and international trade and labor unions and organizations of farmers, are still pending.

Financial legislation, demanded on all sides, has given rise to an endless discussion of proposed measures, and the enactment of a law that was bitterly opposed by men who have made finance a life study.

We are asked, however, to pass a bill that the people or the press of the country have not petitioned for, that is of great importance to both capital and labor, yet neither have been heard in favor of it.

NO DEMAND FOR ARBITRATION LAW.

Mr. Speaker, in the time that I will occupy I will endeavor to show that there is no demand for the pending bill either by employers, employees, or the public, that it will serve no good purpose, and ought not to pass.

The bill provides—

That whenever a controversy concerning wages, hours of labor, or conditions of employment shall arise by reason of which controversy the free and regular movement of commerce among the several States and with foreign nations is, in the judgment of the President, interrupted or directly affected or threatened with being so interrupted or directly affected, the President may, in his discretion, inquire into the same and investigate the causes thereof, in accordance with the provisions of this act.

The bill provides, further, that the President shall appoint a special commission, not to exceed seven in number, of persons

with power, to require in each case, before said commission, the attendance of witnesses, the production of books, papers, documents, and so forth, and with authority to employ experts.

Further, that having made such investigation and ascertained the facts connected with the controversy into which it was appointed to inquire, the commission shall with all convenient dispatch formulate its report thereon, setting forth the causes of the same, locating, as far as may be, the responsibility therefor, and making such specific recommendations as shall in its judgment put an end to such controversy or disturbance and prevent a recurrence thereof, suggesting any legislation which the case may seem to require.

It is also provided that the Secretary of Commerce and Labor shall provide suitable offices, and so forth, and incidentally that each commissioner shall receive not to exceed \$30 per day and all expenses.

Mr. Speaker, this bill was pending during the Fifty-ninth Congress, and the only persons examined at the hearings held on the bill were Hon. James R. Garfield, the Commissioner of Corporations, in the Department of Commerce and Labor, and Hon. Charles P. Neill, Commissioner of Labor, same Department.

An article favoring legislation of this character, from Charles Francis Adams, was submitted by the gentleman from Michigan [Mr. TOWNSEND] and a draft of a bill by Mr. John P. Palfrey, of Boston, Mass. This is all of record that was obtained by the Committee on Interstate and Foreign Commerce on this important measure.

It was understood that the bill would not be called up in the House last Congress; it was allowed to die. Practically the same bill, without any additional investigation, was reported at this session, and we are asked to pass it, and not 10 per cent of the Members of the House have given it any consideration.

In order to show to the House that there is opposition to this bill, I will read a letter I received from Mr. Samuel Gompers, president of the American Federation of Labor, which letter I read to the committee before the bill was reported:

WHAT LABOR'S REPRESENTATIVES SAY.

AMERICAN FEDERATION OF LABOR,
Washington, D. C., January 27, 1908.

Hon. WM. H. RYAN, Washington, D. C.

DEAR SIR: Having been asked to express my opinion upon H. R. 4857, introduced by Mr. TOWNSEND on December 5, 1907, first session of the Sixtieth Congress, I submit the following:

Ostensibly the bill has for its purpose the investigation of controversies affecting interstate commerce by commissions appointed by the President. As a matter of fact, it goes much further. No one will pretend to say that all disputes, controversies, or strikes between employees and employers are unjustified, unnecessary, or that they have not been beneficial in their results, and yet section 7 of the bill provides that the commissions shall, in addition to formulating their report, set forth the causes of the controversies, locating the responsibility therefor, and make specific recommendations to "put an end to such controversy or disturbance and prevent a recurrence thereof, suggesting any legislation which the case may seem to require."

Section 6 gives the Commission power to employ experts to examine accounts, books, or official reports or "to examine and report on any matter material to the investigation;" in other words, with certain other provisions of the bill, make it possible for a "dragnet" investigation to be gone into which astute counsel for corporations may demand. It is true that on the surface this is apparently impartial in its application, but, on the one hand, corporate employers particularly have the adaptability to so formulate their procedure as to avoid or evade the technical matters coming within the purview of the investigation of such commission, while, on the other hand, workmen and workmen's organizations usually state plainly and bluntly the things they undertake to do. In the first case it may be the secret arrangement of a few; in the other it is the actions and declarations of vast numbers, which, however discretely declared and decided, must of necessity be an open act.

Section 4 makes an apparent impartial provision—that is, the parties to any controversy shall be entitled to be present in person or "by counsel." It is seldom that organizations of labor can avail themselves of counsel of the first class. Yet these are always available to employers and great corporations.

In the history of the administrations of the industrial courts of arbitration in Australasia one of the great causes of complaint has been the very fact of the appearance of counsel in cases coming before the courts, and yet the right to appear by counsel in any procedure can not be very well denied.

Section 5 vests the commissions with the same powers and to a similar extent which obtain "under the same conditions and penalties" as are vested in the Interstate Commerce Commission. When it is borne in mind that any cases coming before the Interstate Commerce Commission penalties imposed having thus far remained uncollected, and that in cases in which workmen are involved they have been compelled to suffer imprisonment, it is not difficult to discern how in practice provisions of this character would militate against the workers.

The law passed by the Canadian Parliament for the compulsory investigation of controversies between workmen and employers is subject to much adverse criticism. It is still too young in its operations to admit of justified final judgment.

The compulsory arbitration law of New Zealand and other Australasian countries is admitted to be a failure of its purpose. Owing to the determined attitude of organized labor, we have in the United States escaped the enactment of a compulsory arbitration law in many States, and perhaps in the United States. Employers have generally agreed with labor as to the undesirability, the ineffectiveness, and the injustice of such a law, and I have not any hesitancy in declaring my belief

that such a bill as the one under consideration simply means the fore-runner of an attempt at compulsory arbitration by law.

You asked me for my opinion of the Townsend bill. I have crowded in the above a few of the thoughts which I have upon the subject. I am so overwhelmed with other important duties requiring my immediate attention that I can not enter into a fuller discussion of the subject.

Very respectfully, yours,

SAMUEL GOMPERS,
President American Federation of Labor.

AMERICAN FEDERATION OF LABOR,
Washington, D. C., March 23, 1908.

Hon. WILLIAM H. RYAN,
House of Representatives, Washington, D. C.

DEAR SIR: A month or two ago, having been asked to express my opinion upon H. R. 4857, introduced by Mr. TOWNSEND, I wrote to you at considerable length upon the subject dealt with in that bill.

In addition thereto I desire to say that a friend of mine having the same subject in mind addressed a letter to me in the nature of a protest against the passage of the Townsend bill or the principles involved in it, and because it is so pertinent let me quote what he said:

"The open door to compulsory arbitration is the official investigation and report; that is, official arbitration by the Government. The only plausible argument for officialism in labor disputes is the creation, or manufacture, of 'correct' public opinion as to the merits of each dispute as it arises. It is said not to be the design of the advocates of officialism to decide such controversies, but only to investigate and report, thus giving publicity to the facts. But to make a public report in such cases will necessarily involve the passing of judgment. How will these ex cathedra judgments be colored? With the press in the hands of capitalists and the official investigators holding office through political influence emanating from political bosses or political power behind whom are the large employers of labor, could labor expect a proper consideration of its side or a fair presentation to the public of its contentions? Would not the bureau or commission become a sort of capitalistic or commercial priesthood?"

"Such a law would be either thus perverted and turned against labor, or it would be a dead letter. In either aspect of the case it should be opposed."

"There can be no arbitration except where the disputants mutually and voluntarily consent. The initiative should be private, not official. Voluntary arbitration, the only sort that is worth mentioning, is being resorted to almost every day. For this no law is needed. Here the Government—that is to say, political power—should keep its hands off. Moreover, any such law, if resisted, would fail to stand the test of constitutionality."

"But let the bureau, commission, or whatever it may be called, be once established, even if without compulsory jurisdiction, and a cry will at once be set up for power to enforce its decrees. Therefore the description of official investigation and report as the open door to compulsory arbitration is correct."

Now, as to arbitration boards or compulsory arbitration, let me say that organized labor of the United States has from the first opposed the policy or principle of compulsory arbitration, for compulsory arbitration is nothing more nor less than compulsory abiding by the award rendered by the arbitrators.

We hold that to enforce an award against employees, backed up by the law and by the Government, is confiscation. On the other hand, the enforcement of an award by law and by the Government, when such an award is against workmen, involves compulsory enforcement of involuntary servitude; in other words, slavery. And let me add that experience has demonstrated the soundness of contention of the working people of the United States. The compulsory-arbitration law of New Zealand and other Australasian countries is admitted to be a failure of its purpose.

About ten years ago a Mr. Lusk came to the United States, and for months entered upon a campaign to convince our people, particularly the employers, that they should follow in the course of New Zealand and adopt compulsory arbitration. It was my privilege at the time to be present on one of the occasions when Mr. Lusk was addressing an influential public meeting. I took the issue with him, and though made to bear the brunt of adverse criticism by the opponents to our movement and through a portion of the public press, the position I took was thought compelling.

For several years we had to meet the advocates of compulsory arbitration in the various legislatures and in the United States Congress, as well as upon the public platform. A turn in the tide of opinion came and employers generally agreed with labor that compulsory arbitration should not be made part of our economic or political system—that is, compulsory arbitration by the State or nation. Owing to the attitude of organized labor we have therefore escaped the enactment of compulsory-arbitration laws in the States and in the United States. Employers and those having the better understanding of industrial conditions and the industrial relations of employer and employees saw the undesirability and ineffectiveness and, above all, the injustice of such a law.

Organized labor believes in a policy of conciliation and arbitration, but believes in arbitration only where conciliation has failed, and it contends that arbitration when entered into should be voluntary, and voluntarily and faithfully abiding by an award rendered; that this is the only method to obtain and maintain the largest degree of industrial peace consistent with human liberty.

I should add that we believe in an investigation of some of the industrial disputes and controversies which arise, but I am fully persuaded that the fullest advantages and best results with the least injury to the people and their rights would accrue from unofficial or quasi-official investigation, rather than investigations conducted by a commission created by law with power, with penalties, punishments, and what not.

It is exceedingly interesting to note to what extent some men want other men to do by law, and let me add that I have no hesitancy in declaring my sincere convictions that such a bill as the Townsend bill simply means the forerunner of an attempt at compulsory arbitration by law with all that that implies.

Very respectfully, yours,

SAM. GOMPERS,
President American Federation of Labor.

Mr. Speaker, those letters, it seems to me, should be sufficient to warrant this House to go slow.

PRESENT LAW ADEQUATE.

There is now on the statute books the law of 1898, known as the "Erdman Act," bearing on this very question.

In the act creating the Department of Commerce and Labor the Bureau of Corporations is authorized to investigate corporations engaged in interstate commerce. In the same act the Bureau of Labor is given authority to investigate individuals or partnerships—all power necessary to proceed unless it is desired to provide for compulsory arbitration.

That there may be no doubt as to how the organizations of employees of railroads look upon this proposed legislation I will read a letter I hold in my hand, signed by Mr. H. R. Fuller and Mr. M. N. Goss:

ORGANIZATIONS OF RAILROAD EMPLOYEES.

WASHINGTON, D. C., March 17, 1908.

Hon. W. H. RYAN, M. C.,
Washington, D. C.

DEAR SIR: On behalf and by authority of the Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen and Enginemen, Brotherhood of Railroad Trainmen, and Order of Railway Conductors, we earnestly and respectfully express the opposition of these organizations to the passage of House bill No. 15447, entitled "A bill for the investigation of controversies affecting interstate commerce, and for other purposes," our reasons for such opposition being expressed in the attached letter bearing the signatures of the chief executive officers of the above-named organizations.

Respectfully submitted.

H. R. FULLER,
Legislative Representative Brotherhood of Locomotive
Engineers, Brotherhood of Locomotive Firemen and
Enginemen, Brotherhood of Railroad Trainmen.
M. N. GOSS,
Legislative Representative Order of Railway Conductors.

WASHINGTON, D. C., March 16, 1908.

MESSRS. H. R. FULLER and M. N. GOSS,
Legislative Representatives, Washington, D. C.

GENTLEMEN: For the members of the organizations we represent you are authorized to oppose the passage of H. R. 15447, a bill for the investigation of controversies affecting interstate commerce, and for other purposes.

Legislation such as this bill contemplates is not sought by the railway employees, and is otherwise objectionable. We believe that the bill tends toward compulsory arbitration, which principle we oppose. We are in favor of publicity in all things pertaining to the relations between capital and labor, and of any method or plan that is economically right that will minimize industrial warfare, but we do not any more believe in settlement of these questions under Government domination than we do in government by injunction.

We believe that there is now sufficient law on the subject. The law approved June 1, 1898, known as the "Erdman Act," provides adequate means for mediation, conciliation, and voluntary arbitration. Anything more would, in our judgment, be oppressive.

Yours, truly,

W. S. STONE,
Grand Chief Brotherhood of Locomotive Engineers.
J. J. HANNAHAN,
Grand Master Brotherhood of Locomotive Firemen and Enginemen.
A. B. GARRETTSON,
President Order Railway Conductors.
P. H. MORRISSEY,
Grand Master Brotherhood of Railroad Trainmen.

The Brotherhood of Locomotive Firemen and Enginemen, in the following resolutions adopted at a meeting held in Washington recently, reiterate their position in regard to the Townsend bill:

PETITION OF THE BROTHERHOOD OF LOCOMOTIVE FIREMEN AND ENGINEMEN.

PETITION OF THE Brotherhood of Locomotive Firemen and Enginemen praying for the enactment of legislation to require common carriers to equip their locomotives with automatic self-dumping ash pans; and also for the passage of the so-called "La Follette-Sterling employers' liability bill," etc.

WASHINGTON, D. C., March 31, 1908.

SIR: The undersigned, a committee representing a union meeting composed of 1,000 delegates representing the Brotherhood of Locomotive Firemen and Enginemen from thirty States, held at Masonic Temple, Washington, D. C., March 30, 1908, respectfully submit for the consideration of the Senate the following memorial adopted by said meeting:

"Resolved, That we favor the early consideration and passage by Congress of the Hemenway-Graff bill, requiring common carriers to equip their locomotives with automatic self-dumping ash pans, thereby doing away with the necessity of men exposing themselves to danger by being compelled to go under locomotives."

"Resolved, That we favor the passage by Congress of the La Follette-Sterling employers' liability bill, as against the Knox bill. The former being broad in its application and plain and explicit in its terms, thereby furnishing protection to a greater number of employees and their families, and being capable of intelligent understanding by those who would benefit by its provisions, while the latter bill is limited in its scope, less liberal to the employees, and contains principles which are experimental and untried in legislation, and which would not be understood by many affected by it."

"Resolved, That we are unalterably opposed to the passage of the Townsend bill, entitled "A bill to provide for the investigation of controversies affecting interstate commerce," as we believe said bill aims at governmental regulation and control of labor disputes, is a step toward compulsory arbitration, and therefore threatens our liberties, both as employees and citizens."

"Resolved, That we view with increasing alarm the steady and gradual encroachment upon our liberties by Federal judges through the abuse of the power of injunction in labor disputes, such power having already been extended so as to prevent workmen from striking and from

organizing. We protest against this abuse, and demand the passage by Congress of such legislation as will preserve to us our civil rights and prevent the abuse of such power in the future."

Respectfully submitted.

JOHN M. HALL,
WILLIAM A. CAHOON,
Committee.

ONLY VOLUNTARY ARBITRATION EFFECTIVE.

The only arbitration that can be effective is voluntary arbitration. The plan proposed here would be no more effective than international arbitration, and the current history of our country is the best evidence I can offer at this time of the extreme ridiculousness of that great question.

This Government is annually appropriating hundreds of millions for war purposes, our plans for attack and defense provide for land forces, fleets at sea, submarines, and war balloons, and yet we welcome with great pomp the peace gathering in New York, and annually have delegates representing this country at The Hague. It reminds me of the energetic policeman who, when a fight was imminent on his post, said, "There will be no fight. I will preserve the peace if I have to kill every man in the crowd."

In a work entitled "Capital and Labor," edited by John D. Peters and published in 1902, appears the following comments on this question by men whose opportunities to judge can not be questioned:

Samuel Gompers, president American Federation of Labor, says:

Arbitration is only possible when voluntary. It never can be successfully carried out unless the parties to a dispute or controversy are equals or nearly equals in power to protect or defend themselves. The more thoroughly the workers are organized in their local and national unions and federated by common bond, policy, and polity the better shall we be able to avert strikes and lockouts, to secure conciliation, and, if necessary, arbitration; but it must be voluntary arbitration, or there shall be no arbitration at all—voluntary in obedience to the award as well as voluntarily entered into.

It is our aim to avoid strikes, but I trust that the day will never come when the workers of our country will have so far lost their manhood and independence as to surrender their right to strike or refuse to strike. We seek to prevent strikes, but we realize that the best means by which they can be averted is to be the better prepared for them. We endeavor to prevent strikes, but there are some conditions that are far worse than strikes, and among them is a demoralized, degraded, and debased manhood. Let our attitude be misconstrued, we emphatically, and without ambiguity, declare our position. The right to quit work at any time, and for any reason sufficient for the workman himself, is the concrete expression of individual liberty. Liberty has been defined as the right to move freely from place to place. Hence any curtailment of this right, by or through law, or by and through contract enforced by law, is, in fact, a negation of liberty and a return to serfdom.

Mr. Gompers says further:

Unions of labor endow the workers with individual dignity and individual freedom. The unions prescribe a minimum living wage, not a maximum wage. They insist upon a living rate, and never hinder an employer from rewarding superior skill or merit, the charge of labor's enemies to the contrary notwithstanding.

American labor has been clearly demonstrated to be the cheapest in the world, in spite of the higher wages prevailing here; the cheapest because the most efficient, intelligent, alert, conscientious, and productive. American manufacturers have conquered the markets of the world and have defeated their competitors on the latter's own ground, and yet a sycophantic press would have the world believe that the most skilled, the most progressive American workmen, those organized into unions, have sacrificed their dignity and individuality and leveled themselves down to the least capable. Never was America's foreign trade so stupendous as now, and never was labor better organized or more alive to its interests than in our day.

Compulsory arbitration is the very antithesis of freedom and order and progress. On the one hand, it would mean confiscation of property; on the other it involves slavery; and the enforcement of either or both of these is the beginning of the end, the death knell of the industrial and commercial superiority of America.

JOHN MITCHELL.

John Mitchell, whom no one will deny has done a great work in improving the conditions of the United Mine Workers of America, is quoted in this work on this very question as follows:

Arbitration has been advocated by many eminent and worthy people for many years, but I am glad to note that the advocates of compulsory arbitration are growing fewer with each succeeding year, and that there is a corresponding increase in the number of those who favor voluntary arbitration. Arbitration, to be practical, to be beneficial, must be entirely voluntary. Compulsion and arbitration are in themselves contradictory terms; there can be no real arbitration that is compulsory, and were the people of our country forced to agree that arbitration should become compulsory, that penalties should be inflicted upon either the employed or the employing classes for a failure to accept the award of a board of arbitration, it would destroy every principle of free government, and I am free to confess that I know of no method by which compulsory arbitration could be adopted which would not mean the imprisonment of those who refused to accept the decisions of boards of arbitration, providing they were unable or unwilling to pay fines.

State boards of arbitration, created by our legislatures, have been tried in many of our States, and I believe that much good has been accomplished by such boards; but I am satisfied that they have accomplished good while acting as boards of conciliation, rather than as boards of arbitration.

In the State of Illinois we have a State board of arbitration, through whose efforts many strikes have been settled, and I believe that in a majority of cases this result was attained by the board exercising their power as conciliators.

Martin Fox, president of Iron Moulders' Association of America says:

I recognize, of course, that were it possible always to guarantee a tribunal to adjudicate upon a dispute which could and would do full justice to all interests, compulsion, both in arbitrating and in enforcing the award, could be justified. We know, however, that among men as at present constituted such a guaranty is impossible. We know, also, that there is not a perfect community of understanding among the classes upon what is called the labor problem. That being the case, it would be an extremely difficult matter to constitute a court of arbitration which would have the entire confidence of the interests involved, and hence to secure a court whose findings would be satisfactory.

I am strongly of the conviction that, in a country like the United States, where there are so many diverse interests, so many views, and so many instances in which the interests of capital are placed before those of labor, compulsory arbitration is thoroughly impracticable, and its principal is thoroughly obnoxious to the American citizen. The citizen can not afford to lend his assent to any governmental institution which, in the capacity of a court having power to enforce its award, could compel him to submit to conditions of labor which are obnoxious to him, under penalty of fine or loss of liberty.

COMPULSORY ARBITRATION IN NEW ZEALAND.

Australasia has been spoken of in connection with the arbitration question and the New Zealand law has been referred to as an example of how successful the law has been administered there and the good results following its enactment. I have some data here on that very point and I will show by competent authority that the law itself has failed of its purpose and that the conditions in that land are not similar to conditions here.

Hon. Carroll D. Wright, former United States Labor Commissioner, says on that point:

The experience of New Zealand is giving some impetus to the doctrine of compulsory arbitration, but the fact is, the experience of New Zealand can not be taken in any sense as a measure of what should be established in the United States. The industries of New Zealand are small and in their period of inception, while in the United States industry is organized on a large scale, with vast capital involved, large industrial armies employed, and the conditions of distances, of transportation, of cost, and of marketing entirely at variance with the conditions existing in New Zealand.

Taking another view of compulsory arbitration, it would seem that it must inevitably result in the destruction of trades unions. A union, a party to a suit in a compulsory court, must be able to sustain the penalty involved for a violation of the decree, either in damages, which must be met by a money payment, or in the loss of its charter. It is this particular condition which makes nearly all labor organizations in this country, especially those represented in the American Federation, antagonistic to the inauguration of a system of compulsory arbitration. Adverse decisions, the impossibility of obeying decrees of judgments, would mean inevitably the destruction of the unions involved and ultimately of trade unionism itself.

Thomas J. Hogan, general secretary of the National Association of Stove Manufacturers, says in relation to arbitration in New Zealand:

Compulsory arbitration has been suggested as a solution of the question, it being said to be in successful operation in New Zealand. While it may be a solution of the problem in that country, it is hardly possible that it will ever obtain to any extent in this country. It is opposed to the principles of individual liberty and at variance with the spirit of our Constitution to compel men's action contrary to their own will. There is no law to compel a man to work if he does not want to, nor to prevent a man closing down his works if he elects to do so.

The following from the pen of J. Gratton Grey shows the result of the attempt to settle disputes under the arbitrations of New Zealand and how it failed of its purpose:

In June, 1901, Mr. Ballance, premier of New Zealand and leader of Labor Liberal party, had established a labor department, with a minister at the head, and he appointed Mr. W. F. Reeves minister. Mr. Reeves had identified himself very considerably with labor interests, and had complained bitterly that the industrial classes had been scandalously neglected by successive administrations and Parliaments. Consequently, it was considered that no better selection could have been made, and Mr. Reeves justified the confidence reposed in him by the general mass of the people. Labor enactments followed in rapid succession, and besides this the labor department became a real live and useful institution of the state. While Mr. Ballance lived and Mr. Reeves remained at the head of the labor department an immense amount of good was done on behalf of the industrial classes; but after Mr. Ballance's death and Mr. Reeves's departure for London, abuses soon manifested themselves, and it is therefore much to be regretted that Mr. Reeves did not continue to control the labor department, as he would never have permitted the scandalous use that has since been made of it for political purposes.

RAILWAY EMPLOYEES' ORGANIZATIONS.

Mr. Speaker, at the present time all the railway employees' associations act more as arbiters than in any other capacity.

Their by-laws provide for an amicable settlement of all questions wherever such a settlement can be reached in an honorable manner.

The chief executive officers of these associations are frequently requested to take part in the conferences between officials of the railway companies and committees of employees by the railway officials themselves.

The officials who refuse to recognize the employees' associations now are in the minority and their number is constantly growing less.

It is obvious that where a company employs many thousands of men it is better for the employer to do business with them in an orderly way by means of committees than it is to attempt to do so by the individual plan.

The broad-minded operating officials of the present time openly state that they would not care to dispense with these associations. They claim in many instances that they are an absolute necessity for the proper administration of affairs.

They insure industrial peace by contract. They make wage questions easy to handle and furnish a means of settling other kinds of disputes that are inseparable from the business along strictly equitable lines. The committees enable the officials to get through with wage and grievance questions quickly, thus giving the officials more time to attend to other administrative duties.

Before the advent of these associations strikes were quite frequent and very disastrous in character. For reference see reports on Pennsylvania Railroad troubles in 1877, New York Central strike in 1888, Southwestern strike in 1886, American Railway Union strike in 1894, and many others. The present-day railway employees' associations were then in embryo, and their successful work was made possible by the mistakes made by other associations.

More settlements are made by these associations than the public is aware of. For instance, the Order of Railroad Telegraphers made fifty-nine amicable settlements in the year 1907, and the year was free from strikes as far as that association was concerned. The conferences are private, and the public does not hear about them.

The public hears about strikes, the worst feature in organization, but does not hear about the friendly settlements, the best side of organization.

It is constantly said that strikes are bad for the wage-earner. It may look so on the surface, but the fact is the reverse. Each strike is made so expensive for the employer that he sees the error and will do better next time rather than stand such another experience. The weakest organization on the railroads can teach its employer a lesson in ethics, and frequently does so.

If strikes were losing propositions for the employees, they would not be instituted, and the employees' associations would go to pieces because of it. The working people are more intelligent than lawyers and judges give them credit for, but they are not so thrifty and avaricious as the average employer.

The employer in the past has taken a greater part in the framing of laws than the employee; hence the statute books are full of speciously worded laws that favor the employer as against the interests of the employee. In other words, the rich have made the laws for the poor. But this phase is now undergoing a change, and the world is better for it.

The employee does not court favor or charity or special privilege. He does not want that which does not by right belong to him. He simply demands justice.

The truth is on the side of the worker, or he would have been crushed long ago. The employer has the best lawyers, writers, and purchasable brains in the country, while the worker can only confront them all with the naked truth.

RECENT COURT DECISIONS.

Mr. Speaker, organized labor in this country has been given some very hard raps recently. The decisions of the Supreme Court declaring unconstitutional the employers' liability act came first, then the Adair case was decided, where the court held the act of June 1, 1898, known as the "Erdman Act" unconstitutional in so far as it protected members of labor organizations from being discharged from their positions because of such membership, and soon after came the decision in the United Hatters case, where the court decided that the Sherman antitrust law applied to labor unions.

This record has fallen as a heavy blow on labor unions, and to add to this list the abuse of the power of injunction by the circuit courts, as evidence, in the order granted in the circuit court of the United States for the northern district of West Virginia, have aroused a righteous indignation among the wage-workers of the country, as the very existence of their organization is imperiled. This feeling resulted in the recent national conference of representatives of trade labor unions and organizations of farmers that was held in Washington and the presentation to Congress of labor's protest as follows:

LABOR'S PROTEST TO CONGRESS.

AMERICAN FEDERATION OF LABOR,
Washington, D. C., March 19, 1908.

We, the official representatives of the national and international trade and labor unions and organization of farmers, in national conference assembled, in the District of Columbia, for the purpose of considering and taking action deemed necessary to meet the situation in

which the working people of our country are placed by recent decisions of the courts, now appear before Congress to voice the earnest and emphatic protest of the workers of the country against the indifference, if not actual hostility, which Congress has shown toward the reasonable and righteous measures proposed by the workers for the safeguarding of their rights and interests.

In the name of labor we now urge upon Congress the necessity for immediate action for relief from the most grave and momentous situation which has ever confronted the working people of this country. This crisis has been brought about by the application by the Supreme Court of the United States of the Sherman antitrust law to the workers, both organized and in their individual capacity.

Labor and the people generally look askance at the invasion of the court upon the prerogatives of the law-making and executive departments of our Government.

The workers feel that Congress itself must share our chagrin and sense of injustice when the courts exhibit an utter disregard for the real intent and purpose of laws enacted to safeguard and protect the workers in the exercise of their normal activities. There is something ominous in the ironic manner in which the courts guarantee to workers:

The "right" to be maimed and killed without liability to the employer;

The "right" to be discharged for belonging to a union;

The "right" to work as many hours as employers please and under any conditions which they may impose.

Labor is justly indignant at the bestowal or guaranteeing of these worthless and academic "rights" by the courts, which in the same breath deny and forbid to the workers the practical and necessary protection of laws which define and safeguard their rights and liberties and the exercise of them individually or in association.

The most recent perversion of the intent of a law by the judiciary has been the Supreme Court decision in the *Hatters' case*, by which the Sherman antitrust law has been made to apply to labor, although it was an accepted fact that Congress did not intend the law to so apply and might even have specifically exempted labor but for the fear that the Supreme Court might construe such an affirmative provision to be unconstitutional.

The workers earnestly urge Congress to cooperate with them in the upbuilding and educating of a public sentiment which will confine the judiciary to its proper function, which is certainly not that of placing a construction upon a law the very opposite of the plain intent of Congress, thus rendering worthless even the very moderate efforts which Congress has so far put forth to define the status of the most important, numerous, and patriotic of our people—the wage-workers, the producers of all wealth.

We contend that equity, power, and jurisdiction, discretionary government by the judiciary for well-defined purposes and within specific limitations, granted to the courts by the Constitution, has been so extended that it is invading the field of government by law and endangering individual liberty.

As government by equity—personal government—advances, republican government—government by law—recedes.

We favor enactment of laws which shall restrict the jurisdiction of courts of equity to property and property rights and shall so define property and property rights that neither directly nor indirectly shall there be held to be any property or property rights in the labor or labor power of any person or persons.

The feeling of restless apprehension with which the workers view the apathy of Congress is accentuated by the recent decision of the Supreme Court.

By the wrongful application of the injunction by the lower courts the workers have been forbidden the right of free press and free speech, and the Supreme Court in the *Hatters' case*, while not directly prohibiting the exercise of these rights, yet so applies the Sherman law to labor that acts involving the use of free press and free speech, and hitherto assumed to be lawful, now become evidence upon which triple damages may be collected and fine and imprisonment added as a part of the penalty.

Indeed, the decision goes so far as to hold the agreements of unions with employers to maintain industrial peace to be "conspiracies" and the evidence of unlawful combinations in restraint of trade and commerce, thus effectually throttling labor by penalizing as criminal the exercise of its normal, peaceful rights and activities. The fact that these acts are in reality making for the uplift and the betterment of civilization as a whole does not seem to be understood or appreciated by the courts. The workers hope for a broader and more intelligent appreciation from Congress.

It is not necessary here to enter into a detailed review of this decision.

The workers ask from Congress the relief which it alone can give from the injustice which will surely result from the literal enforcement of the Sherman antitrust law as interpreted by this decision. The speedy enactment of labor's proposed amendment to the Sherman antitrust law will do much to restore the rights from which the toilers have been shorn.

We submit for consideration, and trust the same will be enacted, two provisions amendatory of the Sherman antitrust law, which originally were a part of the bill during the stages of its consideration by the Senate and before its final passage, and which are substantially as follows:

That nothing in said act (Sherman antitrust law) or in this act is intended, nor shall any provision thereof hereafter be enforced, so as to apply to organizations or associations not for profit and without capital stock, nor to the members of such organizations or associations.

That nothing in said act (Sherman antitrust law) or in this act is intended, nor shall any provision thereof hereafter be enforced, so as to apply to any arrangements, agreements, or combinations among persons engaged in agriculture or horticulture, made with a view of enhancing the price of their own agricultural or horticultural products.

It is clearly an unwarranted assumption on the part of the courts or others to place the voluntary associations of the workers in the same category as trusts and corporations owning stock and organized for profit.

On the one hand, we have the trusts and corporations, dealing with purely material things and mostly with the inanimate products of labor; on the other hand, there are workers whose labor power is part of their very life and being and which can not be differentiated from their ownership in and of themselves.

The effort to categorically place the workers in the same position as those who deal in the products of labor of others is the failure to discern between things and man.

It is often flippantly averred that labor is a commodity, but modern civilization has clearly and sharply drawn the line between a bushel

of coal, a side of pork, and the soul of a human, breathing, living man.

The enactment of the legislation which we ask will tend to so define and safeguard the rights of the workers of to-day and those who will come after them that they may hope to continue to enjoy the blessings of a free country as intended by the founders of our Government.

In the relief asked for in the proposed amendment to the Sherman antitrust law which we present to Congress labor asks for no special privileges and no exemption from the treatment which any law-abiding citizen might hope to receive in a free country.

Indeed, the present Parliament of Great Britain, at its session in December, 1906, enacted into law what is known as the "trades dispute act." It is brief, and we therefore quote its provisions in full:

"1. It shall be lawful for any person or persons, acting either on their own behalf or on behalf of a trade union or other association of individuals, registered or unregistered, in contemplation of or during the continuance of any trade dispute, to attend for any of the following purposes at or near a house or place where a person resides or works or carries on his business or happens to be—

"(1) For the purpose of peacefully obtaining or communicating information.

"(2) For the purpose of peacefully persuading any person to work or abstain from working.

"2. An agreement or combination by two or more persons to do or procure to be done any act in contemplation or furtherance of a trade dispute shall not be ground for an action if such act when committed by one person would not be ground for an action.

"3. An action shall not be brought against a trade union or other association aforesaid for the recovery of damage sustained by any person or persons by reason of the action of a member or members of such trade union or other association aforesaid."

We submit that if such relief from the onerous conditions brought about by the Taff-Vale decision of the highest court of Great Britain can be enacted by a monarchical government, there ought to be no hesitancy in conceding it in our own Republic.

The unions of labor aim to improve the standard of life; to uproot ignorance and foster education; to install character, manhood, and an independent spirit among our people; to bring about a recognition of the interdependence of man upon his fellow-man. We aim to establish a normal work day; to take the children from the factory and workshop and give them the opportunity of the schools, the home, and the playground. In a word, our unions strive to lighten toil, educate their members, make their homes more cheerful, and in every way contribute an earnest effort toward making life the better worth living. To achieve these praiseworthy ends we believe that all honorable and lawful means are justifiable and commendable and should receive the sympathetic support of every right-thinking American.

Labor asks only for justice. It asks that it be not victimized and penalized under laws never intended to apply to it.

We hope for a prompt recognition on the part of Congress of the wage-workers' very reasonable and moderate insistence in this important matter.

In addition, the other most important measures which labor urges are: The bill to regulate and limit the issuance of injunctions—Pearre bill. Employers' liability bill.

The bill extending the application of the eight-hour law to all Government employees and those employed upon work for the Government, whether by contractors or subcontractors.

There are other measures pending which we regard as important, but we feel especially justified in urging the passage of those mentioned, because they have been before Congress for several sessions and upon which extended hearings have been had before committees, every interest concerned having had ample opportunity to present arguments, and there is no good reason why action should longer be deferred by Congress.

We come to Congress hoping for a prompt and adequate remedy for the grievances of which we justly complain. The psychological moment has arrived for a total change of governmental policy toward the workers; to permit it to pass may be to invite disaster even to our national life.

In this frank statement of its grievances the attitude of labor should not be misinterpreted, nor should it be held as wanting in respect for our highest lawmaking body.

That the workers, while smarting under a most keen sense of injustice and neglect, turn first to Congress for a remedy, shows how greatly they still trust in the power and willingness of this branch of the Government to restore, safeguard, and protect their rights.

Labor proposes to aid in this work by exercising its utmost political and industrial activity, its moral and social influence, in order that the interests of the masses may be represented in Congress by those who are pledged to do justice to labor and to all our people, not to promote the special interests of those who would injure the whole body politic by crippling and enslaving the toilers.

Labor is most hopeful that Congress will appreciate the gravity of the situation which we have endeavored to present. The workers trust that Congress will shake off the apathy which has heretofore characterized it on this subject and perform a beneficent social service for the whole people by enacting such legislation as will restore confidence among the workers that their needs as law-abiding citizens will be heeded.

Only by such action will a crisis be averted. There must be something more substantial than fair promises. The present feeling of widespread apprehension among the workers of our country becomes more acute every day. The desire for decisive action becomes more intense.

While it is true that there is no legal appeal from a Supreme Court decision, yet we believe Congress can and should enact such further legislation as will more clearly define the rights and liberties of the workers.

Should labor's petition for the righting of the wrongs which have been imposed upon it and the remedying of injustice done to it pass unheeded by Congress and those who administer the affairs of our Government, then upon those who have failed to do their duty and not upon the workers will rest the responsibility.

The labor union is a natural, rational, and inevitable outgrowth of our modern industrial conditions. To outlaw the union in the exercise of its normal activities for the protection and advancement of labor and the advancement of society in general is to do a tremendous injury to all people.

The repression of right and natural activities is bound to finally break forth in violent form of protest, especially among the more ignorant of the people, who will feel great bitterness if denied the consideration they have a right to expect at the hands of Congress.

As the authorized representatives of the organized wage-earners of our country, we present to you in the most conservative and earnest

manner that protest against the wrongs which they have to endure, and some of the rights and relief to which they are justly entitled. There is not a wrong for which we seek redress, or a right to which we aspire which does not or will not be equally shared by all the workers—by all the people.

While no Member of Congress or party can evade or avoid his or their own individual or party share of responsibility, we aver that the party in power must, and will, by labor and its sympathizers, be held primarily responsible for the failure to give the prompt, full, and effective Congressional relief we know to be within its power.

We come to you not as political partisans, whether Republican, Democratic, or other, but as representatives of the wage-workers of our country, whose rights, interests, and welfare have been jeopardized and flagrantly, woefully disregarded and neglected. We come to you because you are responsible for legislation or the failure of legislation. If these, or new questions, are unsettled and any other political party becomes responsible for legislation, we shall press home upon its representatives and hold them responsible, equally as we now must hold you.

 J. F. McCarthy, Hotel and Restaurant Employees' International Alliance.

Mr. Speaker, the American labor unions are entitled to more favorable consideration than is here proposed. The American wage-worker is the bone and sinew of the land; he is the means by which the country excels in the world of trade; he is the one who, in times of danger, must bear the brunt of battle; the country's producer in times of peace, and its defender in times of war, he is entitled to a square deal, and every fair and reasonable opportunity for advancement should be given him. Instead of adverse legislation, he should be uplifted and encouraged, and no such legislation as is here proposed should be enacted.

Philadelphia—Mother of Patriotism.

SPEECH

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. MOORE said:

Mr. SPEAKER: On page 6038 of the CONGRESSIONAL RECORD the gentleman from Mississippi [Mr. WILLIAMS], in the course of a running discussion with the gentleman from New York [Mr. PAYNE], gives utterance to an assault upon the city of Philadelphia. It is a glancing blow, the like of which is frequently sustained by the kindly old person of good intentions who plays the part of peacemaker between an obstinate husband and a scolding spouse. The two great leaders of partisanship in the House were throwing stones, and peaceful, by-standing Philadelphia was struck by a flying missile. Since the gentleman from Mississippi, however, reflected upon the political integrity of Philadelphia, I can absolve him from any personal feeling against the standard of life in the city which, in part, I have the honor to represent.

The gentleman from Mississippi is too appreciative of fairness and truth to do an injustice to a great people whose traditions and achievements are foremost in the annals of our country. He makes it clear that his assault was political, having special reference to the purity of elections, and to that extent it may be fair to invite a comparison of the political methods that hold in the respective States of Mississippi and Pennsylvania.

WHERE IS THERE NO NOTE?

In a population which now reaches 7,000,000 who would be surprised that flaws may be found; that frauds may be enacted; that crime may prevail; that the infidel and the fanatic and the misanthrope may stalk abroad? Have we more of them in Pennsylvania in proportion to the population than are to be found in Mississippi? Does not the very growth of a community require provision for the protection of the lives and health of the people? Does not regulation follow logically the trend of increase in population, and shall we cease to grow and cease to prosper because, perchance, a theft is committed or a public official plays false to his trust? Is the rule different in any other State? Does not every State establish its reformatories, its prisons, its insane asylums? Does not every State maintain its courts for the enforcement of its laws? Why are they necessary in every State, as they are admittedly necessary in Pennsylvania?

True, in the matter of elections, Pennsylvania has suffered long and painfully from the shafts of critics beyond her borders. She has suffered at the hands of the anonymous letter writer and the claptrap orator; yet she has steadily progressed; improved her natural opportunities and created wealth for her people, a wealth that has placed her second amongst the States of the Union. Responding to the demand of her people she has taken advanced ground in the matter of suffrage, and in some respects has thrown about the voter greater safeguards than are vouchsafed in any other Commonwealth.

SAFEGUARDS FOR THE VOTER.

She has enacted a uniform primary election law which has done away with the old system of party conventions; she has enacted a personal registration law which prevents fraud upon the ballot by padding or impersonation. She has enacted, and enforces, a corrupt practices act which requires an accounting of all funds contributed or used for political purposes. Has she not purged herself of the charge of neglect of the rights of suffrage? What Commonwealth, indeed, has done better?

Were I inclined to pursue the inquiry further I would compare the method of voting in Pennsylvania with that prevailing in Mississippi. I would show that while but one political party approaches the polls in Mississippi a dozen parties contend for the mastery in Pennsylvania. I would show that if the election methods of the two States were reversed Pennsylvania would be entitled to 165 Representatives in the House of Congress upon the Presidential returns of 1904, and that if the average returns of the last Congressional election in Mississippi were accepted, Pennsylvania's representation in Congress would consist of 600 members. I do not chide the gentleman from Mississippi for the conditions that prevail in his State; I believe I understand them as few Northern Representatives do. Were it not for the temper of the gentleman's remarks, I would not refer to the matter at all.

WHY THE ASSAULT?

Quoting from the Record, the gentleman said:

Why, here is the good old City of Brotherly Love, just across the way here. I like it; have been there several times, and have been subjected to arguments of a persuasive character at banquets, but if politically there ever was a thing that was a stench in the nostrils of all humanity it is the boss-ridden, Republican city of Philadelphia. Why, it was such a bad smell that even the Republicans themselves could not stand it all the time, and they came together for a little while and threw it off, but later, like the dog, went back to their vomit.

Why so ungenerous a statement? Why need one so high in the councils of a great party, and so strong in his personality, give credence to the vaporings of slanderers whose intolerance and abuse have become so nauseating? I do not attribute to my friend the viciousness of the demagogue. He is too broad, too generous, and by instinct and association too courteous for that. Rather would I lay his expressions to the heat of debate and the aggravation which enters into the quarrels of leadership.

THE DISTRICT RANDALL SERVED.

A new Member of this House, sent forward by a district the historic importance of which is not exceeded by any other, the old Third District of Pennsylvania, in which the Declaration of Independence was signed, and which for many years sustained its reputation for political fairness by sending to this House the distinguished American statesman and Democrat, Samuel J. Randall, I had entertained the hope that the day would come when, laying aside the prejudices of the past, the younger Members of Congress, without regard to section, might forget the asperities of their elders and make common cause for the improvement of our resources and the happiness of our people wherever found. That sentiment I have more than once endeavored to encourage in this House. It has given rise to friendships formed with Members upon the other side; friendships which I treasure and shall continue to cultivate; friendships which lead me to believe that a frank resentment of a slur upon my own constituency could never violate the manhood or the chivalry of any State.

ABUSE MAY FALL ON ANY STATE.

The gentleman from Mississippi, following up his unhappy reference to Philadelphia, added these words, words which, in my judgment, have no greater application to his own constituency than to any other. They illustrate more than anything I can say the injustice of promiscuous abuse and the proneness of all to err.

"There was a time in the history of my section," says the gentleman from Mississippi, "when there was intimidation and when there was fraud."

With this I close my reference to the remarks of the gentleman from Mississippi, recalling, in the hope that it may be agreeably entertained by him and his people, the motto of my city since the days of Penn—"Philadelphia, maneto"—let brotherly love continue.

THE OLD THIRD DISTRICT.

Mr. Speaker, since the opportunity has presented itself, I desire to present a few facts about the old Third District in the city of Philadelphia, and about that city itself. In October next, beginning on the 4th and ending on the 10th, will be celebrated the two hundred and twenty-fifth anniversary of the founding of the city. In 1682 William Penn, a sublime figure in American history, who framed a government for Pennsylvania, "fixed at the mercy of no governor that goes to make his fortune great"—landed from the ship *Welcome* on the site of the old Third District.

"You shall be governed by laws of your own making," he wrote to the inhabitants of his colony, "and live a free and, if you will, a sober and industrious people." It was in the Third District with bricks brought from England that he reared his home, a structure that is still preserved in Fairmount Park. In the Third District he made his treaty with the Indians, a treaty which is memorialized to-day by a public park, in which stands the successor of the umbrageous elm under which his pact with the Indians is said to have been made.

LAID OUT BY WILLIAM PENN.

In the Third District is most of the city proper as laid out by Penn; its public squares are preserved; its streets still maintained as he had planned them. Even the peaceful, quiet Quakers, coming, as they had done, to worship God as they saw fit, were subject to imperfections and blemishes; but Penn's work prospered; churches grew in larger fold than prisons; the good men far outnumbered the bad, and so a firm foundation was established for the oncoming of events affecting the colonies and the nation—events that destiny confined to the old Third District.

PHILADELPHIA AND THE CONSTITUTION.

President Roosevelt, in an address to the governors at the White House conference of May 13, speaking of the efforts of our forefathers to preserve the resources of the country, said:

Washington clearly saw that the perpetuity of the States could only be secured by union, and that the only feasible basis of union was an economic one; in other words, that it must be based on the development and use of their natural resources. Accordingly, he helped to outline a scheme of commercial development, and by his influence an internal waterways commission was appointed by Virginia and Maryland.

It met near where we are now meeting, in Alexandria, adjourned to Mount Vernon, and took up the consideration of interstate commerce by the only means then available—that of water. Further conferences were arranged, first at Annapolis and then at Philadelphia. It was in Philadelphia that the representatives of all the States met for what was in its original conception merely a waterways conference; but when they had closed their deliberations the outcome was the Constitution which made the States into a nation.

ADOPTED IN INDEPENDENCE HALL.

That Constitution was adopted in Independence Hall in 1787. It was the culmination of the stirring events of the Revolutionary war, a war which was organized, financed, and directed from the old Third District. In that district, Mr. Speaker, stands Carpenter's Hall, the building in which the first Continental Congress met. There, too, under the shade of the trees assembled the colonists to protest against the tyrannies of King George. It is not generally known, but the townspeople of Philadelphia were far ahead of the Boston Tea Party in their denunciation of the stamp act and their determination to resist the importation of tea. On October 16, 1773, a town meeting in statehouse yard resolved "that whoever shall directly or indirectly countenance this attempt * * * is an enemy to his country." In Boston, November 3 following, a meeting of colonists declared that the "sense of this town can not be better expressed than in the words of the judicious resolves lately entered into by our brethren, the citizens of Philadelphia." Boston adopted the Philadelphia resolutions, word for word. The famous "tea party" ensued; but Captain Ayres, of the British ship *Polly*, fared no better at the hands of the Philadelphians. He was given the alternative of a coat of tar and feathers or immediate departure from the port. The captain departed. This was the Philadelphia way.

STRUGGLES OF THE COLONISTS.

Clustering about the old Third District are memories that can never be effaced so long as patriotic fervor continues to animate the American heart. The Old Swedes Church is there—founded in 1677, intact since 1700—a mute reminder of the early struggles of the Swedes and the Dutch. Old Christ Church is there, with its pews of Washington and other Revolutionary statesmen, preserved in grateful memory. The building in which the first Supreme Court of the United States sat is there; the original building in which Washington and Adams were inaugurated to the Presidency is there; the structure in which the signers of the Declaration of Independence affixed their names to that imperishable document is there. The old Bell which "proclaimed liberty throughout the land and to all the inhabitants thereof" is there, the sacred heritage of 85,000,000 freemen. In that district were the homes of Washington, "the Presideliad," it was called in those days; the home of Benjamin Franklin; the home of Robert Morris; the homes of Thomas Jefferson, of Alexander Hamilton, of John Adams, and other American immortals.

WASHINGTON'S HOME IN PHILADELPHIA.

"Arrived at the seat of the Federal Government," says the historian of this period, "the President and Mrs. Washington formed their establishment upon a scale that, while it partook of all the attributes of our republican institutions, possessed at the same time that degree of dignity and regard for appearances so necessary to give to our infant Republic respect in the eyes of the world. The house was handsomely furnished, the equipages neat, with horses of the first order; the servants wore the family liveries, and, with the exception of a steward and a housekeeper, the whole establishment differed but little from that of a private gentleman. On Tuesdays, from 3 to 4 o'clock, the President received the various ambassadors and strangers who wished to be introduced to him. On these occasions, and when attending the sessions of Congress, the President wore a dress sword. His personal apparel was always remarkable for its being old-fashioned and exceedingly plain and neat.

"On Thursdays were the Congressional dinners and on Friday nights Mrs. Washington's drawing room. The company usually assembled about 7 and rarely stayed exceeding 10 o'clock. The ladies were seated and the President passed around the circle, paying his compliments to each. At the drawing rooms Mrs. Morris always sat at the right of the lady President, and at all

the dinners, public and private, at which Robert Morris was a guest, that venerable man was placed at the right of Mrs. Washington. When ladies called at the President's Mansion the habit was for the secretaries and gentlemen of the President's household to hand them to and from their carriages, but when the honored relicts of Greene and Montgomery came to the presidential the President himself performed these complimentary duties."

WHERE SLUMBER THE GREAT.

History was made in the Third District of Pennsylvania. It had endured the Revolutionary period. It had suffered the invasion of the British army under Howe in 1777, and it had risen at the adoption of the Constitution to be the social, commercial, and maritime center of the country. So replete is the old district in incidents of patriotic endeavor that I dare not trespass far upon this line of thought. The monuments of the great men of the earlier days still remain. In Christ Church graveyard rests the body of Benjamin Franklin; in this district he feasted upon his famous loaf, labored as a printer, attracted electricity from the clouds, established the Junta, and laid the foundation for enduring institutions. In a neighboring graveyard rest the bones of signers of the Declaration of Independence; in St. Mary's the body of Commodore John Barry, the "father of the American navy;" in St. Peter's the body of Stephen Decatur, the intrepid commander at Tripoli.

MAJOR ANDRE'S FATAL VERSE.

It was during the occupation of Howe, when the Tories were jubilating, that Major Andre, from a house in this district, wrote his mock verse to the tune of Yankee Doodle:

But now I end my lyric strain,
I tremble while I show it!
Lest this same warrio-drover Wayne,
Should ever catch the poet.

It was this same "warrio-drover" Wayne, the dashing "Mad Anthony," a Philadelphia boy, to whom the unfortunate poet, bearer of the treacherous message to Arnold, was subsequently delivered at Tappan. John Paul Jones sailed out of the Third District commissioned by the Continental Congress. On board the *Alfred*, it is said, he had the honor himself of first hauling to the masthead the flag of America.

THE OLD FLAG HOUSE STANDS.

The old Flag House still stands in the Third District; that house in which the deft fingers of Betsy Ross wrought into eternity the Stars and Stripes. The first bank chartered by Congress is there, the bank of Robert Morris's creation, the existing Bank of North America. There, too, doing service as a custom-house for the port of Philadelphia, is the famous structure which invited the antagonism of Andrew Jackson, the Bank of the United States, rich in its classic architecture, a modern representation of the Parthenon; there it stands, a useful, living monument to the financial ability of Nicholas Biddle, and to the irresistible opposition of "Old Hickory." In that district, under the direction of Franklin, Adams, and Jefferson was prepared the first great seal of the Government of the United States, the original of which is now preserved in the State Department at Washington.

"THE PHILADELPHIA LAWYER."

In old St. Joseph's Church Lafayette and Rochambeau worshipped. The great lawyers, who gave a distinguishing character to the Philadelphia bar, were residents of the Third District. Dickinson, Shippen, Boudinot, Hopkinson, Sargent, Binnay, Cadwalader, Biddle, Brewster, Duponceau—these are but few of the illustrious names. It was in tolling the death of Chief Justice Marshall, a resident of the district, that the Liberty Bell was cracked and silenced forever. In this district Hopkinson composed and dedicated to his country "Hail! Columbia." Literature and science flourished here. Here the celebrated "Wistar Parties" originated. Dr. Benjamin Rush, whose body lies close by that of Franklin, was attached to the district; and David Rittenhouse, the greatest astronomer of his time and the intimate of Washington. Rebecca Gratz, the original of Scott's Rebecca in "Ivanhoe," was among the celebrities of the district, her body now resting in a neighboring Jewish cemetery.

In this district Edwin Forrest, the tragedian, and Joseph Jefferson, the greatest "Rip Van Winkle," were born. Here Louis Hallam, "father of the American theater," died. Longfellow's "Evangeline" is said to have found her resting place in the old graveyard at Sixth and Spruce. Whittier labored in the district in the cause of abolition. He witnessed here the destruction of Pennsylvania Hall. Poe edited Burton's Magazine in this district, and here James Russell Lowell brought his bride and completed much of his best work. Unending indeed is the list of names and incidents describing the glory of the Third Pennsylvania District. It was here the foundation of the nation's political and commercial strength was laid.

THE MOTHER OF PATRIOTISM.

The old Third District! May we not proclaim it the mother of patriotism, out of whose womb have come the spirit and the glory of the nation? But before we leave it let us pause for a moment to consider its substantial worth in three crises of the nation. The Revolutionary war! Consider the ragged Continentals at Valley Forge; an army fed by the blasts of winter; a General destined to rise above the turmoil and the terror of the times to be "The Father of his Country," "first in war and first in peace." Who was it who lifted the clouds and brought the cheer of financial encouragement to Washington and his wretched forces? Robert Morris, president of the Third District and founder of the Bank of North America. Consider the war of 1812. A country insistent upon being free, plagued again by the stern necessities of finance. Who was it, when Jackson's fiery shafts were hurled against the British from behind the bales of cotton, who rose to the occasion and pointed the way to financial relief? Stephen Girard, resident of the Third District; merchant and mariner; philanthropist. Consider the rebellion! A nation torn asunder; the solemn Lincoln bearing the brunt of malevolent criticism, patient in the face of the most astounding financial necessities. Who was it whose strong directing hand brought hope to the President? Jay Cooke, whose modest banking house in the old Third District became the center of governmental expectancy.

THE INDUSTRIES OF PHILADELPHIA.

It might help those who have been speaking ill of Philadelphia to a better understanding if I were to speak of the shipbuilding which made the American merchant marine a formidable competitor in earlier days upon the high seas. It was done along the banks of the Delaware in the old Third District. From the days of Joshua Humphreys, who built the *Philadelphia*, which Decatur took at Tripoli, down to the passing of the clipper ship and the rearing of the modern armor-clads, the Third District has been conspicuous, even foremost, in the development of the American Navy and merchant marine. It was in the Third District that Baldwin built his first locomotive; Baldwin, whose successors in the great works that bear his name to-day are now constructing eight locomotives every working day of the year for the railroads of the world.

FIRST IN STEAMBOAT CONSTRUCTION.

In this district, long before the achievements of Robert Fulton upon the Hudson River, way back in 1787, John Fitch, a Philadelphian, devised and operated a steamboat which followed a regular schedule between Philadelphia and Bristol. In this old district the Pennsylvania Railroad sprang into being; that road which gives employment and sustenance to hundreds of thousands of people, and carries a tonnage from the thriving industries of Pennsylvania greater than that of any railroad in the world. It was in this district the Reading Railroad was created, the greatest carrier of anthracite coal from the greatest mines in the world. It was in this district that John Wanamaker began his business career, a career which has since made him the greatest merchant in the world.

SCORN NOT THE PAST.

But, Mr. Speaker, I shall pass from the Third District, pass from it reverently and as a dutiful son would take his leave of a fond and aged parent. The district has grown old; its streets and its buildings bear evidence of the passage of the years. Do we respect less the kindly parent because the hand trembles and the hair is silvered? Shall we respect less the structure of history because the rot is eating away the timbers and the incessant tread of the pedestrian is wearing away the stones? Why make light of the things that no longer respond to our modern fancy? From the old has sprung the inspiration of the new; the narrow streets of William Penn have given way to wider thoroughfares in newer communities. The buildings huddled together for protection against the Indians have not been duplicated. Costly residences and modern structures that tower toward the sky have come instead. The old gives way to the new, but shall we mock the old?

ALIVE TO OPPORTUNITY.

To-day the factories and warehouses have largely taken the place of the ancient homes in the Third District. Respecting her landmarks Philadelphia has kept abreast of her opportunities. Is it commonly known how Philadelphia stands as a manufacturing center? Mr. Speaker, according to the Government census the Quaker City is third in the list of manufacturing cities. She has not extended her borders, but confines her statistics to original lines. For manufacturing from raw material direct it is believed that Philadelphia stands at the very head of the manufacturing cities of the country. Her

output is more than \$600,000,000 per annum. She is foremost in locomotives, in leather, in carpets and rugs, in hosiery and knit goods, in hats, in woolen goods, and in the manufacture of street cars. At the time of the last census she gave employment to more than 225,000 wage-earners alone. She utilizes materials drawn from every section of the country. She is a good customer of every raw-material producing section. Useful to the cotton planter of the South, the wool grower of the West, and the farmer whose corn and produce she takes and stores away. Yes, in a thousand ways she is essential to the welfare of vast communities of people. She is doing her part nobly and well.

FINANCIAL STRENGTH OF THE CITY.

Her vast enterprises challenge the workmanship of the arts and trades; they find their support in the conservative banks of the city. Most of these banks, be it said again, are doing business in the old Third District. These banks, with a capital approximating \$22,000,000, do a loan and discount business of \$224,000,000. The business of the nation, as it was done through the Bank of the United States in 1835, was only \$24,000,000.

But, Mr. Speaker, if we are to consider Philadelphia, including the Third District, we are brought face to face with a substantial development, a safe and steady progress, that is at once a refutation of the small talk about the City of Brotherly Love. In the narrow limits of 129 square miles, the full extent of Philadelphia's area, she sustains a population of 1,500,000 people. Peaceful, law-abiding, property-owning, respectable citizens; a citizenship of churches and of homes.

A CITY OF 300,000 SEPARATE HOMES.

What other city can boast, as Philadelphia does, of 300,000 separate and detached homes with modern conveniences; most of them the property of the occupants? Through the building association, which is peculiarly a Philadelphia institution, the wage-earners of Philadelphia have now invested \$100,000,000. Sadly maligned, as Philadelphia has been, no experienced traveler can deny that in her observance of the American Sabbath Philadelphia stands first. Her schools and colleges, charitable institutions, public parks, and free libraries are her chiefest pride. The tax rate for many years has been maintained at \$1.50 per thousand. Property in Philadelphia is assessed for taxation at more than \$1,600,000,000. Contrast that, if you please, with the assessable valuation of many of the States of this Union, and Philadelphia will not be found abashed.

THE GOVERNMENT OF THE CITY.

The fame of the city political has been assailed. May it not be well to produce some facts that reach the marrow in the bone of municipal government? Philadelphia owns her own gas works, and under a lease supplies consumers with 22 candle-power gas at a rate reduced from \$1 to 85 cents a thousand feet, with provision for future reductions, besides obtaining her public light free. Philadelphia is credited by experienced observers with being the best lighted, by gas and electricity, and the best paved city in the world. Philadelphia filters her water from two rivers, and is now constructing the largest and most complete filtration plant in the world, a plant which has been an object lesson to engineers the world over. Philadelphia has compelled her traction companies, apart from fees, taxes, and other charges, to pave and keep in repair streets occupied by such companies, at a cost to the companies until a recent period of more than \$15,000,000. In addition to appropriations made by the State of Pennsylvania, the city has contributed since 1894 to the removal of impediments to navigation and the deepening of the channels of the Delaware and Schuylkill rivers, both navigable streams, a total of more than \$2,300,000.

DONATED NAVY-YARD TO UNITED STATES.

In 1863 the city purchased for \$430,000 1,000 acres of land known as "League Island" and presented it to the Government—the greatest and only fresh-water naval station and repair shop in the world. In official life Philadelphia employs the services of more than 10,000 men and women, who, apart from occasional individual wrongdoing, constitute in the matter of police, fire, and health and property protection as capable an army of patriotic workers as can be found in any city.

EXPENSES LIMITED TO REVENUE.

The annual revenue of the city reaches a total of \$30,000,000, and from its tax rate it has reared a city hall which is one of the marvels of the structural world, at a cost exceeding \$25,000,000. The debt of Philadelphia, and I would invite comparison of this debt with that of other large cities, is \$66,000,000, a debt which could be utterly extinguished by the sale of a single piece of the city's property—Fairmount Park. The assets of the city of Philadelphia in public lands and buildings, in schoolhouses, libraries, parks, wharves, boats, municipal equipment, estates in trust challenge comparison with those of any

city in the United States. Is there corruption in the municipal life of Philadelphia? Let us see. The city can not borrow money in excess of 7 per cent upon the assessed value of its taxable property. It does not borrow money except it makes provision for a sinking fund for the redemption of every permanent loan. The city can not appropriate any money nor enter into any contract without first having the funds in hand. Therefore it would seem that if there is political offending, it can not be of a fundamental nature.

FINANCIAL SYSTEM CONTRASTED.

But to those who persist in their disbelief let me commend the regulations pertaining to the control and management of municipal funds. I invite a comparison of this system with that of any other city. Each bureau and department which receives money on behalf of the city of Philadelphia must make a daily return to the city treasurer, and the city treasurer in turn must make a daily sworn statement of receipts to the city controller. And the city controller must keep upon file for public inspection the orders, receipts, and vouchers for work performed or for materials required in the conduct of the city's business. The books and papers of the office of the controller and treasurer, and in fact of all the departments and bureaus, are open for the inspection of the critical; and those who are bitterest and most persistent in their grievances are fully aware of the fact.

WHERE IS PERFECTION?

Why, then, shall this great community be singled out as an unholy object lesson in municipal affairs? Are there crooks in the city of Philadelphia? One, perhaps, to a thousand reputable, law-abiding citizens. What city has not a black sheep in its midst? Are there cranks and demagogues in the city of Philadelphia? One of each, perhaps, to every 3,000 home-loving, even-tempered, common-sense citizens. What city of respectable proportions is without its cranks and its demagogues? Are we to judge the standard of living in Mississippi, or in California, or in Massachusetts by the sporadic outbreaks of lawlessness occasionally reported? Are we to estimate the worth of a community, the very fiber of its citizenship, by the professional misfit, or the wandering hobo whose last resort is scurrillity and blackmail? Are we to take our standards from the ephemeral writers who flit into a city in search of the stench, and with devilish haste rush back to print? Shall we not admire the great glory of art behind the speck upon the windowpane?

CHARITY OF A GREAT CITY.

Philadelphia has been asking no favors. She has suffered overmuch, but she demands that rightful position in the esteem of Americans to which her proud history, her wonderful achievements, her domestic happiness entitle her. Has she not come promptly forward when distress has crowded hard upon other communities? Ask the stricken people of Russia, to whom she sent her ships of relief. Ask the downtrodden peasants of Ireland, who know her bounty. Ask the sufferers by earthquake in Charleston; the flood sufferers in Galveston; the sufferers by hurricane in Porto Rico; the stricken people of Johnstown; the victims of the earthquake in San Francisco. Philadelphia, prosperous and happy, there she stands, exchanging her commodities with the world, sending forth her precious manufactures upon all the seas, providing comfortably for her own, ever ready to respond to the call of the unfortunate.

DEAL FAIRLY WITH MUNICIPALITIES.

Mr. Speaker, let us deal fairly with the great municipalities. As they have grown in substance and in influence they have had to make provision for violations of the regular order. Such violations are inevitable; but the law maintains its supremacy. The proportion of wickedness to the population of to-day is less than it was a century ago. The scrutiny of men's acts is keener than it was then. The scent of the public press is close to the trail of public and private wrongdoing. The misfortune is that the ill we do attracts the greater mention. The preponderance of good that is done is wont to go unheralded. The orderly work of a thousand men will pass in the obscurity of a footnote; the deviltry of a single scamp will draw the title-page.

Philadelphia needs no defender. She is high above calumny. She has proven her courage in the days of trial. On the rock of liberty her walls were laid. Morality and the law have guided her course. Her industry has blessed and exalted her people. The city has given its best blood to the American nation. It holds in its keeping the custody of the nation's priceless treasures. On more than one occasion it has demonstrated its mother love. Witness the Centennial Exposition of 1876. First of the international expositions under American auspices, it brought together the representatives of the progressive peoples of the world. It opened up the eyes and minds of men to op-

portunities of modern genius and resources. It gave to America new industries and aspirations, and first unfolded to the world the marvelous possibilities of the telephone. By that exposition the city established a new record for the nation, and made for itself a record in turning back to the United States the money it had appropriated to support the enterprise. Eleven years later it again evidenced its public spirit, celebrating the one hundredth anniversary of the adoption of the Constitution. In this it taught anew the lesson of our national institutions. The great Peace Jubilee of 1898, bringing together the various States, the North and the South, at the close of the Spanish-American war, is readily recalled. In these and numerous other instances the city has led in patriotic well-doing. It has never faltered; never lacked the spirit nor the strength.

THE CELEBRATION IN OCTOBER.

And so it enters upon its new imposed task. With the coming of October, 1908, the gates of patriotism and fellowship will be opened wide to visitors. The scenes historic, the material growth of two and a quarter centuries will then bespeak the city's pride. Truly an event that deserves the interest of all who live and strive for better things. Legions will come and to them will be extended the cordial hand of hospitality. The officials and the people have spoken. They glory in Philadelphia's contributions to the nation's history, and putting aside "the slings and arrows" that but prod and fortify, they rear in golden letters, high above the city's portals, the name of that good ship which bore the peaceful Penn to these fair shores—at once an emblem and a greeting—WELCOME!

National Defense.

SPEECH

OF

HON. RICHMOND P. HOBSON,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 29, 1908.

Mr. HOBSON said:

Mr. SPEAKER: Events of recent years have produced dangers in the Pacific greater than those of the Atlantic, for which latter alone our present Navy has been built.

In the absence of an international system of jurisprudence, the peace of the world requires a balance of power on the high seas. This balance of power in the Atlantic is maintained by the presence of the fleets of all the great nations of Europe—except for America's fleet there is not a battle ship of any white nation in the Pacific, while Japan's whole navy is concentrated there. The only hope of a balance of power depends upon America's maintaining permanently in this ocean a fleet substantially superior to the Japanese navy. Mr. Speaker, under leave to print, granted by the House, I desire to place in the RECORD the following articles that appeared in the *Cosmopolitan Magazine* for May and June, 1908:

[*Cosmopolitan Magazine.*]

IF WAR SHOULD COME! FIRST ARTICLE—THE QUESTION OF PREPAREDNESS. BY CAPT. RICHMOND PEARSON HOBSON.

[EDITOR'S NOTE.—In spite of the assurances of Japanese diplomats, war with that nation is by no means improbable. By many clear-sighted statesmen it is even regarded as inevitable.

How are the American people prepared to cope with so stupendous a possibility? Are we adequately equipped and fortified against so formidable an enemy?

Would it be an impossibility, under present conditions, for the Japanese to occupy our Pacific seaboard, lay San Francisco, Seattle, and Los Angeles under tribute, and fortify the Coast States so thoroughly and scientifically that their reconquest would cost billions of dollars and perhaps a million lives?

Does not the mere suggestion of so desperate a contingency point urgently to the necessity of swift national action for the adoption of the most complete preparatory plans?

These are questions which concern every American citizen from Maine to California. In order that the readers of the *Cosmopolitan* may understand the facts about the peril which threatens the country and the measures which must be instantly taken to meet it, we have obtained a highly interesting series of articles by Capt. RICHMOND PEARSON HOBSON, in which the situation is reviewed from the standpoint of an expert. The first of these articles is presented herewith. It will be followed by two others in the next succeeding issues. We venture to say that the facts presented by Captain Hobson will make very clear the duty of Congress to take such vigorous and immediate action as will be likely to avert the danger which is so lucidly and convincingly pointed out.]

The sailing of the American fleet from Hampton Roads through the capes of the Chesapeake into the open sea on its voyage to the Pacific was the greatest naval spectacle ever witnessed in the western world. The tens of thousands of spectators who had come from far and near to witness this event were electrified when the sailors mounted the bulwarks, superstructures, turrets, rigging, and masts and gave rousing cheers as the President reviewed the departing ships. The multitude

in turn spontaneously cheered as the great ships weighed anchor and one by one stood away in solemn grandeur in a column extending over 4 miles. The multitude present was but the eye and the voice of the 80,000,000 Americans who gazed upon this event from afar, and with a feeling of misgiving, but all with the confidence and assurance which possesses the American people, undismayed by nature and never yet defeated by man.

This event stirred the people of America, however, not merely with feelings of pride and of expectancy awakened by the mere fact of undefined danger; beneath the great shouts of applause, pitched in the major of exultation, there was in the depths a minor chord, expressed in the tears of parents, children, wives, sweethearts, whose dear ones were leaving for the unknown.

The eyes of the whole world also were fixed upon this fleet, and properly so. For the first time in history the yellow men of the Orient and the white men of the Occident gazed together with concentrated interest upon each other and upon a movement of vital moment, not only to their two continents, but to all men and nations, indeed to civilization itself. And yet few people in any country seem to have comprehended the full significance of what was occurring.

For the first time since the birth of our Republic the monarchies of Europe were looking upon an undefended American coast line. How the members of the Holy Alliance, against whose conspiracy the Monroe doctrine was declared, would have gloated over that sight! What was whispered in Europe's secret councils by the direct successors of those conspirators against the rights of the people, as the American fleet passed from the Atlantic to the Pacific, transferring to our western waters practically the entire naval power of the one nation that has stood for and compelled the progress that has been achieved during the past century, not only in America, but also in Europe? The answer concerns our people more than the price of stocks, the cause of the panic, or the solution of any of the grave internal questions which now perplex the nation.

Leaving the European chancelleries to discuss these events, the American fleet has retraced the course taken by the *Oregon* in 1898, when that gallant ship made the record voyage for a single ship in time of war. Heretofore America has faced eastward, whence our foreign wars have come. Now, and suddenly, we have been compelled by the action of an Asiatic power to leave our European seacoast unprotected and to place practically the entire naval power of the nation between us and Asia. And yet the dangers in the Atlantic have not disappeared; they have not even decreased. Indeed the "mistress of the sea" is at this moment, and for the first time in history, in league with the Asiatic power that has compelled this change in the policy of our nation. Though England is our mother country, two of our foreign wars have been fought with her. We have no contract with England binding her to respect our territories and rights. Japan has such a contract with England, and contemporaneously with the sailing of our fleet England gathered together, for foreign service, a fleet almost twice as large as ours.

No sudden or even immediate change had taken place in Europe or in our relation with European powers. The change that had taken place was in Asia, or, preferably, in our relation with one of the Asiatic powers, the one that is making itself the master of the Orient. The dangers in the Atlantic are not decreased, but the dangers in the Pacific have increased, and our President was compelled by the logic of events to take this action. It was not a matter of private opinion or personal preference. Conditions, not theories, confronted the nation, and duty laid its compelling hand upon our Chief Executive.

During the past two decades Japan has seized upon and utilized to the utmost the inventions and discoveries made by the white race. And in consequence Japan holds to-day the mighty forces of nature and of organization more completely at her command than any nation of the white race. In naval and military affairs each western nation has built up a practice of its own, with both good and bad characteristics. Japan, on the other hand, has appropriated the good characteristics of all; and just at the time when Japan is emerging from feudalism she has made her entry into the council chamber of the nations through the gate of war forced open by the mighty power of her military organization.

The feudalism from which Japan is now emerging was regnant in Europe centuries ago. It was never a part of the life of America. This fact makes it difficult for Americans to grasp, without careful consideration, the significance of what is now transpiring. The white nations, on the whole, are three or four hundred years beyond feudalism, and under the leadership of America are swiftly traveling the road toward international confederation and organization that will tend to make war obsolete. But these nations are not yet federated. War is not yet absolute even among the white nations in their relations with each other, and it behooves them to understand the meaning of Japan's rise in power through victorious handling of the weapons of war. The presence of superior power is absolutely necessary to check the natural course of that nation toward war with foreign powers, now that war within her own body has ceased as a result of the union of the feudal lords behind the Mikado.

No internal question at this moment is comparable in importance to the present and prospective strength of Japan compared with that of our country. The supreme duty of America at this moment is to gauge accurately the possibilities of Japan's military power and to make that power ineffectual by the provision of an unquestionably superior force. No other thing that our Government can do would have so powerful an influence for the establishment of justice and the maintenance of peace in international relationships.

The departure of the fleet was like a flash of lightning. Things heretofore hidden by the darkness were brought momentarily into plain view. On one side of the Pacific was disclosed a great nation, heretofore considered inferior, that had demonstrated superior power on the field of battle, and emerged victor over the most populous nation of Europe. Justly proud of its achievements, and wounded by the condescensions of the western world; different in color, in traditions, in political institutions, from our country; capable of being either friend or enemy to America as its supposed interest at any moment may dictate; almost as different from us in character and in preparedness and inclination for conflict as in color or in position on the world's map, this people, molded into one body and with a common purpose in the act of war with Russia, caused and witnessed the most humiliating military and political spectacle ever seen in the western world, namely, a revelation in the face of a grave danger that the United States is unable to execute a just foreign policy, is unable even to perform the duty imposed by the Constitution of preserving the members of the Union in the full and free exercise of the rights reserved by the several States. The people's representatives neither foresaw the danger nor provided against it. Congress, the press, the two great

political parties of the country, did not see, even in this flash of light, that our nation is defenseless, and that the most tempting morsel that ever became a menace to national character or international peace is displayed unprotected before the rising power of the Orient.

The strength of a nation is in the number of its able-bodied men, their availability for action, the average fighting value of the men, and the preparation and efficiency of their organization.

For her soldiers and sailors Japan draws upon a population at home of nearly fifty millions, a population greater than that of England, Austria-Hungary, or France, and only second to that of Germany in Europe and the United States in America.

By an extensive system of propaganda Japan is preparing to draw upon the 450,000,000 people in China, making, with Japan, for prospective use, a total of 500,000,000, more than the combined population of all Europe and both the Americas.

The Japanese population is more available for war at the present moment than the population of any white nation. The people are not only more disposed for war, on account of the stage of their civilization and their recent victories, but are more willing than the people of the West to bear the greater burdens of taxation without murmuring against the government. Furthermore, the women are more ready to do the work while the men are on the battlefield. In the next place, the military forces can be maintained and a campaign properly executed at a cost far below what the same movements would impose upon the white nations.

Since the Russo-Japanese war the world has been compelled to put the fighting value of the average Japanese above that of the average white man. The Japanese has shown himself equally courageous in action and equally skillful in the use of modern weapons, while superior in endurance and more amenable to discipline.

The degree of preparation for war in America is low; it is high in the chief military nations of Europe, but it is higher still in Japan. There they begin with the school children and continue the work throughout life. In the Russo-Japanese war the extraordinary degree of preparation and the efficiency in action of the Japanese organization were the marvel of the world. The character of the yellow man, his patience, his attention to details, his endurance, make him an ideal unit for the organization of a perfect human mechanism of no matter what dimensions. The only safe assumption for a white man to make is that the yellow man, on the average, will be found his superior as a soldier and his equal as a sailor.

I do not hesitate in making this statement. With a knowledge of the Chinese derived from actual experience in China, I am prepared to say that the average Chinaman, properly trained, will make a better soldier than the average Japanese, being equally intelligent, more reliable, of greater strength and endurance, and without fear of death. In estimating the present as well as the prospective preparation of Japan it is necessary to take this fact into account, for Japan at this moment is carrying on a systematic instruction of the Chinese in the arts of war, and when war comes Japan will find a way of drawing upon China for assistance.

The Japanese are masters in the inspection and spying out of the naval and military preparations of other nations. They are past masters in secreting their own preparations and intentions. They have had opportunity, and have made use of it, for learning everything that is going on in America. They have allowed no access to anything going on in Japan. The half has not been told of the preparations for war made by Japan during the past two years and a half, and yet that which is known of their preparations should rouse this nation to a sense of the danger and to a performance of its duty to the States composing the Union, and to the great principles of liberty, of which our nation is the world's leading exponent.

After the war with Russia, when the one fleet to be feared by Japan had been destroyed, when the vessels captured in the war constituted a substantial increase in the Japanese navy, when the heavy burdens laid upon the people by the war called for economies, especially in view of the fact that by the treaty of Portsmouth the expected war indemnity was denied to the victor, it would have been natural for Japan to rest for a while and recover herself before inaugurating an expensive programme for an increased navy. Instead of doing this, Japan has ordered more than one hundred million dollars' worth of new ships of the *Dreadnought* class and large armored cruisers, eleven in number, together with auxiliaries and torpedo boats. Rush orders for these ships were given to English and Japanese shipyards.

Japan was already allied with Great Britain. There was certainly no need of additional ships to cope with Germany, France, or Italy. Why was this done? The only plausible inference is that the purpose was to secure an advantage over America while she was still sleeping. It was a master stroke, proved by the fact that Congress simply discussed the question for two whole years before ordering a single large ship of the new type; and the peace societies of America even increased their agitation in favor of disarmament.

Our people are liable to indulge in a feeling of unwarranted security now that our fleet has arrived safely in the Pacific and has been joined by the two battle ships and the two squadrons of armored cruisers already in those waters, numbering altogether 18 battle ships and 8 armored cruisers, making 26 armored vessels. The Japanese now have in Pacific waters 11 battle ships and 11 armored cruisers, making 22 armored vessels. It should be noted that the Japanese armored cruisers *Tsu Kuba*, *Okoma*, *Ibuki*, and *Satsuma* carry 12-inch guns, larger than any guns carried by our armored cruisers. These Japanese armored cruisers will certainly be found on the battle line with the regular battle ships. The moderate superiority of our fleet will soon disappear. Our own ships will gradually deteriorate because of the lack of docking and repairing facilities, and the Japanese will be constantly adding to their fleet the great new ships as they are completed. The only two of this type that we have in course of construction will probably go into commission in the summer of 1910, and will be on the Atlantic seaboard. The Japanese by that time will certainly have in commission 8, and possibly 11, more vessels, all of the new type. Conservative estimates have placed one vessel of the new type as equivalent to at least three vessels of the type that compose our fleet.

Assuming that our two new vessels can reach the Pacific in time, Japan will have a superiority of 9 new vessels. The total strength of the two fleets, estimated in the average units of the present vessels, will be, United States 32 and Japan 55. To bring us up to an equality with Japan we must order at once and complete in record-breaking time 8 battle ships of the *Delaware* class of 20,000 tons. If we order two of this class to complete a squadron of four, with the two already building, and at the same time four of an improved class of 25,000 tons, we can realize the same result at considerable less cost and in the same time. This programme must be regarded as the very minimum demanded by scientific treatment of the subject, for even then all these vessels would have to leave the Atlantic to make our strength equal to

Japanese strength in the Pacific. The fact is Japanese efficiency must be reckoned as gradually becoming greater than ours on account of their superior docking and repairing facilities and because of their presence in home waters. It is not scientific to have simply an equal fleet in the Pacific. We should have an unquestionably superior force so as to prevent war if possible and to win if conflict is inevitable.

This still leaves the Atlantic Ocean absolutely stripped of American war vessels, a condition which Congress can never justify before the American people.

One would have expected that the armies of Japan would decrease after the peace of Portsmouth. On the contrary, five divisions have since been added to the Japanese army, and to-day Japan is prepared to put into the field half again as many men as in the war with Russia; this would mean 1,500,000 trained men.

The preparation of war material would naturally have fallen to a normal condition upon the conclusion of peace with Russia. Instead greater activity has resulted. Old works have not only continued in full force and overtime, but new works of great size have been established, and they are kept working day and night. The Japanese have built new steel works and armor-plate factories, new ordnance works for heavy guns, new torpedo factories, new powder factories, new factories for high explosives, also factories for small arms and projectiles; new shipyards have been established, new dry docks built, as well as new building slips, new machine shops, new building and repair works, and new boiler and engine shops; and besides all this, heavy orders for war material have been placed abroad.

In contrast with this great army of 1,500,000 trained men, containing 1,000,000 seasoned veterans, and with this feverish activity, America has drifted drowsily along and now has but 69,000 men in the Regular Army and only 140,000 raw militiamen, most of the Regulars being now in service in Cuba and the Philippine Islands. There are now available inside of our own country only 9,000 infantry of the Regular Army, less than the police force of New York.

I estimate that Japan could place 500,000 trained men on the Pacific slope within four months, and 1,000,000 men within ten months, against whom we could not marshal over 200,000 men that have ever had any substantial military service. Where great numbers are involved untrained men can not be effective against veterans. Our Army, therefore, is hopelessly inadequate to cope with Japan even on the Pacific slope, to say nothing of the Hawaiian Islands and the Philippines. So that for security we must depend absolutely upon superiority on the sea.

In addition to the preparation described above, in modern warfare a nation must not neglect to provide money or to secure active assistance, or neutrality where assistance is impossible, on the part of the most important nations likely to be affected by the war. In preparation of this kind Japan has been wonderfully active and successful. She has negotiated great loans at home and abroad, and now has on hand over 600,000,000 yen in specie, mostly in European depositories and immediately available for military purposes—sufficient to keep 1,000,000 Japanese soldiers in the field for a year.

Although the exact text of the treaties between Japan and France and Japan and Russia is not fully known, there are evidences that by these treaties Japan has secured the neutrality of these two powers through conceding to them, with England's approval, special privileges in certain sections of the opening markets of China.

It is certain, however, that the accumulated wealth of France is pouring into Japanese coffers. But important as these things are, the supreme achievement of diplomacy was an offensive and defensive alliance with Great Britain, which for a century has held undisputed control of the sea. Being an island kingdom, Japan is vitally affected by the attitude of the "mistress of the sea" until such time as she is in control of the situation. This treaty continues until 1915 and renews itself automatically for ten-year periods successively, unless denounced by one of the parties. We must, therefore, squarely face the natural conclusion that Great Britain will cooperate with Japan, and consequently we must prepare to be masters of our waters in the Atlantic at the same time that we hold the supremacy in the Pacific.

[Cosmopolitan Magazine.]

IF WAR SHOULD COME! SECOND ARTICLE—THE CONFLICT. BY CAPT. RICHMOND PEARSON HOBSON.

[EDITOR'S NOTE.—In the last issue of the *Cosmopolitan*, Captain Hobson showed very clearly how thoroughly Japan is prepared for war at the present moment in comparison with the state of affairs in this country.

In the following brilliant article he describes Japan's attack and America's defense, if war should come.

This is no work purely of the imagination. Captain Hobson is one of the greatest living experts in the science of war, and every move described in these pages is the result of careful study. He considers it the most important piece of writing he has ever done.]

In America, every function of government should have the earnest thought of the people. In no function of government is the need of an enlightened and interested public opinion greater than in that of providing for national defense. So vague is our present condition of knowledge upon this important subject that a popular discussion from the platform or in the press brings forth criticism and condemnation, as though such a discussion tended to bring on war. In truth, the only true way to prevent war is for our people to understand the elements of national defense and the real factors that determine war and peace.

Nothing can have a more beneficial effect at this juncture than a general discussion of the contingencies of war. If there were not a single cloud above the horizon this would still hold true. As it is, the sky is overcast. It is past the eleventh hour. Any other people on earth or in the world's history would, long ere this, have thoroughly investigated the contingency of war with the great powers over the ocean from us and would have adopted precautionary measures to prevent the culmination of war if possible and to insure victory if war must come. As it is, our people, absorbed in developing our resources, have given no heed to the steady approach of the world's great armies. The annihilation of space and the conquest of the ocean have brought the great armies of Europe to our eastern doors; new armies, more portentous than those of Europe, have arisen in Asia and are likewise at our western doors, and to-day America is not only unable to prevent war but is powerless to avert disaster if war comes.

It has been shown how completely Japan is prepared for war. A recent interpellation in the Japanese parliament as to the nation against which the warlike preparations were being made brought forth the answer from the minister of war that the preparations were "against eventualities in the Pacific," an official confirmation of the universally recognized fact that great war preparations have been

going on for a long time. It has been evident for some time that Japan intends to move upon China, but her stupendous efforts in augmenting her navy leave no doubt that America is the objective. The swarming of spies over our country and our possessions, the peremptory attitude of Japan after the trivial incidents in San Francisco, her attitude on the immigration question, all confirm this conclusion. To study the contingency of war with Japan is, therefore, now an urgent public duty. In discussing this contingency, it may be remembered that there is no danger of divulging any secrets, naval or military. Japan and every other nation already know all our secrets, all our elements of weakness and of strength.

No one can forecast the exact date for the beginning of any war, even when war is recognized as inevitable. The only means of approximating it is to determine the time when the aggressive power will have relatively the greatest strength. By this test war is liable to come before our fleet reaches the Far East. If it does not come before that time it is likely to be postponed until the fleet, or part of it, returns to the Atlantic, or until it deteriorates because of the lack of docking and repairing facilities and the Japanese fleet is reinforced by additional vessels.

Permanent control of the sea in the Pacific will determine the issue of the war. Therefore the destruction of the battle-ship fleet of the enemy will be the supreme objective of both powers. Japanese diplomacy has been invoked to secure the division of the American fleet by bringing danger from Europe through the Anglo-Japanese alliance. The second clause of the treaty of alliance reads as follows:

"If, by reason of an unprovoked attack or aggressive action, wherever arising, on the part of any other power or powers, either contractor be involved in war in defense of its territorial rights or special interests mentioned in the preamble, the other contractor shall at once come to the assistance of its ally, and both parties will conduct war in common and make peace in mutual agreement with any power or powers involved in such war."

It is to be noted that an "aggressive action" may occur anywhere. The special interests mentioned in the preamble are those "in the regions of eastern Asia and India." It is impossible for any war against Japan not to endanger that country's interests in the "regions of eastern Asia," and any war would be proclaimed "unprovoked" and "aggressive" on the part of the other party. Therefore the only interpretation permissible is that Great Britain would join with Japan in a war with America.

When America assembled 16 battle ships in the Atlantic, Great Britain assembled 26 battle ships. This was designed to cause a protest from the Atlantic coast States against the stripping of the Atlantic, and to result in only a part of the fleet being sent to the Pacific. Our Government wisely proceeded to send the whole commissioned fleet. As new vessels are commissioned in the Atlantic, they should be sent straightway to the Pacific, and the whole fleet should be kept together, constantly ready. As soon as practicable this whole fleet should be sent to the Philippines. If it is permitted to reach those waters before a rupture occurs, the Japanese-English purpose will be to bring about its departure for the Atlantic in whole or in part. We should, on the contrary, keep the whole united fleet permanently in far eastern waters and build additional fleets for the Atlantic. It is only by having the fleet in the Far East that we can be sure of forcing a general engagement in case of war. This very fact gives us our only chance of peace and our only hope of victory if war is inevitable.

Should the fleet remain in the Far East, Japan will doubtless wait until it deteriorates because of the lack of docking and repairing facilities, and until she adds the *Ibuki*, the *Kurama*, the *Oki*, and the *Satsuma* to her fleet. Without the last two vessels the Japanese would have 24 armored vessels to our 26. While they would have the advantage of being in home waters and of having adequate docking facilities our fleet would still have a good fighting chance. But when the *Oki* and the *Satsuma* are added, each carrying 4 12-inch guns and 12 10-inch guns, 32 great guns in all (as many as any 8 of our vessels), giving the Japanese the equivalent of 32 vessels to our 26, the chances will be heavily against us. In spite of all that we can do, this Japanese preponderance will exist before the summer is here. For the last three years we have neglected to build big vessels of the new type, and if war comes upon us in these most unfavorable circumstances, our best possible condition will see our fleet of obsolete vessels move out to engage a superior Japanese fleet headed by two *Dreadnoughts* with their terrible concentration of power. Our only reliance, a reliance that should never be required, would be upon superior skill and greater efficiency.

It is altogether likely that Japan will add two more, and possibly four more, *Dreadnoughts* to her fleet before we can hope to add the *Delaware* and the *North Dakota*. We must therefore proceed with all dispatch not only to build new fleets of *Dreadnoughts* for the Atlantic, but new ones for the Pacific, and these latter must come as fast as the Japanese reinforcements. If the fleet reaches the Far East and remains there, we must be prepared for some time to come to see a general engagement with the odds against us. Should we win the victory the war would be over. Should the Japanese win the war would be just begun, for they would have control of the Pacific, and the invasion of the Philippines and of our Pacific coast would begin. There is little doubt that the British would join the Japanese the moment the Japanese gained such control of the Pacific that their armies would be available to cooperate with the British armies in an invasion from Canada. It is probably one of the objects of the peculiar wording of the Anglo-Japanese treaty to give the British a line of retreat or advance, according as defeat or victory perches on the Japanese banner.

Let us now take the case of our fleet being on the Pacific coast when war comes. As before, the permanent control of the sea is supreme and the destruction of the battle-ship fleet of the enemy the objective. In this case the long distance across the ocean becomes a leverage against us. Hawaii is the point without which neither power could take the aggressive, even after a victory that gave control of the sea. If Japan had control of the sea and also held Hawaii, the Pacific slope would at once be open to invasion. If America held Hawaii in force, the Japanese would have to overpower our force there, at great sacrifice, before invasion would be possible. Since Japan is compact, with strongly fortified harbors and a great army, America is forced to adopt the defensive. Even if we held Hawaii and gained control of the sea, we could never do more than destroy Japanese over-sea commerce, which is never a deciding factor in a great war. From the outset, therefore, we must realize that we have nothing to gain and everything to lose by war. Japan has little to lose and from her standpoint everything to gain.

Considering the fact that there are over 100,000 Japanese and only 7,000 Americans in the Hawaiian Islands, we must assume that Japan controls the pivot, and if she should get control of the sea invasion of

the Pacific slope would follow. We should at once place in Hawaii a garrison sufficient to keep the Japanese inhabitants under control and to repel a landing in force, even under the protection of Japanese ships, and we must take no chances of losing the control of the sea.

After hostilities began our fleet should remain on the defensive off our coast and put the enemy at the disadvantage of crossing the ocean before he could get an engagement. On no consideration should we venture farther than Hawaii, and this far only if we were in control and Pearl Harbor entrance can be dredged. This harbor is the most wonderful and most vital sheet of water in the world. Whether in the hands of the white men or the yellow men, it is destined to become the greatest naval station the world has ever seen. If held by the yellow men, America will be helpless against Asiatic invasion. It is our supreme duty to hasten to garrison and fortify the island of Oahu and speedily establish a naval station at Pearl Harbor.

Judging from the circumstances attending the beginning of the Russo-Japanese war, America would know nothing of the first moves of Japan if war should come. Our first indication would be the simultaneous cutting off of cable communication with the Hawaiian Islands and the Philippines without warning or explanation. The cutting of the cables would be followed within a few hours by the landing of Japanese expeditions. Two of our fastest armored cruisers would probably be dispatched at once to make a reconnaissance of Hawaii. A week would probably elapse before any definite news would come from Manila by way of Hongkong or Saigon or Singapore. This news would probably recite that a Japanese expedition, under heavy escort, had landed probably 100,000 men in the Lingayen Gulf or on eastern Luzon, and that this army was advancing on Subig Bay and Manila. Reports would follow that the Filipinos were flocking to the Japanese colors. From the day America retained the Philippine Islands, the Japanese have been in communication with the natives, planning our expulsion. The landing of the Japanese army would be the signal for an uprising.

The first report about Honolulu would probably be brought by the armored cruisers about ten days after they started from the coast, and their report would probably announce that a Japanese expedition had landed probably 15,000 men, with large quantities of arms, ammunition, and supplies; that the Japanese on the island had risen; that the small garrison and the American residents who joined it had been overpowered; that a Japanese army of probably 50,000 men was in camp out of range from the water; that active preparations were in progress to resist any landing that might be attempted, and that the vessels in the expedition had retired.

The seizure of the Philippines and the Hawaiian Islands would be the first move of Japan. Preparations have been completed for this move. The bases for the Philippine invasion will be Kilung, Formosa, and a harbor in the Pescadores Islands, which are being prepared for this purpose. These bases are so near Luzon that 150,000 men could be thrown into this island long before our fleet could cross the Pacific; and once in the islands, with large quantities of munitions, the army could live on the country.

The first advance of this army would be upon Subig Bay, which would be quickly taken from the rear, and would thereafter be the naval base for the Japanese fleet. I do not believe, however, that the Japanese fleet would remain there. The one supreme objective being control of the Pacific, the Japanese plan would be to lure our fleet to the relief of Manila. The advance of the Japanese army and the siege of Manila would be conducted toward this end, and the dispatches allowed to go out would be planned to stir the American people to the attempt. Should we make the blunder of attempting the relief of Manila, the disintegration and ultimate annihilation of our fleet would be practically assured. It really could not relieve Manila, because we have no transports to convey the necessary troops, and we have no troops if we had the transports. The fleet would find itself in hostile waters over 6,000 miles from a base and unable to force a general engagement. The main Japanese battle-ship fleet would retire to the security of fortified home bases. Our fleet would be compelled to seek one of the inadequate, undeveloped harbors of the Philippines, without any facilities for docking or repairing. The enemy's cruisers would scour the ocean and cut off or cripple the collier coal service. The coal carried by the colliers with the fleet would be quickly exhausted. The fleet would doubtless be subjected to repeated attacks from torpedo boats and to harassment from the enemy's cruisers. Every time a vessel was injured repairs would be impossible. The machinery would rapidly deteriorate for lack of overhauling and the bottoms would foul without a chance for cleaning. The health and esprit of the men would sink steadily to a low level. Disintegration and ultimate defeat would be inevitable.

In case the fleet undertook to find the Japanese fleet and to force an engagement, it would be compelled to force an entrance into one of the fortified harbors of Japan to reach their fleet, incurring dangers and disadvantages that could not end but in disaster. Without troops it would be almost impossible to seize and hold an adequate Japanese harbor for a base from which to conduct a blockade. Thus it may be taken for granted that any attempt to relieve the Philippine Islands after they had been occupied would certainly end in disaster that would give to Japan permanent control of the sea.

The moment this control was secured the invasion of America would begin. The first step would be the gathering of a great army in Hawaii. Two hundred thousand men could be landed there in two weeks, 200,000 more in four weeks, and 200,000 additional men every month for six months. From Hawaii it is but a step to the Pacific coast—about 2,100 miles to San Francisco, about 2,200 to Los Angeles, and a few more to Port Townsend. The choice of these points of invasion would depend on whether the British were in cooperation or not. Judging from the words of the Canadian premier, Sir Wilfrid Laurier, in a speech in the Dominion parliament on the Japanese immigration question, on February 28, we can not assume that the Japanese would be alone. On the contrary, Sir Wilfrid pictured a Japanese fleet weighing anchor at Vancouver to proceed against a common enemy in the North Pacific. With British cooperation the invasion would take place simultaneously from British Columbia and at points on the coast of California.

Assuming British cooperation, there would be ample transport service, and in a few weeks 250,000 Japanese, with substantial reinforcements of Canadian and British soldiers, would proceed to occupy the cities and country around Puget Sound and then go southward through Portland, Oreg., occupying as they went all the territory from the coast to the Cascade Mountains. Branch expeditions would be dispatched to hold the railroads and other passes through the mountains. Simultaneously two expeditions would land, one below Los Angeles, whence the city and the Southern Pacific, the

Santa Fe, and the Salt Lake railroads would be seized, the other landing below San Francisco, whence this city and the Union Pacific Railroad would be seized. As reinforcements arrived these expeditions would move northward, occupying the territory from the coast to the Sierra Nevada Mountains, and seizing the mountain passes. The forts defending San Francisco would be taken from the rear, and this city with its harbor would become the base for the united armies of invasion after they made a juncture. In the seizure of the coast cities and the mountain passes the Japanese already on the coast would be invaluable, particularly the compact, disciplined Japanese clubs. As the country was occupied it would be thrown open to Chinese and Hindus, as well as Japanese, and with the ocean open the white population of the slope would soon be overcome.

Simultaneously with the invasion of the slope Alaska would be occupied by Canadians, and there would be an invasion by the British from the Canadian frontier. Porto Rico, Cuba, and Panama would be seized, an unopposed fleet would destroy all the shipyards, and assaults would be made on our cities on the Great Lakes and on the Gulf and Atlantic seaboard. Our vulnerability on these waters is appalling. On the Atlantic coast alone our population aggregates over 15,000,000, with over \$17,000,000,000 worth of property within gunshot of the water. Coast defenses have always proved inadequate. The efficient protection of all these cities depends on the control of the sea. With the enemy in undisputed control of the sea the damage that could be inflicted and the tribute that could be exacted would stagger the world.

On the Great Lakes there are over 7,000,000 people and over \$7,000,000,000 worth of property within gunshot of the water, all without defenses of any kind, while over 200 British light-draft vessels can pass quickly through the Canadian canals to the lakes.

I do not believe that Great Britain would undertake to join Japan unless Japan soon gained permanent control of the Pacific, so that troops from Japan and India, coming in through Vancouver and on the trans-Canadian railways, could join Canadian and British troops in the invasion from the north. However this may be, Great Britain is held in the offensive-defensive alliance, and it is our duty to investigate the contingency of war with those two powers. This investigation shows that for a long time nothing but the direst adversity could be expected. Upon the outbreak of war the Regular Army would be mobilized, and the militia would be called out. Our people would awaken in consternation to find that there were only about 9,000 infantry of the Regular Army in the whole country, and that these few were scattered far and wide. The consternation would be intensified when it was found that only about 60,000 militia were fit for duty, and that these likewise were scattered over the whole country.

The President would probably issue a call for 250,000 volunteers, and the nation would be shocked to find that there was no system prepared for their organization and equipment; that not even uniforms could be supplied to half that number; that facilities were lacking even for their mustering in.

In olden days, when the numbers involved were comparatively small and the time available after the declaration of war was great, preparation in advance was not vital, though it has always been of great importance. Not so to-day. It is too late to prepare after war has come. Formerly vessels could be built in ninety days, and it took an enemy's fleet that long to get over the ocean and inaugurate a campaign. To-day it takes three years to build a battle ship, and an enemy's fleet could be at our doors in less than two weeks and destroy our shipyards so that no vessels could be built at all. Likewise with armies. When the numbers are so great it is impossible to perfect the organization overnight. In the Spanish war we called out but a quarter of a million volunteers altogether, but the woes of imperfect organization were so great that they died off like flies in camps at home here in our midst. A great industry or a great business can not be created overnight. Much less can an army.

With the Japanese in control of the sea in the Pacific it would be impossible to prevent the invasions mentioned above. We could not possibly oppose the three invasions of 200,000 trained soldiers each, the veterans of Port Arthur and Manchuria, with 25,000 trained soldiers in each case. It would simply be slaughter and butchery to attempt resistance. It would take America at least a year to assemble and train an army competent to undertake the expulsion of the invaders. Ere this the host of Japanese, reinforced doubtless by Chinese and Hindus, would be in complete occupation, and with 1,500,000 veterans in control of the mountain passes they would be impregnable. The transportation and commissary problems, with the deserts and thinly settled stretches east of the coast ranges of mountains, would be stupendous, while the Japanese, besides having a rich country on which to live, would have the open-sea communications with the mother country.

We might as well realize now as later that the Asiatics, in control of the Pacific, could dislodge the Americans on the Pacific slope, and as long as they retained control of the sea we could never successfully contest their supremacy.

A general invasion from Canada by the combined British, Canadian, and Asiatic forces, with both oceans open and with east and west railroads and the waters of the Great Lakes for transportation, while the coasts were held by the unopposed fleets, would present us with a problem almost as hopeless. The invasion would probably reach from the frontier to New York and even to the Chesapeake, east of the Appalachians, and perhaps to the Ohio River, in the Middle West. Our people have been living under the impression of absolute security against invasion. This impression was well founded when the ocean was a great barrier and the only danger was from Europe. Events of recent years, however, have demonstrated the great capacity of Asiatics for war and have at the same time annihilated the time-and-space separation due to the ocean. With Europe and Asia cooperating and in control of the sea in both oceans the question of invasion takes on a new aspect. Japan is planning and preparing to gain control of the population and resources of China. The cooperation of Great Britain, the "mistress of the seas," would make practicable the invasion of America along its northern frontier. No nation could stand up under the weight of numbers the alliance could command.

It is time patriotic Americans were considering the possibility of a war for our very existence. They should realize that everything would hinge on the control of the sea in the Pacific. We must take no chances of having the permanent control of the sea in this ocean. If our fleet were on the Pacific coast at the outbreak of war it should remain on that coast, moving out no farther than Hawaii, and allow the Japanese to occupy the Philippine Islands for the time. Except for cruises by our armored cruisers we should stand fast and proceed to build a new fleet as big again as our present fleet, and in the meantime should undertake no offensive move except to gain complete control of the Hawaiian Islands and establish a great naval base there. Of course

Japan would proceed to build new ships also, but we could ask nothing better than a race in building ships. We should so move that the Japanese fleet could get a general action only by crossing the ocean.

Should war come when the fleet is in the Atlantic, its difficult transfer to the Pacific would begin immediately, but it should hug the coast on the eastern shores of the Pacific and force the Japanese fleet to cross the ocean to get a general engagement. Of course the Philippine Islands, Guam, Hawaii, the Aleutian Islands, Samoa, and Alaska would be seized, but the general invasion of the Pacific coast would not be undertaken while our fleet remained afloat. During the absence of the fleet, however, the coast would be subject to raiding expeditions. It is only too true that, almost without warning, such expeditions could seize Los Angeles, San Francisco, Seattle, Tacoma, and the other cities on Puget Sound, and possibly Portland. It is conservative to state that with our present lack of coast defense these raiding expeditions could be made successfully with our fleet in the Philippines, and some of them could be made successfully with our fleet on the coast. The Japanese have no doubt planned such expeditions. Quickly executed, with 25,000 men in each expedition, there would be no hope of successful resistance at a single point.

Fabulous ransoms would be exacted, and, if refused, the cities would be looted and laid waste or left in ashes. If the ransoms were paid all the works of defense would be destroyed, forts would be blown up, naval stations, arsenals, ship-building plants, wharfs, drydocks, ferry-boats, and railroad terminals would all be destroyed. All vessels and shipping would be captured and taken away. The size of the ransom and the extent of the damage that could be inflicted can be appreciated when we understand that in the State of Washington there are \$317,000,000 worth of property within gunshot of the water; in Oregon \$248,000,000; in California the huge sum of \$2,100,000,000, a total of \$2,665,000,000.

If war comes before we have taken more adequate steps for defense, we can only expect humiliation and defeat. The American nation, however, has never yet accepted defeat as final.

Atlantic Coast Inland Waterways.

SPEECH

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. MOORE of Pennsylvania said:

Mr. SPEAKER: No public question, except it be that of the currency, has so occupied the attention of the business men of the nation during the past year as that of transportation. In more than one message to this House and in his extraordinary convention of governors at the White House, the President of the United States has evinced his deep interest in this subject, and particularly in that of the development of our harbors and internal waterways. If I mistake not the temper of the people of this country, this great problem of internal development will at an early day require of this House its intelligent cooperation.

Our tremendous increase in population has been followed by the growth of industries unrivaled on the face of the globe. We must sustain these industries and encourage their development. They can not continue to prosper unless a ready and convenient market is obtained for them. Such a market is dependent upon means of transportation. The farmer whose great crops are ready for the harvest can not secure a fair reward for his toil and expenditure unless he is given an outlet to the consumer of his product. The manufacturer who provides the farmer with his tools and wearing apparel must have the same opportunity to distribute his commodities. Thus the industrialists and the agriculturalists alike are vitally concerned in the matter of transportation.

RAILROADS NEED RELIEF.

We are told that we have more railroads than any other country and that we afford better service to the traveling public. As a civilizing influence, bringing cities to the wilderness and helping the wilderness to blossom with comfortable homesteads, full credit is to be given to the railroads. Whether they have been rightfully or selfishly managed is beside the question. The people need the railroads as the railroads need the people. The difficulty is, that great as has been the growth of the railroads, gridironing over State and Territory, they have not progressed in proportion as the necessities of the people have increased. This was so apparent preceding the recent financial flurry that no less eminent a railroad manager than James J. Hill, in an address before the National Rivers and Harbors Congress in December last, declared the utter incompetency of the railroads to keep pace with our commercial and industrial requirements. In that address, the terms of which might later have been modified because of the subsequent business depression, Mr. Hill made specific appeal for the opening of the waterways of the country to relieve the railroads of their congestion of freight. He declared for the return of the canal,

hailing it as a wise move, and pleaded for a uniform depth of not less than 16 feet. Since that remarkable speech there has been another of equal significance, supporting the proposition that waterways have become essential to transportation, and that their installation will mean a saving of the natural resources of the country.

CARNEGIE SPEAKS FOR WATERWAYS.

At the conference of the governors at the White House, May 13, Andrew Carnegie, speaking upon "The conservation of ores and related minerals," said:

In my opinion, we should watch closely all the assets and begin both to save and to use them more wisely.

Let us begin with iron: We must in all possible ways lessen the demands upon it, for it is with iron ore we are least adequately provided. One of the chief uses of this metal is connected with transportation, mainly by rail. Moving 1,000 tons of heavy freight by rail requires an 80-ton locomotive and twenty-five 20-ton steel cars (each of 40-ton capacity), or 580 tons of iron and steel, with an average of, say, 10 miles of double track with 90-pound rails, or 317 tons additional; so that, including switches, frogs, fish plates, spikes, and other incidentals, the carriage requires the use of an equal weight of metal. The same freight may be moved by water by means of 100 to 250 tons of metal, so that the substitution of water carriage for rail carriage would reduce the consumption of iron by three-fourths to seven-eighths in this department. At the same time the consumption of coal for motive power would be reduced 50 to 75 per cent, with a corresponding reduction in the coal required for smelting. No single step open to us to-day would do more to check the drain on iron and coal than the substitution of water carriage for rail carriage wherever practicable and the careful adjustment of the one to the other throughout the country.

Addressing the President and the governors of the various States, Mr. Carnegie summed up what he declared to be our duty as a people in this wise:

First, conservation of forests, for no forests, no long navigable rivers; no rivers, no cheap transportation.

Second, to systematize our water transportation, putting the whole work in the hands of the Reclamation Service, which has already proved itself highly capable by its admirable work. Cheap water transportation for heavy freights brings many advantages and means great saving of our ore supplies. Railroads require much steel, water does not.

Third, conservation of soil. More than a thousand millions of tons of our richest soil are swept into the sea every year, clogging the rivers on its way and filling our harbors. Less soil, less crops; less crops, less commerce, less wealth.

THE AGITATION WEST AND EAST.

With these brief references to the opinions of high authorities I wish to call the attention of the House to that part of the great inland waterways movement of the United States which is confined largely to the Atlantic seacoast.

The recent trip of the President and the Inland Waterways Commission along the Mississippi River is of too recent occurrence to require explanation. That inspection was the outcome of the demand of the people of the Mississippi Valley for relief from railroad congestion in the Middle West and for an outlet for bulky freight to the sea. In view of the near completion of the Panama Canal and of the growing importance of New Orleans and Galveston and other Southern ports of entry, the agitation leading up to the President's visit to the Mississippi country was none too early. The wonder is that it had not been undertaken before. The outcome of the Mississippi agitation was a reawakening of inland waterways opportunities throughout the country. Along the Atlantic seaboard the impression prevailed that the time had come to put the coast inland waterways in unison with the general trend. They had been the thought and concern of our forefathers, including Washington, Jefferson, Gallatin, Clinton, and others. The original canal and waterway had largely given over to the better equipped and more expeditious railroad, and the business activities of the people had caused them to neglect the importance of keeping alive these serviceable and competitive avenues of communication. Freight congestion eventually brought the shippers of the East to a realization of their position, so that in November last, when a conference of the representatives of the Atlantic coast was called to meet in Philadelphia, governors and active business men of no less than fifteen States responded. These States extended in a line from Maine to Florida, divesting the movement of any sectional interest and enabling the delegates to declare in the interests of commerce and for the general welfare only, that waterways were no longer to be slighted. The resolutions of that conference are here reproduced:

ATLANTIC COAST LINE URGED.

The delegates from the Atlantic seaboard States, assembled in Philadelphia in the Deep Waterways Conference, after full and free discussion of all the aspects of the project for a deep waterway along the whole Atlantic coast and along the Gulf to the Mississippi River and of the plans so far suggested for creating such a waterway, approve and adopt the following resolutions:

"Resolved, That, as a primary movement, the opening of ship canals and deepening of intervening rivers and approaches from Norfolk, Va., southward to Key West, Fla., from Chesapeake Bay to Delaware Bay, and from the Delaware River to the Raritan River, and across Cape Cod, along the lines approved by Congress as the most practical,

having due consideration for the cost and promptness of their development, is demanded by the commercial interests of 30,000,000 people on the seaboard directly, and indirectly and ultimately by those of the remainder of the American people.

"Resolved, That, in our judgment, the construction of this highway can alone give gravely necessary and permanent relief to the business of transportation, and it will surely result both in stimulating commerce and in reducing the cost of moving commodities.

"Resolved, That the canals should be dug in any case by the Federal Government: First, because the Government alone has authority over navigable waters; second, because all the canals should be free, but chiefly because the enterprise planned in the interests of peace will have incalculable value for the whole nation in time of war.

"Resolved, That the present Congress be urged to take this great matter in hand at once, and to arrange for the practical starting of the undertaking at the earliest possible moment."

LENGTH OF CANALS AND TONNAGE.

In order to show exactly what such an inland chain of waterways as is contemplated by the resolution would mean, I submit the following data, prepared for the conference, showing the length of existing and proposed canals from Boston to Beaufort, N. C., and the difference in freight tariff rates by railroad and by water, the miles given being statute miles:

LENGTH OF CANALS.

No. 1. Cape Cod Canal via Buzzard's Bay, 7.5 miles long, saves 148 miles outside.

No. 2. Delaware and Raritan, 31.4 miles long, saves 184 miles outside.

No. 3. Chesapeake and Delaware, 13.8 miles long, saves 318 miles outside.

No. 5. Albemarle and Chesapeake, 13.9 miles long, saves 50 miles outside.

AVERAGE TARIFF PER TON MILE.

Earthen roads by animal power	cents	25
Steam railroads (1906)	mills	7.8
Canals, from 5 to 10 feet	do.	2 to 3
Rivers, from 5 to 10 feet	do.	1
Lakes, ocean, etc.	do.	0.5

TONNAGE RATES COMPARED.

I also submit an editorial from Shipping (February 8, 1908) bearing upon the importance of an improved coastwise system of inland waterways:

Enlargement of the Atlantic coastwise canals for the benefit of our manufactures and commerce is a matter of the greatest importance in the interest of economical transportation. The total amount which the people of the United States pay annually as freight for goods hauled over the railroads alone is more than \$1,400,000,000. The average length of haul is 131 miles, and although the rate per mile is only 0.78 cent, the charge per ton is therefore \$1.02 for every ton hauled. One-fourth of this movement is coal, much more consists of raw material and manufactured product, so that a large part of the cost of producing any articles of commerce is composed of the freight charges. These are lower in the United States than in any other part of the world, yet the foreign railroads are enabled to charge a much higher rate, while the manufacturers are able to undersell our own. This paradox is explained by the general use of waterways for transportation of raw materials, while the finished products are carried by rail at a charge which they can readily bear. No country in the world has apparently greater possibilities for the development of interior waterways than this, yet they seem to be sadly neglected by the States and the National Government. The niggardly appropriations made will not meet the present demands of about \$500,000,000 for fifty years, by which time the population will have far more than doubled. This has led to a general demand for a return to the original policy of authorizing corporations, States, or private parties to make their own improvements as they may be required, just as has been done in the case of other lines of communication, as for roads, canals, railroads, telegraphs, telephones, etc.

NEW YORK CANALS TOLL FREE.

Prior to the ascendancy of railroads, the States built many miles of canals, but they were purchased and, in a measure, destroyed to eliminate the competition. New York, however, has preserved her system as a public highway, free of tolls, and is now enlarging it at a charge of \$101,000,000. The congestion on all lines of railroads compels them to refuse freight and causes annoying delays at terminals, so that frequently from four to six days are required for deliveries within a radius of 100 miles. Enormous orders for more cars are placed, but even this will not increase the terminal facilities, and the cars will continue to be used for storage until each one, as a unit, can be unloaded in the warehouse or vessel. Again, the cost of movement by canal being but one-third of that by rail, while in open water it is but one-tenth, the enormous economy thus secured is attracting the attention of the manufacturer to the improvement of the available waterways between the great centers of industry which stud our coast. There is no such aggregation of capital and manufactures in the world as is to be found from Boston to Norfolk, and the physical advantages for an interior waterway of ample dimensions connecting them are unsurpassed, but unfortunately for more than a century they have been almost neglected because of the hostility to their improvement by vested interests. It is said the open sea is available, but this is not always true: in storms or in war it is unsafe, whereas the interior waterway passes through a fertile, safe, and enormously productive territory, both flanks of which are teeming with traffic, while the ocean is nonproductive from start to finish, without long detours into the bays and estuaries to reach particular ports.

THE MASSACHUSETTS CANALS.

It is not unnatural, in view of the foregoing, that the State of Massachusetts has granted charters to three distinct companies to attempt the construction of canals, from private funds, across the Cape Cod peninsula, one at Bass River, one at Buzzards Bay, and the last and most important from Weymouth Fore River via Brockton to Taunton River and Narragansett Bay, that her citizens may secure fuel to support her manufactures of shoes, cotton, and other goods which line the route. The next link across New Jersey which at one time had a traffic of about 4,000,000 tons, has been throttled by the small dimensions of the canal and the increase in the size of boats until it can not pay the fixed charges. The link connecting the Chesapeake and Dela-

ware bays, although having the greatest draft of any, is still far too small and unable to pass more than about 3 per cent of the vessels navigating these waters. The tonnage now in sight amounts to something above 50,000,000 registered tons, yet most of it must go to sea at greater risk, loss of time, and expense. These, as well as the Schuylkill Navigation, which has been leased by the Reading Railroad Company, are all barriers to interstate commerce and a check upon the growth and industries of the great States to which they are tributary, because of the high rates which are maintained by their controlling interests. If made free, as in other parts of the country, great economies would be effected to all consumers, and the overland transporters would be materially benefited by the higher class freights which would result from the industries thus fostered.

INTERSTATE COAST COMMERCE.

An analysis of the statistics of foreign commerce along the Atlantic coast, from the viewpoint of the Philadelphia Ledger, March 10, 1908, is also submitted:

Boston's chamber of commerce has been making a detailed analysis of the statistics of the foreign commerce of that port, together with a comparison with the imports and exports of the other principal ports of the United States. This analysis and comparison afford food for thought for Philadelphia shippers as well as for those of Boston, and while the showing made by Philadelphia is not all that it should be and can be made, it is decidedly inspiring. It shows that, whatever the reasons, the last year has been one of extraordinary gains, and it gives solid ground for the expectation that, with an intelligent administration of the affairs of the port, with the provision of adequate docking and transportation facilities, and with the completion of the channel to the sea, to which Philadelphia is justly entitled, the ground that has been gained will be permanently retained.

In the aggregate of its foreign commerce the port of Philadelphia stands fifth in the list, its total of \$187,000,000 in 1907 having been exceeded not only by New York, but by Boston, New Orleans, and Galveston as well, in the order named. New York's lead is so great that none of the other ports of the country can be compared with it, but Philadelphia's exports and imports fell below those of Boston by only \$40,400,000, and was less than New Orleans' by \$21,560,000 and of Galveston's total by \$16,670,000. On these totals alone, considering its geographical and industrial position, Philadelphia would have no cause to be satisfied, but there is another aspect of the situation which is more encouraging.

INCREASE OF IMPORTS AND EXPORTS.

It is to be noted that while Philadelphia did not alter its relative position as compared with the figures for 1906, its foreign commerce for last year increased at a rate that was not approached by any other American port. The actual increase was 17 per cent, as compared with an increase of only 7.9 per cent at New York and 9 per cent at Boston, and a decrease of 1.7 per cent at New Orleans and of 11.5 per cent at Baltimore. This port increased its imports by \$8,555,000 and its exports by \$18,588,000, the percentages of increase and decrease, as compared with 1906, at the different ports being shown in the following table:

	Imports.		Exports.		Totals.	
	Increase.	Decrease.	Increase.	Decrease.	Increase.	Decrease.
New York.....	6.3	-----	9.8	-----	7.9	-----
Boston.....	11.9	-----	5.3	-----	9.0	-----
New Orleans.....	-----	1.5	-----	1.8	-----	1.7
Galveston.....	55.0	-----	5.2	-----	6.5	-----
Philadelphia.....	11.9	-----	21.0	-----	17.0	-----
Baltimore.....	2.5	-----	10.3	-----	11.5	-----

It will be observed that Philadelphia's principal gain was in its exports, but it is also to be noted that its increase in imports was equal to that of Boston. The large percentage of gain for Galveston, in the import column, represented an actual gain of only \$2,700,000—the strength of that port being almost wholly as a shipping point for cotton—whereas the actual gain for Philadelphia in that column was \$8,555,000. Boston alone exceeded this aggregate, although the percentage of gain was the same. In the table of exports, on the other hand, the record of Philadelphia gains is exceeded by none of its competitors, New York not being considered in the comparison of totals.

This is a condition of affairs so gratifying that it should inspire the commercial interests of the port to a serious study of the causes for these substantial gains, and to a united and determined effort to make still further progress, a progress which shall wipe out the effects of the present temporary depression and carry the port forward another point in the table of comparison with its rivals on the Atlantic coast.

ATTITUDE OF LYNN BOARD OF TRADE.

As showing the commercial attitude toward the proposed inland chain, a letter from the Lynn Board of Trade to my colleague from Massachusetts [Mr. TIRRELL] will also be of interest. This communication is selected from many others received from points along the New England coast, showing the widespread interest in the movement to secure adequate transportation facilities by water:

SECRETARY'S OFFICE, LYNN BOARD OF TRADE,
Lynn, Mass., March 21, 1908.

C. Q. TIRRELL, M. C.,
Washington, D. C.

MY DEAR SIR: It is generally understood that the railway systems in the eastern part of the country are utterly unable to handle the volume of freight which comes to them, and because of this vexatious delays in the transportation of freight are constantly occurring, putting the shippers to a considerable money loss.

This state of affairs also prevents the development of agriculture and manufacturing industries. The only relief for this unfavorable condition lies in the development of transportation by water. The most pressing need at present seems to be the development of inland waterways, according to the plans adopted in the Atlantic waterways conference and the national rivers and harbors congress, both held during the present winter.

Believing that the carrying out of this project will be of great and lasting benefit to the commercial interests of the country, the Lynn Board of Trade is in favor of some form of legislation which will best promote that end.

The secretary of the Lynn Board of Trade has been instructed to write you, requesting you to urge upon Congress such favorable legislation. Trusting this will meet with your approval, we remain,
Respectfully, yours,

HENRY A. SAWYER, Secretary.

INLAND WATERWAYS MEAN GROWTH.

Without desiring to encumber the RECORD, but because of its brevity, I draw attention to the following editorial from the Philadelphia Record, under the caption "Inland water-borne commerce:"

A census of vessels engaged in the transportation of freight and passengers on the waters of the United States taken for the year 1906 is now completed by the compilation of the facts and the tabulation of the figures, and the results are most encouraging. They show that wherever the conditions for navigation are reasonably good water-borne traffic has enormously increased, thus supplying irrefutable arguments in favor of the improvement advocated by the Internal Waterways Congress and affiliated associations. Where rivers have been neglected or the contemplated deepening or canalization has been delayed business has fallen off. Despite these instances of decay in the business of inland transportation by water the industry as a whole has kept step with the growth of the country's wealth and business. Proportionately the increase of interior navigation has been as great as, if not greater than, the increase of railroad facilities.

In the seventeen years since the last special census was taken the value of the vessels employed on the interior waterways and in coasting (fishing vessels excluded) has increased from \$200,000,000 to \$500,000,000; their gross income has grown from \$162,000,000 in 1889 to \$295,000,000 in 1906, and the wages paid to employees from \$41,000,000 to \$72,000,000. In the former year these vessels carried 130,000,000 net tons of freight; in 1906 they carried 265,000,000 net tons. The gross tonnage of all the inland water and coasting craft was 8,359,135 in 1889, and 47 per cent only of this was in steel or iron vessels; in 1906 the gross tonnage had risen to 12,893,420, and the proportion in steel or iron vessels to 82 per cent of the total. The steam vessels increased in number from 5,603 to 9,927, and in registered tonnage from 1,710,073 to 4,059,521 tons. By far the largest part of this shipping is operated on the Atlantic and Gulf coasts and the adjacent estuaries, sounds, and bayous, the totals being 20,000 vessels, with a registry of 4,800,000 tons. To what proportions this embryonic fleet could grow under the impetus of a coastal inland waterway from New England to Texas beggars the imagination.

The number of vessels employed on the Mississippi and its tributaries is 9,622, and their aggregate tonnage is 4,400,000, and from these figures one might get the impression that traffic can flourish on waterways even that are not improved. But the Mississippi craft are mostly coal barges and scows; their total value was but \$23,000,000, and their annual gross income \$17,000,000. Moreover, in the seventeen years under consideration general traffic on the Mississippi had dwindled, and would be almost negligible but for the development of the coal-carrying trade coming down through the Ohio. The St. Louis steamboat trade is almost extinct. The 2,990 vessels on the Great Lakes represented a value of more than \$130,000,000—over six times that of the entire Mississippi outfit—and they earned \$65,000,000 in freights and fares.

SOUTHERN CARGOES HELD UP.

As an object lesson, pointing a waterways moral, I also present the following statement of fact with regard to the difficulties under which interstate commerce, as between the Atlantic States, is now carried over such inland waterways as are left to us. This article is from the Philadelphia Inquirer of March 9, 1908:

The arrival at this port yesterday of thirty-two barges loaded with the largest cargoes of lumber ever shipped here at any one time, which had been tied up for over a month in the canals between here and Newbern, N. C., furnished maritime and commercial interests with another forceful argument for prompt Government action on waterways development. The delay of the barges was due, it is said, to the fact that many of the canals which they were compelled to pass through were closed either because of the ice or for repairs, while in other instances they found the waterways so badly in need of improvement and development that they were hardly navigable.

The barges are loaded with 10,000,000 feet of lumber, several thousand tons of wood pulp, 200,000 mine props for the coal mines and a large quantity of copper ore. The cargoes come from Virginia and North Carolina and the delay in transit, it is said, will mean a serious loss, not alone to their owners, but also to the concerns to which the lumber and other material are consigned.

According to shipping men, the poor condition of the inland waterways along the Atlantic coast has been a source of great financial loss to the maritime interests of the Delaware River and other ports, and this fact alone, they say, should hasten the adoption by the Government of a comprehensive programme for developing the canals and other inland navigable streams. The most serious delay encountered by the barges was in the Delaware and Chesapeake Canal, one of the most important of the inland waterways along the coast, which had been closed to navigation for several weeks because of necessary repairs which had to be made. Friday the repairs were completed and when the lock at St. George was thrown open the big fleet of barges, together with other craft which had been tied up in the canal, passed through into the Delaware River. Besides the vessels which were tied up in the canal there were a score or more bound from this port for Baltimore and other places which could not take their departure because of the fact that the Delaware and Chesapeake Canal was temporarily closed. With the opening of the canal navigation between here and Baltimore and other Southern points has again been resumed.

SAVING OF LIFE AND PROPERTY.

Another phase of the problem to which attention is respectfully drawn is the life-saving and property-protecting advantages of inland waterways. Since this subject is comprehensively treated in a letter from Col. C. P. Goodyear, of Georgia, I offer it for the consideration of the House:

BRUNSWICK, GA., March 19, 1908.

HON. J. HAMPTON MOORE.

MY DEAR SIR: In my inquiry concerning the proposed Atlantic and Great Western Canal across the hills of Georgia I have been led to make an investigation of Life-Saving Service records, due to my per-

sonal knowledge that there have been very few disasters upon the Georgia coast in my thirty-eight years' residence here.

I find the record for a period of ten years prior to June 30, 1906, most gratifying, but 43 disasters of all kinds in the ten years.

There were 3,760 disasters in same period on Atlantic and Gulf coast.

The location of these disasters, it seems to me, is a most impressive argument for the inland waterway down the entire coast, across the State of Florida, and to the Mississippi River.

The New England coast record distributed through the ten-year period named shows 561 disasters for the Maine coast, 33 for New Hampshire's only 12 miles of coast, 851 for Massachusetts, 151 for Rhode Island, 73 for Connecticut; total, 1,669.

Many of these were total wrecks. Much loss of life ensued. How much the Life-Saving Service reports do not specifically show for localities for such period. (See Life-Saving Service reports, 1906.)

The arrival of vessels at Boston, coastwise ports south and east, was 8,643 vessels, 9,274,615 gross tons, 1906; 9,616 vessels, 10,261,474 gross tons, 1907. (See Monthly Summary Commerce and Finance, December, 1907, p. 1189.)

The ten-year period shows for New York, New Jersey, Delaware, Maryland, 978 disasters. New York's coastwise commerce, vessel arrivals, 1905, 7,182; 1906, 7,186; 1907, 6,326. Philadelphia coastwise arrival vessels, 1906, 4,211; 1907, 4,450.

Total vessel arrivals for the three ports, 1907, 16,392. I do not have for this portion of coast disasters for 1907, but the average for each year often is 2,547, all avoided by the inland route.

Of the 16,392, the Boston data shows proportion from Southern ports to be from Southern ports, 1907, 6,306; 1906, 5,672. New York and Philadelphia data does not show this, but proportions probably about the same, about two-thirds, about 10,000 from the South; therefore the disasters south of Maryland become important.

Of course arrivals should be doubled to show number of trips affected, as vessels go as well as come, making total affected for Northern ports named 32,784, at least 20,000 to and from the South.

For the ten-year period, disasters on coasts as follows south of Maryland: Virginia, 278; North Carolina, 283; South Carolina, 53; Georgia, 43; Florida, 184; Alabama, 20; Mississippi, 7; Louisiana, 26; Texas, 119; total, 1,013. The straits of Florida, the danger points off North Carolina and Virginia coast, all avoided by the 32,784 vessels, which statistics account for at least by 20,000 of them in a year. The average per year, South, 103.

If the data for all important ports were given, as Portland, Providence, New London, Wilmington, Baltimore, Norfolk, and Newport News, it would, I believe, readily show interchange coastwise business of not less than 50,000 vessels; not less than 33,000 between northern and Southern ports.

Counting all classes of vessels in coastwise trade, \$20,000 would be, I think, a ridiculously low estimate of average value of vessels, or \$7,000,000,000 of total cargoes, \$500,000,000 exposed to these dangers relieved by inland passage.

For the years 1904 and 1905, vessels in disaster, 530; 1905 and 1906, 465. On Atlantic and Gulf coast: Value of such vessels and cargoes, 1904 and 1905, \$29,000,579; 1905 and 1906, \$28,558,680; losses, 1904 and 1905, \$4,447,480; 1905 and 1906, \$3,034,970; tonnage, 1904 and 1905, 316,126; 1905 and 1906, 307,358; tonnage, total loss, 1904 and 1905, 47,961; 1905 and 1906, 28,650. Lives lost, Atlantic and Gulf coast, 1905, 86.

The yearly increase of this coastwise interchange of freights can probably be gotten at from records of trade bodies in the different ports, and would be of great value.

The data can also be obtained of coastwise insurance, which would be, of course, greatly reduced for an inland passage.

The reduction in freight rates would make an enormous yearly saving to commerce. The loss of any part of eighty-six lives a year which would be saved is not purely a humanitarian question. An able-bodied man has a yearly value in dollars.

The classes of freight transferred upon the two coasts—coal, lumber, and other heavy commodities, a vast majority of the tonnage—can not stand a high-class freight.

Sincerely, yours,

C. P. GOODYEAR.

THE PEOPLE LOOKING TO CONGRESS.

Important as the waterways problem is to the people, it has been apparent for some time past that owing to the exigencies of this session it would not be advisable to attempt waterways legislation. A rivers and harbors bill of generous proportions was enacted in the Fifty-ninth Congress, and a public buildings bill had to be first considered this session. The hopes of waterways advocates, therefore, turn to the next session of this Congress. The Inland Waterways Commission appointed by the President will continue its inquiries, and the various associations operating together, in conjunction with the Rivers and Harbors Congress, will proceed with their work of education and agitation. Since the various commercial and trades bodies of the country are behind the movement and the prosperity of the country shows no sign of abatement, nor any disposition to make lighter the task of the railroads, there is every reason to believe that the next Congress, responding to the wishes of the people, will give consideration to their claims in respect to waterways.

As to the necessity for a survey for a continuous inland waterway from Boston to Beaufort, N. C., as contemplated by concurrent resolution No. 35 introduced by me, and from Beaufort, N. C., to Key West, Fla., as proposed in concurrent resolution No. 39, introduced by Mr. SMALL, of North Carolina, I deem it proper to present certain information which has come into my hands as to the distances along the proposed inland waterway from Boston to Beaufort, and the saving by an inside over an outside course. The following letter from the Superintendent

of the Coast and Geodetic Survey, followed by one from the Acting Superintendent, presents authentic figures:

FIGURES AS TO DISTANCES.

DEPARTMENT OF COMMERCE AND LABOR,
COAST AND GEODETIC SURVEY,
Washington, March 13, 1908.

Hon. J. HAMPTON MOORE,

House of Representatives, Washington, D. C.

SIR: In response to your letter of March 10 I have pleasure in furnishing you below the distances along the proposed inland waterway from Boston, Mass., to Beaufort, N. C., these distances having been measured from the larger scale charts of this Survey.

	Nautical miles.
Boston to New York, via Cape Cod Ship Canal	226
New York to Philadelphia	90
Philadelphia to Baltimore	93 1/2
Baltimore to Norfolk	154 1/2
Norfolk to Beaufort, via Albemarle and Chesapeake Canal	175

Total 739

Seven hundred and thirty-nine nautical miles is equal to 851 statute miles.

Respectfully,

O. H. TITTMANN,
Superintendent.

DEPARTMENT OF COMMERCE AND LABOR,
COAST AND GEODETIC SURVEY,
Washington, March 13, 1908.

Hon. J. HAMPTON MOORE,

House of Representatives, Washington, D. C.

SIR: Replying to your letter of March 16, I have the honor to furnish the following information:

The shortest navigable distances in nautical miles for full-powered steam vessels are as follows:

	Miles.
Boston to New York	300
New York to Philadelphia	229
Philadelphia to Baltimore	355
Norfolk to Beaufort	357

Total 1,241

Respectfully,

F. W. PERKINS,
Acting Superintendent.

AUTHENTIC ESTIMATE NEEDED.

From the above data it will be seen that in nautical miles the outside sailing distance from Boston to Beaufort is 1,241; the inside distance, 739 nautical miles. The saving of sailing distance in favor of the inside passage therefore is 502 nautical miles, and this saving involves the passage around Cape Cod, around Cape May, around Cape Charles, and around Cape Hatteras, the terror of all coastwise mariners. I commend to the attention of the House the notable saving in sailing distance inside as between Boston and New York, New York and Philadelphia, Philadelphia and Baltimore, and Norfolk and Beaufort.

Obviously the 30,000,000 people directly and indirectly interested in the business of the Atlantic coastwise States should have some definite information as to the cost of the proposed inland waterway and some reasonable prospect of having this waterway opened up for commercial, industrial, and agricultural purposes. So far as information upon this subject could be obtained, I am convinced that it would require no more money to build a 16-foot barge canal, with greater depths at certain points from Boston to Beaufort, than the single State of New York has already appropriated for its improved Erie Canal system. In answer to an inquiry for an estimate, based upon such data as he already had at hand, the then Chief of Engineers, United States Army, whose retirement upon age has removed from the Government service one of its most faithful officials, sent the following letter:

THE GOVERNMENT'S INCOMPLETE DATA—VALUABLE INFORMATION ALREADY AT HAND, BUT NOT SUFFICIENT FOR THE PURPOSE.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, February 24, 1908.

Hon. J. HAMPTON MOORE,

United States House of Representatives.

SIR: 1. In reply to your letter of the 5th instant, concerning estimates for an inland waterway from Boston to Beaufort, I have to state that there is considerable information at hand concerning all sections of the route with the exception of the Delaware and Raritan Canal link and the region bordering upon the open stretch between Narragansett Bay and the eastern entrance to Long Island Sound.

2. For the section between Boston and Fall River reliance is placed upon the estimate of the board of harbor and land commissioners of Massachusetts, published in their report of May 1, 1902, amounting to \$57,618,358 for a canal 25 feet deep and 130 feet wide at the bottom. The preparation of an estimate for a canal 35 feet deep will probably require a series of borings.

3. The routes across Cape Cod have been extensively investigated and the conclusion reached that the line by way of Barnstable and Buzzards bays is superior to all others. The estimated cost of a canal along that route 23 feet deep and 198 feet wide at the bottom is approximately \$10,000,000.

4. No reconnaissance appears to have been made for an inland waterway to avoid the stretch of open sea of about 40 miles between the entrance to Narragansett Bay and the eastern entrance to Long Island Sound. A draft of 25 feet can now be carried from Fall River to the northern end of Staten Island, passing through Long Island

Sound, East River, New York Bay, and Kill von Kull. A draft of 14 feet is available between that point and the Raritan River, and operations are in progress to obtain a depth of 21 feet. The preparation of an estimate for a channel 35 feet deep from Fall River to the mouth of the Raritan will perhaps require borings in Narragansett Bay, East River, the Kill von Kull, and the Arthur Kill, but it is possible that the information obtained by the local engineer officers in connection with works of improvement may be sufficient for the purpose.

5. The available depth in the 12 miles of the Raritan River between its mouth and the entrance to the Delaware and Raritan Canal is about 9 feet. Estimates for channels 16 to 35 feet deep will probably necessitate borings in the bed of the Raritan, and careful surveys and borings along the 44 miles of the Delaware and Raritan Canal. The available depth in that canal is 7 feet. Its cost to December 31, 1870, was given by the Tenth Census as \$4,735,353.

6. The limiting depth in the Delaware River between the Delaware and Raritan Canal and Philadelphia is about 8 feet at the mouth of the canal and at Kinkora Bar. Elsewhere the depth is greater, and it is thought that the local engineer office at Philadelphia can furnish estimates for a 16-foot channel between those points. Estimates for channels of greater depths will probably require borings. From Philadelphia to the mouth of the Chesapeake and Delaware Canal a 30-foot channel is in progress of excavation, and it appears possible that the local engineer office may also be in a position to estimate the cost of a 35-foot channel between those points.

7. Several estimates are available for the proposed Chesapeake and Delaware Ship Canal, viz:

For depth of 15 feet and bottom width of 100 feet (Sassafras route) approximately-----	\$5,713,345.00
For depth of 26 feet and bottom width of 100 feet (Sassafras route)-----	8,085,330.00
For depth of 27 feet and bottom width of 100 feet (Back Creek, existing route, but not including cost of obtaining possession of existing canal)-----	7,605,471.39
For depth of 35 feet and bottom width of 150 feet (Back Creek route, including cost of obtaining possession of existing canal)-----	20,621,323.70

8. A 35-foot channel is in progress of excavation in the Chesapeake Bay, from Baltimore southward, and a 28-foot channel is available through Hampton Roads and the Elizabeth River to the navy-yard at Norfolk. It is thought that the information in possession of the local office at Norfolk will permit the preparation of an estimate for a 35-foot channel.

9. Surveys have been made for a waterway between Norfolk and Beaufort Inlet. The estimate for a cut 90 feet wide and 16 feet deep is \$10,023,000.

10. On account of the length of time required to furnish even an approximate estimate of cost of the entire waterway with any of the uniform depths specified in your letter, no attempt is made at this time to do so.

The nearest approach that can be attempted without considerable labor is as follows:

Estimated cost of 25-foot depth from Boston to north end of Staten Island (in open ocean from Narragansett Bay to Long Island Sound)-----	\$57,618,358.00
Cost of 25-foot navigation from north end of Staten Island to Philadelphia (involving deepening of Arthur Kill, Raritan River, Delaware River, and the construction of a canal from Raritan River to the Delaware)-----	Indefinite.
Cost of 27-foot depth from Philadelphia to Norfolk-----	7,605,471.39
Plus value of works and franchise of Chesapeake and Delaware Canal, given in Senate Document No. 215, Fifty-ninth Congress, second session, as-----	2,514,289.70
Cost of 16-foot depth from Norfolk to Beaufort Inlet-----	10,023,000.00

Total-----
Plus a large and indefinite amount for Delaware and Raritan section.

Very respectfully,

A. MACKENZIE,
Brigadier-General, Chief of Engineers, United States Army.
COST OF A MISSING LINK.

It is observed that General Mackenzie carries his estimate of cost of the entire work at varying depths to \$77,761,119.00, but omits one or two links in the chain, notably that across the State of New Jersey on lines contiguous to the Delaware and Raritan Canal. Since Government data upon this link are imperfect, I have gone to the author of a report of a canal commission authorized by the city of Philadelphia to make a survey in 1894. His letter is that of a civil engineer whose views have not always coincided with those of the Government engineers and whose opinion with regard to the general project is that the Government estimate of the cost from Boston to Beaufort is too high. The letter of Professor Haupt, to whom I refer, estimating the cost of the link between New York and the Delaware River across the State of New Jersey at between fifteen and twenty millions of dollars, is as follows:

LEWIS M. HAUPT, CONSULTING ENGINEER,
Philadelphia, Pa., March 12, 1908.

Hon. J. HAMPTON MOORE.

MY DEAR SIR: I have cut my paper on "Our waterways" short that I may give some attention to your request for estimates on the entire coast line from Boston to Beaufort, as well as for a 16-foot navigation from Trenton to Philadelphia, and for 35 feet thence to the sea.

In the brief note of this morning I intimated that the Cape Cod project of Mr. Belmont, now under contract, is the one which may properly be taken, so far as national defense is concerned, and that is to be provided for by private capital, as is also the Boston-Brockton canal for the preservation of the business interests along its banks. They will be completed without cost to the Government and in less time, from all appearances, by avoiding entangling alliances, if experience is any criterion.

As to the New Jersey link, the data are all clearly given in the Report of the Philadelphia Canal Commission of 1894. (See p. 28 et

seq.) For a 16-foot canal across these 31.4 miles of the plateau, the only reduction would be in the amount of excavation, as all the works and auxiliaries remain about the same. This means some 3,000,000 cubic yards less, but to-day the prices of labor are higher than when the estimate was made, at least 50 per cent, so that the unit price would more than offset the reduction in quantity, and the cost would be about \$15,000,000, aside from the cost of securing the old works by condemnation, which may be five millions more, or, say, \$20,000,000 in all.

The Chesapeake and Delaware link for 16 feet can be placed at \$10,000,000, including the right and franchises, the removal of the summit level, and making of an open cut at sea level between the two bays, with very little work in the approaches; and the Norfolk-Beaufort section is estimated at ten millions, making for these three connections only \$40,000,000, or with the Cape Cod link \$50,000,000, which was the figure Senator Quay had fixed upon some twenty years ago.

As to the river, I presume you have Mr. Hasskarl's late report of December 31, 1907, giving all the statistics of appropriations and works, and hence I can briefly refer you to his digest as to the condition of the 26-foot project when the 30-foot one was substituted for it and it had been declared completed. He says on page 3 that the depth on Tinicum Island Shoal was 23.6 to 26 feet over a distance of about 4,200 feet. Above Schooner Ledge 24 to 26 feet for about 4,800 feet, and from below Marcus Hook to Bellevue 23 to 26 feet over a distance of 13,500 feet, which is about 23 miles over what is known as the Cherry Island Flats, which have been dredged some five or six times, but constantly fill up. On his summary he shows "Minimum present depth as being in all cases 30 feet, excepting at Duck Creek Flats, which has shoaled to 23 feet for a distance of 24,000 feet opposite Listons Point, or almost 5 miles. But on inquiry of the pilots as to the actual conditions of these several bars, I learn that they are shoaling rapidly, excepting at the Bulkhead and just below Fort Delaware, where the channel is reasonably permanent. His report states on page 4: "The work of dredging under the 30-foot project has resulted in the formation of a channel 30 feet deep, with a mean width of 600 feet at the following localities: Duck Creek Flats, channel length, 43,000 feet, $8\frac{1}{2}$ miles; Baker Shoal, 20,500 feet, 4 miles, and Salem Cove Flats, 12,500 feet, $2\frac{1}{2}$ miles.

This is the usual phraseology in reporting the results, yet his profile and summary both show the shoaling to 23 feet for a distance of nearly 5 miles at Duck Creek, and there are credible reports of shoaling elsewhere so that there is nothing very reliable within reach as to the actual amount to be removed to recover and maintain the 30-foot project.

As to the artificial island intended for a dump, referred to on page 7, it is reported as being completed and protected by stone riprap, at a cost of \$465,326.86 for the latter, which was not contemplated in the estimate, but I learn that the bulkhead is not completed and the island is no longer used as a dump for the dredged material which is being deposited in the *tideway of the bay*, since the action of the tides in the gap at the island is such as to have bored so deep a hole that it can not be closed, and it is not practicable to pump the silt over it. In this connection I beg to call your attention to the excellent paper of Mr. Ripley, which was handed you, for an intelligent understanding of the conditions which militate against the procuring of even a 30-foot channel by dredging which disturbed the regimen of the river at the place of excavation as well as that of deposit. The upper river only needs a little regulating above the Kinkora bar to give a good 16-foot navigation, which I believe could be secured for about \$150,000.

Regretting that I must be thus brief and so unsatisfactory in a matter of so great importance to the commercial welfare of the country, I am,

Very sincerely, yours,

LEWIS M. HAUPT.

THE DEEPER DELAWARE PROPOSITION.

Although there is a much greater depth than 16 feet in the Delaware River below the city of Philadelphia, the importance of deepening the channel from 30 to 35 feet bears so directly upon the commerce of all the States affected by a continuous inland waterway, of which the Delaware would necessarily be a part, that I have obtained from the engineer director of the department of wharves, docks, and ferries of the city of Philadelphia an estimate of the cost of deepening the Delaware channel which, in the absence of Congressional sanction by survey, can not otherwise well be obtained. Mr. Hasskarl, the writer, was formerly in the Government service, and is well qualified to make the estimate which is herewith presented:

DEPARTMENT OF WHARVES, DOCKS, AND FERRIES,
Philadelphia, March 19, 1908.

Hon. J. HAMPTON MOORE,

Member of Congress, House of Representatives,
Washington, D. C.

DEAR SIR: In reply to yours of the 16th instant, I have the honor to submit figures, which are very nearly correct, as to quantities and cost of deepening the Delaware River Channel, from Christian street, Philadelphia, to the bay, from 30 to 35 feet.

In this estimate please bear in mind that the depth is computed to 37 feet, which allows 2 feet overdepth, which is about the average amount of overdepth dredged in forming such a channel, and with side slopes of 1 on 5.

The amount to be removed from Christian street to the Bay, exclusive of Schooner Ledge section, is about 40,600,000 cubic yards, which at the rate of 15 cents per cubic yard amounts to \$6,090,000.

Schooner Ledge, it is estimated, will require the removal of 100,000 cubic yards of rock, estimated cost of which is \$15 per cubic yard, making a cost of \$1,500,000; and 550,000 cubic yards of overlying material, at the rate of 50 cents per cubic yard, making a cost of \$275,000; making a total cost of \$7,865,000.

Add to this 10 per cent of the total amount for engineering expenses and contingencies, \$786,500, makes a grand total of \$8,651,500.

SUMMARY.	
40,600,000 cubic yards dredged, at 15 cents per cubic yard-----	\$6,090,000
100,000 cubic yards of rock at Schooner Ledge, at \$15 per yard-----	1,500,000
550,000 cubic yards of overlying material at Schooner Ledge, at 50 cents per yard-----	275,000
Total-----	7,865,000
Engineering expenses and contingencies, 10 per cent of total-----	786,500
Grand total-----	8,651,500

I have just succeeded in getting information concerning the old project of a canal across New Jersey, which information you also desire. I will cull out the data you wish and will send it to you tomorrow.

Very respectfully, yours,

J. F. HASKKARL.

THE ASPECT FROM BEAUFORT SOUTH.

Before leaving this phase of the subject I wish to say that with but very few exceptions, the newspapers along the entire Atlantic seaboard, reflecting the opinions of boards of trade and commercial bodies generally, have urged upon Congress the importance of early action. This has been due to the complaints of business people, particularly those of New England and shippers in congested centers elsewhere, who have been unable to make shipments without demurrage and who have been compelled to hold up bulky freight because the railroads were obliged to devote their equipment to the lighter and more perishable kind. It has also been due to the demand of the farmer, both North and South, for the opening up of agricultural lands otherwise waste and unprofitable and the opportunity waterways would afford to send the product of the farm to market.

In order that a better understanding may be had of the progress of inland waterways south of Beaufort, N. C., I call attention to this letter from the vice-president and general manager of the Florida Coast Line Canal and Transportation Company:

FLORIDA COAST LINE CANAL AND TRANSPORTATION COMPANY,
St. Augustine, Fla., April 4, 1908.

Hon. J. HAMPTON MOORE,
Member of Congress, Washington, D. C.

MY DEAR MR. MOORE: Some of the prominent business men of Jacksonville yesterday called my attention to the fact that the bill which you introduced in Congress, relating to an appropriation for a survey of the inland waters of the Atlantic coast, only provided for a survey of the route between Boston and Beaufort, N. C.

These gentlemen stated that, while they have recently felt a strong interest in the movement started by the Atlantic Deeper Waterways Association, they now feel that the southern part of the State of North Carolina, and all of the waters of South Carolina, Georgia, and Florida have been left out of your programme, notwithstanding the fact that they were all included in the resolution adopted at Philadelphia last November, defining the policy to be followed by that association.

You may remember that the delegates to the Philadelphia conference discussed this question at considerable length and decided that the efforts of the association were not to be concentrated on the waters between Boston and Beaufort, but that they should extend to all of the inland waterways of the Atlantic coast, between Boston and Key West. It was stated that there was to be no sectionalism in the movement, and that the project referred to in the resolution adopted, so far as the Atlantic Deeper Waterways Association was concerned, should be at all times considered in its entirety, leaving the merits and requirements of the various links in the chain to be presented by the local Representatives in Congress.

It was therefore assumed by the gentleman who spoke to me in Jacksonville that when you, the head of the Atlantic Deeper Waterways Association, introduced a bill in Congress providing for an appropriation for a survey of the route from Boston to Beaufort only, you had decided to change the policy of the association and confine its efforts to the waters mentioned in your bill. I assured them that I did not think that this was the case, as, if so, you would not have made the trip to Florida and examined the waterway of this company; but I could see that if you require the support of the citizens of Jacksonville and other sections of the South it would be more energetically given if you could amend your bill so as to provide a survey for a 9-foot barge canal from Beaufort, N. C., to Key West, in addition to the survey for a ship canal from Boston to Beaufort.

The barge canal would, I think, be sufficient for present requirements, and should not cost more than eight or nine million dollars; although this is merely an approximate estimate, based on the cost of the work done by this company.

As you know, we have opened an inland waterway for nearly 400 miles along the east coast of Florida, about 100 miles of which is artificial work, and the balance natural waterway. The cost of this work did not exceed \$2,000,000. It is true that the minimum depth provided for in our work is only 6 feet at mean low water, with a width of 60 feet; but it would not be a serious nor an expensive undertaking to increase the depth to 9 feet.

Between the St. Johns River, Florida (the proposed northern terminus of our canal), and Georgetown, S. C., there is, at the present time, an inside passage, which by waiting for tides can be navigated by vessels drawing 8 feet of water. It would not, therefore, be a serious matter to secure a 9-foot channel along this portion of the route. While between Georgetown and Beaufort, N. C., I understand that several reaches of natural inland waters exist, which could be connected and deepened at a very moderate cost. However, nothing but a survey can settle these questions definitely. And, if you will forgive my making a suggestion, I believe if you could amend your bill so as to cover the whole of the route between Boston and Key West, you would have the people of all the South Atlantic States back of your movement, and they would insist that their Representatives in Congress should work with you to secure the legislation necessary to carry out the programme of your association.

A waterway such as I mention, viz. 9 feet in depth, would answer for torpedo boats and light-draft floating batteries, which would fully protect the coast, as the uncertainty of their whereabouts in time of war would cause hostile vessels to keep well off shore, thus giving protection to the territory bordering the Atlantic coast of the United States for its whole length.

With kind regards,

Yours, very truly,

GEORGE F. MILES,
Vice-President.

Mr. Miles, it is observed, gives it as his opinion, based upon the expenditure made to cut 400 miles of inland waterway in

Florida, that the entire cost of a 9-foot barge canal from Beaufort, N. C., to Key West would not exceed \$9,000,000. This is the best approximation I have been able to obtain, since inquiry of the Chief of Engineers of the Army fails to disclose any reliable data.

For the information of the House, however, and as showing the advantages that would accrue to the Government in the construction of inland waterways along the southern Atlantic coast, a survey for which is asked in the concurrent resolution introduced by Mr. SMALL of North Carolina, and particularly in southern Florida, which, in the event of war, would have tremendous strategic advantages, I deem it proper to place in the RECORD the accompanying letter from General Mackenzie, with inclosures:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, April 30, 1908.

MY DEAR MR. MOORE: Referring to your verbal request for available data regarding an interior waterway from Georgetown, S. C., to Miami, in Florida, I have the honor to advise you that we have not been very successful in finding reliable facts which would permit even a guess as to the cost of extending the Atlantic Coastal Canal southward; in fact, all information on file is somewhat old, no surveys or examinations of the line having been called for by river and harbor acts. While I appreciate the fact that the information will not be a great service, I inclose copies of certain indorsements giving the condition of the existing channels in 1901 between New York and Fernandina; a letter from Major Shunk, written in 1904, as to the channel then existing between Fernandina and Palm Beach, and letters dated October 25 and November 6, 1907, from Major Beach regarding inland channel from St. Johns River to Biscayne Bay.

Very respectfully,

A. MACKENZIE,

Brigadier-General Chief of Engineers, United States Army.

Hon. J. HAMPTON MOORE,
United States House of Representatives.

THE AMERICAN-HONDURAS COMPANY,
Cleveland, Ohio, May 21, 1901.

CHIEF OF ENGINEERS UNITED STATES ARMY,
Washington, D. C.

GENERAL: I have the honor to request that you will have the kindness to cause to be sent to me such information as you may have on file in your office relating to the inside or coastwise canals and inside water passages from New York to Key West. The company of which I am the chief engineer desires to send a steamer 97 feet long, 22 feet 10 inches beam, and drawing when light 5 feet and loaded 7 feet, from New York to Central America, and we desire to take advantage of the inside passages along the coast wherever possible, but have no information as to the locations and the extent or the depth available or the size of the locks. This information we would also be glad to have on the Gulf of Mexico coast, if you have such in your office, as we may have occasion to use them there also. If this data is not available in your office, will you please advise me where it can be obtained? Would we find it in an Atlantic Coast Pilot? Any printed charts that you have of these canals and waterways for distribution we would be glad to receive to use on the voyage. I have the honor to remain,

Yours, very respectfully,

J. FRAZ. LE BARON, Chief Engineer.

[First indorsement.]

OFFICE CHIEF OF ENGINEERS,
UNITED STATES ARMY,
Savannah, Ga., May 25, 1901.

Respectfully referred to Maj. James B. Quinn and Capt. E. W. Van C. Lucas, J. C. Sanford, and Cassius E. Gillette, Corps of Engineers, for remark by each officer, in the order named, concerning so much of the within-mentioned route as relates to his respective district.

To be returned to this office by Captain Gillette.

A. MACKENZIE,
Acting Chief of Engineers.

[Second indorsement.]

ENGINEER OFFICE, UNITED STATES ARMY,
Norfolk, Va., May 31, 1901.

Respectfully returned to the Chief of Engineers, United States Army, through the officers named in the preceding indorsement.

A vessel of the within-mentioned dimensions will experience no difficulty in navigating either of the existing private canals and connecting waters between Norfolk and Albemarle Sound, North Carolina. The services of a local pilot are necessary, however.

There is not much choice in the navigation of either canal. A navigable depth of 8 feet exists in each, and the locks are capable of passing vessels over 200 feet in length and 35 feet in width. The canals afford the only means of communication between the waters of Chesapeake Bay and Albemarle Sound.

JAMES B. QUINN,

Major, Corps of Engineers, United States Army.

1604 Misc.

[Third indorsement.]

UNITED STATES ENGINEER OFFICE,
Wilmington, N. C., June 1, 1901.

Respectfully returned to the Chief of Engineers, through Captains Sanford and Gillette.

A vessel drawing 7 feet can go through Albemarle, Croatan, and Pamlico sounds to Ocracoke Inlet, and if drawing only 5 feet can go through Core Sound to Beaufort Inlet. The route from Pamlico Sound to Ocracoke Inlet is shown on coast survey charts 140, 142, and 143, and that through Core Sound on coast survey chart 421. The successful navigation of Core Sound with 5 feet draft is somewhat difficult and requires a skillful pilot, and with a boat of within dimensions it would probably be better judgment to go out through Ocracoke

Inlet; but a local pilot is desirable for navigating Albemarle, Croatan, and Pamlico sounds, and necessary at Ocracoke Inlet. From Beaufort Inlet, North Carolina, to Winyaw Bay, South Carolina, there is no chance for inland navigation with a vessel drawing over 3 feet.

E. W. VAN C. LUCAS,
Captain, Corps of Engineers, United States Army.

[Fourth Indorsement.]

UNITED STATES ENGINEER OFFICE,
Charleston, S. C., June 4, 1901.

Respectfully returned to the Chief of Engineers, through Capt. Cassius E. Gillette, Corps of Engineers.

It is customary for vessels of the size in question to wait for good weather and make the trip from Beaufort, N. C., to Charleston, S. C., outside. The distance is about 240 miles, with Cape Fear River, 100 miles from Beaufort, and Winyah Bay, 180 miles, as harbors of refuge. A boat drawing 5 feet can pass through from Winyah Bay to Charleston by the inland route, but such a boat would be obliged to have high tide at several places, notably Cape Romain, Bulls Bay, and Meeting Reach, in order to get through. A vessel drawing 7 feet might possibly get through from Winyah Bay to Charleston with spring tides, but would be greatly delayed. A draft of 7 feet can be taken all the way from Charleston to Savannah, but there are several points where high tide would be necessary to give this draft. At Mosquito Creek there is not over 2 feet at low water, with a tidal rise of from 5 to 6 feet. There are several places on the route from Charleston to Savannah where the exposure is considerable, as at St. Helena and Port Royal Sounds, but a vessel as large as that described would hardly be delayed on this account. A pilot is necessary. Coast Survey Charts Nos. 153, 154, and 155 give general information.

J. C. SANFORD,
Captain of Engineers.

[Fifth Indorsement.]

UNITED STATES ENGINEER OFFICE,
Savannah Ga., June 7, 1901.

Respectfully returned to the Chief of Engineers.
The boat mentioned within can go, loaded, inside all the way from Savannah to Fernandina, with the possible necessity of waiting a little while for the tide at Parsons Cut, Mud River, and Jekyll Creek.

A local pilot would be advisable, but not necessary, if the boat goes through by daylight, as the route is clearly and accurately shown on Coast Survey Charts 156 and 157.

CASSIUS E. GILLETTE,
Captain of Engineers.

UNITED STATES ENGINEER OFFICE,
Jacksonville, Fla., February 1, 1904.

Brig. Gen. A. MACKENZIE,
Chief of Engineers, United States Army, Washington D. C.

GENERAL: 1. As directed by first indorsement on letter of E. A. Moseley, secretary Interstate Commerce Commission, dated January 23, 1904 (49925), in regard to information relative to certain water routes requested by J. N. Savignac, M. D., Ottawa, Canada, I have the honor to submit the following information regarding that portion of the route between Fernandina and Palm Beach, Fla.

2. The inside passage between Fernandina and the St. Johns River is shown on Coast Survey Chart No. 577. The limiting width is about 50 feet, and the limiting depth is about 3 feet at low water and 7 feet at high water.

3. Between the St. Johns River and the Halifax River there is no communication by water, except by sea. A boat would have to proceed from the mouth of the St. Johns River to Mosquito Inlet. From the latter point a boat may proceed inside through a series of salt-water lagoons, connected by artificial cuts, to Lake Worth, on which Palm Beach is located, and thence to Miami. From the latest information available, the limiting width through this portion of the route is 40 feet, and the limiting depth 2½ feet. The range of tide at shoalest places is insignificant.

4. General information regarding the route may be obtained from Coast Survey Charts Nos. 157, 158, 159, 160, 161, 162, 163, 164, and 165.

Very respectfully, your obedient servant,

FRANCIS R. SHUNK,
Captain, Corps of Engineers, United States Army.

UNITED STATES ENGINEER OFFICE,
Jacksonville, Fla., October 25, 1907.

Brig. Gen. A. MACKENZIE,
Chief of Engineers, United States Army, Washington, D. C.

GENERAL: 1. In compliance with second indorsement of October 21, 1907 (E. D. 65319), I have to submit the following report upon the application of the Florida Coast Line Canal and Transportation Company for permission to extend their canal system from St. Augustine to the St. Johns River, Florida.

2. The Florida Coast Line Canal and Transportation Company has constructed a good navigable channel from St. Augustine to Biscayne Bay, utilizing such natural waterways along the route as best served the purpose, cutting canals through such portions as were not traversed by navigable waters. The Indian River, which is under control of the United States, forms the middle length of this waterway. I recently passed over the route and found it to be in good navigable condition, the shoalest places in the entire distance being found in Indian River, under control of the United States. The route is one possessing considerable military and strategic value, and its connection with the St. Johns River would greatly increase its importance. The work proposed by the company would increase the importance of the route and make it much more serviceable to the public in general and to the Government in case of hostilities.

3. As the work proposed involves dredging in Pablo Creek, which is a navigable stream, traversed by boats at the present time, it would seem proper that a permit should be issued for the purpose. The route proposed by the company will materially shorten the length of Pablo Creek, which is now a very crooked stream, but as it has practically no current except that of ebb and flow of tide—being more properly a bayou than a creek—it is not believed that the shortening of the route will result in any scour or detriment to the waterway, but will be an advantage by avoiding the many and awkward bends and reduction of distance.

4. I would therefore recommend that permit be issued the company to dredge the channel as requested in Pablo Creek and to connect its canal in this manner with the St. John's River; the work to be done under the supervision of the Engineer Officer in charge.

5. The work south of Pablo Creek, being the construction of the canal, would hardly seem to come within the province of the United States, but, as I understand it, is to be done under the State charter.

Very respectfully,

LANSING H. BEACH,
Major, Corps of Engineers, United States Army.

UNITED STATES ENGINEER OFFICE,
Jacksonville, Fla., November 6, 1907.

Brig. Gen. A. MACKENZIE,
Chief of Engineers, United States Army, Washington, D. C.

GENERAL: 1. I notice by the papers that the Waterways Commission, which is considering the waterways for the entire country, has recommended the improvement or establishment upon a larger scale of the inland waterway from Cape Cod to Beaufort, S. C.

2. I would, however, like to bring to your attention the existence of the inland waterway at present open and available for traffic from St. Augustine to Biscayne Bay, Florida, and which will, it is believed, soon be opened up to the St. Johns River; application for permission to straighten Pablo Creek and connect it with North River, which empties into Matanzas River at St. Augustine, having been made by the Florida Coast Line Canal and Transportation Company, which controls the waterway, with the exception of Indian River.

3. This inland waterway appears to me to form one of the most valuable links of the whole chain, from a military and strategic point of view, as it could be easily made available for the passage of torpedo boats and all light-draft vessels, and they would thus have a secure line past the Bahamas, which form the most dangerous point for a hostile fleet or vessel to station itself.

4. It may be that the newspapers have not reported the decisions of the board correctly, but I thought it advisable to mention the existence of this waterway and its importance in military operations.

Very respectfully,

LANSING H. BEACH,
Major, Corps of Engineers, United States Army.

THE KEY WEST VIEW POINT.

From the Key West view point the improvement of inland waterways for naval strategic purposes looms up as highly important. I append two letters addressed by Commodore Beecher, United States Navy, to Mr. Miles, of Florida:

UNITED STATES NAVAL STATION,
Key West, Fla., February 7, 1906.

DEAR SIR: Please accept my sincere thanks for the copy of the Engineering News of August 25, 1904, and of the Florida Magazine for January, 1903, containing your article on the waterway of the Florida Coast Line Canal and Transportation Company, and that of Mr. Nather on the inland waterways of Florida, which you kindly sent me through Mr. Trumbo, who is in charge of the work of filling at this station.

Mr. Trumbo very kindly delivered your message to me, with the invitation to visit this waterway, and I beg to assure you that I shall be delighted to avail myself of your courtesy should opportunity offer.

I have the honor to be commandant of the seventh naval district, which extends from Tampa to Jupiter, Fla., and I have an order to consult with the admiral commanding the coast squadron in regard to the interior waterways of the naval coast patrol.

The development of this work is of immense importance, because of the strategic position of Key West in the command of the approaches to the Gulf and the isthmian canal. Since I have been here it has been my endeavor to bring this strategic value of Key West into prominence.

I have recommended that Fleming Key shall be a torpedo-destroyer depot. This key is in Man-of-War Harbor, at Key West, adjoining the proposed terminus of the Florida East Coast Railroad. It is a most admirable site for such a base for a torpedo flotilla, and in connection therewith the waterways of the Florida Coast Line Canal are of the utmost importance.

I have read these articles with a great deal of interest, and while they are intended for the laymen, they convey a very good general idea, but for the practical use of these waterways it would be necessary to have much more complete detailed information.

The naval officers in command of torpedo boats should have sufficient information to be able to navigate these canals without the aid of pilots or other persons, and therefore it would be very desirable for me to have blue-prints showing the hydrography and details as given on the Coast Survey chart. It is possible such charts are in existence, but I have none, and I assure you I would highly appreciate any further data that you can give me in regard to this canal, both completed and proposed, or, rather, such proposed work as is deemed probable of being carried out.

The development of this inland waterway along our coast is surely of the highest importance for the naval coast patrol and command of this strategic point, which should be one of the most important naval bases of our country. You yourself have not in the least exaggerated the immense importance of this inland waterway for the development of the country.

While serving as naval attaché for four years in Berlin my attention was called to the efforts of the German Emperor in developing the waterways in Germany. I was present at the opening of the Ems-Dortmund Canal, and also the opening of the port of Emden, which, in the time of Germanicus, was the port of northern Europe. The construction of these canals, giving direct sea communication with the Rhine, and also connecting Wilhelmshafen, the great naval port, with Emden, has had an immense effect upon the development of Friesland, which was a comparatively thinly populated portion of Germany. The canal connecting Emden with the great naval port of Wilhelmshafen is an inland waterway, second only to the great Kaiser Wilhelm Canal at Kiel in strategic importance in all Europe. But notwithstanding all these, in the future the inland waterways of our coast with which you are connected are of much greater importance, strategically and commercially, and I take the opportunity to congratulate you upon being engaged in a work of such great value to our country, independent of whatever other compensation you may derive from your financial interests in this enterprise.

I can make no plans myself in regard to visiting these waterways until after the arrival of Admiral Dickens with the Coast Squadron, and I am not yet informed as to when he will probably come here.

I have been studying the salient features for the organization of this naval coast patrol, and I beg to assure you that the information you so kindly sent me is most highly appreciated.

Thanking you again for your kind courtesy, I have the honor to be,
Very respectfully,

W. H. BEEHLER,

Captain, United States Navy, Commandant.

Mr. GEORGE F. MILES,

Manager and Director, Florida Coast Line Canal and
Transportation Company, St. Augustine, Fla.

PROTECT COMMERCE OF FLORIDA STRAITS.

UNITED STATES NAVAL STATION,
Key West, Fla., April 22, 1908.

DEAR SIR: I have the honor to acknowledge the receipt of your letter of April 15, with inclosures, relating to the inland waterways from the Florida point of view, and also by separate mail a report of the Atlantic Deeper Waterways Association, for which I beg you will accept my sincere thanks.

I shall endeavor to embody something of your typewritten paper on the inland waterways in my article that is to appear in the next number of the proceedings of the United States Naval Institute.

I notice from the reports that you expect to have 9 feet of water throughout the canal as a minimum depth eventually, and that you have 7 feet now. The torpedo boats have a draft of 7 feet, but their propellers require, I think, at least 2 feet more. I am not certain in regard to this.

In the data that I have collected regarding the strategic value of Key West, I have a report from the weather observer at Sand Key, who keeps an accurate record of all passing vessels. From this record it appears that 4,000 vessels passed through the straits of Florida, south of Sand Key, during the year 1907. This is a greater commerce than that of any other point of our coast, and in time of war this vast American commerce would be the first objective for an enemy, and provision must be made to protect this commerce. Manifestly this can only be done by the Navy, and the inland water route along the Atlantic seaboard would be most valuable for torpedo boats to concentrate at any point along the coast from Key West north.

The outer line of reefs—those outside the Florida Keys—should be fortified to a certain extent by isolated, turret forts, especially the entrance to Key West Harbor and Knights Key and one or two other points. The flotillas of torpedo boats, with a base at Key West and secondary bases at Dry Tortugas and Knights Key, could operate against any hostile fleet and secure perfect protection for our commerce. From this you will perceive how important the Florida inland waterway is to the country.

If submarines are half as efficient as they are claimed to be, they would be of the greatest value in the inland waterways of Florida, inside the outer reefs. These submarines would necessarily be on the surface while within the inland route, but after passing out from the reefs they would find deep water, and could operate against an enemy with great advantage, and most assuredly with great deterrent effect if it were known that these submarines were available for that purpose.

I have been insistent for the past three years, in season and out of season, urging the Department to send torpedo craft to Key West to operate in these waters and to make a study of the conditions and facilities that may be available, so that now, in time of peace, we may be so well prepared that no one would dare to go to war with us in the hope that this vast commerce of the Straits of Florida would be an easy prey.

The third torpedo flotilla is now at St. Josephs Bay, where they went for practice because the water is said to be always smooth in that bay, and sometimes the harbor of Key West is lumpy. I do not know what reasons govern that my urgent request for the flotilla to maneuver in these waters and have their target practice here as they did last year was not granted, but I am very much disappointed.

Key West received such a "black eye" because of its inadequacy during the Spanish war. This was due chiefly to the lack of proper communication, and this lack of communication is now remedied by the construction of the railroad extension to Key West and your canal. The water supply was inadequate and 7 cents a gallon was paid by the Navy for fresh water during the war with Spain. This last has also been remedied by the building of cisterns, so that we now have 800,000 gallons storage, which will be increased to 1,200,000 this year, with plans for 800,000 more under consideration, making 2,000,000 gallons, which will be ample; together with a distilling plant which produces 15,000 gallons daily, the water problem is thereby solved. Thus it is a difficult matter to convince not only the citizens, but the Navy Department, as to the vital necessity for the development of Key West into a proper naval base. My paper will show all this clearly, and one of the most important strategic features of Key West is your canal.

I sincerely hope I may have an opportunity to make a trip on the canal this summer, and will let you know when it will be possible for me to do so.

Very respectfully,

W. H. BEEHLER,

Commodore, United States Navy, Commandant.

Mr. GEORGE F. MILES,

Vice-President and Managing Director,
Florida Coast Line Canal and Transportation Company,
St. Augustine, Fla.

In my judgment, Mr. Speaker, those who will carefully consider the subject, no matter from what section of the country they come, will agree that the Government ought to be in possession of accurate information as to the cost of an inland waterway from a point south of rockbound New England—that is to say, Boston—to the southern extremity of the coast, to wit, Key West. From such information as I have laid before you it appears that a survey to ascertain the cost of this beneficent enterprise should be undertaken at once. The cost of the survey would be less than \$200,000, and the cost of constructing the canal would not far exceed \$100,000,000. When a single State can appropriate that amount for the improvement of its own waterways and the development of its own trade, why can not the Government afford to do it? The advantages are legion. The cotton planter of Alabama could send his raw material at reduced rates to the manufacturer along the New England coast.

The New Englander who turns out agricultural machinery and finished textiles could take the water route for his products to the South. From point to point along the line the shipment of commodities and farm products would be facilitated with improving commercial advantages. Waste land would become worth tilling and settlements would arise along the borders of the waterway. Capital would come from its hiding place, seeking investment where opportunity thus presented itself. Labor would find a market in new fields, and occupations that had long since succumbed to the march of progress in other directions would be re-created with profit to the toiler. The North and the South would vie with each other in commercial supremacy, exchanging their output and creating avenues of employment for the youth of the country who would otherwise be lost in the overcrowded professions. There could be no return from this investment that would not benefit all the people. Why not let it come?

The Textile Unions.

SPEECH

OF

HON. WILLIAM S. GREENE,
OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. GREENE said:

Mr. SPEAKER: I am very much gratified to be able to present a copy of the statement submitted by Mr. James Tansey, president of the textile council of the city of Fall River, Mass., where I reside, to that organization on the evening of Wednesday, May 20, 1908.

The textile council is composed of three representatives of each of the five textile unions, which comprise a very large number of the operatives in the 100 cotton mills located in the city where I reside. For general information I will state that the manufacture of cotton goods was commenced in the city of Fall River, Mass., in the year 1813, the water power which came from Watuppa Pond, flowing through the Quequechan River, with 126 feet fall, to Taunton River, being the original basis of the cotton industry there. The successful management of the mills, which were begun nearly a century ago, was the real foundation of the greatest cotton manufacturing center in the United States. The first mill contained about 9,000 spindles, and now there are more than 3,500,000 spindles in the more than 100 mills in Fall River, Mass. This city has more than one-seventh of all the cotton spindles in the country and nearly one-quarter of those in New England, and manufactures three-fourths of all the print cloths in the United States. It contains more spindles than are contained in any State of the Union, excepting Massachusetts, and up to within a very few years had as many cotton spindles as all the Southern States combined.

Every working day its mills weave more than 1,500 miles of cloth, or more than 2 miles every minute.

In the city of New Bedford, Mass., only 12 miles distant from Fall River, and in the Congressional district which I have the honor to represent, are more than 2,000,000 cotton spindles. That city is the center for the manufacture of the finer grades of cotton goods in this country, and it has developed a marvelous growth of that branch of the cotton industry within the past few years.

The Thirteenth Congressional District of Massachusetts is especially adapted for the manufacture of cotton goods of both the finer and coarser varieties. Skilled operatives of native birth, and many who have come from all parts of the world, have sought the district which I have the honor to represent because of the opportunities for education for themselves and their children, the salubrity of the climate, and social conditions, according to the traditions of the Commonwealth of Massachusetts.

The letter of Mr. Tansey, president of the textile council, is as follows:

Report on margins from November 25, 1907, to May 20, 1908:
The total margins for the 153 marginal days is 12,189.2623. The average margin for the 153 marginal days is 79.6683.

During this period the highest price for middling upland cotton was 12.25 cents per pound, lowest price 9.90 cents per pound. The highest price for 28-inch standard print goods was 5 cents per yard, lowest price 3½ cents per yard. The highest price for 38½-inch print goods was 6 cents per yard, lowest price 4 cents per yard.

The price of cotton to-day is 10.90 cents per pound; 28-inch standard goods, 3½ cents per yard; 38½-inch goods, 4½ cents per yard; margin to-day, 57.61.

The highest daily margin during the period was November 25. Cotton was quoted at 11.20 cents per pound, 28-inch goods at 5½ cents per yard, 38½-inch goods at 6 cents per yard; margin for the day, 128.8550. The lowest daily margin during the period May 14 and 15, 1908. Cotton was quoted at 11.30 cents per pound, 28-inch goods at 3½ cents per yard, 38½-inch goods at 4½ cents per yard; margin each day, 50.2712.

During the last forty-five days the margin has ranged between 64.2837 cents and 50.2712 cents, and during twenty-four days of that period 60 and below.

Your executive committee met the manufacturers' committee on Tuesday afternoon, May 19, to compare notes and margins. The manufacturers' report being made up to Saturday, May 16, showed the margin for the one hundred and fifty working days to be 80.80. Our council's report up to the same date is 80.1202. As our margins were made up to Tuesday, May 19, it showed the margin for the one hundred and fifty-two marginal days to be 79.8135.

As it will require a total margin for the one hundred and fifty-six marginal days of 12,495.60 to bring the margin for the six months to a fraction over 80, and there being but three days of the period left, which means that the average for the three days would have to be about 102.2, and the daily margin to-day being only 57.861 cents, it will be seen that all chances for an average for the period of six months of over 80 cents is hopeless.

Taking the average margin of to-day and assuming that the daily margin of to-day will continue to the end of the week, the estimated margin for the six months will be 79.1159.

In accordance with the agreement reached by the various textile unions and the manufacturers, through their respective representatives, the price for weaving, commencing Monday morning, May 25, will be based on a margin of 80 cents, and the price for weaving will be 19.66 cents per cut, and all other departments in proportion, a reduction of 17.94 per cent, unless the exceptional change in margins as stated above should take place.

In submitting this report we are fully conscious of the fact that the reduction of wages which goes into effect Monday morning is the heaviest that has ever been made at any one time in the wages of the operatives of Fall River, and more than was ever anticipated by either of the parties to the present wage agreement.

The indications and conditions of trade six months ago were such as to encourage even the most pessimistic observer that at least another year of prosperity, with the prevailing high rate of wages, would be the predominant feature. But unfortunately, conditions arose which could not be foreseen or prevented either by the employers or employees, or the most keen observer of commercial interests, which shattered the prospects of all interested, brought disaster to our trade, and wrecked a future which seemed bright and promising for our city and all its citizens.

We, the members of the Textile Council, regret that such conditions have arisen, which should call for the reduction in wages as stated in the agreement; and while we realize that the reduction is a steep one, we hope and feel that you will not lose sight of the fact that it is being taken from the highest rate of wages that has ever prevailed during the life of the Textile Council, and for many years previous to its existence. It is safe in saying that we can go back at least thirty-five years, and then only under the most exceptional conditions can a comparison be made.

It should not be necessary to remind you that the rate of wages paid during the last twelve months is 10 per cent higher than ever was paid in the city during our life as combined unions; and further that it is 20 per cent higher, with an exception of a period of about nine months, a few years ago.

With regard to the present agreement we do not say, nor have we ever taken the stand and declared that it is the panacea for all difficulties existing between the employer and employee in our trade. But we do declare, emphatically and without reserve, that it is and has proven to be the best agreement for the operatives that was ever accepted by the employers for the control and regulation of the rise and fall in wages; and further assert, for reasons stated above, that it is well worthy of a trial for experience and a guide in dealing with such questions in the future.

Until such time that we see that a change is necessary in the margin scale, we say to our members that this agreement should be honorably lived up to, as it was entered into honorably by a vote of acceptance and indorsed by all of the unions at their general meetings before being signed by the representatives of the respective associations contracted.

Even though the reduction in wages is greater under the agreement than was anticipated by its most ardent supporters, and which we regret, we are not prepared to declare that it is a failure, because, owing to the unfortunate trade conditions previously referred to, which suddenly and unexpectedly worked havoc with our industry, we do not believe it has had a fair trial; and until such time that it has, the least that can be expected is that judgment should be suspended and hasty action upon our part be rejected.

We do not take the position that this agreement can not be amended. We believe that there are some phases of it that can be discussed by the representatives of both of the parties interested, and further believe that it can, with a disposition of sincerity and honesty of purpose on both sides, be so amended by mutual agreement, that it will eventually prove to be the best instrument for the welfare of the city that was ever entered into by the employers and employees.

Coming back to the agreement, the present rate of wages and the reduced rate that goes into effect Monday morning. If the agreement was not in existence, why is it not fair to assume that the unfortunate history of Fall River in the past, under such depressed conditions of trade with regard to agitations, cut downs, shut downs, threatened strikes, and actual strikes, would repeat itself with all its attendant evils and demoralizing effects upon our city and its various commercial interests. History does repeat itself, and, under like conditions, were it not for the agreement now in existence, we believe that it would.

The only comparison that we can draw to compare with present conditions is that which existed in 1898, ten years ago, when the margin got down about 50 cents and we were obliged to accept reductions in wages which brought the weaver down to 16 cents per cut, and all other departments in proportion. The margin to-day is but 57.61 cents, and has been between the fifties and sixties for nearly two months. And the price per cut under the reduced rate is 19.66 cents per cut, with operatives in all other departments in proportion, a matter of about 20 per cent higher rate than prevailed under similar conditions in 1898, to say nothing of other improved conditions.

Again repeating our regret for the reduction of wages that goes into effect Monday morning, brought about through conditions over which

neither employer or employee have control, we bring these matters to your attention, so that you can deliberate upon the conditions and situation with more intelligence, and give to it that fair, just, and conservative consideration that all such important subjects of its kind are entitled to. With the hope that our industry has seen its worst for years to come, and that prosperity with better conditions and otherwise will be our reward, I remain,

Yours in unity, on behalf of the Textile Council,

JAMES TANSEY, President.

Particular attention is invited to the statement contained in the foregoing letter.

For many years attempts have been made to establish a sliding scale of wages for operatives whereby the rate of wages should be determined according to the existing margin between the cost of the raw material and the finished product, but heretofore these efforts have not been crowned with success.

One year ago, after many conferences were held between representatives of the mill owners and the representatives of the textile council, which was composed of delegates of the different textile unions in Fall River, Mass., a sliding scale of wages was adopted which, owing to the unprecedented prosperity of the country, gave to the mill operatives an increasing rate of wages at each recurring six months, which was exceedingly gratifying to the entire community.

Frequent expressions were uttered by those with pessimistic views that the sliding scale would exist as long as the wages tended upward and the operatives had the advantage, but doleful warnings were expressed regarding the result of a downward tendency in the scale of wages.

Owing to unexpected and unforeseen business conditions, the downward scale of wages, affecting many thousands of mill operatives, was put into effect in Fall River, Mass., on the 25th day of May, 1908.

In view of the unrest and dissatisfaction with labor conditions in various parts of the country, I am very much gratified to point with pride to the breadth of public spirit displayed by the intelligent working men and representatives of the various unions, located in the city where I reside, and I sincerely hope and fully believe that the clouds which now unfavorably hover about the business situation will soon disappear and that a period of unexampled prosperity which will, under the sliding scale adopted, yield an abundant advantage to both the manufacturers and operatives.

National Defense.

The Inadequacy of Land Defenses and the Lack of a Mobile Army Make it Imperative for America to Control the Sea in the Waters that Wash Our Shores in Both Oceans.

REMARKS

OF

HON. RICHMOND P. HOBSON,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. HOBSON said:

Mr. SPEAKER: Under the leave to print granted by the House, I desire to place in the RECORD the following article from Everybody's Magazine, by Lieutenant Johnson, United States Army, whose statements are accurate and whose conclusions are conservative and inevitable:

[Everybody's Magazine, March, 1908.]

THE LAMB RAMPANT.

[By Lieut. Hugh Johnson, United States Army.]

[EDITOR'S NOTE.—"Commissions for the Army are going begging. * * * On November 3, 1907, there were 381 vacancies in the grade of second lieutenant, the shortage being 37.87 per cent. * * * At Fort Leavenworth recently only 14 enlisted men were competing for 203 vacancies in the grade of second lieutenant. * * * An heroic attempt was made recently to obtain second lieutenants for the coast artillery. * * * The presidents of 125 colleges and technical schools were informed that the War Department would welcome applications by the graduates. * * * At the end of four months not an application had been received direct from the institutions canvassed." (New York Sun, January 11, 1908.)

The mobilizing of the United States Army, under present conditions, would produce very poor results," says Lieutenant-Colonel Le Juge, a retired officer of the German army, in a pamphlet just issued on the American land forces. "No preparation for war is made in peace; no organization of the units into armies with their requisite staffs has been drawn up, and no provision is made for supply." (Berlin correspondence of New York World, January 13, 1908.)

The foregoing are only random examples of constantly appearing news items and editorials. The country receives them with indifference. It refuses to remember that the most devastating international conflict of modern times—the Franco-Prussian war—began and ended before France, proud, rich, but unprepared, had time to concentrate her resources. Within a few weeks she lay bleeding and humiliated before a

nation at that time potentially no stronger than herself. Unprepared as she was, the defenses of France in 1870 far surpassed those of the United States to-day. There is no doubt of our prosperity; we can raise more money in less time than any nation on earth. We have unparalleled aptitude and inventiveness; within twenty-four hours we could have a million men clamoring to march against an invader. But we are unprepared. It takes eighteen months to make a 12-inch coast-defense gun; from two to three years to erect a plant to make these guns; four months to put a field gun together after the parts have been made; and, worst of all, it takes a year to turn a citizen into a soldier. Of none of these—guns nor soldiers—have we sufficient to begin a war. Meantime, there are nations whose money, brains, and men are practically always in the field. Are we so drunk with dollars and pride that we are careless of the day of reckoning? As we stand to-day, our assertion of the Monroe doctrine is a monumental bluff, backed by nothing but noise and luck. This magazine is not preaching militarism nor conscription; we are not advocating huge military establishments, but we are placing before you the plea of an Army officer, backed by the majority of his fellows, and in this plea we earnestly concur. The result is with you, and you, and you. What are you going to do about it?

Early in May rumors that the hundreds of thousands of Germans who have for years been swarming into South America had joined in a tremendous pro-fatherland movement flitted up the coast, flared into sensational black type, and then flickered out before a murder scandal.

In June positive news came that a congress representing the 500,000 German colonists in South Brazil had adopted articles of federation as an imperial German province, and had appointed a commission to convey to the Kaiser the homage of the colony and its earnest desire to be received into membership in the Empire.

This news caused tremendous excitement from one end of the United States to the other. There rose an overwhelming, deep-toned chorus, first asserting the essential rightness of the Monroe doctrine, and second making a fierce avowal that, even though the policy were wrong, no insolent disregard of it by another nation would be tolerated.

Official inquiries from this side met with a response from Germany to the effect that the matter was of such grave importance that it could not be dismissed hurriedly. News dispatches from Germany reflected no popular excitement on the subject, though, to be sure, it was known that a rigid censorship over outgoing news had been established in Germany on June 6. But the public in Germany seemed to be absorbed in admiration of the land and naval maneuvers of the forces of the Empire, which included an ostensibly experimental gathering of all the merchant marine fit for transport service.

On June 12 the ambassador from Berlin announced to the President that it was the intention of the Imperial German Government to accept the territory and the allegiance of the citizens of the new state.

The answer was a sharp, unmistakable note, reciting the language of President Monroe's letter, with an emphatic reassertion of the policy therein contained. It was of such sort as to obviate the possibility of any protracted diplomatic negotiations, and was construed in Germany as a declaration of war. There was an ominous silence of a few days, and then there issued from Berlin a manifesto announcing that a state of war had existed between the United States and the German Empire since June 14.

Germany's war preparations had been going on since that date—possibly since June 6. On June 19, the day after Germany's declaration, the United States War Department issued orders for the immediate concentration near Washington and Philadelphia of all regular troops in the United States. The States were called upon to send to one or other of these camps as much of their militia as was fit for immediate service. The Navy Department recalled the battle-ship fleet, which was in the Pacific.

Late on the evening of June 20 heavy signal firing was heard off the coast of lower Jersey. At midnight the life-saving stations reported a great fleet of battle ships, cruisers, and torpedo boats, conveying an enormous flotilla of big merchant ships.

The news, once it got abroad in New York, stirred the city into a crazy people. Before daylight militia that had not yet boarded its trains for Philadelphia was recalled to the armories. Regular troops in progress toward Philadelphia were stopped and ordered to New York to join the forces being assembled to protect the rear of the harbor coast defenses—Forts Wadsworth, Hamilton, and Sandy Hook. These forts are provided only with great guns that point rigidly out to sea. It had been the theory that these guns might be relied upon to prevent any hostile fleet from entering the harbor and that great bodies of troops would protect the rear of the forts from an enemy's force landed at remote points and coming up to the forts on the land side. But it was found that only 5,000 men, Regulars and Volunteers, would be available before June 22.

Yet dawn of June 21 disclosed another heavily guarded flotilla of German transports disembarking men and horses by thousands at Rockaway Beach. Some of the boatloads of landing soldiers were towed away by launches toward Barren Island and Canarsie. Then it was realized that the country was witnessing the actual occurrence of the thing that had always been regarded as axiomatically impossible—a foreign invasion of the United States. Yet how simple it was! There was not the slightest hesitation on the part of the invaders; every step they took had been studied out and mapped out in their war colleges for years, as had similar campaigns against every other power.

But on shore there was a very different feeling. New York was dazed with surprise and fright. The officers of the Army, who had studied the defense problem, knew the futility of any effort to resist the attack, but disposed such troops as they had—on the first day perhaps 3,000—for the defense of Fort Hamilton. Those who proceeded across Brooklyn by the subway and the elevated railroads were not in time to intercept a flying column of 15,000 or more superb German troops, who marched swiftly on Fort Hamilton and smothered its little garrison under sheer weight of numbers. The guns of Wadsworth and Sandy Hook, across the bay, were not able to help without hurting friends more than foes. When the capture of Fort Hamilton had been completed and its guns were in the hands of the Germans, the enemy's column landed at Long Branch during the night and swept up to a rear attack on both remaining forts, which were subjected to fire from Fort Hamilton as well as to the crushing rear attack of field artillery, cavalry, and infantry. Despite the most heroic defense neither fort lasted more than a few hours.

The landing force at Rockaway Beach formed columns as fast as it landed and marched quickly through Springfield and Jamaica, and then, wheeling on Jamaica as a pivot, swung its left wing to Fort Hamilton and held a line across Long Island, placing Brooklyn at its mercy.

All night long half-equipped, demoralized militia and portions of depleted Regular regiments straggled into the city. By 4 o'clock on the morning of June 22 about 4,000 American troops and a variously armed

mob of as many more lined up across the outskirts of Brooklyn, throwing up street barricades to stand off the oncoming of the Jamaica-Fort Hamilton line of the enemy. But the enemy regarded these preparations with utter indifference, not to say complacency. Their silence was disconcerting; but its meaning began to be clear when at sunrise a great gray battle ship steamed grimly past the silent forts, followed by another and another. Menacing specters in the early mist, they took station across the bay with the precision of beads on a string. Watchers gathered in great black crowds on the docks, wondering, fearing they knew not what. On the stroke of 7 a round, white, compact cloud jumped out over the water: the windowpanes of three cities rattled, and a shrieking cloud of steel destruction hit lower Broadway like a blight.

In the ensuing days gloom engulfed the nation. A superb array of 200,000 seasoned Germans held the financial and commercial heart of the country so securely that hope of its recapture seemed futile. Of the 47,000 American Regular troops then actually in service 10,000 were in the Philippines, 4,000 in Cuba, 15,000 with the guns of the coast defense, 2,000 in Alaska, Porto Rico, and Hawaii, and 3,000 had been taken or destroyed in the capture of New York; 13,000 men in depleted regiments were scattered in small garrisons all over the United States.

Of the paper strength of 125,000 militia, 60,000 were found effective, and these, half trained, ill equipped, varying in efficiency from troops little below the Regulars to companies in name only, were dispersed in some forty totally distinct armies in miniature, from Oregon to Florida. The armed force of the United States, at the most optimistic estimate, could not exceed 80,000 men, and their incorporation into an army was a recognized impossibility.

While the country lay in this shocked condition, strong raiding parties destroyed the Springfield and Watervliet arsenals; this was a second staggering blow, only less vital than the first, for it became apparent that neither arms nor equipment for the contemplated 400,000 volunteers were at hand, nor were there facilities for their manufacture. We have no arsenals at Pittsburgh, Bethlehem, nor Gary, steel cities in the heart of the nation. German troops were arriving on the seaboard daily, and the Government frankly admitted its inability to hold Washington, Philadelphia, or the naval stations of the Atlantic, as well as the fact that an indefinite time—at least a year—must elapse before it could attempt any offensive warfare whatever. Even the returning fleet, deprived of coaling and supply stations, as it inevitably must be, found itself in the position of an enemy attacking a hostile coast line that had long been considered impregnable, and with its own base of supplies four times as far away as its rivals. The naval situation was impossible.

Now, all these things are the things that would happen, approximately, if our very good friends—the Germans—were to fall out with us, as God grant, for the sake of the kinship of nations, they never may. They will not happen in our time, because our Administration and the rulers of Germany have worked long and faithfully to avoid the possibility of such a clash between the nations. But that they will not happen is not because, in the event of a sufficient quarrel, we are in the least prepared to resist a foreign invasion. This statement of the complete possibility of such a capture of New York City, with no reasonable fear of failure, is from a man who is almost certainly the highest possible authority on this department of military art in the United States—one of the highest in the world.

If one cares for such elementary problems in war and international policy, there is a much simpler one in the Pacific.

Suppose the Navy normally disposed in a certain spring. Beginning with the San Francisco school affair, Japan had busied herself in compiling a series of international episodes, the termination of each of which left the United States in the light of a nation not punctilious regarding her treaty obligations. By a clever move Japan had cornered almost the entire torpedo output of the world—she has already actually done so, if it is of interest. "Fifty thousand men had long been employed night and day in her arsenals, similar energy being expressed in the steel-gun foundries and shot works at Nagasaki and Tokio, the output of these factories being 500 guns daily" (this was reported by an officer of the Austrian staff in an article published in America in July, 1907). Such activity could, of course, point only to intended invasion, and since Japan had nothing to gain by an Asiatic move, and since the conquest of the Philippines would require no preparation by her whatever, her only possible strategic point for definite results could be the Pacific coast of the United States. All this excited no general comment, nor did the material increase of Japan's peace establishment after a long and costly war. (Whatever may be the peace-sunshine significance of these facts, here they are.)

As a culmination to this series of international events, there came, like a bolt from the blue, the firing of an American cruiser upon a Japanese gunboat off the Aleutian Islands on March 1. This fact was reported to the State Department through the Japanese ambassador, for no word had been received from the American ship.

On March 15 the conciliatory attitude of Japan vanished. Presenting a long list of wrongs, footed by this last incident, she demanded a humiliating and abject action on the part of the United States, reciting that the Japanese flag should be saluted in all ports; that a heavy and untempered indemnity should be paid, and that certain hitherto enforced immigration restrictions should be at once removed.

On March 18 the State Department, in a note expressing indignation and surprise, refused to accede to any or all of these demands. On the same day the Pacific cables ceased to work, save unsatisfactorily and intermittently, until March 24, when the last message crossing over them told that the Japanese Government declared that a state of war had existed between the United States and Japan since March 18. No news got out of Japan by the European cables.

For two days no news could be procured of the small Asiatic or Philippine squadrons of the United States. On March 26 the Chinese embassy informed our Government that both had been crushed by the overwhelming fleets of Japan between March 19 and 23.

On March 24 orders were issued for the concentration of all effective Regular troops on the Pacific coast.

ONLY 15,000 WERE AVAILABLE

on account of the frightened demands of the East, which was suffering from delusions that an Atlantic coast attack of Japanese threatened. The Atlantic Fleet was ordered made ready to hurry on the back track of the Oregon; the militia were called out, and 35,000 of them were ordered to proceed to the West coast; a call was issued for 500,000 volunteers.

The concentration of the Regulars at San Francisco was complete by April 4, though but 10,000 militia had arrived. None of these troops, militia or Regulars, had as much as 60 per cent of their war quota. Though applications for enlistments for the entire 500,000 volunteers had been received instantly, the muster of no more than 50,000 had

been completed, and this at widely divergent points, when on April 12 scout ships and lookouts of the Pacific Squadron reported an advance fleet of Japanese war ships, which, as afterwards became apparent, must have left Japan as early as March 16. Four days later a battle was fought off Monterey Bay, to the complete destruction of the Pacific Squadron, saving one unprotected cruiser and one gunboat, then in San Francisco Harbor. And the Atlantic battle ships were somewhere below Panama.

By this time there were on the Pacific coast 40,000 armed and equipped American soldiers, poorly organized and trained, and with no hope of material reinforcement in less than three months other than through the recruiting of their own ranks. It was apparent that after the arming and equipping of men to fill the entire Regular and militia establishments to their full quota, the military stores of the United States would be exhausted.

To the horrified surprise of the general public, the Japanese landed four considerable armies almost simultaneously on the coast (and all but one without opposition)—one at Bodega Bay, one at Grays Harbor, one at Monterey Bay, and one above the guns at San Diego. A novice's glance at the map will explain the statement that this stroke gave the Japanese control of the four fortified harbors of the Pacific, deprived the oncoming fleet of a naval base, and gave the brown men possession of Portland, Seattle, Tacoma, San Francisco, and Los Angeles, and probably with them the control of the ultimate destiny of the Pacific. For no serious opposition could be offered them in the three coast States, and they had ample opportunity to seize and fortify every pass into the interior, with a year of grace in which to establish themselves in their holding.

Neither, of course, did this happen, but there is no impossibility, nor even any especial military difficulty, in any of the suppositions.

WE HAVE NO ARMY,

but what is worse, we have absolutely no system of defense. All of the great foreign powers exist simply and solely on their ability to mobilize great armies of four or five hundred thousand men in a week; that is the patent of their existence. It is incontrovertibly true that we could not mobilize such an army in one whole year. Popular and constitutional inhibitions will forever prevent the maintenance by this country of a large standing army, and none is necessary. Even the most military of nations does not maintain the enormous force that it can move in a week; the simple potentiality of assembling such a force keeps the world's peace. But the powers have admirable systems for utilizing the resource of their population, and we have not the glimmer of such a system. You see, the material is "resource" in time of peace only; if that resource can quickly be converted into "power," the nation is strong in a military sense, but if the resource is an inert lump, apart from the potentiality of its presence it is useless. And right here is the sluggish heart of our national blunder. We utterly fail to discriminate between

RESOURCE AND POWER.

In crude, inert, uncut resource we are fabulously rich; in actual, efficient, brilliant military power we are as poor as Job. It is the contemplation of the resource that explains the neglect of our true condition, for at a last resort there are 13,000,000 men in the United States eligible for military service, with the fertile land behind them for their sustenance. No other nation has half that resource. But, if in a year only one twenty-sixth of this number can be used to fight other nations that are fifty times as powerful, of what use are they, save to suffer shame? For time is a commodity of terrible significance in war. If we are ever attacked, it will be by a nation whose existence depends upon its power of rapid mobilization. War will come swiftly or not at all, for as the first army to use efficient artillery fought with a new force, so did the first army that realized the value of swift initial strokes—it was Prussia's—fight with a new force; and as artillery was generally adopted so has the swift initial striking been generally adopted.

Germany can mobilize a million men in a month, France as many, Japan at least 800,000—we, with good fortune, a million in two years. In the Franco-Prussian war the Germans placed an initial army of 578,000 men, 159,000 horses, and 1,284 guns in the field within five days after the declaration of war, and effected the most complete conquest of a powerful nation known in history. Simple system was the secret of German effectiveness, and on the fifth day the great German machine of destruction, composed of men who but a week before had been clerks, artisans, and mechanics, began to move, alert, fit, efficient, and equipped to the last shoelace. Advancing with lightning rapidity and perfect control, it gained contact with the French before the completion of the French concentration, and without respite annihilated army after army, until within six weeks the flower of the French establishment had fallen.

Contrast with this the mobilization of our forces for the Spanish-American war. Congress began to issue calls for an army of 216,000 men four days after the declaration. In four months the required number had been enlisted, but the men were, in large part, half organized, half drilled, and half equipped. In two of their great camps more men died of disease than were killed in the entire war, and even at the end of four months they were not able to compare with the German levies in point of efficiency.

Germany—five days, an army of 518,000 men, marching.

The United States—four months, a body of 216,000, learning.

It is a fair statement of the power of the two nations.

It is difficult to say just what Japan can or can not do. In her recent war she mobilized 1,200,000 men just as fast as she could possibly need them, and she is supposed to be able to put in the field 21 perfect divisions of veterans in one month.

Now, a battle-worthy fighting line for the United States could be promised in not less than one year.

WHAT COULD HAPPEN IN THAT YEAR,

once Germany or Japan had established bases on our shores, is appalling and impossible of sensible conjecture. In the East, Germany could fortify and defend New York almost beyond hope of recapture. Washington, Philadelphia, and the coast defenses would certainly fall, leaving the Navy without a base and helpless. Whether she would cross the Appalachians would depend on whether she had any object in doing so.

On the Pacific the problem is simpler. The three coast States constitute one of the richest sections in the world, a new and better Japan. Between it and the interior stretches an almost unbroken line of mountains, flanked by great desert regions impassable to marching armies; taken together, these constitute the most formidable military outworks in the world. Once lodged behind that natural redoubt, with their own country and the island chain behind them, the dislodgment of the Japanese would be as abstruse a military problem as ever confronted the mind of a genius with a Xerxesian host at his command.

In one of our supposititious cases the Navy has been placed on the other side of the world. Although this condition is actually now about to exist, the Navy must ordinarily be considered by a hostile power, and it has not been considered here simply to show how our landward defenses fail. We have a respectable Navy, but the task of policing a territorial grand division, maintaining an arbitrary policy against the world, giving timbre to the predominant voice of the East, and preserving our national integrity, is a fairly large one for so small a weapon. Larger still is that task when we admit that our present fabric of defense is simply our wager (and on it we stake our national existence) that neither Japan nor Germany can destroy our fleet, for once destroyed, the conquest of the land is a conclusion almost foregone.

With the fleet in the Pacific, Germany is one-fourth as far from New York as the fleet is; in the Atlantic, Japan is less than half as far from San Francisco, and with the enemy in possession of either coast the Navy would be helpless on that coast. The fighting chance of the Navy is impossible of determination, and its discussion is no part of the purpose of this paper and deserves the exploitation of an expert.

There are well-defined reasons why we have no system of defense, but they do not excuse the lack of it. For the chiefest of them are the same that explain why people live on the slope of Vesuvius—apathy, nearsightedness, ignorance of conditions, all headed and overtopped by the rut evil.

We are in the much-worn rut of having no national defense because the precedent prescribed none. When the precedent was established we needed none, because of three assets, which are now fallen quite away. The first of these assets was a great natural and geographical rampart, consisting, primarily, of 8,000 miles of sea.

Now, every hour clipped from the transoceanic records brings us closer by that hour to the enormous armaments of Europe and Japan. We know that the record has been cut in twelfths, but mere speed is not the only force at work. Formerly the transfer of a division required a fleet; the building of such ships as the *Lusitania*, the *Mauretania*, and the *Kaiser Wilhelm der Grosse* has rendered the movement of armies simple. The *Deutschland* could easily carry a complete brigade, and Germany could place it aboard in two hours; to assemble a completely equipped brigade of American troops in New York would require a week—they could arrive more quickly from Kiel. Germany has her entire merchant marine on a war-conversion list, and the Japanese system is perhaps even better.

But the water alone did not constitute at that time the only barrier, nor even the greatest one.

Back of the beach howled

MILES OF BARREN WILDERNESS.

Armies move on their stomachs; they must be supplied from home or live on the country. The ocean formerly prevented a resort to the first method of supply for foreign troops, and the land denied the alternative, for it was sparsely settled and productive of comparatively little. The wild terrain inland offered successions of natural defensive positions, and the roads were mere trails—roads are the sine qua non of all military operations. Earnest fate could not have changed this condition more completely. Rich towns now dot the coast country, nets of railroads invite invasion, while fertile fields promise ample support to a marching army. All this is no military secret; every foreign war office recognizes it. German journals have discussed quite freely the plans of the imperial staff, worked out as a war problem, to land 250,000 men on these coasts in twenty days, considering the Navy in the Atlantic.

The second lost asset vanished with

THE PASSING OF THE INHERENT DEFENSIVE QUALITY.

When Congress launched the ship of state without a gun deck America was one vast frontier. Savagery stalked at the back door, and fathers bequeathed to sons the greatest battle of all, the struggle with the untamed wilderness. But the pioneer who was his own soldier is gone. Long Tom no longer hangs above the farmhouse fireplace, and a replica of the "embattled farmers of Lexington" is incongruous with modern settings. Plainsmen, woodsmen, trappers, cowboys, squirrel-rifle men, and scouts—they have all stalked or ridden with the free grace of the open straight into the fascinating pages of romantic history.

We have become an urban people, a nation of city dwellers. The average modern youth can not live under the hardships of the open march, ride, or rustle, and he has no use for firearms. Place him, raw from the streets, in the wilderness from which his grandfather wrested a home and he is irrevocably lost; march him three days forced going and he is literally walking on boils; mount him in the cavalry on a hot dusty day and night will find him unable to ride, his horse withersore and ruined. Forty per cent of cavalry recruits tremblingly admit at their first bareback drill that they have never been astride a horse in all their lives.

Moreover, even in that rougher day, though we had scouts, skirmishers, and open-fighting men in every home, we had (oh, mention it gently!) but few good soldiers. Never forget Washington's heartbroken letters about his incorrigible minutemen, who fought when they felt inclined and went home when they didn't, nor the picture of the frail Jackson bullying his disaffected lines with a horse pistol, and swearing by the Eternal that he would shoot the first man who stirred. Discipline still sits heavy on your American lad. Even in the flush of his ardor he enlists "to fight," but not, "by the nine gods of war," to police company streets. It is the "desperate charge" that appeals to him. But this same cleaning of camp streets is the only thing that keeps ravaging disease at bay, that keeps him alive to know about the desperate charges—of which there are precious few. The street cleaning is an essential part of the soldier business. But though the American youth may burn to do battle, he has no desire to become a soldier.

NO, WE ARE NOT NATURAL SOLDIERS.

We must spend a year in making troopers of men picked raw from the streets, and while our rivals drill every man on their tax rolls we have one trained soldier for every 1,400 souls in our domain, and continue to delude ourselves with the hardy traditions of a past people of the great frontier.

Further, war has become the most abstruse of sciences, and John must now worry his eyes to glasses over logarithmic tables to meet the great guns that kill at 7 miles and a host of lesser shrapnel. While national hardihood has vanished in one direction war has gone glimmering in another, and the old common meeting ground of civilian and soldier is a great gulf. With the widening of it passed the third original asset. We may now consider our loss of military equality with other nations.

We came into being before the Napoleonic wars. Our system now was Europe's system then—that is, the maintenance of a small, rigid

standing army. To keep his conquests conquered Napoleon decreed that Prussia's army should never exceed 40,000 men, knowing that the feet of his marching hosts could outdistance the raising of rebellious levies in point of time. He reckoned without the flash of genius that illuminated the brain of one Scharnhorst, who said, "If I change my 40,000 every year, five years will give me 200,000." Do not smile at this simple arithmetic. From it, in forced and necessary evolution, appeared the terrible armaments of Europe; it is the basic principle of "The Nation in Arms," and it sent Bonaparte to Elba. System, like clockwork, exists for the incorporation of all the civilian body of the foreign nations into armies, and their establishments cost less than our pension list. While we who, to accord with our nonmilitary traditions and yet to live, should have the most elastic and facile military system in the world, have the most inert, unwieldy, and rigid.

We have talked much of military system and we should know more of what it means. If in this country every civilian were a trained soldier, even then we could not present a fighting front in months.

We have no arms and equipment.

We have no plans nor facilities for feeding and supplying.

We have no experts to lead the volunteers.

We have no provision for their handling.

An army is not an armed mob nor a gang of laborers nor a horde of fighting men; an army is a system whereby its own units can be controlled from a central intelligence, as the members of a body are controlled from its brain. Any business organizer can realize that without the very perfection of system 100,000 men can not be fed, fought, nor furnished, and, frankly, there is no system with us so much as to muster them.

In time an army could be rolled and jumbled, stumble, blunder, and miss, into shape, but time, we know, is a commodity of the most terrible significance in war.

Do we then absolutely ignore the lurid fact of war? Have we then no glimmer of an idea of our part in an international crisis? Of course not. We have a lick-and-a-promise war-time plan. There is a vague general idea that in the event of war:

1. The ranks of the regulars will fill from 50 per cent peace strength to 100 per cent war quota.

2. Volunteers will spring up like blades of grass.

3. Somehow, from somewhere, arms and equipment for them will be forthcoming.

4. The new recruits will be trained by experienced soldiers and there will be plenty of teachers.

1. Will the regular ranks fill so? No, the plan fails there. With the alternative of the romantic volunteers no man will enlist in the austere regulars. The enlistments are so falling off at this moment that regular companies all over the States are slowly descending to bed rock. And if the ranks were so recruited, the happy fact would invalidate them for weeks. The addition of twenty recruits to a company demoralize it in peace time—in war an influx of more than its original number in raw material would place it with the noneffectives.

2. Will volunteers spring up like blades of grass? Yes, luxuriantly, because, with no one to take care of them, they would better not, for they will also die like grass, and, further, because,

3. Arms and equipment will not be forthcoming. Equipment for even one-fifth enough infantry does not exist. Rifles, hard-tack, guns, shrapnel, saddles, uniforms, tents, clothing, haversacks, belts, bayonets, sabers, all the jumbled circumstances of war will have to be manufactured after the outbreak of hostilities. We have some 150 field guns; Japan has ten times as many, and guns are wonderfully made. Their manufacture requires trained men, special material and machinery, and weeks of painstaking care. Guns also mean caissons and limbers, shell, shot, and shrapnel, trained men to serve them, trained horses to draw them, and experts to direct them. The ordinary rifle can not be used in war. If the other fellow kills at 2,300 yards and you at 1,000, he will slaughter you unscathed with 1,300 yards margin of safety. Military rifles are made with craft. All these things must be produced in war-time panic, by machines not yet constructed, by specialists not yet taught, in factories not yet built, from material still in the bowels of the earth or growing on its fertile hills.

4. If the volunteers were mustered, would there be instructors to make soldiers of them? Absolutely no. The Regular Army is so denuded of company officers by present peace-time demands from the Army itself that there are not one and a half officers to an organization; there should be three. The increased demands of war will reduce this number to less than one to the company.

THE BLIND WILL LEAD THE BLIND,

and men little better fitted than you who read these words must whip a volunteer army into shape to fight men led by military experts. Can you clothe, discipline, maneuver, fight, and feed 100 raw recruits? Can you command a regiment, maneuver a battery, direct a sap, make a map, report a position, lead a cavalry charge, estimate a range, select a camp, organize a train, plan a battle, defend a mountain, or take a squadron across the unbridged Hudson? Neither can the men who must officer the volunteers.

Two seasons make a marksman, one year a trooper, three a subaltern. Men who can feed and clothe 100,000 hungry men are made by experience; never born equipped.

Yet there is something that counteracts the danger of our position—something that swings the balance even. But it is a very delicate balance, and its quivering beam is unsafe national footing. The fact that has prevented a trial of arms in recent times is this: We are the only nation that could support two years of modern war and not perish from poverty.

THE LAMB RAMPANT.

War is neither imminent nor probable, but nothing in the world could invite war as does our present defenseless state. Moreover, the greater a nation grows in commerce, power, pride, and aggression, the more does she offend, and we like to think that we are greatest in all of these. Through our commercial interests alone we tug at many a purse string, and we declare an intention to dominate the commerce of the world and to control the Pacific, where our richest land, cut off from the citadel of our strength by almost impassable barriers, faces a new force in the world—an aggressive, wonderful people, to whom our avowed aspirations must be an ever-present flaunt. Weak, even in the possession of a boundless wealth, we rashly dare the nations of jealous and overcrowded Europe. We do not need to look deep to see Europe's internal boundaries preserved by the most enormous armaments that time has ever known. Like an assembly of beasts, continental nations are gathered in a dangerous congress, where they keep their integrity by the overt expression of their prowess and the fear that it instills into the hearts of their rivals. Into this perilous gathering we have come, bleating our dicta, making the fiercest flaunts, and venturing at large our opinions, our desires, and our demands—a lamb rampant in a congress of lions.

The Fallacy of Prohibition.

SPEECH

OF

HON. RICHARD BARTHOLDT,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. BARTHOLDT said:

Mr. SPEAKER: I desire to insert in the RECORD an argument submitted by me to the Committee on the Judiciary of the House of Representatives in opposition to the several bills aiming to restrict interstate commerce in certain cases and on the question of prohibition generally. The following is what I said on these most important questions:

"Mr. Chairman and gentlemen of the committee, I do not propose to make a speech, but I desire to submit an argument, and trust the committee will give me as much time as the importance of the subject will warrant.

"Superficial minds may wonder at and flippant tongues may criticize the members of this great committee for devoting as much time as they do to the consideration of the pending bills—and I shall speak collectively of all these measures designed to prohibit interstate traffic in liquors—but thoughtful men will accord to them the fullest measure of credit for their deliberate action and posterity will call them patriots for refusing to destroy, without maturest thought, the proud structure which the fathers of the Constitution have erected. And since I shall submit my argument in the name of all who love the liberties guaranteed to them by the Constitution, I take it upon myself to thank you gentlemen, in their behalf, for your patience, your conservatism, and your patriotism.

"In my judgment there is not now, and there never was, a more important question before Congress than the one involved in these bills, because none affects more vitally our governmental structure and the foundation upon which it rests. In one of its decisions the Supreme Court of the United States has characterized the laws guaranteeing free and unobstructed commerce between the States as sacred statutes, and no less a term will aptly describe them because they convey to us the true significance of our union of States and of a union inseparable and indestructible. The right of free interchange of commodities opens up the whole country as a market to every producer and every consumer. It makes the citizen of Maine a customer of the citizen of California, and the citizen of Florida a purveyor to the citizen of Oregon. It makes the United States, in geographical extent, the largest free-trade territory in the world. And what is of still greater importance, it carries home to every American fireside the lesson of our unity and of a common country. Erect barriers on the boundary lines of the States, stop the flow of trade, and you do not only lay violent hands upon a sacred law, but you undermine the foundation of the Government. The Constitution prohibits the levying of a tax by one State upon imports from another State of the Union. In other words, within the extended domain of the Republic custom duties are absolutely prohibited. Now, it is proposed to substitute the policeman for the tax collector, and instead of levying tribute from the merchants of other Commonwealths the police of prohibition States are to be enabled, by this proposed legislation, to destroy their goods altogether. Why, gentlemen, if such a law could be enacted without doing violence to the spirit of the Constitution, then we would be bound to admit that, instead of a Federal Government with power to regulate interstate commerce, we merely have a loose federation of sovereign States; instead of one republic, forty-five republics, instead of a common country, a divided country.

"And this leads me, at the outset of my remarks, to another question. It has been argued by a gentleman at the other end of the Capitol that we should pass one of these bills merely to obtain an expression from the Supreme Court on the fundamental question involved in them. The gentleman I refer to seems hotly in favor of this legislation, because the interpretation by the Supreme Court of the original-package act has seriously interfered with his pet scheme of regulating the drink question, but, judging from his remarks, even he seems to have his serious doubts as to the constitutionality of any of these bills.

"Mr. LITTLEFIELD. To whom has that reference?

"Mr. BARTHOLDT. I refer to a member of the other body.

"I am sure there is no one sitting around this table who would knowingly vote for an unconstitutional measure. And

even if he was in doubt he would ten times rather dissolve it in favor of the Constitution than in favor of a legislative scheme thrust upon you by interested parties whose arguments here have convicted them of a willingness to spit on the Constitution if they can but have their way. Only a few days ago, by action of the House, a bill was referred to this committee on a subject entirely foreign to its legislative authority. It concerns the forest reservations in the White Mountains and the Appalachian Range. By this reference the House simply propounds the question to the learned gentlemen composing the Judiciary Committee whether that measure is constitutional or not—that is, whether under the Constitution the Federal Government can assume control of these reservations, or whether the respective States should do so. Now, there may be as many lawyers on the Committee on the Public Lands or on Agriculture—whichever originally may have had charge of that bill—but the House wants to hear from the Committee on the Judiciary on this question. It means that this committee is regarded by the House as the watchdog, if I may use this expression, of the Constitution. Its members owe their seats here to their knowledge of constitutional law, and they are justly so jealous of their reputation that even a pronounced prohibitionist would, I believe, as a member of the Judiciary Committee, readily subordinate his personal views to his loyalty to the Constitution rather than vote for a motion to report a bill of doubtful constitutionality, and his constituents would surely uphold him in this action, no matter what their own views may be on the merits of the proposition. We are all under oath to uphold the Constitution, and it is not for the Supreme Court, but for us, in the first instance, to decide a constitutional question. If the adoption of any proposition means a step outside of the organic law, we are not permitted, under our oaths, to take the step. And if anywhere in our great country the Constitution ought to be safe, it is right here in the house of its friends.

"I wish it could be written across the heavens, in letters to be seen by all the 80,000,000 people of this country, that a vote cast in this committee for or against the constitutionality of a measure never commits the member for or against its merits.

"I should refer right in this connection to the unpatriotic course of some of the advocates of the pending bills who are threatening the members of the Judiciary Committee with dire vengeance if they dared to respect their oaths by voting down an unconstitutional measure, but I shall pay my respects to these modern crusaders a little later in my argument. I shall first ask the committee to examine with me the constitutional aspects of the case. Taking it for granted that the several Supreme Court decisions bearing on the so-called 'original-package act' are at your fingers' ends, I shall not weary you with quotations from them. What I propose to submit are my deductions from these decisions.

"Two years ago, on March 16, 1906, standing before this committee, I made this statement:

"I have read law sufficiently to convince me that this bill is clearly unconstitutional. I am satisfied that an attempt to single out a special article of lawful commerce and to decree that in the case of the article thus singled out the operation of the interstate-commerce law shall be interrupted at the boundary line and give way to the police power of a State, so that that article can not be delivered into the hands of the consignee, amounts to a denial of the rights guaranteed by the interstate-commerce clause of the Constitution.

"I hold this same view to-day, only that I am much more strongly convinced of its correctness. And I will go a step further and assert that even if the so-called 'personal use' clause were inserted as an amendment the bills would still be unconstitutional. Why? If the Supreme Court in its various decisions has settled one thing, it is that an interstate shipment can not be interrupted or interfered with from the time of its commencement to its destination—that is, from the moment it leaves the consignor up to the moment that it is delivered to the consignee—and it makes no difference at all whether the consignee has ordered it for his own use or not. In other words, the Supreme Court declares that if a citizen of Iowa orders a shipment of liquor to be delivered to him, say, from the State of Missouri, this order signifies the exercise of a natural right which is founded on the Constitution, and the shipment can not be interfered with or stopped until the goods are delivered into his hands. It naturally follows that an act of Congress subjecting interstate shipments to the police power of a State on the border line would be a violation of a constitutional right, or, to use the language of the Supreme Court, of a right 'founded on the Constitution.'

"The same would be true of a State law which throws any impediments in the way of the delivery of an interstate shipment by requiring proof—for instance, as does the Iowa statute—that the goods are intended for personal use and not for sale. And this interpretation of the organic law by the Supreme Court of the United States makes it wholly unnecessary, in my

judgment, to argue the other questions which have been raised, namely, that the interruption of such shipment before delivery or on the border would give to the prohibition law of a State extraterritorial jurisdiction, inasmuch as it interferes with a sale or a contract made in another State, or even the question whether the right to regulate interstate commerce, granted to Congress by the Constitution, includes the right to totally prohibit it. Under the powers which the States have given up to the National Government under the Constitution, Congress probably has the right to make liquor contraband and prohibit its shipment as an article of interstate commerce altogether—

"Mr. DIEKEMA. By a general law all over the country?

"Mr. BARTHOLDT. Yes, sir.

"But so long as liquor remains a legitimate article of commerce, just so long will any bill of the character of those pending before the committee be contrary to the inalienable rights guaranteed to American citizens by the Constitution.

"To many the questions involved in these bills may have been most complicated and difficult to understand, and much has been said before this committee, especially by the advocates of these measures, to befog the issue, but when you resolutely keep in mind the constitutional guaranty of an uninterrupted interstate shipment, the problem becomes easily intelligible even to the simplest mind. And to those who are still in doubt, I would respectfully recommend the lucid argument made on this question in another place by the distinguished chairman of this committee, the Hon. JOHN J. JENKINS.

"Now, let us turn to another aspect of the case. The advocates of prohibition are asking for the passage of one of these bills for what purpose? To prop up their cause in prohibition States. In other words, wherever prohibition has carried there always is a minority of citizens, large or small, who will not allow any sumptuary State law to interfere with their personal habits and individual right to drink when and what they please. And it is no libel to say that even among the majority there are many who will continue to make use of that right, because by voting for prohibition they meant it for the other fellow and not for the restriction of their own liberty and comfort. And because this is true it is even being claimed that the quickest way to dispose of the prohibition movement would be the strict and relentless enforcement of the laws it has placed on the statute books. I myself would be in favor of such a course if it did not involve an unwarranted restriction of personal liberty, an insult to the rights and dignity of manhood, a ruin of hundreds of thousands of innocent people, and a waste of untold fortunes in property values. But that is neither here nor there. I want to say here and now, and without fear of successful contradiction, that the Federal law which our prohibition friends are urging us to enact is absolutely unnecessary if the States themselves will honestly enforce their prohibition laws.

"And I assert further that it is just because of their non-enforcement that they come here to invoke the aid of Congress. What are the facts? As we have seen, a shipment is free from interference, or immune, if I may use that term, until the goods are delivered to the consignee. But the very moment he attempts to dispose of them, by sale or otherwise, they become subject to the State law, and consequently to seizure and destruction. Hence, if the State authorities do their full duty in enforcing the law, the very object of the bills under consideration here can be accomplished without any aid from Congress whatsoever. It may be argued that an enormous police force will be necessary to watch violations, but, gentlemen, that is the penalty of the enactment of Russian statutes. And certainly it will take a police apparatus of no smaller proportions to watch and search every railroad train, every boat, every farmer's wagon, and the basket of every man and woman as they are crossing the boundary line of a State. The real facts are, my friends—and I address myself to the advocates of prohibition—that your laws are incapable of strict enforcement, either with or without the aid of Congress, because total abstinence is not a result of law, but of sentiment and education. The man who wants to indulge and can not do so because there is a policeman around the corner will do it clandestinely, and as long as people are not satisfied that to drink is injurious and wrong just so long will your laws against indulgence of this kind be ineffective.

"But before showing the futility and fallacy of prohibition laws, let me point to one of the many ethical phases of this contemplated assault on the Constitution. I said prohibition is a failure wherever it has been tried, and I want to elaborate on the statements I made to you in this connection the other day. I asserted in so many words that in Maine there were almost as many drinking places, some public and more secret, as in any license State; in Kansas the business had simply been trans-

ferred from saloons to drug stores, and in Iowa the legislature had passed a law which permits the violation of the prohibition statutes upon payment of a fine. Now, if you want evidence to prove these assertions, I can furnish any amount of it, but instead of taking up the time of the committee unnecessarily I shall, with your permission, print some facts and figures in connection with my statement. We have seen that if the traffic could be suppressed at all the State police power would be amply sufficient to suppress it, but the partial or complete failure to do so is admitted on all sides, even by our prohibition friends, or they would not be here asking for this legislation. There can be but two reasons for such failure. Either the State is not exhausting its powers to that end or the natural human desire for liquor can not be suppressed—that is, its satisfaction prevented by law. In either case there is not the shadow of an excuse for interference by Congress.

"In the first instance, if a State can not furnish to this committee and to Congress complete proof of its inability to suppress the traffic and its entire good faith in the exercise to the utmost limit of its powers to that end, then I claim it has no moral right to invoke the power of Congress. And if, on the other hand, practical experience has demonstrated all honest attempts at suppression to have been futile, simply because of the inefficiency of all law in preventing people from obtaining what they desire, then, I say, it is absolutely useless to provide additional legal machinery for that purpose, because to do so would have no other effect than to undermine, aye, destroy, the authority and dignity of national law in the eyes of the people. During the many hours I have listened here during this and former Congresses I have not heard a single argument on the other side which tended in any way to refute or break down the inexorableness of this situation.

"And in this connection I should like to propound an inquiry to those members of the committee who have been sitting here year after year listening to the appeals of the one side and protests from the other: Has it ever occurred to you that not one of the governors, not one of the attorneys-general, not one of the officials whose province it is to enforce the laws of the prohibition States has ever appeared before you to ask for this legislation? Why have they not come? Evidently because they are more farseeing than the professional agitators and the gentlemen who style themselves, by an ingenious translation of the word "lobbyist," the "legislative agents" of prohibition organizations. Those officials who are clothed with responsibility, the same as we are, have learned two things. The first is, that it is a technical impossibility to enforce their own State laws against prohibition, and the other is that these laws would be incapable of enforcement even if Congress came to their aid by the passage of one of the pending bills.

"As to the first proposition, if it is agreed that such failure is due to the importations from the outside, I answer that these importations can not be stopped because, under the Constitution and the Supreme Court interpretations, every citizen has a right to import for his own use, and any law forbidding it, as we have seen, is repugnant to the Constitution. And this answers the second proposition at the same time. But I will go further and say that even if the importations could be inhibited, no human ingenuity has as yet been able to devise a law by which a farmer, for instance, could be estopped from making all the liquor he wants for his own use. Apples and a cider press are all he needs for that purpose. So you would not even gain anything if Congress, in the exercise of its constitutional powers, deprived liquor of its character as one of the legitimate articles of interstate commerce. Is it not possible, Mr. Chairman, that the officials referred to have been demonstratively absent from these hearings just for such considerations? Realizing that the object of the pending measures could be attained by the State seizing the liquor the moment a consignee attempted to dispose of it, and that the State has failed for one reason or other in employing its police power to this extent, and realizing further that because of such failure the State authorities have no right to come to Congress for aid, they preferred to remain silent for fear that anything they might be compelled to say and admit would simply add to the overwhelming evidence against the inefficiency of all prohibition laws.

"In closing my argument on the constitutional and legal aspects of the case, I can not refrain from briefly referring to the catchword of the other side, the alluring bait by which the votes of the States-rights men are to be caught, namely, that the States should be allowed to have their way in the enforcement of their laws, which, it is alleged, the national laws render impossible in the matter of prohibition. How absurd, in the light of the views I have previously expressed! Why, if I were a pronounced States-rights man, instead of a Federalist and

Unionist, I would regard the bills under consideration as a pernicious attempt at further encouraging the States to sleep on their sovereign power. Two years ago the Speaker of the House of Representatives, Hon. JOSEPH G. CANNON, said in the course of an address at Philadelphia—I merely give the substance of his remarks—that in former years there was great danger in our country of the possible concentration of too great power in the National Government. To-day the danger was the very reverse, namely, that the people of the several States were prone to neglect the exercise of the powers which they have under their constitutions, and preferred to appeal to Congress on all possible and impossible occasions to do for them what they were fully competent to accomplish under their own State laws. Here we have a case in point, and I claim that the safety of the doctrine of States rights lies in the rejection instead of the passage of these bills.

"If you, my Southern friends, will by an appeal to the Federal Government allow the nation to supply the power which the State fails or refuses to exercise, though it is competent to exercise it, then I predict it is only a question of time when you will be entirely governed from Washington instead of from your State capitols. But you say you want the national power in this case to halt at the border of the State in order to give full sway to the police power of the State. Well and good; but do not you see the efficacy of your police power would be more firmly established and better demonstrated by conquering the alleged evil in spite of the concurrent operation of the interstate-commerce law? The evil you complain of exists, not because of a lack of State authority or because of an interference with it by the nation, but because of a failure to fully exercise it. The legislator who would be willing to sacrifice, aye, under the circumstances needlessly sacrifice, the inviolability of interstate commerce in order to hush up the failure of a sumptuary State law and its enforcement may be a good Prohibitionist, but to my mind he is not a good American.

"So much for that, and from now on I shall not again refer to the constitutional and legal features in these bills. Their enactment would be obnoxious to the organic law because it would interfere with individual rights founded not on an act of Congress, but on the Constitution. The lawmaker who believes this to be true need go no further. True to his oath, he will vote down these measures, no matter what their intrinsic merits may be. If he be a Prohibitionist he might wish to aid in their enactment, but conscientiously he can not do so because of his oath to defend and uphold the Constitution. For him it is unnecessary to listen to me any further. But for the benefit of those Members who strangely believe in the constitutionality of these measures I must go into the merits of the proposition. They certainly would not vote to report any of these bills merely because, in their judgment, they do not violate our fundamental law, but after having answered affirmatively and to their own satisfaction the question of constitutionality it becomes their bounden duty to next investigate the question of the expediency and wisdom of such legislation.

"Then, and not until then, will the merits and demerits of prohibition become a paramount issue. As I said before, this is no issue at all with those who honestly believe the bills to be unconstitutional, but it is the sole issue with those who believe otherwise. Hence the brushing aside of the prohibition question proper as something which is not supposed to be involved in the measures now before the committee was, to say the least, a rather risky proceeding on the part of one of their prominent advocates. Or does he really think all that is necessary to insure an affirmative vote on a bill in this great body is its constitutionality? If so, I venture to suggest that his experience here as a legislative agent should have taught him differently. But perhaps this merely gives us a foretaste of what will happen when the two great parties have been crushed and the Prohibitionists will run the Government. No, my good friends, we can not follow you at such a gait in spite of what I regard as a passing fancy or a temporary popular clamor. You may capture women and children, intimidate village councils, and crack the whip over State legislatures, but when you come to Congress you strike a level where people are in the habit of doing a little thinking all for themselves.

"Mr. WEBB. This bill passed Congress in 1907?

"Mr. BARTHOLDT. No, sir; it did not. It passed the House with a slim attendance and without any discussion. It was passed in the House in twenty-five minutes. There was no hearing before any committee.

"Mr. HENRY. It was not this bill?

"Mr. BARTHOLDT. No, sir; it was one of these bills; the Hepburn-Dolliver bill.

"At any rate, Members of Congress are mostly men who have learned to look before they jump. And as to the members of this great committee, any one of whom would grace any judi-

cial bench in the country, why, they are the most conscientious, painstaking, and deliberate judges of the membership of the House.

"Mr. CAULFIELD. If you can not finish to-day, there is a matter that we would like to take up, if it is entirely agreeable to you.

"Mr. BARTHOLDT. I should be very glad to give way. I am slated for a speech on the floor on the battle-ship proposition, so I shall be obliged to you gentlemen if you will let me go at 11.30 o'clock.

"Mr. LITTLEFIELD. There are other people who will have to consent to that. I ask for the regular order.

"Mr. BARTHOLDT. Very well. Then let us examine the merits of the proposition. If these bills are in harmony with our Bill of Rights, then what is their purpose? That is the first question. Their passage is asked for by the advocates of prohibition to make the State prohibitory laws more effective.

"Mr. HENRY. I insist that Mr. LITTLEFIELD listen if Mr. BARTHOLDT is to continue.

"Mr. CLAYTON. I think we all should listen.

"Mr. MOON. I am listening to every word of the argument.

"Mr. BARTHOLDT. I thank you.

"Granted, for argument's sake, that this would be their effect, should Congress lend a helping hand to accomplish this purpose? That is the second and main consideration. So far the Congress has never yet gone on record directly in favor of the principle of prohibition; at least not as affecting the people at large. It has prohibited the sale of intoxicants to Indians, to soldiers and inmates of Soldiers' Homes, and others within Government buildings, military reservations, or immigrant stations; but beyond that the arm of Uncle Sam has not reached. Now, we are asked for the first time to lend aid and assistance to the States in the enforcement of their sumptuary laws. This naturally brings up the question—necessarily the vital one—whether prohibition is right or wrong, good or bad, and last, not least, whether it ever accomplishes its purpose. We can not escape the responsibility of going on record for or against prohibition in voting on these bills, provided we hold them to be constitutional; consequently we pause and investigate. For the conscientious lawmaker it is difficult to reach a conclusion on the spur of the moment.

"With his multitudinous duties he has not the time to thoroughly inform himself on the subject; hence, if I were a member of this committee I would move the appointment of an impartial subcommittee to investigate the subject of prohibition in all its aspects and to report at some future time. This only, as a matter of course, if a majority held the bills constitutional, for in the other case it would not be necessary. As one teetotally opposed to prohibitory laws, for reasons which I shall give you instantly, I am so sure of my ground that I would not only not fear the results of an impartial investigation, but would hail them with delight as surely corroborative of the statements I am going to make to you.

"I have the highest regard for those well-meaning men and women who honestly strive to promote temperance and sobriety, and in all my manhood years I have prided myself with being of their number. But it is as clear to me as if it were one of the Creator's revelations that those who honestly favor sobriety must not advocate prohibition.

"There our ways part, for I regard that alleged preventive against drunkenness, and shall prove it to be such, as a devilish device to nail the human family the more securely to the cross of King Alcohol. I do not hurl this as a wholesale indictment against its advocates, though many of them certainly thrive by the agitation, but I do charge that they are either honestly blind to the truth or intentionally shut their eyes to facts and figures which are patent to every sane and discriminating person, so that, even though 'convinced against their will, they are of the same opinion still.' And outside of insanity, Mr. Chairman, there is only one state of the human mind which the force of reason can not penetrate, and that is fanaticism.

"The belief in witchcraft was that kind of fanaticism. It sent thousands of innocent women to torture and death, and the men who had the courage to protest and who, by an appeal to reason, endeavored to restore the minds of people to their normal condition were first made, by insufferable torture, to recant and then put to death, so that their lips might never tell how their forged confessions were secured. You can not read without shuddering the chapters devoted to witchcraft in Andrew D. White's splendid work, 'A History of the Warfare of Science and Religion,' but you will also learn there how reason finally prevailed. And so it will be in this case. The 'pipe dream' of many of our people in the omnipotence of legislation is bound to be followed by a rude awakening. The belief, almost childish

in its naïveté, in the all-powerful curative effect of law will be rudely shaken by the discovery that legislation will always be a failure when it attempts to correct human nature. And since as good citizens we are interested in maintaining a common respect for law, might I not venture to suggest that it might be more conducive to the welfare of the country not to undermine the authority of law by attempting the impossible by legislation? Have you ever read the history of the so-called 'Kulturkampf' in Germany?

"Mr. CLAYTON. What does that mean?

"Mr. BARTHOLDT. The struggle for enlightenment; a political struggle.

"Well, Bismarck, flushed with his victory over France, attempted to crush or at least repress the Church of Rome, which, to him, had become a somewhat inconvenient factor in the interior politics of the Empire. He announced this policy with the proud words, 'Never shall I go to Canossa,' referring to that unhappy German Emperor who for hours stood in the courtyard of the papal residence in that Italian town waiting for an audience with the Pope.

"And what was the result of Bismarck's daring policy? Figuratively speaking, like Henry IV, he did go to Canossa. His policy proved an ignominious failure, and with all his so-called "May laws" he capitulated before the power of the church. And, mind you, gentlemen, that was only a struggle of the state against one of the churches, an invocation of the power of law against a mere creed. How much more signally will that power fail in a struggle against human nature itself? And by human nature I mean the ineradicable desire and the inalienable natural right to eat and drink when and what you please. Therefore I say to you, my prohibition friends, your movement is doomed to defeat, because you build on a foundation of sand, on a perverted principle, namely, the idea that you can promote sobriety from without instead of from within, by law instead of by moral suasion.

"The CHAIRMAN. We will have to stand adjourned.

"Mr. LITTLEFIELD. I ask unanimous consent that we listen to the argument of Mr. BARTHOLDT.

"The CHAIRMAN. The committee will have to stand adjourned under the rule.

"(Thereupon the committee adjourned.)"

"FRIDAY, May 1.

"Mr. BARTHOLDT. Mr. Chairman and gentlemen, at the last meeting I discussed the legal and constitutional features involved in this bill. I endeavored to show that the bills (and I shall speak of them collectively) are unconstitutional and unnecessary—unconstitutional because they interfere with the right of the citizen of the State to order and have delivered to him an interstate shipment of liquor; unnecessary, because if the laws which are now upon the statute books in the different States are properly enforced liquor can be seized by the agents of the State at the moment when the man who receives it tries to dispose of it by sale or otherwise.

"I stated that those members of this great committee who considered those bills unconstitutional did not have to consider the question whether prohibition is right or wrong. With them it would be sufficient to know that the bills are unconstitutional, and that would settle the question. But for the benefit of those who strangely believe these bills to be constitutional, it is necessary to go into the merits of the question of prohibition and to investigate whether prohibition is good or bad, right or wrong.

"Before, however, proceeding to this part of my argument I should like to read to you a statement prepared by a lawyer which is rather trenchant, but which touches a phase of the question that I believe has not yet been touched upon before this committee:

"POLICE POWER ABOVE THE CONSTITUTION—A DANGEROUS CONDITION."

"The enactment of prohibition to stop the manufacture and sale of liquor without compensation for property destroyed or rendered valueless can not be a constitutional measure.

"In order to accomplish such an outrage upon property rights it is necessary to place what is termed the 'police power' above the Constitution and so confiscate property without any form of redress. This erection of the police power into a giant force overshadowing the constitutional guaranties is an act of revolution and rapine that endangers constitutional liberty. For, if this method of destroying property be employed with reference to liquor, it can be with cotton or tobacco if enthusiasts who claim they want to do good see fit to condemn the production and sale of these staples. Prohibition of the production of tobacco by the exercise of so-called 'police power' would be everywhere resisted, because it would be an exercise of despotic power and a violation of the constitutional guaranties of property.

"The outlawry of any form of property without redress can only be accomplished by the assumption of powers not granted by any constitution. Naming this assumption an exercise of the 'police power' does not help matters at all. Every constitution worthy the name contains declarations of the great charter—'No person shall be deprived of life, liberty, or property without due process of law.' The exercise of the so-called 'police power' prohibiting the use or sale of

any recognized forms of property must remain purely despotic seizure without a shadow of constitutional authority.

"The decision of the New York court of appeals is as good law to-day as in 1856, when New York's prohibition act of 1855 was declared unconstitutional, because it destroyed property without redress, and therefore without due process of law.

"How has this modern invasion of constitutional liberties been so long permitted? Corporations with money and a claim that they want to do good have put their hired agents at work upon the sentiment of the people and have fooled them into believing that sentiment, or a desire to do good, justifies the most drastic measures. Again, the great interests threatened with complete property loss have shown a strange paralysis in the face of this wild crusade. And the general public fails to see that the appeal to the 'police power' to destroy property is summoning a demon that may destroy all forms of property and tread under foot the great charter of liberties. The fact that prohibition has been a fraud and failure is lost to sight.

"Another reason for the advance of the crusade is the utter refusal of the crusaders to permit discussion upon reasonable and constitutional grounds. They force matters by the overwhelming urgency of their devotees who invade the capitols of States, besiege legislators, and even threaten them socially and politically if they do not yield. Impressionable men and women are the chief agents of the sleek lobbyists of the corporations engaged in attacking property rights. They are well disposed, but ignorant and badly deceived. They have done enough mischief.

"And since in this statement the decision of the New York court of appeals is referred to, I should like to call to your attention briefly the legal status of matters in New York with respect to prohibition:

"STATE AND TOWN PROHIBITION IN NEW YORK.

"In 1854 the Prohibitionists, and some allies who cared little for prohibition, carried the State of New York. The legislature of 1855, April 9, enacted a law prohibiting the manufacture and sale of liquor in the State. In July a liquor dealer in Buffalo was indicted for violation of the law. As soon as possible he carried his case to the court of appeals on a writ of error. In March, 1856, that tribunal decided that the prohibition act was null and void, as it destroyed property without due process of law. The court cited the provision that 'No person shall be deprived of life, liberty, or property without due process of law.' The record of this decision will be found in the New York Reports. The legislature never afterwards amended the law to recompense owners of property in liquor nor in establishments for its manufacture, so prohibition failed.

"The decision is still in force, although efforts have been made in recent years to evade it by a system known as 'local option,' or prohibition by towns or other subdivisions. The decision by the court of appeals was a pronouncement of great importance and worthy the eminent jurists who rendered this State famous in legal annals. The court said in effect that a man can not be executed out of hand by vote of the legislature, he can not be imprisoned by vote of the legislature, his property can not be destroyed or taken by legislative enactment, unless provision be made for full compensation under the State's power of eminent domain. Life, liberty, and property are equally protected.

"It follows that if the legislature can not destroy property or annihilate its value by enactment without trial and compensation, the legislature can not delegate such power to a town or city or ward. Local option is therefore unconstitutional and void.

"An effort has been made to substitute the 'police power' of the State for the guaranties of the Constitution, and so justify the destruction of property without compensation. But the guaranties of the Bill of Rights can not be nullified by the 'police power.' That power justly represents no more than the executive arm in the enforcement of law. The police power is not the source of law or government. The Constitution is the source.

"Modern deviations from its sanctions at the behest of enthusiasts who want to do good show decadence or partial abandonment of constitutional government. Those who are so anxious to destroy property and regulate their neighbors also, organize and raise funds to enter into partnership with the state in the enforcement of sumptuary statutes that involve personal liberty and property. This proffered aid to the state is confession that the enactments are impossible of enforcement by the ordinary powers of state.

"The legislature is not justified in helping private corporations to do good by the means involved in prohibition or local option without compensation for property destroyed or rendered valueless.

"I cite these views and statements, Mr. Chairman, for the reason that the enactment of any of the bills pending before you would, in effect, destroy hundreds of millions of property.

"I closed my argument at the last meeting by saying to my prohibition friends that their movement was doomed to defeat, because they were building on a foundation of sand, on a perverted principle, viz, the idea that they can promote sobriety from without instead of from within—by law instead of by moral suasion. Now, let me continue. While we are in an analyzing mood, let us dig a little deeper into the subject. Neither a monarchical nor even a despotic government has ever attempted to prohibit what in itself is not morally wrong. In all countries and at all times it has been held to be wrong to deny an individual a natural right where its exercise does not conflict with the equal right of his fellow-man. Especially is this true as relating to mere personal habits. Deviations from this wise rule have invariably caused social disturbances, bloodshed, and revolution. Lawful liberty is nothing more and nothing less than a guaranty of the natural rights of man, as I have just circumscribed them, and constitutions are made to protect these rights.

"The right to eat and to drink can never be interfered with by any majority, and a law prohibiting it, namely, the act of eating and drinking itself, if put upon the statute books by the 51 outvoting the 49, would immediately be declared unconstitutional. That is the reason why our friends on the other side

seek to accomplish their purpose by indirection. They shrewdly do not prohibit the use of spirituous and malt liquors and wines, but only their manufacture and sale. But what will the American people do when they awaken to a full realization of the fact that the exercise of a personal right, dear even to the serf of Russia and cherished by all as a right, whether really exercised or not, has been or is to be denied them by a trick? Or do you believe for one moment that the present generation of Americans places a less valuation on their priceless heritage than do other nations on whatever liberty they may enjoy, merely because they have inherited it and hence lack a true appreciation of its value? Wait and see. I hold that the people have been misled. Prohibition is parading in the respectable garments of a church movement and an alleged moral revival. Every shortcoming of youth, for which no one but the parents themselves are responsible owing to the laxity in discipline and educational methods, every crime in the Decalogue, poverty, misery, unhappiness in matrimony—all these have been ascribed to the influence of the 'demon rum,' the same as in the age of witchcraft all ills and misfortunes were traced back to the influence of witches.

"It is comforting, perhaps, to seek the cause for our troubles outside of us instead of in us, and it is so convenient to assign one cause for all the ills of society; but is it just and is it true? Surely people will learn to discriminate. While up to this time we may have regarded it as an unseemly task to be our brothers' keepers and as unworthy of a great people to make the personal habits of man and the private lockers of families a paramount political issue, we may yet have occasion to thank these good men and women and the many reverend gentlemen who are engaged in this movement for having opened the Pandora box of social problems. Only we shall not stop where they stop. We shall investigate whether it is not true that many American homes are deserted because the wives and mothers are out upon the streets and the hustings and in legislative halls agitating for prohibition; whether they would not benefit the cause of true temperance immeasurably more by inculcating the right ideas of moderation into the minds of their children; whether the so-called 'temperance drinks' which American women are in the habit of consuming in sickening quantities and at all times of the day are not really more harmful and more alcoholic than the milder of the men's beverages which they propose to put under the ban; whether the charms of 'Home, Sweet Home' are not marred by an agitation which, under the leadership of certain modern clergymen, makes women and children participants in public political demonstrations.

"And those of us who believe in the old sound maxim, 'Render unto Caesar what is Caesar's,' and so forth, will also try and ascertain whether those clergymen, on behalf of their churches, are not grasping for political power, and whether a gratification of their desires would not tear the old ship of state from its safe moorings and carry it into that dangerous whirlpool caused by a mingling of church and state. In a word, the spirits you have conjured up will never again be banished. I am not a prophet, nor the son of a prophet, but I predict here and now that as soon as the masses of the American people will discover that the dominion of the church can not be established in affairs of state except at the expense of the heritage handed down to them by the fathers, the prohibition movement will disappear from the soil of this free country as rapidly as does the mist in the rays of the sun. Henry Waterson has well said:

"Holding the ministry in reverence as spiritual advisers, rejecting them as emissaries of temporal power, I do not intend, if I can help it, to be compelled to accept a rule of modern clericalism which, if it could have its bent and sway, would revive for us a forgotten past. I do not care to live in a world that is too good to be genial, too ascetic to be honest, too proscriptive to be happy.

"I am not unmindful of the fact that those who are undertaking the impossible task of making people sober by legislation are at the same time waging war against a certain form of sociability; in fact, I am sometimes tempted to believe that the professional prohibitionist, since he never discriminates between strong and mild drink and never opens his eyes to the lawless drunkenness which results from prohibitory laws, is really less concerned in the cause of temperance than in the shutting up of the public houses where men congregate for social purposes. And this presents a phase of the question which is entitled to the most thoughtful consideration of all. Shall we constantly walk in the shadow of penitence with stern faces and bent heads, or shall we be permitted to bask, occasionally at least, in the sunshine of life's pleasures? The struggle for existence is intense, and those who visit the public taverns are mostly, yes, 90 per cent of them, hard-working men. Will any reasonable and well-meaning man deny that, in view

of the crowded conditions in a laboring man's home, such places are a necessity?

"It is safe to say that 95 out of 100 men visiting such places are sober and respectable citizens who simply feel the necessity, so thoroughly human, of enjoying a sociable chat with their neighbors, comrades, or friends, and with most of them drinking is only a secondary consideration. They really wish less for the drink than the momentary diversion, the good cheer, the sociability connected with it. Where is the good wife and mother who is willing to deny to him, the breadwinner, this little recreation? The wealthy can, of course, go to their clubs, and these never run dry, especially not in prohibition States, but the middle and poorer classes who can not afford to keep well-stocked ice boxes and sideboards are depending absolutely on the place which has very aptly been called 'the poor man's club.' And this class of men are entitled to the same respectful consideration as are the members of millionaire clubs. This illustrates plainly enough, I think, how prohibition would not only have the effect of rank class legislation, but would also punish the ninety-five moderate and sober men on account of the five immoderate ones. But, besides, I do not believe in a law which restricts a man in the free choice of the kind of happiness he seeks as long as it is moral, or which will in any way tend to lessen a people's opportunity for innocent recreation and enjoyment. Life is too serious as it is. A happy man is always a good man, while his state of happiness lasts, but deprive him of his enjoyment and there will be a vacuum in his heart and mind in which only too frequently vicious thoughts find lodgment. We are smarter than other nations, of course. But it is not always wise, even for us, to discard the wisdom of the ages, that wisdom which, for instance, prompted Roman statescraft to adopt the policy of 'panem et circenses'—bread and the circus—for the people. Yes, and we can learn from the older nations in other respects.

"Why not substitute for the bar imported from England the German combination of restaurant and saloon without a drinking bar? Why not make these places so respectable that none of us need hesitate to take our wives and daughters into them, as is the case in Germany? There the drinking of a glass of beer or wine is merely incidental to the meals people take in these restaurants, and as a result, after nine different trips I made to that country in the last thirty years, traversing it from one end to the other and stopping at some places for months at a time, I never saw a single person under the influence of liquor. Is this wonderful state of sobriety which establishes for the Germans a standard higher than that of any other nation a result of prohibitory laws? No, gentlemen; it is a result of sane regulation and of proper education. Why could not the United States emulate this example?

"Mr. TIRRELL. Mr. Bartholdt, do not the German people confine themselves to German beer, and does not that account for your last observation?

"Mr. BARTHOLDT. As I just now stated, they confine themselves to the consumption of beer and wine, and that to a very great extent accounts for their sobriety. Later on in my argument I will show you the difference between prohibition States and the State of Wisconsin, for instance—Wisconsin, where beer is mostly consumed, and prohibition States, where secretly whisky is used; and I will give you facts and figures on the subject.

"Let me quote in this connection the words, clipped from one of the newspapers, of an American tourist who styles himself a total abstainer:

"I have had a large experience with men, and have traveled extensively. In Germany I found that drunkards are almost unknown. In America they are, unfortunately, too common. Why is this? Because Germany, with her civilization so much older than ours, has had experience with the liquor question and has solved the problem to her own satisfaction by allowing the people to have their beer without legal restrictions. Beer is cheap and common there. The people, young and old, rich and poor, enter the beer gardens quite freely. There is no false glamor about beer drinking, and beer has ceased to be looked upon as a luxury. It has not the taste of forbidden fruit, and the laborer, largely because he does not have to pay much for it or break the law to get it, does not value it highly or become intoxicated upon it. I think we might do well to imitate Germany in this respect.

"These words of a man who evidently traveled with his eyes open remind me of what Ingersoll said on one occasion when the liquor question was under discussion: 'If the Mississippi,' said he, 'contained whisky instead of water no one would care to drink it.' And the water drinking lady confirms this logic when, according to the story, she said: 'This water is delicious; is it not a pity that it isn't a sin to drink it?' To my mind these words express great truths in human nature, and as lawmakers we should profit by them.

"No cause has permanently succeeded in the world's history which was grounded on the idea that human nature could be

corrected or coerced by law or by force. Nature alone is unerringly right and true, and its majestic power scoffs at all attempts at defying it by law the same as the giant would at the somersaults of pygmies. We can harness natural instincts, we can elevate the human mind, we can enrich the human intellect, and by example of love and mutual respect imbue the citizen with the power of self-restraint—and that, by the way, is all there is in our much-boasted civilization—but no one, not even a professional prohibition leader, would be so bold as to contend that these results could be achieved by the exercise of the police power, that they could be brought about by means other than moral suasion and education. Even perversions of human nature can be cured in no other way, because they are mental and not physical diseases.

"A man eats and drinks in obedience to a natural law, and the only power between heaven and earth which can stop him from eating and drinking when and what he wants is his own intellect and his instinctive regard for the preservation of health and life. Attempt to stop him, and he will violate law and overthrow even constitutions. The Constitution of the United States guarantees that right to him, and nowhere in our country could this inalienable right ever be made the subject of a vote by the majority over the minority. Hence the attempt, as I said before, to rob us of it by indirection, namely, by prohibiting not the consumption itself, but the manufacture and sale of what some of our fellow-men do not wish us to consume.

"But if we are not entirely blind to what human nature is, we will see at a glance that this underhanded attempt to rob us of a natural and constitutional right is based upon an utterly false theory. Our friends on the other side foolishly believe that by removing the temptation they will kill the desire. How childish! You might as well say that the way to prevent those unspeakable crimes committed by negroes in the South is to abolish white women because their existence constitutes the temptation. And you would certainly have to abolish money, for there is no gainsaying the fact that the existence of money has caused more crimes in the world than all other temptations put together. And by the time you would get through removing temptations the earth would be desolate, the human race extinct, and there would be nothing left but the stones to cry to heaven and bewail the idiocy of those who had once been made in the image of the Creator.

"Mr. Chairman, the Bible teaches, and all good Christians devoutly believe, that sin has come into the world by Eve giving away to temptation and eating the forbidden fruit.

"Mr. ALEXANDER. You stand on that, do you?

"Mr. BARTHOLDT. Yes, sir; I will show you how far. I am afraid the other side are not standing on it, though.

"According to the theory of the advocates of this legislation, that temptation should have been removed; in other words, the logic of Prohibitionists would make it appear that the Almighty himself made a mistake in permitting apples to grow on that fateful tree in Paradise, and if they had lived no doubt they would have corrected the Creator and removed that apple tree by legal enactment. This is where you will land, gentlemen, when you start from wrong premises. Will you still follow the lead of those modern crusaders who, well meaning, but themselves totally misled, are sure to run counter to reason, to nature, to the Testament, the Constitution, the Bible, and the infinite wisdom of the Almighty himself? Christians? Why, I believe even Mohammedans, who alone observe total abstinence as a religious tenet, would disown them. But to come back to first premises. What is the correct theory? In a word, it is that temptation can not be removed at all; it is with us, always has been, and always will be with us, if we can trust the Bible and its grand philosophy. Temptation has been created by the Creator himself, according to Christian religion, and the degree to which we resist it is the measure of our morality.

"The only logical conclusion from this is that temptation can successfully be resisted only from within, and true reform and moral improvement will consist not in a vain effort to remove temptation, but in an honest endeavor to strengthen human resistance against it. And this is what the opponents of prohibition have been preaching ever since that impossible cure of intemperance has been first heard of. As I said before this committee on another occasion, nobody will place a high value upon the honesty of a man who never had an opportunity to steal or to be dishonest, nor would the world praise a man for being sober when, placed behind prison bars, he could never secure an intoxicating drink.

"But he who is honest despite all opportunities to steal and he who remains sober despite all opportunities to drink is a man after our own hearts. It is certain that you can not make him either honest or sober by legislation, but you can raise and

educate him so as to make him both. The fact is, sobriety, the same as charity, begins at home. Hence we had better turn our faces homeward. And if it were not presumptuous to undertake the teaching of teachers, I would say to my reverend friends: Retrace your steps, because you are on the wrong track. You do not need the Government to make the world better. You are already in possession of the only means by which the evils you complain of can be cured—namely, by good example and precept, and if, despite their proper use, you are obliged to confess to failure, then we had better honestly admit that there exists no remedy at all, for where spiritual power fails in an effort to make human beings good and sober, temporal power will surely be invoked in vain.

"Viewed in this light, your presence in the halls of Congress is really an indictment against the American people in that you make it appear as if this nation were incapable of attaining the high state of sobriety which other nations, without invoking the power of the state, have attained, and in the name of the people I have the honor to represent here, I protest against such an insinuation. In my judgment and theirs, the real cause of the failure which is here alleged is not the lack of State authority, but the unholy hankering after such authority and the waste of so much valuable time on the part of those whose influence on hearts, minds, and souls a nation must largely rely on for its moral welfare. If mothers would stay at home and teach their children proper discipline, if in school men would take the boys in hand and women the girls and instruct them in the principles of ethics and right living, and if our churchmen would look after the spiritual welfare of their congregations instead of chasing after the phantom of political power, there would be no need of an invocation of governmental authority to reform people and correct their innocent habits. And there is no such need. The American people are a religious people, and there is absolutely no reason why they should not rank all other nations when it comes to the highest requirement of real culture, namely, the exercise of self-restraint. But to reach this exalted station, what must we do? We must learn to turn from the police club to educational means, from a meddling interference with the personal affairs of our neighbors to higher ideas and ideals, from undemocratic retrogression to progress, from prohibition to liberty.

"From what I have said, Mr. Chairman, you can not escape the conclusion that prohibition is wrong in theory. The question arises, Has it proved wrong in practice? In order to answer this question I must ask you to follow me from the domain of speculative thought to the practical ground of actual experiment. We do not have to go far to find that a bogus remedy has resulted in a bogus cure. In order to prove, by facts and figures, that prohibition is not only ineffective, but in the highest degree mischievous and dangerous, let us turn to the oldest experimental territory in the Union, the State of Maine. Ever since prohibition has been introduced there, more than half a century ago, it has been an inexhaustible source of social discord, the same as in all other localities where it was tried. Why? Because in matters of conscience and personal habits not morally wrong no minority will meekly submit to the tyranny of a majority.

"The instincts of manhood rebel against every needless restriction of personal rights. Even to-day the dissensions on account of this question are threatening to rend the little State asunder, and it is safe to say that social peace will never return until it is settled and settled right. But what are the facts? The Lewiston Sun says there are 2,583 persons in Maine who have Federal licenses to sell liquor, and the number of places without such licenses where intoxicants can be had is beyond calculation. And they are naturally dives of the worst kind, for what is driven underground can not be supposed to be respectable, and what is still worse, instead of pure whisky, poisonous rot gut is being sold, and the milder drinks which have contributed so much toward true temperance have almost totally disappeared.

"In Portland, Sheriff Pennell's raids have disclosed the fact that there are 495 dives in that city. In Rockland, the home of our distinguished colleague [Mr. LITTLEFIELD], there are said to be over forty. 'Prohibition has placed the whisky jug on sideboards in Maine houses where liquor was never known before,' says a newspaper correspondent who recently traveled through the State for his paper, the Sunday Union, of Springfield, Mass.

"Mr. LITTLEFIELD. Who was that gentleman?

"Mr. BARTHOLDT. Some one connected with the Sunday Union, of Springfield, Mass.

"Mr. LITTLEFIELD. I will undertake to say that that is a falsehood. Put it right in your remarks. He could not know it to be true.

"Mr. BARTHOLDT. I assume no authority—

"Mr. LITTLEFIELD. I do.

"Mr. BARTHOLDT. But I leave the authority to the Sunday Union, of Springfield, Mass.

"Mr. LITTLEFIELD. I do not care about that; I assume authority for the statement.

"Mr. BARTHOLDT. And I have the paper here, if the gentleman—

"Mr. LITTLEFIELD. That does not make any difference. I assume the authority for the statement I make, and the responsibility for it.

"Mr. BARTHOLDT. Let me quote from his description a little further.

"He says:

"In the harbor of Portland and near by there are islands where from 1,000 to 1,200 United States troops are garrisoned. Nearly all of the soldiers are young men. Squads of them, as drunk as they can be, are seen in the streets of Portland every night, and, infinitely worse, a United States Army surgeon is responsible for the statement that the cocaine habit is growing at an appalling pace among the young soldiers stationed along the coast of Maine. The ordinary Maine druggist sells intoxicants over his counter in violation of law. In every city in Maine the drug stores far outnumber the populations when compared with cities in other States. In Lewiston there are thirty-two. Twelve of these are real drug stores where prescriptions may be filled. The other twenty are bars simply masked by fronts containing dummy bottles. Liquor is sold in most of the hotels. One morning, in the Bangor House, the writer counted twenty-one bottles of beer and fourteen empty whisky flasks lying outside the various room doors.

"Mr. STERLING. Is this liquor made in Maine, Mr. BARTHOLDT?

"Mr. BARTHOLDT. It could easily be made there.

"Mr. STERLING. Is it made there?

"Mr. BARTHOLDT. Yes; I think it is made there, as I will show you in a minute.

"Mr. STERLING. If it is not, I should think a law like this might help them out a good deal.

"Mr. BARTHOLDT. I think it is all made there.

"Mr. LITTLEFIELD. I do not think there is the slightest evidence that any of it is made there.

"Mr. BARTHOLDT. I shall show you in a minute. The ordinary Maine druggist sells intoxicants over his counter in violation of law. Throughout the State the liquor sold is of the very worst character (now I come to the point raised by the gentleman from Illinois), most of it being made of high-proof spirits:

"There are a number of formulas, the worst one including a 10-cent plug of tobacco boiled in water. A liquor dealer who retired a year ago said: 'I quit the business because I could not help thinking of the poison I had sold men. I decided that it would be better for me to drive a truck than to sell the vile stuff that passes for liquor in my town.'

"The writer then goes on to describe how prohibition has produced a system of corruption by which the liquor sellers are made to put up and share with the police, thus buying immunity from arrest, and for proof he recites specific cases. Rev. Leonard W. Lott, rector of the St. John's Episcopal Church at Bangor, has said recently:

"I am shocked at the revelations of conditions in Maine. Last May I accepted my charge here after ministering to a church in New Orleans for twenty years. In all of the time of my pastorate in that city I never saw so much intoxication as I have since last May in Bangor. There is something radically wrong with the law.

"He should have said there is something radically wrong with prohibition as a means of promoting the sobriety of the people. Much more could be said to make the dark picture still more hideous, but these observations, I think, will satisfy even a fanatic that prohibition does not only not prohibit, but straightway promotes drunkenness and crime and makes hypocrites and lawbreakers out of otherwise respectable citizens.

"This is Maine, gentlemen, and conditions in all other prohibition States are identically the same everywhere. No sovereign American citizen will allow any power on earth to deny to him the use of what he does not regard as morally wrong to use, and rather than waive his manhood and his personal rights he will stoop to even violate the law, make a hypocritical face, and tell falsehoods. Will you deny that as between the sobriety of the few and the debauching of the many the latter is the greater evil? But if, as I have shown, prohibition promotes both drunkenness and debauchery, surely, Mr. Chairman, every man and woman who honestly abhors such results should reject and condemn it.

"With great flourish of trumpets prohibition papers have recently announced that half of the territory of the Union has gone dry. Dry is the wrong word, of course, for the only real change which has been wrought is that which the hypocrite calls 'right side up with care.' We are merely shutting up the places which were subject to proper regulation and where a man was under the restraint of observation by others and of

his personal sense of decency, and are driving the vice underground to places which the sun of heaven can not shine on. We are doing clandestinely what we were accustomed to do publicly. We are sneaking through back doors and over back steps to procure what, like men, we used to ask for within sight and hearing of all. From men who are openly responsible for their acts we have been converted into sneaks and hypocrites and lawbreakers. From mild drinks which are too bulky to be handled secretly we have been driven to the strong, such as can be conveniently carried even in hip pockets, and our houses have largely been converted into saloons. We have abolished the public bar and legislated the private bar into our homes. Let us be honest and admit that 'dry' means practically this, and nothing else.

"Mr. LITTLEFIELD. Brother BARTHOLDT, just one moment. You quoted just now from the Lewiston Sun, which states that there are 2,500 licensed dealers in Maine. I want to read you a short extract from a letter addressed to Mr. Alexander under date of March 9, 1908, from the Commissioner of Internal Revenue, which states that there are only 869 in Maine, as against 2,500 per the Lewiston Sun. So if the rest of your authority is as accurate as that, it is entitled to little weight.

"Mr. BARTHOLDT. Well, what is the difference in numbers?

"Mr. LITTLEFIELD. Oh, nothing. The difference between 2,500 and 869 does not amount to anything. I only call your attention to that fact. The Lewiston Sun has just about that same degree of accuracy in connection with this question.

"Mr. BARTHOLDT. But right there I want to take you up, Mr. LITTLEFIELD.

"Mr. LITTLEFIELD. Surely.

"Mr. BARTHOLDT. If prohibition in Maine would be strictly enforced by your State authorities, or could be enforced, it would be impossible for even five dealers to take out United States licenses, because they could not sell it profitably.

"Mr. LITTLEFIELD. The only suggestion that I have to make is that if you can not get within more than 33½ per cent of your facts when you quote from the Lewiston Sun, it is not entitled to very great weight before this or any other body.

"Mr. BARTHOLDT. I do not know whether the Lewiston Sun is such an unreliable paper.

"Mr. LITTLEFIELD. Well, there are your figures—2,500 to 869.

"Mr. BARTHOLDT. I have taken it for granted that that statement was correct.

"Mr. STERLING. Mr. BARTHOLDT, the law of Maine provides for dispensaries, does it not (and I suppose they have to have Government licenses), where liquor can be bought for medicinal purposes? I think some lady from Maine here made a statement to that effect.

"Mr. LITTLEFIELD. Oh, yes.

"Mr. BARTHOLDT. No, Mr. Sterling; a druggist does not require—

"Mr. LITTLEFIELD. Not only 'No,' but 'Yes.' The law of Maine does not authorize liquor agencies for the sale of liquor; so that your 'No' is not correct. Yes; it does.

"Mr. BARTHOLDT. Liquor licenses for the sale of liquor?

"Mr. LITTLEFIELD. Why, certainly.

"Mr. CAULFIELD. He did not say that; he said that druggists were not required—

"Mr. BARTHOLDT. No; I said the druggists were not required to have them.

"Mr. STERLING. I do not know that they give licenses to drug stores; but the law provides that cities can establish dispensaries for selling liquor for mechanical and medicinal purposes, so it was stated here by some lady from that State, and of course those people have to have Government licenses.

"Mr. BARTHOLDT. Of course, gentlemen, my facts and figures are taken mainly from Maine sources. If they are not reliable that is not my fault.

"Mr. LITTLEFIELD. I am not criticising you, Brother BARTHOLDT, for that. I am calling you attention to the fact that the Lewiston Sun, the editor of which I know extremely well, is not reliable on this proposition, on the known facts.

"Mr. BARTHOLDT. What about the facts of Sheriff Pen-nell's raid in Portland?

"Mr. LITTLEFIELD. I know him better than I know the man that edits the Lewiston Sun; but of course I will not fill the record up with details on that point.

"The CHAIRMAN. Mr. BARTHOLDT, how nearly are you through? They are just commencing the second roll call downstairs.

"Mr. BARTHOLDT. I have a good deal of material here yet, Mr. Chairman.

"The CHAIRMAN. Several members of the committee want to go right down to the vote.

"Mr. ALEXANDER. Can you not hand the balance of your remarks to the stenographer?

"Mr. BARTHOLDT. Yes, part of it; but there is a great deal that I wanted to present personally—a great deal of material that I could not simply hand in to be printed.

"Mr. ALEXANDER. Then can you not continue this afternoon? What is the objection to having the matter continued this afternoon for a couple of hours?

"Mr. BARTHOLDT. Only this objection—that I am trying to make a public building bill, and have been working for five months for others, which has resulted in complete neglect of my duties. I have correspondence on my desk for three weeks back.

"The CHAIRMAN. We will have to go down now to that second roll call; so the committee will have to stand adjourned.

"Mr. BARTHOLDT. I thank the committee for their attention.

"(The committee thereupon adjourned.)"

"Mr. BARTHOLDT. When interrupted I was endeavoring to illustrate that what we call 'dry' simply means clandestine and mostly immoderate consumption. Such are the glories of prohibition of which our friends boast. If 'dryness' and prohibition were one and the same thing, then surely our receipts from internal revenues should have fallen off exactly in proportion to the territory which the prohibitionists have conquered. In other words, if half of the country has gone 'dry,' our internal-revenue receipts should have been decreased just one-half.

"But what are the facts? The receipts from both spirits and fermented liquors were, in 1880, \$74,015,312. In 1890 they were \$107,691,505. In 1900 the figures were \$183,419,571, and in 1907 they were \$215,894,720, an increase since 1880 of 300 per cent, while the population has increased only 75 per cent in the same space of time. And this very period has witnessed the 'greatest triumphs,' so-called, of the prohibition propaganda. Do you want any more overwhelming proof of the inefficiency of the cure? And when you realize that the increase of consumption has gone hand in hand with the closing of saloons you can easily fix the cause yourselves. But this is not the worst feature. The consumption of strong drink has greatly increased, and the use of mild beverages has correspondingly decreased. From 1900 to 1907, during the time the greatest prohibition victories were heralded abroad, the receipts from spirits increased from \$109,868,817 to \$156,326,902, while the receipts from fermented liquors decreased—yes, decreased despite the increase in population—from \$73,550,754 to \$59,567,818. What an eloquent story these official figures tell, and how they expose the fraud which is masquerading in the garments of a temperance measure?

"I know the question which is on your tongues, my friends. You are about to ask why it is, if such are the results of prohibition, that the 'liquor men,' so called, are opposing it. They oppose it, I reckon, because if we had country-wide prohibition it would destroy the legitimacy of their business, and, at least in the case of the breweries, it would mean the confiscation of hundreds of millions' worth of property. These brewers crave the privilege of remaining what they are to-day, honest, respectable, and law-abiding citizens, who carry on a legitimate business, and a business, too, which has indirectly promoted the cause of real temperance much more materially than all the professional 'promoters' combined have been able to do. These men may prosper financially because prohibition does not prohibit, but if the whole country would become submerged in this wave of intolerance and fanaticism, their business would be outlawed and they would be financially ruined. Could we have a particle of respect for a citizen who would not protest under such circumstances? Most of the men I know in this business are men of the highest integrity of character, and they are fighting not only for their property, but for their honor. And right here let me make a suggestion. We hear so much about the 'low class of men' engaged in the retail liquor business. By such talk a prejudice must necessarily be created against these business men as a class. In other words, a man, no matter how good a citizen he may be, is condemned at the outset simply because he goes into this business.

"I want to suggest that this is surely not the way to improve conditions. These men in catering to a public want are doing a legitimate business, authorized by law, and as long as they obey the law they are entitled to our respect as much as any other class of business men. The good opinion of our fellow-men has as much, if not more, to do with our 'walking the chalk line' as has the fear of the law. But these remarks

are merely incidental. I want to answer the question previously asked: Why protest when under prohibition the consumption of liquor has increased? From a temperance standpoint the question answers itself—that is, the honest temperance man should for this reason alone oppose prohibition—but I want to refer for a moment to another important consideration, which is that the business interests affected are not the only factors who are concerned in this matter. It always arouses my indignation when I read newspaper accounts about the contests between the 'temperance forces' on one side and the 'liquor men' on the other. In the first place, it is not true that all the men who really have the cause of sobriety at heart are supporting prohibition. I can cite you any number of well-known total abstainers who do not. They know that prohibition is a failure and a humbug, and many of them, too, resent the idea of meddling with other people's personal habits. They choose their own mode of living and are willing that their fellow-men should have the right to choose theirs.

"On the other hand, it is a positive insult to the American people to assume that the only citizens ready to defend the cause of individual rights and personal liberty are the men engaged in the liquor business, the same as it is an insult to the men who appeared before you in defense of their cherished rights as American citizens, namely, the representatives of the National German-American Alliance, reverend gentlemen, and others, when the advocates of the other side characterize them as mere tools or agents of the liquor interest. I resent this insinuation with all the scorn that is in me, and predict that the time will come when these very men will be universally recognized as patriots, inasmuch as they perceived quicker than others did how much of American liberty is involved in this question. I myself have large brewing interests in my district, but I want it understood that I do not stand here at their behest or even in their interest, but that I am defending what I conceive to be a high principle. I fear the flame of intolerance and fanaticism which has been kindled by this agitation will eventually consume our Bill of Rights, for when it has come to such a pass that majorities can be deceived by sophistry and fraud, it will not be long before popular self-government will have proved a failure and the beginning of the end of our liberties will have been reached.

"Constitution and laws have drawn a sacred circle around the individual which marks the domain of his inviolable rights. Let that domain once be invaded and there will be no stop to further regulations and infringements until the gallows are erected alongside of the remnants of our boasted liberties. What were the words once attributed to a famous bishop? 'Better England free than England sober,' he is said to have exclaimed, which means, of course, that even sobriety may be purchased too dearly if it be purchased by the loss of freedom so essential to the production of character. Who will dare to deny that these words are just as true of the United States, if not more so, than they were of England? And what if prohibition can, by facts and figures, be proven to simultaneously undermine both freedom and sobriety? I wonder if these considerations will make it plain why I stand before you and why there may be a few other people besides the liquor men, as they are called, interested in the defeat of this dangerous legislation, even though it does not promote temperance. I do not know what you think about it, but I can not help but believe that it is not due to shortsightedness and ignorance alone when the liquor men are being pointed out as the sole defenders and guardians of our personal rights as American citizens. There is no doubt an element of meanness and contempt for the people in the assumption that our citizenship at large have become indifferent as to their rights and privileges to such a degree as to have totally forgotten the old maxim, 'Eternal vigilance is the price of liberty.'

"We have seen that under prohibition the consumption of liquor, at least the stronger kind, has increased four times more rapidly than the population. Now, let me show you, also by facts and figures, that drunkenness, too, is more prevalent in prohibition than in free territory; and since my figures are taken from United States Census bulletins only recently issued they are official. These bulletins (Nos. 20 and 45) contain a detailed statement of the number of arrests for drunkenness and all other causes in all cities of over 8,000 inhabitants. The figures apply to the year 1903, and the population is officially estimated on the basis of the census of 1900. Comparing cities in the prohibition States of Maine, Kansas, and North Dakota with cities in Wisconsin, which are not only "wide open," but have the lowest license besides, we discover the astonishing fact that in proportion to population the number of arrests for drunkenness and crime in the three alleged 'dry' States exceeded by far those in the great beer State of the Northwest. In

Portland, Me., without any saloons and with an estimated population of 52,656, there were 2,186 arrests, or 1 arrest for every 24 of the total population, while in Milwaukee, with a population of 313,025 and 2,145 saloons, there were only 2,197 arrests, or 1 out of every 142 of the total population.

"Or let us compare two cities of about equal population, for instance, Bangor, Me., with 22,675, and Sheboygan, Wis., with 23,600 people. In the Maine city there were 1,236 arrests for drunkenness and other causes, or 1 out of 18 of the population, in Sheboygan only 127, or 1 out of 186 of the population. Now, take Kansas. Compare Wichita, with 31,549 people and 1,212 arrests, and Racine, Wis., with about the same population, namely, 31,529, and 184 arrests, we find that in the prohibition town 1 person was arrested out of every 26, while in Racine 1 out of 171. In Fargo, N. Dak., also a prohibition city, with 11,342 population, 345, or 1 out of every 33, was arrested, while Manitowoc, Wis., with 12,353 people, shows only 49 arrests, or 1 out of every 252 of the population, and so all the way down the list. In other words, there is from six to eight times more drunkenness and crime under prohibition than under proper regulation, according to the official figures of the United States Government. With these figures, gentlemen, I could easily rest my case. Their grandiloquent force is an unanswerable refutation of all there is of reason and argument on the other side, and an imperishable monument to the folly and failure of prohibition. We all know that drunkenness is one of the causes which promote crime, but here we learn from irrefutable facts and figures that prohibition promotes both, and from this there is but one logical conclusion: Society must fight prohibition as much as it does drunkenness itself. In the name of sobriety we must declare war on both.

"Incidentally, Mr. Chairman, these figures also show that there is no casual relation between inebriety and the number of saloons or the amount of the license fee. Wisconsin appears to be the soberest State in the Union, if I may use that expression, and yet it has the lowest license fees and, proportionately, the largest number of saloons.

"I realize, Mr. Chairman and gentlemen, that no argument on this question is complete without a reference to its material or financial aspects. To many the loss to the nation, the States, and the communities as an inevitable result of the destruction of property which prohibition will work, as well as the direct losses of revenues, may even be the main consideration, but this is so apparent to every citizen that I need not emphasize this feature of the problem.

"My purpose was to call attention to principles and considerations involved in the question which, I regret to say, the public prints have rarely touched upon, if at all. Certain it is that if the national capital and the Capitol of the nation were to capitulate before the forces of intolerance and fanaticism, it would be only a question of time when the whole country would fall a victim to these false prophets of temperance. Then we would lose, as experts have approximately estimated, over \$900,000,000 annually, which the liquor trade is now paying, namely, \$220,000,000 to the United States Government in taxes, \$110,000,000 to the States in license fees, \$215,000,000 to labor, \$90,000,000 to the farmer, and \$270,000,000 in miscellaneous expenses, and while giving figures I might as well add that prohibition would destroy \$600,000,000 in capital which the distillers, brewers, and wine growers have invested in machinery and buildings, and, besides, throw over 600,000 men out of employment, upon whom not less than two million and a half of others are dependent, not to speak of the hundreds of thousands of small tradesmen who now live on the patronage of these millions or of the many affiliated trades which will be most seriously affected. It would be a calamity worse than pestilence and war, and we might well paraphrase an old saying and exclaim, 'Oh, reform, what crimes are being committed in thy name!' We all know to-day that the world would have gotten rid of witches without the sacrifice of a single human life, and the question with us to-day is, Can the desired reform not be brought about without a war of wanton destruction of property values and a ruin of hundreds of thousands of men? I leave it to your wisdom to answer this question.

"In this connection let me quote a most sensible editorial utterance of one of my home papers, the St. Louis Times:
